## Do You Want Layers?

**I**F you were to depend upon horses for your living and as a means of your daily support, which would you buy—a team of draft horses or race horses? Do you want a team that will make you a living from day to day or are you willing to stake your living against the outcome of a race?

This should be a serious question to you who are about to go into the poultry business and to you who are already in it. What applies to horses applies to chickens. Are you going to buy "race horses" and expect them to "work" or are you going to buy "horses" that have been "bred" to "work"? One cannot take the place of the other, and I say to you—

### Do You Want Layers?

Do you want the kind of poultry that will produce a daily income and a profitable one?

That's the kind I breed. I can supply you with hens, pullets, cocks and cockerels at prices listed in my ad on opposite page.

A discount of 15 percent on three fowls, 20 percent on five, and 25 percent on ten or more will be allowed for October, November and December.

My stock cannot be equalled for egg production. Do not fail to write for revised price list and my instructive catalog. It is free. See other ad on opposite page

with sex. Usually the gander is of coarser build and has a more masculine head and a thicker neck. There is only one way to tell the sex in geese. Wait until they are full grown. If the fowl is a gander you can find the male generative organ by holding the bird firmly on its back and rolling the lip of the vent outward. The gander has a well-developed penis. If you can't find one after several thorough attempts, you can safely assume that the fowl is a goose. This is the only dependable way to tell the sex in geese. All other signs are of doubtful value and we have known some of the best water-fowl judges to be fooled on sex of geese.

### Poultry Keeping in the Ozarks.

**Q.** Please give me your opinion in this case. My health is not very good, and I have been thinking of going to the Ozark mountains, taking a homestead and raising poultry. I have raised chickens for fifteen years on a small scale, but the thing that bothers me is the price of eggs and poultry there. Eggs are 10 cents a dozen and hens 7½ cents a pound, fryers are 11 cents a pound and old cocks 15 cents each. Now, what I want to know is this, do you think one could ship his poultry and eggs and do better? Where would be best to ship, say from northern Arkansas?

Mrs. M. F. D.

Farmington, Mo.

**A.** The location you give is too general for us to select a "best" shipping point. The nearest large city will be the best market in all probability. You should get much better prices than you quote if you can furnish good produce. If there is a health resort near your proposed location you should find a market there. The prices you quote are the collector's or "poultry house" prices for ordinary and inferior farm produce. In the Missouri Ozarks the best outlet for good poultry has been St. Louis, and the best quality goods are in demand at fair prices.

### Probably Choked to Death.

**Q.** Last evening while feeding my chickens, one of my pullets suddenly dropped its head with a limber neck, flopped her wings a little and died before I could pick her up. I examined her throat, cut her open, but could not find anything wrong.

S. D.

Ramseur, N. C.

**A.** The pullet probably choked to death from getting food down the windpipe. It is, of course, possible that she may have been ailing some time before you noticed her, and that death was due to intestinal disease, but the sudden symptoms you give suggest choking.

### How Large a Flock?

**Q.** As I am about to start an egg farm with about 2,000 Leghorns, I am writing to ask how many can be housed together most successfully. It is possible to have green food growing here all the year. How many acres of land should be set aside for the above number stated?

R. B. S.

Jacksonville, Fla.

**A.** We would not want to start a poultry farm on less than 20 acres; 10 acres would be sufficient to set aside for poultry use at first. The size of flocks and the amount of land needed depends a good deal on the location and on the management.

Four hundred layers can be successfully housed and yarded on one acre, if

necessary. We recently visited a plant where the flocks are from 1,000 to 2,000 Leghorns in a house and 4,000 birds occupy (with houses) 10 acres, the range being undivided. We consider them a bit crowded. Houses were divided into roosting sections to accommodate about 150 birds each.

We prefer 100 to 150 breeders in one flock in an open-front house 20x20 feet. Layers might be well housed in flocks of 500 each and do well. A Woods' open-front house 50x50 feet is being tried out in a mid-western state for a flock of 500 layers; so far results have been good.

#### Stunted Chickens.

Q. (1) What shall I use to feed a chick to make it grow? This chick is 2½ months old and is just as large as it was the day I got it. I feed chick food, mash and grit, and it has a nice sandy run.

A. (1) You do not say how long you have had this chick or how old it was when you got it, but we assume that it is badly stunted. In such case you can't get it to grow much. Feed it plenty of green food, keep beef scraps where it can have free access to them and feed an abundance of wholesome grains.

Q. (2) Are Houdans good layers? Are they a fancy chicken?

New Rochelle, N. Y. G. W. W.

A. (2) Houdans are considered good layers. They are a Standard variety of fowl, and may be considered "fancy" when bred for that purpose. You will find illustrated description in the American Standard of Perfection.

#### Laid One Egg and Then Stopped.

Q. On July 26 I bought twelve White Leghorn pullets five months old. On August 2 one laid an egg. Since that time to August 12 no other egg appeared. Is this an unusual case for a pullet to go so long before laying a second egg?

J. C.

Carson City, Nev.

A. So long an interval is not common. She may have laid and the egg may have been removed or eaten, or lost. Pullets are often careless about laying at first and will drop their eggs anywhere the notion takes them. The amount and kind of food also makes a great difference in regularity of laying. Feed an abundance of greens, meat food and keep a mixture of wholesome grains before them.

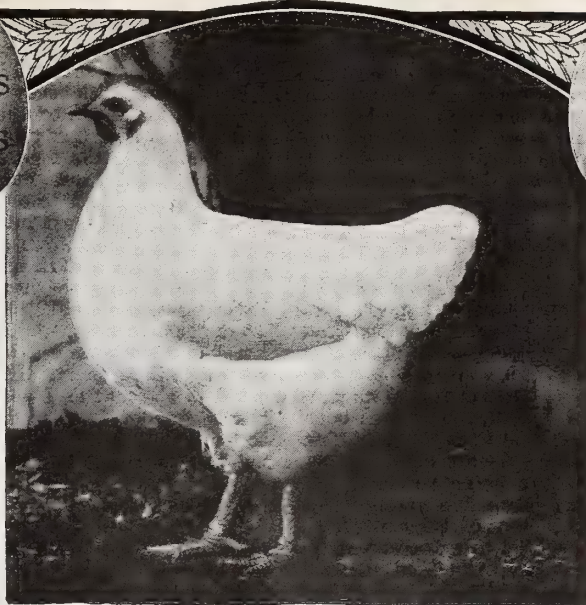

#### Roup.

Q. I have a fine lot of White Orpingtons and they are dying. Please tell me what is the matter. The first I notice their feathers don't look right. They get mopy and walk slow, as if sore all over. I pick them up and they will sit quiet on my lap. Their appetites have failed and they don't care for food or drink. In a few days they die. Some live for eight or ten days and get so weak they just fall over and can't get up. They have a very offensive discharge from the nose. No swelling. Eyes clear and bright up to the time they die. The discharge from the nose is the only thing. They have pure drinking water, clean houses and good food. Have tried a roup cure, but I can't see that it has done any good.

Laurelville, Ohio. L. F.

A. Disease is roup. House them in open-front house. Feed an abundance of wholesome food, greens, grains and meat scraps. Dip heads in a cresol dis-

infectant solution, holding their mouths open when dipping. Prepare solution by mixing one tablespoonful of creolin with a gallon of soft water in a galvanized iron bucket. (Creolin, carbonol, kreso, sulpho-naphthol, model disinfectant, napereol, zenoleum, pyro-carbol or other similar cresol disinfectant may be used for this purpose). Mix solution fresh as needed. Dip two or three times a week if necessary until cured.

#### Buff Cochins Bantam-Pheasant Crosses.

In the January, 1912, issue of The American Poultry Journal appeared an article, or rather some questions and answers, in regard to crossing pheasants with domestic fowls.

I was much interested in the matter, and saved that number, as I have been trying for some time to cross the China pheasants and Buff Cochins bantams, but did not succeed in doing so until this year, and I now have five young birds from this cross. Three of them are from pheasant hens mated to a bantam cockerel, and the other two from bantam pullets and a pheasant male. All of the birds from which I hatched these five were last year's birds, and were never mated to any other birds, and even if I were not absolutely positive as to the mating and eggs, which I am, the young birds themselves show positive proof as to their parentage. All five of them, while differing somewhat, show marked characteristics of both parents.

The first two, hatched on June 2 from

pheasant eggs, and the next two, hatched June 18 from bantam eggs, are very much alike. In shape they are more like the pheasants, having the large, dark eyes, sharp bill and long legs, while as to color, while they have much of the dark markings of the young pheasants, the breast, fluff and under color is clear buff and the legs are stocky and feathered to the toes, but not so heavily as bantams. The fifth one, hatched July 19, is really the most interesting of the lot, being hatched from a pheasant egg, and except for a dark spot on the head and brown wing feathers, is a perfect little bantam in both shape and color. They seem to be much hardier than the little pheasants, and I hope to be able to raise all of them. If you are interested in the matter I will be pleased to advise you of further developments as to how they come out and whether or not they prove to be sterile, etc.

H. A. H.

Florence, Colo.

A. We would like very much to have a further report concerning these pheasant-bantam chicks. If they are true hybrids they should be sterile. If they prove fecund and can reproduce it will be very interesting to note the development of the progeny, and it should establish in part the relationship between pheasants and bantam fowl.

#### Foot Disease.

Q. I am raising White Leghorns and about three weeks ago one of my hens had a very badly swollen foot. Upon

an inspection I found a place in the bottom which looked like the core of a boil, only it was hard and dry. I dug this place out and found that the whole foot was festering inside. I washed it out with peroxide and painted her foot with iodine, but it did not seem to do very much good. The swelling still is present and I have opened the foot several times. It does not seem to be very sore. I have been informed by several that the trouble is what is commonly called bumble foot. However, I am of the impression that it is something else that is contagious, as nearly all the old hens in my flock now have the same disease. Only one of my young pullets has the trouble as yet.

All of those affected have this small round scab on the ball of the foot, which is merely the end of a hard, dry core going up into the foot, the inside of the foot being festered.

C. A. K.

Meridian, Miss.

A. Foot disease of this sort is slow to yield to treatment, and any surgical treatment must be very thorough; you must remove all the growth, or it will recur. Prevention is only satisfactory remedy. See that house floors are free from coarse gravel, stones or that they are well sanded where fowls jump from perches. Don't have roosts too high. Do not use very narrow perches. Use 2x4s for roosts, 2-inch edge up. Cull out affected birds. This trouble, usually described as "corns" and as "bumble foot," may occur as a result of tubercular or similar infection.

Everybody makes a home run who reads free offer on back inside cover

### Won All FIVE FIRSTS, 22 Ribbons, 30 Birds Entered

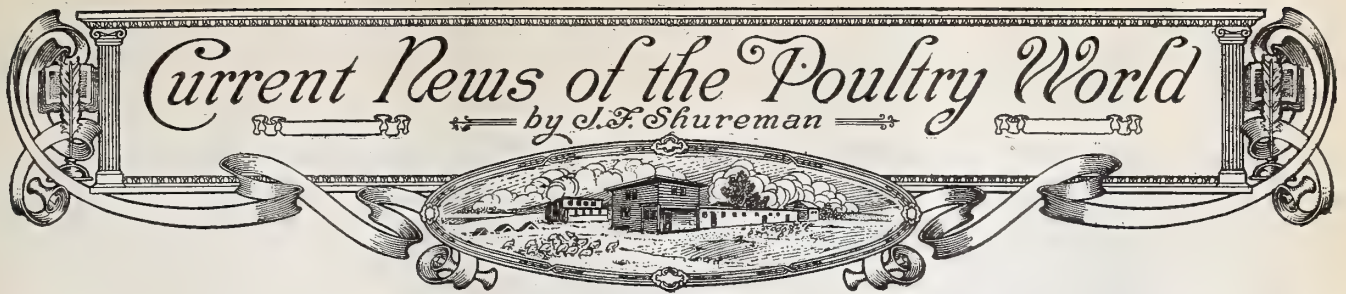

Show birds, cockerels and pullets ready to win at fairs, Fall and Winter shows, bred exclusively from our New York champions, also yearling cocks and hens shipped on approval, satisfaction guaranteed, at prices from \$10 to \$50. Write for catalogue. Mention American Poultry Journal.

Foxhurst Farm, Lime Rock, Connecticut

FIRST PRIZE HEN MADISON SQUARE GARDEN NEW YORK 1912-1913  
BRED & OWNED BY FOXHURST FARM, LIME ROCK, CONN.

An institution to be known as the National Farm School and Vocational Training Institute has been incorporated under the laws of Missouri and will be located near Jonesburg, in that state. It is the aim of the institute to give boys and girls an opportunity for education under most favorable conditions. Poultry culture will be one of the branches taught. Thomas W. Garland, of St. Louis, has placed the facilities of his 1,700-acre farm near Jonesburg at the disposal of the new school, including the annual course of lectures on practical poultry-raising given each year at the Garland Farm by poultry experts.

Hereafter "professional" breeders of poultry will be debarred from exhibiting at the Northern Wisconsin State Fair. The new rule has been adopted to shut out the car-load exhibitors who are in the habit of making the circuit of the fairs.

Dr. Pruce, the minister of agriculture to the government of the Argentine Republic, who has been in this country for some time, sailed a couple of weeks

ago with the largest variety of poultry that has ever left this country in one shipment. The vessel was especially chartered by the Argentine Republic to bring everything necessary for the establishment of an up-to-date poultry experimental station at Buenos Aires.

The value of the poultry industry to New Zealand is estimated at £2,000,000, or about \$10,000,000 per annum.

Upward of 44,000 pounds of dressed poultry, acknowledged to have been in cold storage for six or seven years, was recently condemned and confiscated by the Board of Health of Philadelphia, Pa. The poultry was declared unfit for food and was sent to the fertilizing plants.

Much interest in poultry culture has been awakened in Southeast Texas through the work of the poultry department of the Santa Fe experimental station near Lumberton. The department is in charge of a capable and experienced poultryman, who is seeking to overcome difficulties in poultry raising in that section of the state and

thus point the way to greater profits.

J. C. Bergen, of Livermore, Iowa, has purchased a large tract of land near Helena, Mont., and will engage extensively in the poultry business. He is a practical poultryman and believes the Northwest is a good field for a large poultry farm.

J. Krull, of Fort Worth, Texas, has some chickens that have black flesh all the way through. He killed one recently and made the discovery, even the bird's breast being black. Two others were killed and their flesh was also black. They apparently are healthy and do not seem to be diseased in any way. Who can explain it?

A Cochin Bantam hen owned by Miss Emma Chandler, of Coatesville, Pa., has for some time been laying eggs with a perfect initial "C" upon them. The hen is a Madison Square Garden winner and will be shown in New York again the coming winter.

A meeting of the recently organized Southern Poultry and Egg Shippers'

# The Poultry House For You

This Essex-Model Year-'Round Poultry House is just the thing for a choice pen of breeders or layers. If you are just starting and have only a suburban lot, one or more of them will be more satisfactory, and cheaper, too, than a carpenter-built one.

**From Canada—North,  
to Argentine—South**

It meets all conditions of all seasons—**Spring, Summer, Fall**

and **Winter**—Everywhere and is recognized as the best

## Year-'Round Colony Poultry House

This is the House recently ordered by Argentine Republic to equip the whole of their Government Poultry Farm. **THE PRICE, THE SIZE, THE DESIGN** are **PRACTICAL FEATURES** that caused that Government to order 100 Essex-Model Houses

**In Competition with the Whole World**

Size 5x6 feet; 6 feet high in front; 4½ feet at back; equipped with roosts and roost supports, floor and runners.

**Prices \$17.00 to \$21.00. With or without floor and nests.**

## Essex-Model Incubators and Brooders

**America's Largest Line—\$2.25 to \$48.00**

Essex-Model Incubators are the only true Moisture-Conserving, Self-Ventilating machines made. The Essex-Model (Patented) Thermostat used gives a positive and accurate regulation of the heat.

Essex-Model Brooders and Hovers raise chicks with less labor and more successfully, because they are Practical, and Mother the Chick Better Than the Hen.

## Essex-Model Mammoth Sectional Incubator

Made in all sizes 1100 eggs and upwards

If you intend installing a Mammoth machine, write us as to your requirements.

## Essex-Model Supplies are Superior

Prepare for Cold Weather by buying now your Food Hoppers, Shell and Grit Boxes, Fountains and Feeders.

Get **Essex-Model Remedies**—Roup Cure, Disinfectant, Lice Spray, etc. Essex-Model Remedy Case of 10 Remedies (Price \$2.00 Postpaid) will enable you to prevent and cure **Winter Diseases**.

**QUIC-MOLT** makes Hens moult quickly and young stock feather fast. Used in the mash—5 lb. package—enough for 50 hens for one month—**\$1.30 Postpaid.**

87 Barclay St., New York City

ROBERT ESSEX

Association will be held in Nashville, Tenn., in October. The purpose of the association is to improve the quality of poultry and eggs in the South and to increase production. Efforts are also to be made to induce the United States Department of Agriculture to reestablish the laboratory for research into the poultry and egg industry in Nashville. This laboratory was removed to Missouri several months ago. Its removal is regarded as a great loss to the poultry interests of Tennessee and near-by states.

A modern poultry plant has been established at the federal prison at Atlanta, Ga. It is conducted by the prisoners and is for their exclusive benefit. It is fully equipped with modern conveniences and devices and is proving a success. All the breeding birds are from fancy stock, most of them having been donated by poultrymen, the state furnishing the equipment.

W. H. Rhodes, of Macoupin, Ill., who has had long experience in both general farming and poultry farming, says there is more money in the poultry and the work is much easier. He will give up general farming and give his entire time to his poultry.

O. D. Foulks, of Selbyville, Del., caught a young bald eagle in his poultry yard one day recently. The eagle had just caught a chicken when Mr. Foulks grabbed it and after a fierce struggle got it into a cage.

Reports from the American Association of Warehousemen indicate that there is a shortage of some 400,000 cases of eggs as compared with conditions of a year ago. This means that winter eggs will command a good price.

Over in England they are conducting some ingenious experiments as to the effect of electricity upon the growth and development of young poultry. In South England, on the largest poultry farm in the world, an experiment of this nature has just been completed, and it is claimed that the birds treated electrically developed twice as fast as those not so treated. Further experiments and investigation will be made.

A new Wisconsin law provides that each incorporated poultry association in the state that has held at least one annual exhibition will receive annually from the state a sum equal to 80 per cent of the amount of cash prizes offered at its annual exhibition each year, not to exceed \$200. A statement must be filed with the Secretary of State on or before the first day of April of each year.

Charles M. Schwab, the millionaire steel maker, is having a \$15,000 chicken house erected at his country estate at Loretto, near Altoona, Pa., and will engage in the poultry business on a large scale the coming fall. The building will be of brick and concrete, heated by steam, lighted with electricity and equipped with electric incubators. Stock for the plant is being purchased by a commissioner for Mr. Schwab, and his instructions are to "get hens that will lay."

Patrolman John Thelan, of St. Paul, Minn., has hatched a chick with four perfectly formed legs.

# Associations and Shows

Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department

## White Rocks.

A meeting of White Rock breeders was held at the Syracuse State Fair. Every breeder present believed that something should be done to bring the White Rock Club into effectiveness. It was voted to hold a reorganization meeting at the Palace Show, New York City, December 3, at 4 p. m.

It is the desire to have all breeders present and to hold a big exhibit of White Rocks at this show.

The Club will offer 4 silver cups and the Palace will put up some cash. This is a get-together meeting to help White Rocks. Will you do your part? Attend the meeting and show at least one bird. Write C. W. Whitney for further particulars.

## Blue Andalusians.

E. D. Bird, of Greenwich, Conn., desires to call attention to Blue Andalusian breeders to the need of a good strong club to push this breed to greater popularity. Mr. Bird has called a meeting to be held at the Palace Show, Dec. 4, at 11 a. m., to make plans. He desires that all breeders attend and to assist in the work; requests that they also be represented in the classes at the show. He has collected some cash for specials, and is now trying to get a specialty judge to take the class. Write E. D. Bird, Greenwich, Conn.

## Third Annual Championship Show.

The Third Annual Exposition Show will be held the week of January 19th to 24th, 1914. This is really a championship show because it is the last of the big shows. This year the management, besides their already most liberal cash prizes, will give a handsome cash prize for best display and handsome cups for championship male and championship female, in most of the classes.

With the largest floor space of any exposition building in the United States, with perfect heat and light, the prospects for the Third Annual Exposition Show are that it will be one of the really great shows in the United States this year. They have already procured the annual meetings of the following specialty clubs: Black Minorca Club, National Single Comb Black Orpington Club, National Single Comb Buff Orpington Club, Anacona Club.

They anticipate several other annual meetings which have not yet been decided by the members.

The following judges have been engaged: W. S. Russell, W. C. Pierce, A. Fred Kummer, D. W. Young, Fred H. Cook, A. H. Emch, C. D. Cleveland, L. Rawnsley, G. W. Webb, Theo. Hewes, Marcus Allen Northup, A. J. Edwards, M. F. Baldwin.

If you show at all you cannot afford to miss this GREAT SHOW—THE BEST BIRD WILL WIN.

Permanent headquarters, 303 Empire Bldg., Pittsburgh, Pa.

## The Ridgway, Pa., Show.

The Elk County Poultry and Pet-Stock Association will hold their annual exhibition at Ridgway, Pa., November 18th to 21st, 1913. This is the first great early show in western Pennsylvania and from the record made in the past we look to this exhibition as a leader in both size and quality. Their last show was one of unquestioned quality in every class and located as they are in the midst of a wonderful section where Standard bred poultry of all varieties are bred by men of national reputation as breeders, is conclusive that it takes the best to win at Ridgway and that their honors are awards of merit.

We were really surprised to see at their last show such magnificent classes of

Rocks, Leghorns, Houdans, Orpingtons, Wyandottes, etc. In the Houdans alone there were over 100 birds shown, and birds that later won at New York, Philadelphia, Pittsburgh, and other shows of similar class. This is an early show and just the place to exhibit and to try out your birds for the later shows to come.

They have an elegant show hall with the best of light and cooping, and dyed-in-the-wool fanciers to take care of the birds. The officers and members of this association we have congratulated before, for we have never seen a cleaner show or one at which the birds had better care than at the late Ridgway exhibition.

This year as a feature they are planning to have Mr. Theo. Wittman with them for two days of the show to give free lectures on the breeding and care of poultry, so let me urge all that can to attend this show and to exhibit there and

help to pack the house for Wittman, who surely will tell you things you ought to know.—H. P. Schwab.

## Wilkes Barre, Pa., Show.

The Third Annual Show, which will be from January 19th to 24th, 1914, promises to be the best ever held in this vicinity. Hampton Hall, an up-to-date building, splendidly equipped for the comfort of both visitors and birds, has been rented. Spratt's will coop and feed the show, and first class judges will be engaged. The officers and members of the Wilkes Barre Poultry Association are determined to put this show in the front rank, and poultry fanciers who know the Wilkes Barre breeders are well aware of what they can do. Make a note to include this city in your exhibiting list and send in your name to E. B. Harris, secretary, who will

Will YOUR Roof stand this test?

If burning embers fell on your roof from an adjoining fire, would you be alarmed for the safety of your building?

Statistics show that thousands of buildings are needlessly burned every year—because they are roofed with inflammable materials, easily ignited by sparks and brands. Safeguard your buildings against this dreaded fire-hazard by covering them with

## J-M Asbestos Roofing

This is the only ready roofing that affords perfect fire protection. It has withstood the flame of a powerful blow-torch for almost an hour without a sign of burning. The wonderful fire-resisting quality of J-M Asbestos Roofing is due to its all mineral construction—layers of Asbestos felt (fire-proof rock), cemented together with Trinidad Lake Asphalt, Nature's time-defying waterproofing.

The absence of perishable animal and vegetable substances also means that J-M Asbestos Roofing contains nothing to rot, melt, dry out crack or rust. Hence, it never needs coating or protection of any form. Its first cost is the last cost. It is the cheapest-per-year roofing on the market.

Adapted to any type of building—in any climate. Easily applied. J-M Roofing Cleats, packed in each roll, make absolutely watertight seams and give the entire roof a handsome white appearance.

Order from our nearest branch if your hardware or lumber dealer can't supply you. Write our nearest Branch today for a sample of the curious Asbestos Rock that forms the base of this roofing and Book No. 2826

### Louisiana State Fair Exhibit Contest Open to the World—Many Premiums.

With accommodations for 2,500 birds and numerous other inducements, including \$1,000 offered in cash premiums for the winning exhibits, this year's poultry display at the Louisiana State Fair promises to eclipse all previous records in this division. The contests are open to the world and hundreds of full-blooded fowls from out of the state are expected, as well as many from inside Louisiana, where in recent years great interest has

been stirred up as a result of the State Fair exhibitions.

In addition to a large quantity of equipment placed in the poultry building last year, the management this year has bought 500 new Empire coops, so as to be in position to fully accommodate every exhibit. The building is large and spacious, with an abundance of ventilation and light. Electricity is used for the illumination in the evenings and on cloudy days. The windows are screened and various other improvements have been made with a view of giving comfort and convenience.

Besides the regular State Fair premiums and ribbons, there will be a number of trophies awarded by the American Poultry Association. The fair at Shreveport has been designated the official A. P. A.

show this year, which accounts for these "specials."

The judging will be done by O. L. McCord, of Danville, Ill. Sam M. Watson will again be superintendent of the poultry division. He has held the position ever since the fair began.

Don't forget the dates of the 1913 fair—Nov. 5-12, inclusive, giving eight days. Don't hesitate to write to Secretary L. N. Brueggerhoff for free catalogue and premium list.

Other judges will be added later.

### National Fanciers' Club Show.

The National Fanciers' Club Show will hold its third annual show at Indianapolis in Tomlinson Hall, January 10 to 16, 1914. Entries will close December 30, 1913. Premium lists will be ready early in December, and Henry C. Dippel, secretary, will enter all the names sent him for a copy of the list. A complete list of the judges is not yet selected, but among those already chosen are O. L. McCord, Chas. V. Keeler, F. E. Harrison, and Louis Demberger. For any additional information address Henry C. Dippel, Indianapolis, Ind.

### Norfolk, Va., Show.

Officers of the Tidewater Poultry Association report a large spread of interest in the coming show to be held January 6-9, 1914, at Norfolk, Va. A record-breaking entry, also attendance, is expected, as we had the largest show in Virginia last year and we hope to double the entries as well as the attendance for the coming show. With the large list of prizes, such as cash, cups and specials, to be given, and such noted judges as Chas. Nixon and Fred Huyler to place them, you can not afford to miss this show. Premium lists can be had by addressing Paul W. Kear, P. O. B. 1114, Norfolk, Va.

### Augusta, Ga., Show.

The Fourteenth Annual Exhibition of the Augusta Poultry Association will be held in connection with the Georgia-Carolina Fair, Augusta, Ga., November 7 to 14, 1913.

The Augusta Poultry Association guarantees the delivery of all prizes named in Premium Book, whether donated by individuals or offered by the association.

The Augusta Poultry Association has given, and will continue to give, the handsomest ribbons and cups of any association in the country.

The building in which our exhibitions are held was erected under our special direction and contains approximately 20,000 square feet of floor space; all well lighted and perfectly ventilated, and under the very best sanitary conditions, entirely eliminating all offensive odors, which fact attracts the admiration of all visitors. All our exhibitions are classified and uniformly cooped, Empire Exhibition Coops being used, each specimen cooped singly.

We stand on our past record and reputation for honorable dealing. We fulfill our promises. Our references are the

## Grain Sprouters at Bargain Prices

Here's your chance to get the famous Reliance Grain Sprouter at the lowest price ever quoted on efficient, dependable machines. No one can meet our low price because while other machines are manufactured in small lots, we build the Reliance by thousands and in building them by thousands we can afford to sell way below the standard price. The Reliance comes in many sizes—to feed a few hens up to hundreds. Write for literature and bargain prices.

## Reliance Grain Sprouter

Double Walls  
Heavy Insulation  
Galvanized

is what the Reliance will do for you. Figure it up for yourself. Count the egg money doubled, the feed bill cut in half, the healthier and plumper chicks that bring better market prices. Then count the saving in cost of the Reliance and you can easily see the big money a Reliance will make and save for you. Thousands of these low-priced grain sprouters are in use on the most successful poultry farms in America, on country farms, in city suburbs. Don't put it off any longer, but get one for yourself.

Write us today and learn what a really low price we place upon the Reliance. Facts and literature FREE.

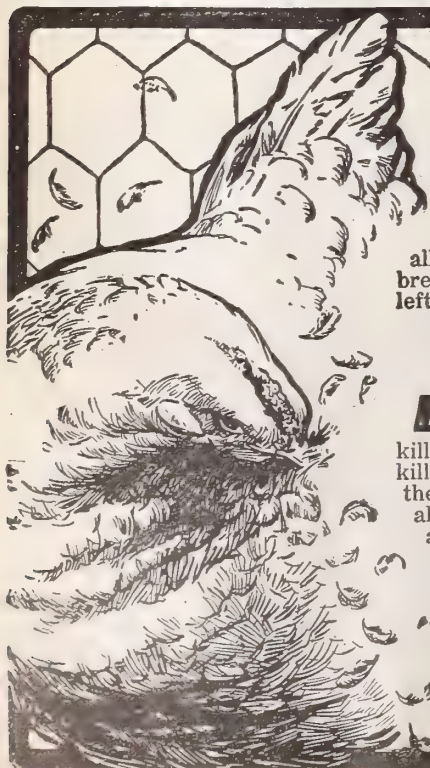

## Lice Prevent Hens Laying

Hens that are pestered with lice can't lay eggs as regularly as they should; they expend their energy pecking and clawing themselves to allay the itch. And don't forget this—lice breed terribly fast, and the longer they are left alone the harder it is to get rid of them.

## DR. HESS INSTANT LOUSE KILLER

kills lice on poultry and farm stock. It kills them *instantly*—as soon as it gets to them—that's why it's called *Instant*. It also destroys bugs on cucumber, squash and melon vines, cabbage worms, slugs on rose bushes, etc. See the name "Instant" on the can—that's the louse killer formulated by Dr. Hess (M.D., D.V.S.). Sifting-top cans. 1 lb. 25c; 3 lbs. 60c. Except in Canada and the far West. If not at your dealer's, write

DR. HESS & CLARK, Ashland, Ohio

judges and exhibitors at all our previous shows.

Show room ready for the reception of birds November 5th.

Premium list ready for mailing September 15th, 1913, will contain list of officers, judges and superintendent who have been selected for their well-known ability and reputation.

W. C. CLECKLEY, President.

R. S. GUESS, Secretary.

### Peoria, Ill., Show.

There is every indication that the show to be given under the auspices of the Peoria Poultry and Fanciers' Association, December, 2, 3, 4, 5 and 6, will be the biggest thing ever attempted. Present plans promise far greater results than any previous effort on the part of the organization.

The Coliseum, where the show will take place, is the largest building of its kind in the central west. The thousands of people who have visited this spacious place in the past know the advantages offered in it, and therefore from the start the show will be well "housed."

The comparison judging will be a feature, and this alone will attract and hold the attention of those taking part in the exhibition. Mr. O. L. McCord, of Danville, and Mr. D. E. Hale, of Chicago, will officiate as judges.

Fully fifteen hundred birds will render a quality show hard to excel, and the large number of cups to be offered should furnish an additional incentive. As a special item, indicating the extent of the Peoria show, it is needless to say, from 75 to 100 cups will be given. The entry fee will be \$1.00.

If you want any further information drop a letter to President G. W. Trunk, R. R. No. 35, Peoria, or Secretary James T. Cunningham, 1224 Maywood avenue, Peoria. Either will answer promptly all inquiries.

### Cleveland Poultry Show.

The Cleveland Poultry Breeders' Association will give their second annual exclusive poultry show in the spacious Grays Armory, Cleveland, O., Jan. 5th to 11th, 1914. This association is or consists of 20 members of Cleveland's most enthusiastic fanciers, each and every member belonging to The American Poultry Association, and consists of well known fanciers, such as J. O. Somers, president, Mr. A. E. Rehburg, secretary, Mr. J. H. Busch, superintendent, and the balance of the members, are well known business men, who have always for years, had a warm place in their hearts for pure bred poultry, and the object of this club is to devote their personal time and attention to promote more breeding and better poultry in the great state of Ohio, and all fanciers are respectfully invited to exhibit at this, Cleveland's greatest poultry exhibition. Premium list will be mailed to all breeders who write A. E. Rehburg, secretary, 2040 West 25th St., Cleveland, Ohio.

### Judges for the Chicago Coliseum Show.

Mr. Ralph Whitney, the well known and popular fancier of Rochester, Minn., has been added to the list of judges for the Great Coliseum Show. This completes the list for 1913 and enables us to give the breeders a line on the judges and the important classes they will pass upon.

W. S. Russell, Barred Rocks; D. E. Hale, White and Buff Rocks and Buff Wyandottes; W. C. Pierce, Golden, Silver, Silver Penciled and Columbian Wyandottes, Columbian and Silver Penciled Rocks; Ralph Whitney, White Wyandottes and all Minorcas; James A. Tucker, all Reds, Cornish and Houdans; H. B. Hark, Partridge Rocks and Partridge Wyandottes; O. L. McCord, White Orpingtons, Buff Orpington hens, cocks and pullets; G. E. Greenwood, Black and Blue Orpingtons, Buff Orpington cockerels and hens; T. J. Rountree, Hamburgs, Polish, Sussex, Red Orpingtons, all Dorkings, all Cochins; A. C. Smith, all Leghorns; F. L. Sewell, Black and White Langshans; H. A. Pickett, all Water Fowls, all Turkeys, all Brahmas, Rhode Island Whites and Buckeyes; A. O. Schilling, all Bantams, all Campines.

In Barred Rocks and Rose and Single Comb Brown Leghorns there will be eleven classes, as follows: Exhibition cocks, hens, cockerels, pullets and pens; pullet bred cocks, cockerels and pens; cockerel bred hens, pullets and pens.

In all other breeds and varieties there will be six classes: Exhibition cocks,

hens, cockerels, pullets, pen old and pen young.

Please note this change: Pens in all classes, except Barred Rocks and Brown Leghorns, will show all old and all young birds—mixed pens debarred. We believe the breeders of all varieties will welcome this change. Premiums will be paid on both old and young pens and they will be so listed in the catalog. Premium List ready November 1st, entries close November 25th; show dates December 12-17, inclusive. All exhibitors at the 1912 show will receive premium list without request; all others should have their names enrolled at once. Should list fail to reach any old exhibitor or prospective exhibitor that has asked for list, by November 5th, drop a line to the secretary so that a duplicate copy may be mailed.

For further information write to Theo. Hewes, Secretary, Indianapolis, Ind. Street address of secretary not necessary, Indianapolis is sufficient.

### Freeport, Ill., Poultry Show.

The Freeport Poultry and Pet Stock Association will hold their annual exhibition in the Odd Fellows' Temple from the 15th to the 20th of December, 1913. Many valuable cups, cash prizes, specials, ribbons, etc., will be awarded. They have secured as judge, Geo. Heyl of Washington, Ill. They will have uniform cooping, coops will be furnished by the association. The fanciers of Freeport are working hard to make this one of the best shows in the state and to be able to win a first will mean that the exhibitor

## The 3 GREAT EGG MAKERS THAT PAY FOR THEMSELVES IN A YEAR.

### CROWN BONE CUTTER \$6.50

Has hardened steel knives. Price, like picture, \$8.50; for bolting to table, \$6.50. For larger sizes see our Book

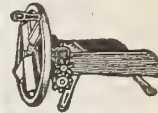

Unless fed plenty of FRESHLY CUT GREEN BONE, with the meat and gristle still sticking to the bones as you get them sweet from the butcher, and CUT CLOVER, hens can't lay as many eggs as they should. The bone must be freshly cut or it's tainted, and spoils the eggs, and often poisons hens. Clover must be cut into short lengths, or most of it is wasted, and what is eaten is fibry and often clogs the crop. If you don't give hens lots of ground SHELL and GRIT they can't digest properly nor get out of food what they must have to make eggs.

Don't depend on buying cut bone because you can't get it fresh, and dry bone and meat scrap are poor substitutes. The only satisfactory and profitable way is to own these three splendid machines. They're not expensive, are easy running, not complicated, and built to last a life-time.

### GEM CLOVER \$9 CUTTER

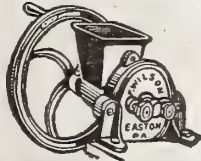

Cuts green or dry clover even and easy. Screw feed & adjustable cutter bar. Blades always square to bar. Price, like picture \$9; high legs, \$10.

## WILSON BROS. BONE CUTTERS, CLOVER CUTTERS & GRINDING MILLS

### GRINDING MILL \$5

Best hand mill for grinding easily, quickly, Dry Bones, Shells, Grit, Charcoal, Corn, Wheat, etc. Price with Stand, \$7; like picture \$5. Larger sizes, hand and power.

WRITE FOR FREE BOOK

### DON'T KEEP HENS UNLESS YOU CAN OWN THESE MACHINES

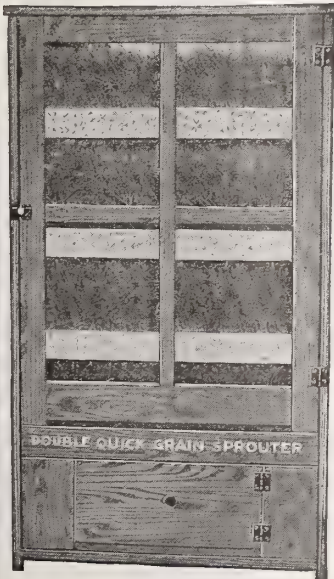

They won't pay you well enough for eggs or table. Keep a record of results and you'll soon prove that these machines will pay for themselves in a year.

Handled by nearly all dealers and hardware stores, or shipped direct. Write for our prices on all sizes—hand and power.

Do your neighbor's cutting and make money. We also make the CORNING FEED MIXER, the best mash and grain mixer in the world. Every Wilson machine is absolutely guaranteed. Write to-day for FREE BOOK & Price List.

WILSON BROS. DEPT. F 25 EASTON, PA.

## DOUBLE QUICK GRAIN SPROUTER THE PERPETUAL POULTRY SILO

Shows Oat Sprouts 8 Inches High

of 2 inches daily. Made in six sizes from a few hens to 1000. Send for complete Double Quick information.

CLOSE-TO-NATURE CO.

This is the fourth season that readers have seen in the poultry papers the following very familiar line:—

### SPROUTED OATS — WINTER EGGS

and several thousand poultry keepers have immensely increased their egg yield by the use of the well known Double Quick Grain Sprouter—the original—the first—the oldest sprouter and made in the Largest Grain Sprouter Factory in the World. We have supplied many of the large and well known poultry plants in the United States, some having ordered as many as three to five sprouter after testing out their value.

Later—April 27—I am enclosing my check for two more of your No. 5 Double Quick Sprouters. The one I bought some weeks since is doing good work.—C. H. Latham, Beauty and Utility Barred Rocks, Lancaster, Mass.

October 7, 1912—On September 16th I ordered your No. 5 Double Quick Sprouter sent to Maud L. Kaler, Columbia City, Ind., and this one is proving so satisfactory that she wants another of the same size and therefore you will find draft in payment of this second sprouter.—Milo R. Meredith, Indianapolis, Ind.

September 14, 1912—I ordered and received from you last fall one of your 5-tray grain sprouters. This works very satisfactorily. I want one for 1,500 hens. Will you kindly advise me by return mail if you make a larger size and the price of same. Later—September 23—I enclose you my check for which please ship me rush one of your No. 6 Grain Sprouters.—E. A. Palmer, Providence, R. I.

Soon pays for itself. Makes two to four bushels of feed from one of grain. Sprouts in 24 hours and forces growth.

38 Front Street

COLFAX, IOWA

has good stock. For information, premium list, etc., write to Paul Wurtzel, Secy., Freeport, Ill.

### At Streator, Ill.

The Northern District of Illinois Fair, held at Streator, Sept. 8-13, inclusive, staged one of the neatest and best poultry shows it has been our pleasure to handle at this season of the year. The classes were well filled and the competition lively, while a spirit of general good-fellowship prevailed at all times. Single Comb Rhode Island Reds were out in good numbers and comprised the largest exhibit. The quality was good. Most of the awards going to F. E. Gopen, of Lостant, Ill., whose beaming smile could almost be heard every time an award "fell his way." His awards were 1st cock, 1st and 2d cockerels, 1st pullet, 2d hen and 1st and 2d pens. First cock was in a class by himself, showing good type and color, but not shown in good

condition. First and second cockerels were both promising youngsters, showing rich, lustrous color throughout, but undeveloped. Second hen was shown in good condition, but a little short in type, so had to take second to a hen exhibited by Frank Betzler, of Roscoe, Ohio. F. E. Jones, of Streator, exhibited some Buff Orpingtons that were the class of the show, winning second cock on a bird not half through the moult, but showing good Orpington type and splendid color. His first prize hen was a grand, good bird, except in comb, while the first pullet should be introduced to stronger competition; she was alone in her class.

R. H. Smith, of Streator, was also well represented in Orpington alley by a bunch of youngsters that took the short end of the money, only on account of being undeveloped. His second cockerel was a classy bird, but just in the awkward stage of development; second pullet was a little beauty and will doubtless be heard from later.

Ames & McAllister, of the Chautauqua

Poultry Farm, of Streator, were the whole thing in the White Wyandotte alley, making practically a clean sweep in the awards, with a class of birds that showed quality all the way.

Frank Retzler, of Roscoe, Ohio, exhibited 450 head of land and water fowls, comprising 115 varieties and containing many specimens of splendid quality, also many rare specimens seldom seen at the smaller shows.

The rabbit and pigeon displays were the center of attraction for the children, while the exhibit of the State Game Farm was of interest to all. This exhibit was in a wire enclosure near the office of the secretary and was the first thing to attract the visitor on entering the gates, and last but not least, our good friend John Brinkman was there dispensing relief to afflicted poultry in the form of "Licene" and infusing a spirit of good cheer to all about him.

We reluctantly said good-bye to the Streator boys and hope we may in the near future have the pleasure of renewing their acquaintance. J. C. Johnston.

### Menard County Fair.

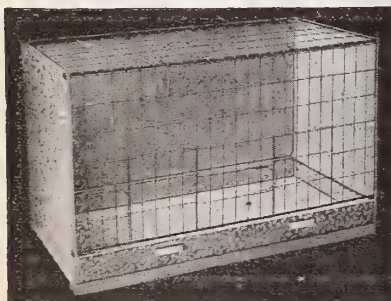

The poultry exhibit at the Menard County Fair, while not large, brought out some quality in nearly all the leading varieties. White Wyandottes, White Rocks and Single Combed Reds were the leading classes, while the Bantam exhibit was the feature of the show. Petersburg is a hotbed of Bantam breeders and the quality of the stock bred is second to none.

O. A. Carman, of Petersburg, was there as usual with a large exhibit of White Wyandottes, winning all first and second premiums, also the trophy cup given by the association for the best display, all varieties competing. Mr. Carman is getting the trophy cup habit, which may cause trouble for some other ambitious Wyandotte breeders in the future. H. E. Taylor, of Petersburg, was well represented in White Rock alley. Harry has the reputation in this locality of being one of the "gamiest" losers in the business, but he had no chance to show his gameness here, as everything came his way. Klingbeil Bros. exhibited a splendid line of Bantams, winning nearly all awards in Games and dividing honors with H. T. Carman and others in the Ornamental classes. Hogden & Golden cleaned up the White Leghorn alley so thoroughly that there was not many ribbons left for the other fellows. Taking the exhibit as a whole, it was good and speaks well for the fanciers of Menard county.

The Annual Poultry Show of the DeWitt County Poultry & Pet Stock Association will be held at Cuero, Tex., Nov. 18 to 22nd, during the four days of the Cuero Turkey Trot Carnival. A feature of this show will be the great street parade of twenty thousand live turkeys. These birds marching (or trotting) the streets like regiments of soldiers present a novel and interesting sight worth coming miles to see. The chickens and pigeons will be uniformly cooped in the Empire Coops recently purchased by the association and will be judged by the score card method by a leading Texas poultry judge. Liberal cash and many special premiums will be awarded. Premium list mailed upon request. Governor Colquitt will open the show and will review the parade of twenty thousand turkeys. L. W. Coit, secretary.

The Michigan State Poultry Fanciers' Association will hold their first annual show February 10 to 15, 1914. Comparison judging, with James A. Tucker, George M. Wells and F. E. Harrison, placing the ribbons. Entry fee—single specimens \$1.00 and pens \$3.00. This will be Michigan's great round-up show, and it will, undoubtedly, be one of the largest shows ever held in the state. Turner Hall has been secured for these dates. The directors are putting forth a special effort to make this show a great success. Liberal prizes will be given and all premiums will be paid before the show closes. Any further information will be gladly given by addressing the secretary, W. A. Haines, Menominee, Mich.

The Mansfield Poultry, Pigeon & Pet Stock Association, Inc., will hold its second annual poultry show Nov. 26, 27, 28 and 29 in the Town Hall. There will be special prizes and ribbons. The Partridge Plymouth Rock Club offers to its members a bronze medal for the best bird and ribbons. Judge Lambert of the Rhode Island State College will judge the birds. Faye Howe, secretary, 56 Draper Ave., Mansfield, Mass.

## GET READY

Buy coops now for county and state fairs. We make training and exhibition coops, brood, setting and colony coops, fireless brooders, portable hen houses, traps, portable fences and runways, collapsible show coops to coop poultry shows, etc. We will be at the state fair, Springfield, Illinois, under a large tent south of the Dome Bldg., next to the covered walk on lot 90 don't fail to see us there. Write now for catalogue, it is free. Address

Niemann Bros. Mfg. Co., Box 677, Mt. Olive, Ill.

Many Other Uses and Directions on Large Sifter Can—10c

DON'T BE WITHOUT IT

The Dover Poultry Pigeon and Pet Stock Association will hold their annual show as usual Thanksgiving week, November 24-29. The Outlook for this year is better than ever, many inquiries coming in for premium lists. Anticipating the largest exhibition ever held in Dover, N. J., the show room is being enlarged to accommodate a thousand more birds. There will be special attractions this year that will be of interest to the many visitors. Many cups, specials and cash awards will be given to the winners. Those who have exhibited in the past know the reputation of the Dover Association, and if those who have not will send in their entries they will be accorded the best of attention whether they can attend or not. Get in line with us this year. Entries close November 16th. Carroll H. Hoagland, secretary. Ledgerwood, N. J.

E. Lisle Keesling, of San Jose, Cal., is making up an exhibit in California to send to the Palace Show in New York City in December. Mr. Keesling is a bantam man, and it was his intention to make the display of bantams alone. However, several breeders of large fowl thought it would be a good plan and have decided to join him. Anyone in California that desires to ship birds with this

collection can do so, and save express charges. Mr. Keesling is planning to send in light coops, and altogether to save the heavy express charges of a single entry. Mr. Keesling is to have real California birds entered, and is not interested in birds purchased in the east to be sent west after the show.

The Kansas City Poultry Show, of Kansas City, Mo., will be held Dec. 1-6, 1913, in the Convention Hall, with V. O. Hobbs, T. W. Southard, E. W. Rankin, J. W. Southmayd, Ralph H. Searle, Tom H. Woods and L. H. Wible as judges. The following are the officers of this association, which insures a large entry and square treatment to everybody: President, W. W. Graves, Judge of Missouri Supreme Court; 1st vice-president, Reese V. Hicks, editor of Poultry Culture; 2nd vice-president, T. E. Quisenberry, director of Missouri Experiment Station; 3rd vice-president, T. W. Southard, dealer in poultry supplies; E. L. Noyes, secretary.

The Hudson County Poultry-Pigeon, Pet Stock Association are making arrangements to have one of the largest poultry shows ever held in the State of New Jersey. They have a large assortment of Silver cups and other prizes to offer to make the show attractive and

have engaged Columbia Hall of Greenville, Jersey City, for the 12, 13, 14, 15, of November, 1913, where everything in the line of poultry, pet stock, also incubators and supplies will be shown. James Eagan, secretary show committee.

The Connecticut Valley Poultry Association, Bellows Falls, Vt., are planning their fourth annual exhibition Dec. 2-3-4, 1913, and have secured as judges, Brundage, Ives and Beebe. The state appropriated \$500.00 to be divided between the associations of the state on certain condition so we should be in a position this year to offer extra cash special, in addition to the large number regularly offered. G. S. Buxton, secretary.

The date of the 3rd annual show of the Newton County Poultry Association is January 8 to 13, 1914, to be held at Morroco, Ind. Judges, Carl J. Carter, all Orpingtons, H. A. Pickett, all other varieties. A. M. Robertson, secretary. We are arranging for a show of 1,000 birds and will offer liberal premiums.

The Savannah Poultry Association will hold its third annual exhibition Dec. 8-13, 1913, inclusive. Officers: president, A. B. Moore; secretary, O. J. Metcalf. Judges will be selected later.

## Heating Outfits

### Dependable HOT WATER PLANTS

We have the very best Hot Water Heating Plants manufactured. There are no half-way methods employed in the manufacture of these outfits—they are carefully made of the finest selected material throughout, all fittings brand new; valves solid brass, heavily nickel plated; brand new pipe; radiators and boilers of latest design and most approved construction. Every plant is a tried and proven success and is sold under our guarantee bond which is backed up by our entire capital and high business standing.

No Previous Experience Necessary to Install One of These Plants

That's where a big part of your saving comes in—you can install the plant yourself! Our wonderful service system makes this possible. Most of our customers install their own heating plants. No reason why you cannot do the same and by cutting out the plumber's profit, easily save half on your purchase. We furnish all necessary information and supply tools.

We have ever experienced. Therefore for the next 60 days we have decided to make the most startling offer ever known in the history of the heating business. Our offer is this: Send us a rough sketch of any building in which you are thinking of installing a heating plant and we will furnish you an estimate of its cost. We positively guarantee that our estimate will mean an absolute saving of at least 25% below what you can buy a similar plant for elsewhere. In addition thereto we will prepay the freight to your shipping point, that is, provided we hear from you at once so that we can arrange our offer giving you an opportunity to take advantage of it within 60 days.

**\$93.00 FOR ABSOLUTELY COMPLETE PLANT FOR EIGHT ROOM HOUSE SHOWN**

This complete modern Hot Air Equipment, includes all necessary pipe, stacks, wall and floor registers and furnace, in fact everything to complete the installation of a Hot Air Furnace in this modern house in a first-class workman-like manner. Supplied with our No. 22 Economy Hot Air Furnace. Complete with double lined casing, pitched top bonnet, all necessary trimmings, including water pan, etc., sent you for \$93 all freight charges prepaid to points as follows: Ill., Ind., Ohio, Southern part of Mich. and Wis. and Eastern part of Iowa. Special prepaid prices to any points outside of the above territory. We can also furnish this house with complete Hot Water Heating Plant for \$235.00. Before you install any kind of a heating plant be sure to write us. We will save you money.

**FREE Heating Information Book**

**Free Heating Information Book**  
Wonderful Bargains in Heating Plants  
Here's a book you should read before you install any kind of heating plant. Contains more valuable information than any other book published. Tells how to install your own heating plant—adapted for different kinds and sizes of buildings and WHY it is best. From this you can readily determine what kind is best adapted for YOUR home or buildings. Gives cost of complete installation of any kind of plant for any size building. Tells how to install your own heating plant—how thousands of others with no previous experience have done so and saved plumbers' charges. PROVES that we save you 30% to 50% on any kind of heating apparatus you may need. Write today for free copy of this wonderful book.

## Extraordinary

**FREIGHT PAID OFFER**  
**ALL CHARGES PAID BY US**

### Why We Make This Great Offer!

We are determined that this season shall show the largest increase in our Heating Outfits Department we have ever experienced. Therefore for the next 60 days we have decided to make the most startling offer ever known in the history of the heating business. Our offer is this: Send us a rough sketch of any building in which you are thinking of installing a heating plant and we will furnish you an estimate of its cost. We positively guarantee that our estimate will mean an absolute saving of at least 25% below what you can buy a similar plant for elsewhere. In addition thereto we will prepay the freight to your shipping point, that is, provided we hear from you at once so that we can arrange our offer giving you an opportunity to take advantage of it within 60 days.

**\$70.00 BUYS COMPLETE HOT AIR PLANT FOR THIS LARGE**

**IN SIX ROOM HOUSE**

**BATHROOM OUTFITS**  
at Freight Prepaid Prices  
Here is a modern, sanitary A-1, brand new, up-to-date Bathroom Outfit, consisting of a sanitary, modern, roll rim, white enameled bath tub, a high-class lavatory and an up-to-date, low down closet combination, all equipped with the latest style trimmings and fittings—an outfit good enough for the palace of a king; absolutely guaranteed "A" grade.

We furnish all necessary connections from floor up; for next 60 days, we furnish this outfit, our "Royal" 5-BG-73, freight prepaid to any point within a radius of 300 miles from Chicago, for \$62.50. We supply all necessary information so you can install outfit yourself.

**The Chicago House Wrecking Co.**

prominently known for 20 years as the great "Price Wreckers" is now being operated under the name of Harris Brothers Company. There is no change in our policy, or in our business methods—we promise the same careful attention to your wants, and the same remarkably low prices as heretofore. Every article offered in this advertisement is sold under a guarantee so broad and binding that you cannot go wrong—your money back if you are not satisfied. Our references: Any bank, any express company, the publisher of this or any other paper.

## Prices B-U-S-T-E-D

### Best Heating and Ventilating Hot Air Furnaces

For a nice, even system of heating, at a moderate price, nothing excels a hot air plant. The first cost is but a trifle, and it can be installed by any man handy with the use of a tool. In point of economy, durability, material and workmanship these furnaces are without a peer. Burn hard or soft coal or coke. They represent the top notch of furnace construction throughout.

Distance Makes No Difference

We furnish all necessary information so that no previous experience is necessary in order to install one of these plants. All we want is a sketch of the building you have to heat, and a general idea as to the construction. No matter where you live, we will give you the benefit of our expert advice; 20 years in the heating business has made us familiar with every phase of the heating business and you will find our suggestions most valuable. Write us today.

**\$70.00 BUYS COMPLETE HOT AIR PLANT FOR THIS LARGE**

**IN SIX ROOM HOUSE**

Never before has a complete Hot Air Plant for a six room house been offered at such a cheap price as this. Outfit includes everything necessary, no parts missing. Furnished with our No. 20 Economy Furnace, including hot air pipes, adjustable elbows, pitched bonnet, casing, collar, Cold Air Faces, plans and instructions for installing. Complete for only \$70; freight prepaid to points as follows: Ill., Ind., Ohio, Southern part of Mich. and Wis. and Eastern part of Iowa. Special prepaid prices to any points outside of the above territory. We can also furnish a plant for the same building, Hot Water, for \$193.00. This is a money-saving opportunity you can't afford to overlook. Don't fail to write us.

**FREE Plumbing Information Book**

**Free Plumbing Information Book**  
Another Wonderful Book Containing a Mine of Valuable Information  
This book contains a liberal education in plumbing—by far the handsomest, the most complete and most practical book on plumbing goods and installation ever published. Shows just what is necessary to equip any building of any style or size and, what is better, shows how YOU can do it, for it reduces the installation of plumbing from the difficult stages as put up by the plumber to an easy proposition that any handy man can handle. Shows you how you can save fully 50% by taking advantage of the bargain offerings it contains. It's yours FREE for the asking. Remember, in all your dealings with us you get the benefit of our 20 years experience.

**Harris Bros. Co. DEPARTMENT BG 8 35 TH AND IRON STS. Chicago**

The 13th annual show to be held by the Warren County Poultry & Pet Stock Association will be the best ever held by that association so far as premiums are considered. A handsome silver cup will be given for the best exhibit all breeds competing; also cups will be given as specials for best color and shape. All of the different clubs are offering specials at this show. So that taking the specials along with the ribbons and cash prizes

offered by the association should make it a desirable show for exhibitors. The show will be held Jan. 5-6-7-8-9, 1914. Any one who wishes further information in regard to the coming show can obtain the same by writing to the secretary, L. E. Conroy, 26 Cedar St., Warren, Pa.

One of the most successful of the new shows held last season was that of the Bowling Green Poultry Association of

Bowling Green, Ohio. This association is a live one and is bound to make this a show where winning is really worth while. The next show will be held Dec. 29th-Jan. 3rd, and the awards will be placed by Judge A. H. Emch. For any further information address the secretary, A. A. Whipple, Bowling Green, Ohio.

The Quincy (Ill.) Poultry, Pigeon and Pet Stock Association will hold its seventh annual show Nov. 26-30, with Russell, Hale, Hare and J. C. Johnston as judges. Seventy-five to one hundred silver cups. Gold leg bands for champion male and female in each class, and we guaranty to pay premiums as soon as the judges put up the ribbons. We will banquet each visiting exhibitor at the best hotel in Quincy, and we will strive to please each and every one who send their birds to us. Quincy is a sales town it doesn't do to miss. Catalogue is ready to be mailed to all who ask for it. A. D. Smith, secretary and treasurer, Quincy, Ill.

The Springfield Poultry Club of Springfield, Mass., announces its sixth annual show will be held Dec. 16-18, 1913, in the new auditorium, one of the municipal group, with a capacity of 1,500 coops single tier. This association issues one of the best and handsomest premium lists of any association in the country. W. B. Atherton, Paul P. Ives, C. H. Welles, W. H. Card, and Richard Oke will hang up the ribbons. In all probabilities, this will be the largest show held in the East, outside of New York and Boston. H. L. Davis is secretary and will gladly send premium list and other information upon request.

The little Cochon Bantam will be a big feature at the Palace Show this year. It is the aim to show that the Cochon is the king pin of Bantam Alley, and there is a fine little race to see which variety of the breed can show strongest. At the present time Blacks lead with 18 pledged exhibitors, within the past week. Buffs have taken an interest and are walking right up the line. Whites are a mystery. H. H. Kingston, Jr., of Rochester, is pushing them and not making any predictions. Whichever breed wins will help all Cochons, but each variety wants the honor of being first in popularity.

The Palace Show of New York City has been advised by Poultry Press Ltd. of London, England, that it plans to send over an exhibit made up of the best breeders in England. This exhibit will be in charge of an export poultry man, who will attend the show with the birds and see that they go back in good shape. It is hoped that the gentleman in charge of the exhibit will be able to arrange a similar display for the London Palace Show.

The Dodge Co. Poultry Association will hold their fourteenth annual show at Fremont, Neb., Dec. 8-12, 1913. We have extended an invitation to the State Branch of the American Poultry Ass'n. and everything is looking fine for a good show this winter.

Our premium list will be out about Nov. 1st and those who have birds to exhibit will do well to send for one and make an entry at the big Fremont show, and we would be very pleased to have you come with your birds. Fred S. Davis, Secy.

The eighth annual exhibition of the Pittsburg Poultry Association will be held at Pittsburg, Kans., on Dec. 1st to 5th. Adam Thompson, judge. For premium list write D. J. Mackey, secretary and treasurer, 912 N. Rouse, Pittsburg, Kans.

The Sandusky County Poultry & Pet Stock Association of Fremont, Ohio, will give their first annual exhibition January 22 to 27, 1914. Judge Jas. Tucker has been engaged to place awards. H. E. Cochran, secretary, Fremont, O.

The Fayette County Poultry Association will hold their second annual show Dec. 11-12-13, 1913. Competition open to the world. Judge, W. W. Zike. A. J. Roth, secretary.

The South Shore Poultry Association will hold their Fourth Annual Poultry Show at Kingston, Mass., December 5th and 6th, 1913. Albert H. Holmes, secretary, North Plymouth, Mass.

The fourth annual show of the Morgan County Poultry Association will be held in Armory Hall, Jacksonville, Ill., Dec. 10th to 13th. Geo. A. Heyl, judge, Jas. C. Weber, sec'y.

## GOLDEN AND BUFF WYANDOTTES

My stock has won at Chicago show for the past eight years and last December won the highest prize champion Golden male. This stock must go as I am going into smaller quarters, having bought a place last month. Write at once if you want show birds for this season. Mention American Poultry Journal.

J. S. Pennington -- Box A -- Plainfield, Illinois

## S. C. BUFF ORPINGTONS

My birds have always won their share of the ribbons at such shows as Chicago, Pittsburg and Cleveland. I still have a few good breeding males and females left. Let me quote you.

Roseland Poultry Farm, Chas. W. Switzer, Prop., So. Euclid, O.

## OUR ANCONAS

First Prize Winners at such leading shows as London, England, Madison Square Garden, Cleveland, Toledo, Allentown, Pa., and the late shows in August at Cleveland, Forest City, Fair. Write for catalog, booking orders for hatching eggs and baby chicks, season 1914.

### Peerless Poultry Promoter

Port Richmond, New York

The Elgin Poultry Association of Elgin, Ill., announce their 15th annual exhibition to be held Jan. 5-10, 1914. Mr. Chris H. Leitner, secretary writes: "We are going to have uniform coops (new coops all our own), comparison judging, thirty-five or more silver cups and \$1,000 in cash prizes. We also have fifteen display coops which we put or place in the center of our show room, which is the big Coliseum, 18,000 square feet of floor space."

The Columbus (Ga.) poultry show dates are November 17-22, 1913. Judges: Chas. T. Cornman, Carlisle, Pa.; F. J. Marshall, College Park, Ga. Premium list will be ready for mailing October 1. We will give sixty handsome silver cups and one thousand dollars in cash premiums. John S. Jenkins, secretary and treasurer.

The Chicago Heights Poultry Association, Inc., will hold its annual show on Jan. 7-8-9-10, 1914, at Chicago Heights. F. H. Shellabarger has been selected to act as judge. Premium lists will be ready for mailing Nov. 1, 1913. B. T. Gibbs, secretary, Box 232, Chicago Heights, Ill.

The Winneshiek County Poultry Association, of Decorah, Iowa, will hold its third annual poultry show Jan. 5-9, 1914. Judge Chas. V. Keeler will hang up the ribbons. Len Larson, secretary.

The Logan County Poultry Association of Lincoln, Ill., will hold a poultry show Dec. 2-6, 1913, with Campbell as judge. The premium list will be ready Nov. 10, 1913. J. W. Walker, secretary.

The eighth annual exhibition of the Mohnton Poultry and Pigeon Association of Mohnton, Pa., will be held Nov. 26-29, 1913, with Geo. W. Webb as judge. J. H. Fichthorn, secretary.

The Hinckley Poultry and Fanciers Association will hold its second annual show at Hinckley, Ill., December 16-19, 1913. Harry W. Atkins, judge. G. Anderson, secretary.

LaFayette Poultry Club of LaFayette, Ind., will hold its annual show Jan. 6-30, 1914, with D. D. Whitaker as judge, W. M. Bryan, secretary, 332 Lawn Ave., W. LaFayette, Ind.

The Wadsworth Poultry Association of Wadsworth, Ohio, announce that their next show will be held Jan. 13-17, 1914, with A. H. Emch as judge, Chas. H. Reis, secretary.

The Wisconsin Poultry Association of Madison, Wis., will hold its tenth annual exhibition, Jan. 5-9, 1914. Judges G. W. Hackett and W. S. Russell will place the awards. James G. Halpin, secretary.

The Consolidated Poultry and Pet Stock Association of Bluffton, Ohio, will hold its annual exhibition, Jan. 12-17, 1914, with Chas. McClave as judge. D. J. Kohli, secretary.

The Fond du Lac Poultry and Pet Stock Association of Fond du Lac, Wis., will hold its third annual poultry exhibition, Dec. 10-15, 1913. Geo. M. Wells will judge the show by score cards. O. E. Born, secretary.

The Port Clinton Fanciers' Association of Port Clinton, Ohio, will hold its first poultry show, Jan. 19-24, 1914, under the rules of the American Poultry Association. G. T. Conley, secretary.

The Terre Haute Poultry Association of Terre Haute, Ind., will hold a poultry show Dec. 31 to Jan. 6, with Theo. Hewes as judge by comparison. M. Austin Potter, secretary.

Mr. L. H. Wible, secretary, announces a poultry show will be held at Independence, Kan., Jan. 5-11, 1914. Mr. Wible's address is Chanute, Kan. Write to him for information.

The Paulding County Poultry Association of Paulding, Ohio, will hold a poultry show Jan. 26-31, 1914, with L. C. Taylor as judge. C. P. Klingler, secretary.

Neodesha Poultry Association of Neodesha, Kansas, will hold its second annual poultry show, Dec. 15-20, 1913. D. R. Kinkead, corresponding secretary.

The second annual show of The Beardstown Poultry Association of Beardstown, Ill., will be held Dec. 1-6, 1913. Victor L. Adelman, secretary.

The Muskegon Poultry and Pet Stock Association of Muskegon, Mich., will hold its annual show Jan. 13-17, 1914. E. G. Evans, secretary.

Mr. W. D. Craig, of Galena, Mo., announces a poultry show and fair to be held at Galena, Mo., Oct. 8-9, 1913. Write to him for information.

The Granite State Poultry Association of Dover, N. H., will hold a poultry show Jan. 7-10, 1914, with Watson and Coffin as judges. D. C. McIntosh, secretary.

Mr. C. M. Swan announces their poultry show will be held at Leavenworth, Kan., Jan. 20-23, 1914, with Shellabarger as judge.

The first annual poultry show of the Grimsby Poultry Association will be held on Nov. 11-14. Henry B. Strome, secretary, Grimsby, Ont.

The Poultry-Pigeon Fanciers Club of Roanoke, Va., will hold a poultry show, Dec. 2-6, 1913. F. J. Gormican, secretary.

Our R. and S. C. Reds made the most sensational win by winning more prizes than all competitors combined. We have show stock for sale. Illustrated catalog free.

### Examine Birds Before You Pay for Them

So sure are we of pleasing you with the high quality of our stock, we are perfectly willing to send any shipment to you C. O. D. subject to your inspection before you pay for them. Our records show by this method that fully 99 per cent of our shipments are accepted. We challenge any breeder to show as good a record. We sell birds on their merits and we will sell to you if you give us a chance. Our Special Sale Circular tells about the 2,000 birds we offer for sale and includes cocks, cks., hens, pullets, pens, trios and single birds, just as you wish them. We can furnish exhibition birds for any show or utility birds as low as \$1.25 each. Send today for a copy of our Sale Circular giving you reduced prices on every bird we offer. Mention American Poultry Journal when writing.

Goshen Poultry Farm : : R. F. D. 7 : : Goshen, Indiana

## News from Our Advertisers.

By H. H. Coburn.

Cherry Red Single Comb Rhode Island Reds, bred by Ernst F. Birkholz, have improved so much in color that other Red breeders are amazed at his success. In addition to this they have size and shape. One lot hatched April 9 weighed five to six pounds on the last of August. Mr. Birkholz offers some wonderful cockerels and a few pullets at reasonable prices. Some sired by his famous old cock bird and the son of the first Madison Square Garden cock. Address E. F. Birkholz, Willoughby, Ohio.

John L. Brown, breeder and originator of the Giant Strain Single Comb Black Minorcas, has about three hundred grand

youngsters that are correctly named Giants. In addition to size they have type and color to burn; many of the females have distinguished themselves with phenomenal egg records, and Mr. Brown guarantees 70 per cent fertile. His Minorcas have won at Chicago, Buffalo, Memphis and Indianapolis for years, and anyone desiring show birds for the winter shows should address John L. Brown, 2337 Brown St., Anderson, Ind.

E. O. Heaton is a most ardent and enthusiastic breeder of the Rose Comb White Orpington. This variety is rapidly pushing toward the front and promises to be as popular as their single comb sisters. Mr. Heaton is wisely on the ground floor of this variety and is in a position to furnish show birds for anyone wishing good ones. These birds are strong and

vigorous and are typical Orpingtons. Mr. Heaton exhibited thirty of his birds at the Indiana State Fair and expects to show a large class at the Illinois State Fair this month. Beginners who desire to start in with a breed which in all probability will come rapidly to the front should write E. O. Heaton, Scircleville, Ill.

J. O. Somers, the originator of the Famous Black Beauty Strain of Mottled Anconas, and president of the Ancona Club of America, has about 1,500 range raised youngsters, hatched from two year old hens, of exceptional size and color, and they show great vitality. Mr. Somers reports that he is making some good sales and that he intends to hold over about 400 yearlings for next year's breeders, and 500 pullets for 1915 breeders. The demand for Anconas is gaining by leaps and bounds and Mr. Somers says that he will triple his capacity for stock next season. If you want some exceptionally good cockerels or pullets for the early shows, write J. O. Somers, Bedford, Ohio.

H. A. Keister, breeder of Rose Comb Black Minorcas, has about 150 chicks bred from his Madison Square Garden and Boston winners. Pullets hatched during March and April weighed four pounds August 1 and cockerels five pounds; they have both color and shape and exceptionally fine combs. Judge Rolland Story at the Boston show last year said, "Your first cockerel is practically without fault and your birds have the best combs I ever saw on Minorcas." Mr. Keister's farm consists of 25 acres, on which the birds have free range. The show records at Madison Square Garden, Boston and Scranton prove that he has the quality to suit. He is about out of breeding stock, but has some good birds ready for the early shows, mostly cockerels. Write him for prices. Address H. A. Keister, Bangor, Mich.

Mrs. Guy Blencoe, breeder of the Blencoe Single Comb White Orpingtons, has some exceptionally fine birds to dispose of. Mrs. Blencoe is a thoroughly competent poultry fancier and was the Doctor's counsel and adviser in all matters pertaining to the poultry business. We can but compliment her on her bravery in continuing what must bring many memories and heart aches. Let us help her by introducing the Blencoe Single Comb White Orpington blood—the strain with a conscience—into our flocks. Write for catalog and prices. Address Mrs. Guy Blencoe, Alma Center, Wis.

C. M. Agler, breeder of Single Comb Rhode Island Reds, furnished birds for Canada's leading shows last season; he also has sold birds to the South which won high honors. He will be short of females this year owing to the loss he sustained during the high water last spring, but he can furnish some grand show cockerels of even color; breast fluff and rich red color to the skin. Mr. Agler's Reds have won the Toledo cup three times in succession. Write him for prices. Address C. M. Agler, Millbury, Ohio.

Dr. G. G. Billman, one of the oldest breeders of Houdans in the United States, is building up a strain of Houdans second to none. Houdans are again gaining favor as their grand utility points appeal to the public in general, and their size, shape and head points make them a most attractive fancy breed. If you are interested in Houdans and want birds of the best type, address Dr. G. G. Billman, Sullivan, Ind.

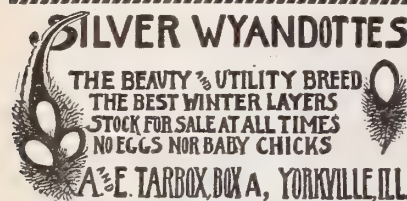

The Wendell Incubator Co. is one of the few incubator concerns that began with a small capital and increased its output every year. Their new machine, called the "Poor Man's Friend," has a capacity of 125 eggs and is guaranteed to hatch every hatchable egg. Price of this machine is only \$6.98. In addition to manufacturing incubators they manufacture the Wendell Suspension Hoyer, which is giving universal satisfaction; they also manufacture the Wendell Non-Freezing Drinking Fountain, and new line of Can't Clog feeders, new oat sprouter and fruit drier and fifty other articles of interest to poultrymen. They are issuing a new catalog which will be larger and more complete than any previous catalog. It will show cuts of buildings, incubators and supplies, with full description and price list. Write for a copy of it, and if on the market for a good machine, buy a Wendell. Address Wendell Incubator Co., Holly, Mich.

## HOUDANS

"WORTH WHILE" I have for sale a number of early hatched birds which I will guarantee to win for you; also have a number of utility birds for sale. Write me your wants, mention American Poultry Journal.  
Dr. G. G. BILLMAN : : SULLIVAN, INDIANA

## MYERS' EXHIBITION BARRED ROCK FEMALES

Madison Square Garden, N. Y., N. Y., Winners 1912-13—Exhibition Females My Specialty—Pullet Bred Males from New York Winning Females—At the late great Madison Square Garden, N. Y., Show, my birds shown by myself won first hen, second pullet and shape special female. This year birds of my breeding also won at Philadelphia, Hagerstown, etc. They have been winning for years and are better today than ever. FOR SALE—Early hatched pullets and pullet bred cockerels fit to win the early shows. I have an unusually large and fine lot of these early hatched birds of the best of New York winning blood that have the quality in form and barring. Let me price your wants. My breeding cockerels are of highest quality, strong and vigorous. They will please, absolute satisfaction to all. : : Write me, C. N. MYERS, BOX A, HANOVER, PENNSYLVANIA

WE have one of the finest flocks of young stock that we ever had; also a fine lot of cocks and hens and are in shape to supply you with anything you want from utility stock to the finest show birds fit to show in any show. Send for catalogue or get prices on what stock you want before buying. Mention A. P. J.

## S. C. BUFF AND WHITE ORPINGTONS, S. C. BUFF AND WHITE LEGHORNS AND BUFF ORPINGTON DUCKS

Our birds won at New York, Baltimore, Philadelphia and Allentown. Let us supply you with show birds for leading shows. We guarantee satisfaction. Send for catalogue. Mention American Poultry Journal.

Dunrobin Farm, Box 177, Red Bank, N. J.

## "O. K." Poultry Litter

WRITE TO-DAY for FREE SAMPLE Because We Know You'll Use Nothing Else THIS FALL

"O. K." is the most wonderful litter for Hens, Ducks, and Geese. It's cheaper to use and ever so much cheaper than Straw, Clover, Alfalfa, Sawdust, Shavings, or anything else ever thought of for litter.

All the big breeders who try it never go back to anything else because there is nothing else they would use.

## "O. K." LITTER

ABSORBS ALL MOISTURE, DRIES up the DROPPINGS, PREVENTS all ODORS

"O. K." Poultry Litter keeps your houses always dry, clean, sweet-smelling and sanitary. You need no dropping boards, and

CLEAN HOUSE ONLY ONCE EVERY 3 or 4 mos.

"O. K." Litter will not BURN. Lice will not come where it is used. TELL US HOW MUCH POULTRY YOU KEEP—WE WILL TELL YOU HOW MUCH "O. K." LITTER YOU NEED.

Write to-day for the free sample and printed matter. You need them both.

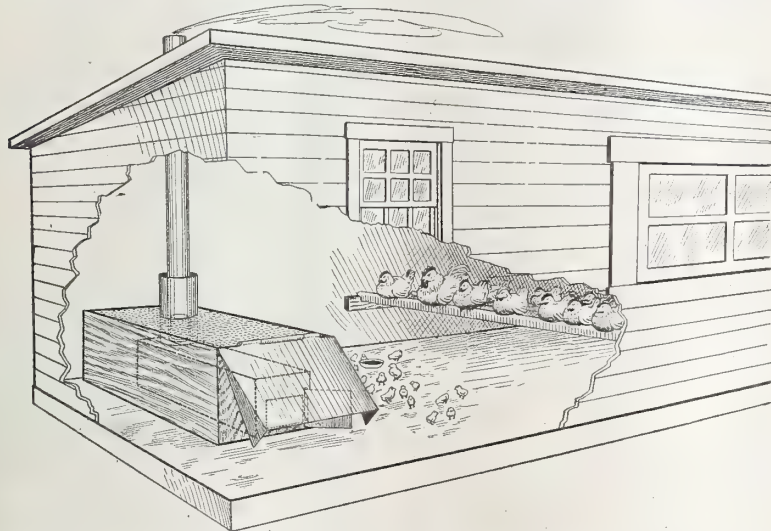

O. K. COMPANY,  
Dept. 183, 157 Water Street  
NEW YORK CITY

Simmons & Crittenden, breeders of Rose Comb Rhode Island Reds for thirteen years, have been particularly successful during the past season in getting that rich red color so much desired in this breed. They have a fine lot of youngsters on hand which are being range raised under ideal conditions and have all the requirements to make them winners and great producers. They have fine head points and grand Rhode Island type. Stock can be obtained from them at reasonable prices. These birds are sired by such males as first cock, also Grand Red Championship male at Pittsburgh, 1913; winner of both shape and color special, and first Pittsburgh cockerel, 1913, winner of first in a class of 35 cockerels. Their Reds have won in the leading shows of the country, and also the silver cup offered by the Rose Comb Rhode Island Red Club of America with 344 birds competing. This certainly proves that they have the quality desired. Write for literature and prices. Address Simmons & Crittenden, Geneva, Ohio.

The Old Honesty Heater Co., of New Washington, Ohio, is manufacturing a heater for colony houses and brood coops which promises to excel anything on the market. This heater will burn anything and is very economical. When installed in a colony house and the floor of the house covered with sand it makes an ideal brooder for baby chicks, as there are absolutely no fumes and no risk of fire. After installing one of these heaters you will find that the egg yield will be greatly increased, and you will also find that bowel trouble in the flock will be en-

tirely eliminated, as this always results from chilling. There is absolutely no expense after the heater is once installed, as they are well made of cast iron and will last a lifetime without repairs. The illustration herewith will give you some idea as to the construction of this heater, and we highly recommend same to all breeders who desire to house their chicks as comfortably as possible. Write Old Honesty Heater Co., New Washington, Ohio, and get their catalog and full particulars. You will not regret it.—H. H. Coburn.

C. A. Keefer, proprietor of the Edgemere Poultry Farm, is still improving and building up his plant. He reports a good business for the past season, being sold out of stock early. Mr. Keefer is one of our oldest Orpington breeders in Buff and was one of the first to import Single Comb White Orpingtons. The Buffs are of the same superior quality which has made them famous; the White Orpingtons are exceptionally white and have grand type. In addition to Orpingtons, Mr. Keefer has started breeding Silver Campines. If you desire some of his stock, write early, as Mr. Keefer is usually oversold. Address C. A. Keefer, Muskegon, Mich.

H. N. Hanchett, formerly breeder of Buff Cochins, now breeds White Wyandottes and Blue Orpingtons exclusively. His winnings at the Madison Square Garden Show last year prove that he has the right kind of stock. He has a large flock of Wyandottes, range grown, which possess grand size and bone, blocky, chubby type, with short, well spread tails, wonderful head points and blood lines to back them. He is ready to fill orders for cock-

erels and pullets for show purposes and also utility birds. In addition to his Wyandottes he has about 100 fine specimens of the Blue Orpingtons. Write him for show birds now if you want birds of either variety. Address H. N. Hanchett, Jackson, Mich.

A. A. Carver, originator of Queen Quality Rhode Island Reds, has the most promising flock of youngsters he ever owned; their color seems to run more even than previous, showing that close selection and restriction is bringing results. Mr. Carver has doubled the capacity of his plant during the past season, and now has what may be termed a small town, which he has aptly named "Carver's Redville." His Reds won at the largest shows in twenty-five states. If you want Reds of quality that will compete with the best in any show room, write A. A. Carver, Seville, Ohio.

Dirk's Red Mite Killer is doing all that is claimed for it wherever used, and the writer can personally recommend it. Mr. Dirk gave me a generous lot to try and it simply worked wonders on a flock of very badly infested hens owned by a friend who tried it. Keep after the pest the year round, and don't let another day go by without ordering some of Dirk's Red Mite Killer. Again, I personally recommend it. Send for circular. Address Dirk's Red Mite Killer Co., M. E. Dirk, Dirk Block, North Baltimore, Ohio.

Mr. Guy Daily was one of the flood sufferers last spring, but managed to raise

over 1,000 of the best White Rocks he ever raised. This could not be otherwise, as year by year he mates up better birds. Mr. Daily has on hand about 200 old birds, 50 of which are cock birds, and fully four-fifths of them are tip-top show birds. His pullets have been laying since July 10 and old stock is molting fine. The Fairview White Rocks have a grand show record and win the lion's share in any competition. If you want winners for early shows, write Guy Daily, Jeffersonville, Ind.

A. J. Fell, West Point, Pa., the well-known White Wyandotte breeder, reports that he has about 1,000 head of young stock that look very promising; some fully matured now and ready for the early shows. His old stock is molting fine and he will have some sensational cocks and hens that can win in any show. He also has some cheaper birds at prices within reach of all. Send for full particulars and mention American Poultry Journal.

J. S. Pennington, Plainfield, Ill., the Golden and Buff Wyandotte breeder, has purchased a new place, where he will have less room, which compels him to dispose of some of his stock at prices that will move them quick. Write him now if you want something to win with. Mention American Poultry Journal.

C. J. Loyd, Greensburg, Ind., the well-known breeder of Partridge Plymouth Rocks, informs us that owing to other business matters that requires his attention he has been compelled to turn his poultry business over to his son, who is well qualified to handle the business in

every particular. He has a fine lot of stock this season and will try and follow the same policy as his father in treating every customer right. Look up his ad in this issue and write him for what you want.

J. H. Leffler, Sharpsburg, Pa., breeder of S. C. White Leghorns, informs us that he has about fifty yearling hens and ten cock birds that he will let go at half price. This is a bargain for someone. He also has a fine lot of cockerels coming on. Write him for what you want and mention American Poultry Journal.

Harrison's Royal Reds eclipsed all their previous records this past week at the State Fair of Upper Michigan by winning every prize offered on Single Comb Rhode Island Reds. Their wins were as follows: 1st, 2d, 3d, 4th and 5th cock; 1st, 2d, 3d, 4th and 5th cockerel; 1st, 2d, 3d, 4th and 5th hen; 1st, 2d, 3d, 4th and 5th pullet; 1st, 2d, 3d, 4th and 5th old pen; 1st, 2d, 3d, 4th and 5th young pen; special for the best male in the show; special for the best female in the show; special for the best exhibit. In handling the Royal Red pullets, Judge Wells made the statement that the 1st and 2d pullets were the two best he had ever handled. Mr. Harrison has upwards of two thousand Reds to sell. Catalog free for the asking.

**Big Opening Leghorn Win.**

The first great show held in the East is at the New York State Fair, Syracuse, September 9 to 13, where this year over seven thousand birds with four hundred S. C. White Leghorns were on display. This was the first year in the new hundred thousand dollar poultry building, and breeders from far and near gathered in this new poultry palace to try out for the mastery of the year's breeding. When the smoke of the battle had cleared away the Rancocas Farm, Box 511, Browns Mills In-the-Pines, N. J., had swept the field with a remarkable winning on their great Rancocas strain of S. C. White Leghorns.

Their remarkable winning of all five places on cockerel stands today without a peer in such a show of such quality. The complete winning on Leghorns was: 1st, 2d, 3d, 4th and 5th cockerel; 1st, 2d, 3d, 4th and 5th pullets; 1st, 2d, 3d and 4th hens; 4th cock; 1st young pen; 1st old pen.

The Rancocas Farm has three thousand other cockerels, many of them just as good as these noted New York winners. These birds are to be sold as show birds and will not only win in the November and December shows, but will prove great breeders of show birds as well as egg producers for the coming year.

A recent visitor at Rancocas Farm was Prof. T. E. Quisenberry, of the Missouri State Experiment Station, who said, after seeing this great group of cockerels, "that group of three thousand cockerels certainly show vitality as well as ideal Leghorn characteristics."

They are especially anxious to send any of our readers their booklets showing these farms, plans of houses, plan of farm as well as some free advice and suggestions on buying. There is no obligation in asking for this free literature, as they are only too glad to send it and help out other breeders of Leghorns in getting best results.

In addition, the Rancocas Farms won on White Rocks at this big New York show: 1st, 2d and 4th cockerels; 2d, 3d and 4th pullets; 1st and 4th hen; 3d cock; 2d young pen; 2d old pen.

**A Cheap Food.**

If you are looking for a cheap food—not cheap in dollars and cents, but cheap because, although it may cost a few cents more than some other, or the one you mix up yourself, will give you better results in health and egg production than anything it is possible to obtain elsewhere—we recommend Blatchford's "Fill the Basket" Egg Mash. The "mash without a filler." Made at Blatchford's Calf Meal Factory, Waukegan, Ill.

It is a complete dry feed, which will enable your hens to produce every egg it is possible for them to lay. They will be laying all through the cold winter and spring weather, while the "other fellows" will be sitting on the roosts keeping their feet from freezing.

Vigor, health and egg production are chiefly a question of food. An egg is actually the surplus nourishment a hen

**S. C. WHITE LEGHORNS**

receives, and Blatchford's "Fill the Basket" Egg Mash supplies all the nourishment necessary, with an abundant surplus to be turned into eggs.

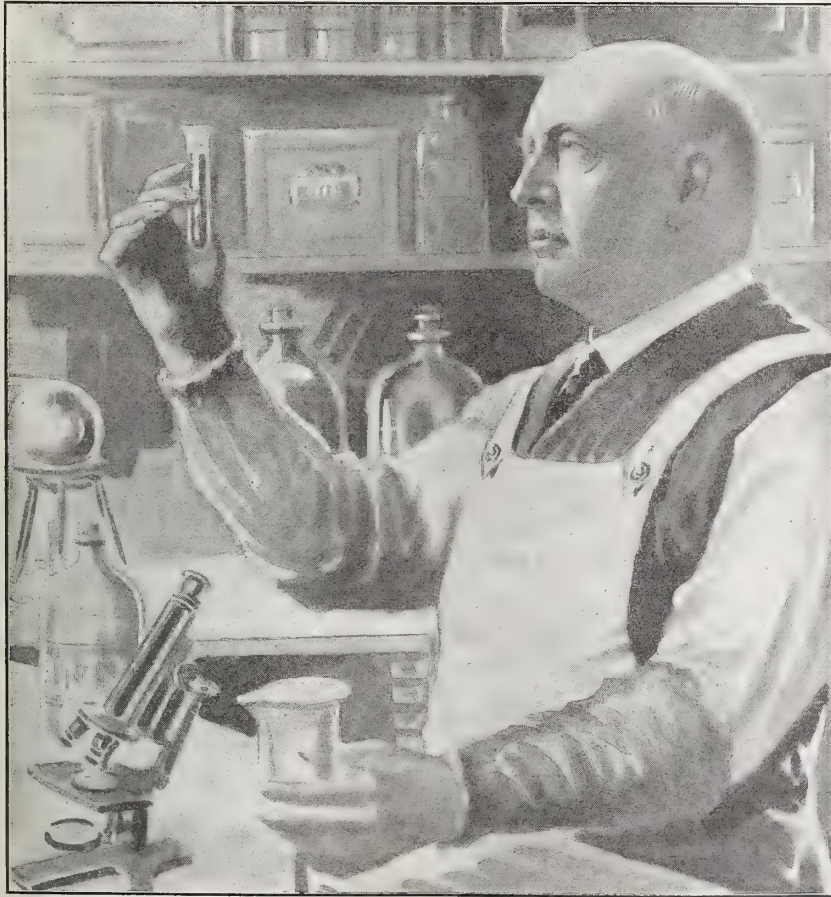

### The Economy of Good Roofing.

Among all the things we use in our advanced civilization it is a curious fact that some of the most important contributors to our comfort we give the least attention to. Take the roof of the house or barn, for instance: Think what is dependent upon the roof. All the furnishings of the home with possibly many treasured possessions as well as the very life of the individuals are protected from rain or snow storms, lightning and other destructive elements by the indispensable roof. The barn, with its stored-up wealth of field and its valuable livestock, finds its preservation impossible without the roof. Yet, strange to say, in view of the importance of the roof, it is given so little consideration. There are those who think that it doesn't matter much what the roof is made of, and content them-

natural asphalt in roofing so as to preserve its durability through all conditions of weather in any climate on the globe. And the man who looks for roofing that will do its full duty without giving him periodical trouble finds what he is looking for when he strikes Genasco. It is unfortunate that it is possible to imitate the surface-appearance of natural asphalt roofing so completely that many people are inveigled into accepting it merely upon its looks; but the man who is on his guard and satisfies himself that he is getting roofing made of genuine Trinidad Lake asphalt can rest assured that he has made a profitable investment.

### A New Form of Shingle.

Having been in the roofing business for over a quarter of a century, and realizing the growing demand for something to take the place of wooden shingles, which are getting more expensive and of poorer quality every day, Bird & Son, manufacturers of the famous NEPONSET Waterproof Building Products, ad-

DR. GILBERT HESS (M. D., D. V. S.) AT WORK IN HIS LABORATORY.

Dr. Hess is one of the most widely known veterinarians in the United States. His scientific stock and poultry preparations—particularly Dr. Hess Stock Tonic and Dr. Hess Poultry Pan-a-ce-a and Instant Louse Killer—are used by millions of farmers throughout the country. That they have stood the test for 21 years is evidence galore that they are preparations of genuine merit. Dr. Hess has written over a quarter of a million prescriptions for the American farmer without charging any fee for his services. This is a monumental work when we consider that the doctor diagnoses each individual case and prescribes accordingly.

selves with this self-esteeming reasoning until the leaks compel quick action. This is the sure fate of cheap roofing. Yet such people are deluded by the attractiveness of low initial cost, not figuring the risk they run to the contents of the building or the time and labor it takes to make frequent repairs. In the long run, however, there dawns upon them the truth of the old adage, "The best is always the cheapest." Then they get wise and begin to look around for the roofing to fill their needs. This state of mind invariably leads them to the choice of roofing made of Trinidad Lake asphalt, for "Trinidad Lake asphalt is reckoned as 'Nature's everlasting water-proofer.'" And judging from the durability of Genasco Roofing, which is made of Trinidad Lake asphalt, this would seem to hit the nail on the head. Science has suggested the method of using this

vertised for many years in these columns, are now making NEPONSET Shingles. These look like a big step in the right direction as the NEPONSET Shingle is made from the old, time-tested NEPONSET Roofing product and is thick at one end and thin at the other. In addition to its excellent wearing qualities, NEPONSET Shingles provide fire protection, while every one knows that a wooden shingle is a fire hazard. Over 25 years ago, NEPONSET Red Rope Roofing, the original ready roofing put up in rolls with complete roofing kit inside, was first made and advertised. 15 years ago NEPONSET Paroid Roofing came into the Market. The NEPONSET line now includes different roofings for every type of building, Waterproof Building Papers and Wall Board. Any one who has a roof would do well to learn more about this new NEPONSET Shingle.

### Poultry Flats

Are sure to revolutionize Poultry raising for profit. Build one and you will always be glad. Not half the work and that done out of wind and weather. Need not move three feet from one spot to water, feed and clean. No brooders to buy. Each flat will brood 600 chicks. Build as many as you like. Raise all you want. One occupies 24x36 feet of ground and includes six runways. They have been erected in every State in the Union. No business today is so safe and sane as the poultry business when properly conducted and you do not need much money to start. One man made \$800.00 the first year from one flat.

If you are not already a subscriber to the Inland, we would like you to send us fifty cents, regular subscription price, and be one of our great family for this coming year or send twenty-five cents and we will put you down for a six months' trial. We know you will enjoy reading our paper every 30 days and besides we will send you this book "Poultry Flats" of over 100 pages, free. You cannot find it anywhere else as we are the sole distributors for Mr. Ott.

If, however, for some reason or other you cannot subscribe for the paper just now, then we do want you to have the book, anyway. Send us ten cents in silver or postage stamps and same will be forwarded to you at once. Under no circumstances build or buy until you have read this book. Read what others say.

Mated trios and pens a specialty. We will please you if you are interested.

### Remember This "Champion" Line

Made its records and reputation at America's greatest show, Madison Square Garden, New York. For several years at Cleveland, Ohio, Philadelphia, Williamsport, Chicago, etc., color and shape specials have been won at all exhibits and we have won five championship specials for best bird in entire shows. Consider this and write us your wants. Absolute satisfaction assured.

Webster Farm, Box A, Girard, Pennsylvania

## Lichtenwalter's Quality Buff Ply. Rocks

They have won at more prominent shows the country over than any other line. Last season they were prominent winners at Madison Square Garden, New York, Springfield, Illinois, (Club Show), Philadelphia, Cleveland, Williamsport, etc. I have birds of quality in old and young and can sell you exhibition birds and selected breeders, assuring satisfaction.

E. A. Lichtenwalter : Box A : Girard, Pennsylvania

### Booming the Old Breeds and Not Overlooking the New.

Booming the old breeds, the odd varieties and giving the new breeds a lift is becoming a mighty good habit of the "Flower City Show" of Rochester, N. Y. In other words, this great national show is drifting rapidly toward an exclusive fanciers' show.

Last year it put its shoulder to the wheel and gave the Houdans a nice boost, and put the Buttercups on the map in a manner never before accomplished for any breed or variety.

This year the Columbian Wyandotte breeders, seeing the good things in store for them and knowing the value of this show as a booming medium, gave it a great complimentary vote and chose the "Flower City Show" for its National Meet. In the odd varieties so far the National Meet of the International Polish Club has been voted to this show, and the indications point to the entries reaching to a thousand and one, with special cash premiums already nearing a hundred dollars, this seems to be well within accomplishment. The First Annual Club Show of the White Face Black Spanish has been voted to be held here, and extra efforts are being put forth to have a grand class. The secretary asks that all breeders of the Spanish drop him a card so the premium list will be forwarded to them.

J. F. Van Alstyne, M. V. Caldwell, Frank G. Bean, Charles Nixon, Rowland Story, H. M. Kenner, Charles T. Cornman, C. J. Andruss, T. F. Jager, and others have so far been engaged to judge. As fast as several other specialty clubs decide for this show for their meets other specialists will be engaged. A hurried scanning of this list of prize awarders would convince most of our readers that it was the Madison Square list.

One more thing that our readers should be acquainted with is the efforts of this show for large classes of pigeons and bantams. Each year the classes are well filled and some years the pigeons run up to 750 entries. It is planned to do better than this for the coming show and to have not less than 500 bantams and 1,000 pigeons. The premium list will be full of specials on these and other varieties.

The dates of the show are December 15th-20th, 1913, and J. F. Tallinger, Box 554, Rochester, N. Y., is the secretary to whom all requests for information and premium lists should be addressed.

Please Don't Read the back Inside Cover

### GIANT HYACINTH FIVE FEET HIGH

What would you think of a Hyacinth that grows from 3 to 5 feet high, with spikes of beautiful flowers 2 feet in length? That is just what we have to offer you. Just imagine such a stately plant—a revelation of beauty. Blossoms later in the season than the common Hyacinth, remaining in bloom during August and September. Strong bulbs produce from 2 to 4 flower stems each season. A bed of a dozen or more bulbs produces a grand effect, and possesses a degree of loveliness which cannot be described. Order now for fall planting. Choice, strong bulbs, 25c each, 3 for 60c, \$2.00 per doz, postpaid. Order today, before supply is exhausted.

919 Advertising Bldg., Chicago

### At Ohio State Fair.

The special cash prizes offered to breeders of "Premier" Partridge Wyandottes by Sheffield Farm, Glendale, Ohio, aroused considerable interest and enthusiasm, as is shown by the fact that in a large class, of unusually good quality, at the Ohio State Fair, five of its exhibitors were breeders of the "Premier" strain. Mrs. Donna Hanley, of Mechanicsburg, O., won \$100.00 in these specials, being awarded 1st on cockerel, pullet, hen and pen, four firsts on five entries. Dr. L. E. Baker, of Mechanicsburg, O., won the \$25.00 special on 1st cock. Mrs. Hanley, Dr. Baker, and all of the Partridge Wyandotte exhibitors are to be congratulated on the excellent showing they made with their favorites. Similar cash prizes, that is, \$25.00 each on 1st cock, hen, cockerel, pullet and pen, will be awarded at the New York and Illinois State Fairs to exhibitors of "Premier" Partridge Wyandottes, who have purchased eggs or stock from Sheffield Farm, who will not compete at these fairs.

### A Phenomenal Winning.

At the late New York State Fair the Regal White Wyandottes made a great sweep, winning twenty-eight prizes out of a possible thirty, including all the first and second prizes. This, together with his winnings in previous years and also his big Boston winning last winter, should emphasize the superiority of the Regal White Wyandottes. We hardly believe it necessary to comment further, as the above record speaks for itself. Send for catalogue to John S. Martin, Box 51, Port Dover, Ont., Canada.

We hear from Wm. Cook & Sons, originators of all the Orpingtons, Scotch Plains, N. J., that they have more young, and better stock than they have ever had before, also the results of Mr. P. A. Cook's mating of birds on their English Plant have been very successful, as they are mated specially for American requirements, as the average imported birds are not good for the American show. This firm intends exhibiting for competition at a few shows this season and are giving a number of \$50 cups for the best Cook Orpington in the show. Nashville, Tenn., and Birmingham, Ala., are two of the first shows to have these cups awarded at. They had very successful business at the Atlantic City, summer Poultry Exposition.

Aug. D. Arnold, Dillsburg, Pa., writes us that he has a grand lot of White Favories and Golden and Silver Campines to spare this season. This season he put out over 3,000 eggs on twenty-five different farms. Most of these farms are along the foot of the beautiful South Mountain and the birds have free range over thousands of acres of shade and grass runs, with insects in abundance. These birds will all come to Mr. Arnold's plant between October 1st and November 10th and will be full of health and vigor. All who wish birds of above varieties should have orders booked for shipment at that time. Mr. Arnold wishes to sell early and will make prices right.

Osbun Poultry Farm Co., Mansfield, Ohio, breeders of White Rocks, Single Comb White Leghorns and Indian Runner Ducks are offering 1,500 old and young birds for sale that are bred for winter egg production especially. The coming season they are planning on going into the baby chick business quite extensively as they have at the present time 12,000 egg capacity and expect to double this at an early date. They are planning to be able to furnish day old chicks of all the leading varieties in any quantity desired. Write them and mention American Poultry Journal.

The F. L. Poultry Farm, Verona, Pa., breeders of Rhode Island Reds, report having about 800 as fine youngsters as they ever raised. Among them some crackerjacks that will be heard from the coming winter at the large shows. Reports from their customers the past season are very flattering, both on eggs and baby chicks. When writing them mention American Poultry Journal.

### A 3-Month Trial Subscription

To Reliable Poultry Journal, only 10 cents. Stamps are acceptable. Or send for free sample copy of the most helpful poultry paper published. Address Reliable Poultry Journal Pub. Co., Box E-13, Quincy, Ill.

The Keyes-Davis Co., Inc., Dept. 502 Battle Creek, Mich.

Petaluma, Calif., July 26, 1913.

The Succulenta Co., Newark, N. J.

Gentlemen:—I have your favor of June 30, 1913; also the 5,000 Succulenta tablets, to which I have delayed acknowledgment until I had observed the effect of the tablets upon my neighbors, Mr. Adams' chickens.

His chickens were certainly badly run down and it was a severe test, but I am glad to say that they are showing the excellent tonic effects of this form of green-food. I expect they will also show a gain in egg-yield.

My own flock are doing fine. They had materially decreased their egg-yield owing to the want of greens. They have, with "Succulenta" tablets, entirely recovered and during this month I am getting 50 per cent., which is in advance of what would be expected at this season of year.

I find that I am being compelled to give considerable time to explaining the Succulenta tablets to the chicken-ranchers and I have trouble to keep the small supply I have on hand. Today I had to part with a can of 500 tablets to the Superintendent of our big mill and supply house.

Thanking you for your kindness and courtesy, I am,

Yours truly,

HARRY L. NEALL.

Fred A. Poertner, proprietor Buff Poultry Farm, Berea, Ohio, informs us that the "Wingold Strain" made another grand record at the great Forest City Fair, Cleveland, Ohio, when his Buff Orpingtons won first pen, first and third cockerel and second pullet in the strongest competition he ever met with. The pen that won first is the same pen that won first at St. Louis in 1912 and first at Cleveland in 1912 and 1913, thus making four exhibitions without defeat in fast company. This farm makes a specialty of breeding Buff Wyandottes and S. C. Buff Orpingtons.

"Poultry Raising" is the title of a very neat, well-printed 16-page and cover booklet issued by the Land and Industrial Department of the Southern Railway. The rules and advice given in this booklet are the results of the practical experiences of successful poultrymen and government and state experiments. Copies of this booklet will be sent on request. Address M. V. Richards, Land and Industrial Agent, Southern Railway, Washington, D. C.

George W. Little, the Rose Comb Rhode Island Red breeder of South Braintree, Mass., informs us that he is now nicely located on his new farm and has a fine lot of young birds ready for the early shows; all bred from "Sensation" and "Supreme." By careful breeding and selection he greatly improved this strain. Write him and mention American Poultry Journal.

Iowana Farms, Davenport, Iowa, report the following grand winnings on their White Orpingtons at the Iowa State Fair, Des Moines, August 20-28, 1913: 1st cock; 1st and 2d hen; 1st pen of fowls; 1st pen of chicks; 2d and 3d cockerel; 3d pullet. Competition at this fair is always strong and a winning like the above is worthy of attention as it shows the quality of the stock that is being produced on this up-to-date farm.

### A Free Sample Copy

Of the Reliable Poultry Journal, one of the most practical and helpful poultry papers published, will be mailed upon receipt of a postal card request.

A 3-months' trial subscription will cost you only ten cents. Stamps are acceptable. Address Reliable Poultry Journal Pub. Co., Box E-13, Quincy, Ill.

I. Brooks Clarke, the well known Buff Orpington breeder, has made a change and our readers are requested in the future to address The-Egg-A-Day Farm, Rahway, N. J. Mr. Clark has some fine large show birds he is offering at very reasonable prices. He showed a seven and one-half pound cockerel at the recent Greater New York Show which was among the winners.

## F. L. Poultry Farm

## Cincinnati, Ohio, Show.

The next great Cincinnati show will be held at Cincinnati, December 1st to 8th, 1913. There will be over 100 beautiful silver cups and other valuable prizes. A silver cup is offered on every breed and variety besides the five cash prizes. The Music Hall is one of the finest show rooms in this country and is so well lighted the birds can be seen at night as well as day. Cincinnati is in the heart of one of the richest sections of the United States, easily reached from all points. It is the gateway to the south. Don't fail to get your birds ready to show with us. Every premium guaranteed. The best of cooping and judges.

The premium lists will be out October 25th. Send your name in for one. Premium lists will be sent only to those who ask for them. W. C. Pierce, Secretary-Treasurer, 825 State Life Bldg., Indianapolis, Ind. E. B. Rogers, president, Cincinnati, O.

## Buffalo, N. Y., Show.

The Greater Buffalo Poultry Show will be staged at the Auditorium, Buffalo, N. Y., November 25 to 29, 1913. The association has been incorporated. The officers are: President, Jas. O. Moore, Buffalo; vice-president, Major Hugh A. Rose, Welland, Canada; treasurer, H. W. Pottle, Buffalo; secretary, J. H. Dreyenstedt, 506 Electric Bldg., Buffalo, N. Y.

Among the other officers are such well-known poultrymen as Geo. Urban, Jr., Robt. Essex, John S. Martin, Jos. Russell, Lew H. Bown, H. W. Alt, etc. The names of such well known men are in themselves a guarantee that Buffalo will be "a show leader."

The object of the new association is to hold in Buffalo each year a high-class poultry exhibition, conducted on strictly business principles, where breeders from the north, east, south and west, as well as from Canada, can annually compete for the liberal regular and gold special prizes to be offered by this new organization. Furthermore, as many breeders have arrived at the conclusion that some of our winter shows are held too late in the season, and too many are crowded into one month, the management of the Greater Buffalo Show has decided to extend the show season by holding an earlier show, believing that no better time for holding a poultry exhibition could be selected than Thanksgiving week.

The finest corps of judges ever engaged for any show in the United States or Canada, has been engaged, including specialists from both countries. The judging list is as follows: W. B. Atherton, Boston, Mass.; Chas. D. Cleveland, Eatontown, N. J.; W. C. Pierce, Indianapolis, Ind.; F. L. Platt, Toledo, Ohio; J. W. Andrews, Dighton, Mass.; L. G. Jarvis, Hamilton, Canada; Wm. McNeill, London, Canada; W. H. Card, Manchester, Conn.; A. J. Braun, Syracuse, N. Y.; W. C. Denny, Buffalo, N. Y.; W. G. Minch, Carlisle, Pa.; F. D. Maunder, Buffalo, N. Y.; A. O. Schelling, Buffalo, N. Y.; H. J. Fiske, Sterlington, N. Y.; Geo. H. Burgott, Lawtons, N. Y.; Geo. W. Webb, Rochester, N. Y.

One of the features of the show will be the display of hares. The New Zealand Red Hare Club offer \$250 in cash as special prize money.

For premium list and entry blanks, address J. H. Dreyenstedt, 506 Electric Building, Buffalo, N. Y.

## Licene Kills Lice and "Nits."

When other lice killers fail, try Licene. It does the work every time. Send to the Licene Co., 1500 Pontiac Building, Chicago, Ill., for a tube of Licene, price 50 cents, and they will send you enough Licene for 200 birds. This firm will refund your money if you are not satisfied. Mr. E. B. Thompson, president of the American Poultry Association, says:

I have tried Licene with the best of results; it is a most excellent preventative of lice and a quick and rapid exterminator. Licene should have a great sale to poultrymen, who must appreciate its value after being tried.—E. B. Thompson.

R. J. Elliott, Mansfield, Ohio, breeder of Single-comb White Leghorns, informs us that, owing to the great demand for day-old chicks the past season, he sold a little closer than usual, and as a result did not raise as many as he generally does and will not have any pullets for sale at any price, but has a nice bunch of vigorous, free-range cockerels to dispose of and a few first-class

breeding hens to sell. He states that this has been the most successful year he has ever had and looks forward to a very prosperous season.

## The Automatic Sanitary Trap Nest.

A complete demonstration of the merits of the Automatic Sanitary Trap Nest was given at the Minnesota State Fair where the company exhibited the nest with a pen of hens operating the same. The exhibition was the principal feature of the poultry department where all poultrymen had the pleasure of seeing hens using a trap nest which required no attention whatever on the part of the owner, each laying hen separating herself from the non-layers, protected while occupying the nest, which automatically re-opened the moment it was vacated by the hen. A similar exhibition will be given at the great Chicago show in January next.

For free booklet descriptive of the nest, address Automatic Sanitary Trap Nest Co., Duluth, Minn.

Archwood Yards, Cleveland, Ohio, breeders of the Original Sussex Strain of S. C. White Orpingtons, report having raised a large number of very choice exhibition and breeding birds this season, and call particular attention to one cockerel, sired by

Regal Lad, that surpasses anything they have ever raised. He is grand in type and superbly furnished, and will be sold at a reasonable figure. They also have two daughters of Lassie Girl that, from all appearances, will excel their mother. These are for sale at a reasonable price. Write them for full particulars, and mention American Poultry Journal.

After eight years of hard work, the Glen Poultry Farm, Fairport, N. Y., breeders of White Plymouth Rocks, assure us that they have built up a strain that can hold its own with the best in the country. They have about 300 choice specimens to pick from this fall and therefore will be able to satisfy the wants of all customers, and assure us that they will give all orders, large or small, their personal attention. Write them for full particulars, and mention American Poultry Journal.

J. B. Greenan, Deckerville, Mich., breeder of high-class White Wyandottes, reports that he has for sale about 25 cocks, 200 cockerels, 200 pullets and 100 yearling hens that are good ones. He states these are the finest lot of birds he ever raised. Some of the cockerels are now ready to show. If you want something good at a reasonable price, write him and mention American Poultry Journal.

# Win With Good Layers

THERE is no need to keep White Leghorns that are not good layers just because you want prize winners. Ferris Leghorns have been bred for eggs and exhibition more than thirteen years. They have been trapnested and only the best layers used for breeding for so many years that laying qualities are bred in the bone.

Trapnested records of 160 or more eggs a year are required from all our best exhibition birds. We never breed from birds that fall below this standard, no matter how good they are from an exhibition standpoint. This is why the laying qualities of Ferris Leghorns are so widely known. Size, health, vigor are present in every bird—we raise no other kind.

Standard qualities are given extra attention. If you could see the hundreds of fine exhibition birds we have for sale you would find just the birds you have always wanted. They have splendid shape in every section—good heads, long concave backs, low wide spread tails. Their plumage is perfectly white, their shanks are a deep yellow. They are the kind that are winning for our customers all over the United States in strongest competition.

## Ferris Leghorns Win

Here are a few of the recent winnings that help establish the superior quality of Ferris Leghorns:

**Iowa State Fair, August, 1913**—Silver cup for best cockerel and numerous other prizes.

**Maryland State Fair, September, 1913**—First and second cock, first and second hen, first pullet.

**West Michigan State Fair, September, 1913**—First and second cock, first and second cockerel, first and second pullet, first pen.

**West Virginia State Fair, September, 1913**—First and second cock, first chl

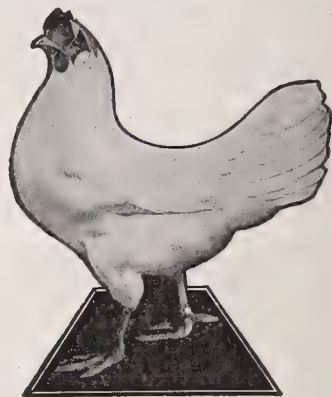

We will exhibit at twenty or more of the leading fairs and shows this fall and winter. Watch our winnings and remember we can furnish equally good birds for your show.

Prices are reasonable. We have good breeding cocks and cockerels at \$5, \$7 and \$10. Good exhibition males at \$15 to \$30. Pullets and hens for breeding, \$2.50, \$3.50 and \$5; for exhibition, \$7.50 to \$15.

We ship on approval—Your money back if not satisfied. We also insure all stock for thirty days—Replace free all that die or become ill.

You should have a copy of our 132-page catalog. It is the most complete White Leghorn catalog ever published. It gives prices and description of all grades of stock—tells you just what we have to sell. It also gives a lot of information that may be of interest to you—how we feed and house our stock, how we breed for eggs, how we produce exhibition stock, etc. Write a postal today and let us prove to you that Ferris Leghorns will suit you. You will be surprised at the low prices we will quote on the stock you need.

**George B. Ferris, The Ferris Leghorn Farm**  
905 North Union Street :: Grand Rapids, Michigan

### A Day at the Aldrich Poultry Farm.

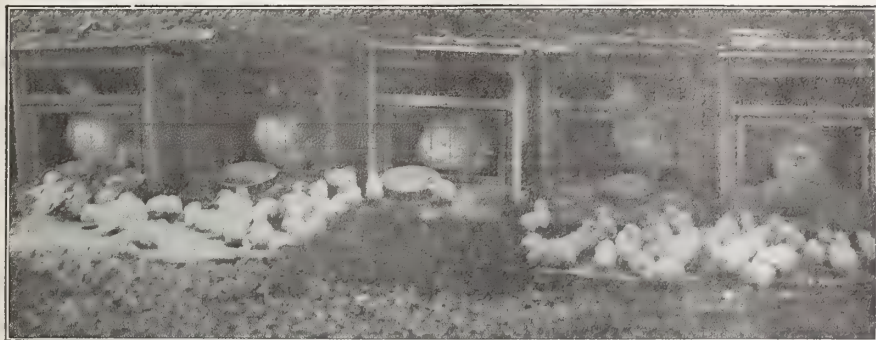

I had been looking forward to my visit at the famous Aldrich White Orpington Farm at Columbus, Ohio, with a great deal of pleasure, as I knew I would see the finest flock of White Orpingtons, both young and old, that I had ever seen, and to say the least I was not disappointed; and I only wish I could take my readers in person to visit this down-to-the-minute poultry farm, where quality is the watchword, and where everyone connected with the business is enthusiastic, hard at work, and where the men whose money is invested do the important work themselves, and do not trust to inexperienced help, and whose chief aim is to satisfy their customers.

This famous farm is ideally located 6 miles north of Columbus, on the C. D. & M. Interurban, and consists of 23 acres

Horticultural Society, and for four years vice-president of the State Horticultural Society. He has retired from the practice of law, and gives his time to the business of the firm, and he is a life member of the American Poultry Association and member of the executive board of the White Orpington Club.

Their superintendent, Mr. Len Rawnsley, is a born poultryman, his father and grandfather having been noted fanciers and judges at the leading shows in England, and he has been at the head of leading farms in England and Canada.

The members of the firm have spared no expense or labor to perfect their strain, and to breed up a perfect type of the White Orpington, and the result is seen in their wonderful flock of youngsters of this year, which, it is believed, have never been equaled upon any White Orpington farm in the world.

BROOD COOPS AND CHICKS ON THE ALDRICH POULTRY FARM

of land, well drained and with plenty of shade and clover and blue grass in the large yards. All of the buildings on the farm are the most modern, and we do not believe there is a better arranged or equipped plant to be found anywhere.

The owners of this farm are all men of means and education, and are devoting their entire time and energy in perfecting this one breed, and to this lies in a great degree the secret of their success, and the wonderful quality of their birds.

Mr. O. W. Aldrich, the senior member of the firm, is known in many branches of business; a lawyer admitted to the bar of Illinois, Ohio, West Virginia, District of Columbia and the Supreme Court of the United States, professor of law in Ohio State University for years, and was for 7 years president of the first interurban railway entering the city. He has been president of the Columbus

I asked the superintendent, Mr. Rawnsley, how it was possible to breed and rear such a magnificent lot; he said: "no other farm ever had such a great number of fine birds for the foundation stock, and the greatest care has been taken in the mating, following the rules that have brought the cattle, sheep and horses up to their present perfection. No bird with white in lobe, or blue in leg, is used, and only those true to type are mated." When hatched they are reared by the Aldrich system, which is given in the booklet "From the Shell to the Show-Room," which is sent to every one of their customers. Every bird sent out is conditioned under the charge of Mr. Rawnsley, and the result was seen last year in their wonderful winnings at the leading shows.

The Aldrich Poultry Farm has succeeded in perfecting their strain in so

far that they are exceptionally well combed, have perfect colored eyes, very heavy bone, great width of back carried well back to the tail, with full round breasts and deep keels, and the birds of this strain are exceptionally white and up to standard weight, and exceptionally free from white in lobe, side-prigs or blue legs. This strain has also been very carefully bred for heavy egg production, and all matings are carefully trapnested to this end. Every fancier who has been much in the show-rooms of the country during the last three years will bear me

## "Pittsburgh Perfect" Poultry & Garden Fence

Always the most popular among the leading poultrymen everywhere, "Pittsburgh Perfect" Poultry Fence is to-day, with its many improvements in quality of steel and galvanizing, the strongest, most enduring, best looking and most satisfactory of any fence made for the purpose. It keeps your birds within bounds, absolutely safe from prowling animals, and strings without trouble, up hill or down dale, because the wires at every joint are

### WELDED BY ELECTRICITY

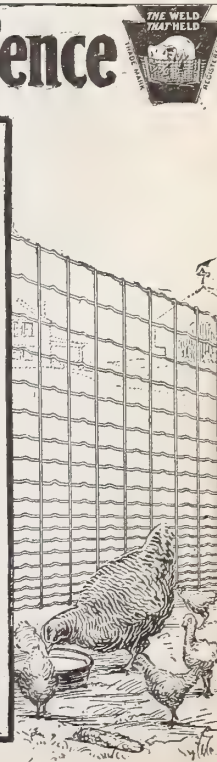

into a continuous, *one-piece* fabric. The many advantages of this method of making fence are found only in "Pittsburgh Perfect."

#### SEE IT AT YOUR DEALER'S

Test the wire in ANY kind of fence before you buy. Our new catalogue—sent free—explains some simple but conclusive tests you can easily make yourself, and so insure your investment. Write for a catalogue to-day.

### PITTSBURGH STEEL CO., PITTSBURGH, PA.

Makers of "Pittsburgh Perfect" Brands of Barbed Wire; Bright, Annealed and Galvanized Wire; Hard Spring Coil Wire; Twisted Cable Wire; Straightened and Cut Wire; Telephone Wire; Fence Staples; Poultry Netting Staples; Regular Wire Nails; Galvanized Wire Nails; Large Head Roofing Nails; Bale Ties, and "Pittsburgh Perfect" Fencing.

out in the statement that better White Orpingtons have been seen throughout the country since the Aldrich strain has been the standard by which the variety is judged than formerly.

In looking over the young stock I was particularly impressed with the very high percentage of good eyes, and the neatness of comb, as at least 90 per cent of the flock had red eyes and low 5 point

combs, and this is an important point with all Orpington breeders, as combs of great size are not to be desired, as they tend more or less to side sprigs, thumb marks and too many serrations.

At the time of my visit, September 1st, there were 100 hens and 100 cocks all through their moult, and already conditioned for the early shows, and 500 hens rounding into shape for later shows, and

there were all the famous winners at all the largest shows in America during the last two years; there were about 600 pullets and 500 cockerels, at least 80 per cent of which would grace any show in America, and plainly show their superiority over even the famous winners from which they were bred. I noticed one pullet, hatched February 4th, which is the best White Orpington pullet I ever saw, almost perfect, and one of the best pullets ever bred in the world; her head points were perfect and she was white as snow, with every bone and the true Orpington type, and she will score 97½ to 98 points. She weighed 7¼ lbs. and will surely cause a sensation in the show room this season. There were a large number of pullets of different ages which promised to equal her in every way that will be ready for the big shows.

There were a large number of cockerels in their small conditioning coops, several of them weighing 9½ lbs., and all up to standard weight in six months; several pens of March and April hatched cockerels weighing 7 to 8 lbs., and they were excellent in type and as white as snow, although they had run at will in the sunlight, thus showing that although sun is a great conditioner for white birds, the Aldrich White Orpingtons are bred white and stay white, regardless of sun, season, or weather. I saw several pens of pullets that were hatched in February that had been laying since July 28th, and a large number hatched in March ready for shows now. All of these birds were bred from the New York and Chicago winners of last season, and all were banded and marked, and a record is kept of the mating entry bird is bred from. We are safe in saying that there were 300 cockerels and 400 pullets that for type, color and show characteristics are seldom met with, and we don't see how it would be possible to produce better birds, and with the perfect care and attention these birds are receiving they will round into the greatest bunch of exhibition birds that have ever been produced. They were all hen hatched and hen reared.

The whole farm shows thrift and everything is where it should be. The size of the plant has been enlarged about one third since last season, and there will be 40 pens mated for the egg trade after November 1st.

Owing to the wonderful success in raising so many good ones, birds will be sold about 50 per cent less than last season; during the last two weeks in August orders for over \$2,000 worth of stock were booked for the early shows, and every bird that had left the farm this season had won for their customers in such shows as Winnipeg, Brandon, Canada; Ohio, Indiana and North Dakota State Fairs, and we can truthfully say that anyone wanting winners for any show in America in White Orpingtons can do no better than send to this famous farm and get their prices.

The earlier you can place your order, the better selection you can get, as the trouble is not to sell the stock on this farm, but rather will the supply equal the demand, so they can take care of all their customers. We trust that those of our readers who have an opportunity to visit Columbus will not fail to visit this farm, as it is worth your time and you will enjoy every minute you are there.—H. H. Coburn.

C. J. Loyd & Son, Greensburg, Ind., breeders of Partridge Plymouth Rocks, have several hundred of the finest young birds they have ever raised, many of them that are ready to go against hot competition in any show. They are better prepared than ever before to furnish high quality at a reasonable price. All inquiries will receive prompt and careful attention and satisfaction guaranteed.

H. A. Keister, Bangor, Mich., breeder of Rose Comb Black Minorcas, has a number of extra fine show cockerels and pullets hatched from his last season's winners that will be ready for the early shows. These birds show nice, small, well-pebbled combs, long, sloping backs, with low-carried tails. His stock is in fine condition and has the range of his 25-acre fruit farm, which assures health and vigor. Write him for what you want and mention American Poultry Journal.

W. O. Lyle & Son, exclusive breeders of Partridge Plymouth Rocks, Gnadenhutten, Ohio, have the finest young stock ever raised and will sell them at reasonable prices. They are the people who can furnish winners for any show room and the Erin Partridge Plymouth Rocks have as fine a show record as any strain in America. Write for prices.—H. H. Coburn.

# CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

Bourne Manufacturing Co., Box M, Melrose, Mass.

## "Licene" KILLS

One application of Licene kills every louse and "nit" on your birds and they will keep free from lice for six months.

Mr. E. B. Thompson, President of the American Poultry Association, says: "Gentlemen;—I have tried LICENE with best results; it is a most excellent preventive of lice and a rapid exterminator. LICENE should have a great sale to poultrymen who must appreciate its value after trying. E. B. THOMPSON, Amenia, N. Y." Enough for 200 birds, postpaid 60 cents. Money refunded if unsatisfactory. Circulars free. Agents wanted.

## THE LICENE CO.

## WHAT EXPERTS THINK OF IT

"Most Complete and Comprehensive"

Gentlemen: Your 1913 Year Book received and carefully inspected. We find it to be a most complete and comprehensive work. Very truly yours, Leo. T. Robinson, Editor Nat. Barred Rock Journal, Union City, Mich.

Dear Sir: I am satisfied you have succeeded in giving to the public a book of permanent value, one that the editors and artists should be proud of. The Year Book is a welcome addition to our poultry literature. Yours truly, J. H. Dreyenstedt, Editor American Poultry World, Buffalo, N. Y.

Gentlemen: You certainly deserve great credit for publishing such an excellent Year Book. Judging by its merits, it should meet with great success. Sincerely yours, A. G. Studier, Editor R. I. Red Journal, Waverly, Ia.

## 11 Four Color Pictures

The American Poultry Journal Year Book for 1913 contains eleven four-color pictures of fowls made by the famous poultry artist, Louis A. Stahmer. Three of these pictures are double-page in size (6½ by 9½ inches, each showing one male and four females) and they were all made from life by the new four-color photo engraving process. Eight of these colored pictures are mounted on heavy tan paper and are suitable for framing. These beautiful pictures have created a sensation wherever seen as they represent the highest type of thoroughbred fowls and they are beyond question the most beautiful and artistic set of exquisite pictures of pure-bred poultry ever published. To appreciate these pictures they must be seen, as it is almost impossible to find words strong enough to describe their natural beauty and artistic background taken from nature's scenery, with its charming hues and tints of the glorious rainbow.

## "MENDELISM AND THE LAWS OF HEREDITY,"

By Rev. F. W. Sturgus, M. A., of England, occupies 36 pages of the Year Book and is undoubtedly the best exposition of Mendelism and the laws of heredity in relation to poultry breeding that has yet been published and is worthy of deep study by our American breeders. This one article by this noted authority, is worth many times the price of the book to every breeder of fancy poultry.

## "The Poultryman's Encyclopedia"

is one of the big features of the book, giving a complete description of 29 common diseases of fowls, their causes and cures, explanation of all technical terms used in the poultry industry, and also treating briefly but fully such subjects as How to preserve eggs, Making feeding sprouted oats, Soft-shelled eggs, Right size of poultry house, Broilers, Broken legs, Curing broody hens, Care of setting hens, Capons, How to stop cock crowing at night, Cocking and pullet breeding, Double and single mating, Color feeding, Colony houses, Contents of egg, Copulation, Crate fattening, Dust bath, Egg bound, Egg and feather eating, Feed for fattening, Grit, Flavor of eggs, Incubators and cellars, Influence of the sexes, Insect pests, Killing and dressing poultry, Mash feeding, Molt, ing, Nests, Perches, Scratching sheds, Sitters and non-sitters, Telling the sex, Removing spurs, Watering devices, Ventilating houses, How to give medicine, Scaly legs, etc. All the above and many more items are arranged alphabetically for instant reference, making it truly a Poultryman's Encyclopedia.

## Printing and Binding

The Year Book is printed on high grade creamed book paper and the binding is linen thread sewed to make it flat opening. There is nothing cheap or trashy about the book as no expense was spared to make it a representative of the best present day standard of artistic printing and worthy to be handed down to posterity as an example of what the best printer could produce in the year of 1913.

No book of this kind has ever been presented to the American public before. Think of it 379 pages, 14 colored illustrations, the best articles that money could buy, on the most helpful subjects, and complete show reports for 1912-13.

Prices—\$1.00 for the de luxe cloth bound edition and 50c for the paper bound edition, express prepaid.

## EVERYBODY PRAISES BOOK

"An Excellent Book for Poultrymen"

American Poultry Journal, Gentlemen: We have looked over the Year Book with a great deal of interest and find it filled with valuable poultry information. It is certainly an excellent book for poultrymen. Yours truly, C. H. Chaplin, Sec'y Sheffield Farm, Part. Wyandottes, Glendale, O.

"More Than Pleased"

Dear Sirs: Received the Year Book for 1913, and must say that I'm more than pleased with same. I think this a great book for amateurs. Yours truly, R. P. Schneider, West Newton, Pa.

"Is Worth Waiting For"

Gentlemen: The Year Book has reached me and more than fulfills my expectations. It is worth waiting for. Yours, Edwin R. Frazer, Oakland, Cal.

## Poultry Show Reports

One of the most valuable features of the Year Book to the exhibitor and breeder is the complete reports of the leading poultry shows held during 1912-13. 1st, 2d and 3d prize winners, with judges making the awards and number of entries in each class, are reported of nine of the largest shows, and 1st prize winners of the next 32 largest shows, and shows having less than 1000 entries are compiled into a directory, giving number of entries, entry fees, date of show, name of secretary, who furnishes the coops, etc.

The Year Book also contains a Specialty Club Directory, Experiment Station Directory, Poultry Judge's Directory, Biographies of 30 successful prominent breeders; The American Poultry Association, its officers, branches, Organizers, and what it is. Complete reports of the National Egg-Laying Contest; North American Egg-Laying Competition, and the Inter Ocean-Midlothian Farms Egg-Laying Contest.

## NOT A ONE MAN BOOK

The table of contents shows that it took 29 of the best poultry experts to edit and write the great American Poultry Journal Year Book for 1913.

The editors of the Year Book are: Jas. W. Bell, Editor in Chief; Clarence Ward, Managing Editor; Louis A. Stahmer, Artist and Contributing Editor; Dr. Prince T. Woods, H. H. Stoddard, C. W. Zimmer, Helen T. Woods, Miss Carey of England, are the contributing editors, besides 21 special articles by leading specialists on poultry culture.

## The Year Book Contains

379 PAGES, all chuck full of valuable, up-to-date information for the poultry raiser, such as "The Poultryman's Calendar," telling what to do each month in the poultry yard; many articles by prominent breeders on such subjects as Line breeding with chart, Dr. Wood's Improved Open-Front Poultry Houses, with illustrations showing how to build one; Capons and Caponizing, with illustrations; Feeding the Layers, with feeding formulas and table of food values; Opportunities in Poultry for the Farmer; Advertising Pure-Bred Poultry; A Simple Indoor Fireless Brooder, with illustrations; Stoneburn Trap Nest, with illustrations showing how to build one; The Diaphragm Open-Air Poultry House, with illustrations; Gillette Open-Air House; Old and New Breeds; and many other special articles by leading specialists of this country and England.

The Book is a comprehensive review of the poultry industry for 1912-13, all thoroughly and carefully indexed for instant reference. It is worth \$5.00 of any poultryman's money.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York, Winter 1910-1911.

The Three Greatest Living Barred Rock Males

## E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

Win the most remarkable record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—this winter of 1913. Winning as follows:

First, second, sixth and eighth on cockerels. First and sixth on pullets. First, second and fifth on exhibition pens. First on cockerel mated pen. Second, third, fourth and fifth on cocks. The Imperial Prize of the show, Sweepstakes special for champion male. Sweepstakes special for champion female. Diploma presented by the American Poultry Association for best cockerel. Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety. Challenge silver cup for best exhibition pen. Special best shaped male. Special best colored male. Special best colored female. Best cock, cockerel, hen and pullet, four best cockerels, four best pullets, \$25 special prize, presented by the New York Show for finest display. All silver cups and cash specials—four times as many first prizes as any competitor. More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibition of any breed.

### My Exhibition of 56 Birds Was the Best the World Has Ever Seen

No other Barred Rock breeder has ever produced or is producing such matchless quality. Every feather in my exhibit was bred on my farm. My First Prize Champion Cockerel and First Prize Champion Pullet are years ahead of their time. They are the produce of the highest skill. No other Barred Rock breeder has ever accomplished the unprecedented achievement of winning the two greatest prizes in the world, Champion Male and Champion Female, at one show in Madison Square Garden. For 25 years at New York my "Ringlet" victories have been complete; my clean sweep of 1ST, 2ND, 3RD, 4TH AND 5TH PRIZES on pullets has never been approached at Madison Square Garden and stands alone and unequalled. The Imperial "Ringlets" are the standard by which all other Barred Rocks are judged. To meet success in winning prizes you must have my birds and eggs. I will sell you grand exhibition birds for any show, and breeders of this Richest First Prize, New York, blood. Richly illustrated 70-page catalogue upon request. It is full of original pictures of New York winners from life.

**Eggs** From the finest exhibition matings in all the world, \$10.00 per setting; four settings, \$35.00 one hundred eggs, \$60.00. One-half these prices after June 10th.

**Louis Lee Haggin, Prop., R. 3, P. O. Box 1025, Lexington, Ky.**

## Hip! Hip!! Hurrah!!!

### Aristocrats Win First Prize

At Chicago, (the biggest Barred Rock show in America), at Pittsburg, at the great American Royal and at 61 other large shows all over the U. S. This grand sweep from ocean to ocean was made by my customers last season and shows to a certainty the wonderful quality I am sending out to my customers. This season the quality of these Aristocrats is **better** than last season and as I have

### 2,000 Show Birds

Growing up into finished beauty, I am ready prepared to send out winners for any show, east or west, north or south. Now—do you need a winning cock, a winning cockerel, a winning pullet, a winning hen, a winning pen? Sit down and write me —now. I can help you. Every show bird guaranteed.

**W. D. Holterman, Fancier, Box A, Ft. Wayne, Indiana**

## COLBY S. C. REDS

At Cleveland, January 20 to 27, 1913, I won 2 Cockerel, 1—2 Pen. Only made four entries. One of the hottest classes of Reds ever shown at Cleveland. Will have 8 pens mated for egg trade. Book egg orders early. Eggs, \$3, \$5 and \$10 per 15. Send for mating list.

## HARRISON'S ROYAL REDS

### LEAD ALL OTHERS

Never before in the history of the breed has any exhibitor equalled the record made by my strain personally exhibited by me at the last Chicago and Indianapolis shows.

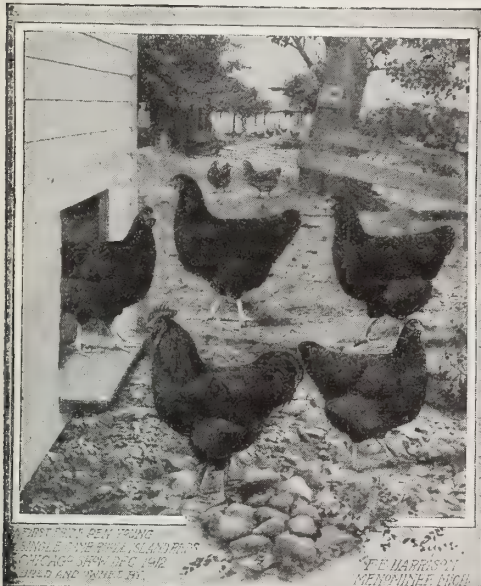

My win at Chicago of 1st, 3d and 4th cock; 2d and 3d hen; 1st, 2d and 3d pullet; 4th cockerel; 1st and 2d old pen and 1st young pen has never been equalled in the history of the show.

My win of six firsts, six seconds and six thirds at Indianapolis is the world's record for a national show.

I have upwards of 2,000 head of stock from these illustrious winners, and am prepared to furnish winners for any show in America.

REMEMBER—There is no more popular strain in the world than Harrison's Royal Red Strain. Catalogue free.

F. E. Harrison : Box 30 : Menominee, Michigan

## TECKTONIUS' STRAIN BUFF LEGHORNS

90 PER CENT SHOW PRIZES

Highest Market Prices

### Are Good for the Big Chicago Show

For seven years my famous birds have captured 90 per cent of first and second prizes, cups and specials at all big poultry shows. The "TECKTONIUS STRAIN" so surely has the habit of "coming back," that this year some of my best customers—buyers of my high-grade stock—have asked me not to show at Chicago in December. They want a chance. Therefore—unless my line is already sold—I will not exhibit at the Chicago December Show. Just now, am offering

#### Unrivalled Bargains in Single and Rose Comb Leghorns

—For quick acceptance: Special values in \$10 and \$15 trios and pens, Single Comb Buff; especially good values in \$3, \$5 and \$10 Single and Rose Comb males; extra good values in lots of twelve Single Comb females, mated to one male—utility grade—price \$18 for thirteen birds. This offer good only until November 15th.

Scientific mating methods have made my Buff Leghorns "rulers of the roost." What I have done for the "TECKTONIUS STRAIN" you can do for yours. Care and persistence have made "Tecktonius Buffs" ace high winners in market and show. My handsome illustrated catalog—sent postpaid, 25c, coin or stamps—shows you how to put your birds in the same class.

Get some "TECKTONIUS STRAIN" pedigreed stock—the world's feathered aristocracy—into your flock—while my prices are away down. They will show you how to get in the best prize winning, show room, and general utility class—decrease sickness in the flock—increase percentage of fertility—grow strong, early maturing chicks—breed beautifully shaped birds—reduce cost of feed—increase productivity—and to get a Buff Leghorn that is really buff—that lays the same, regardless of climatic conditions or moulting periods, is easy to domesticate, and that thrives under any conditions. Get the "TECKTONIUS STRAIN" and you will have the best there is in Single and Rose Comb Buff Leghorns. Do you know about the "Tecktonius & Reed Single and Rose Comb Buff Leghorn Farm?"

After October 1st, 1913, the "Tecktonius" Farm will be known as the Tecktonius & Reed Single and Rose Comb Buff Leghorn Farm—breeding, exclusively, Single and Rose Comb Buff Leghorns. Mr. B. C. Reed—professional in the care and rearing of featured stock—will be my partner in the further development of the now world's best "TECKTONIUS STRAIN" Buff Leghorn. "TECKTONIUS" Single and Rose Comb Buff Leghorns are a safe and sure-return investment for any poultryman. With maximum, or minimum care—in the best, or the poorest quarters—in show room or market—summer or winter—they will earn money for you; they CAN'T HELP IT.

## Set Up and Ready To Run in a Day

*The 1200-egg size opens on both sides and has four separate hatching compartments, each with its own thermostat. Extra sections can be added latter at any time at a small cost.*

**CANDEE**  
INCUBATORS  
AUTOMATIC-RELIABLE

*The 1200-egg size only needs a total floor space of 11 by 14 feet. It comes all built ready to set on legs. It burns only a little coal and keeps a steady, even heat.*

## Make Money Doing Custom Hatching

At \$2.00 a tray in five hatches your profit will be \$160, with the 1200-egg size. Larger capacities figure in proportion. It takes only a few minutes of your time daily to look after it.

Put it in your house cellar if you wish, as the Fire Underwriters have approved it, and your insurance won't be affected.

With the gentle, hot water heat, you can hatch big, fluffy chicks that will live and grow.

The Candee is sold upon a Money Back basis. It is a proved success in every section and every climate.

Our new 1914 catalogue and custom hatching booklet free upon request.

Candee Incubator & Brooder Co., Dept. 2, Eastwood, N. Y.

# You Don't Experiment With The Hall Mammoth Incubator

## A Hall in the Cellar

### The First Requisite for a Successful Poultry Business

Original and Standard  
Capacity 1,200—20,100

The market does not afford any other incubator so suitable for your needs. *Hall* engineers, profiting by 37 years of experience, have designed and built the most efficient hatching equipment in existence. We are, therefore, offering the best possible system for custom hatching and the general poultry industry.

Every detail of manufacture is given the greatest of care and attention, and because we know the Hall is built right and upon the right principles, and that its operation is based upon natural laws, we are in a position to guarantee each and every machine.

We offer you nothing sensational nor do we claim the impossible. We have worked along logical lines with the aid of intelligent engineers and practical poultrymen. Nothing is offered by us for service unless it has proven its practicability. Our latest improvement is the safety temperature control—simplicity itself — no delicate mechanism, such as a thermostat, but a practical application of a practical idea for a practical purpose.

The proven essentials of scientific incubation are incorporated in the Hall Incubator. We do not market theories.

***FILL IN THE COUPON—You will want to know all of the facts about the HALL MAMMOTH INCUBATOR. Just fill out and mail the coupon today before you forget it. It puts the facts before you and you are under no obligations to buy.***

# It's Almost Threadbare

but as true as ever! Don't be misled by vague or misleading statements.  
**I Won**

at the big Albany Meeting of the National White Wyandotte Club last Jany.

2nd, 3rd and 4th cocks (Framingham Chief came back at **three years** of age and won 2nd. Tail was in poor condition, as he was very lame for two months this Fall from a fight and injured it a bit); 3rd hen, 1st, 2nd 5th and 6th cockerels, 2nd and 6th pullets, 2nd pen old, 2nd pen young, 1st collection sweepstakes in the American class, best shaped young male, best solid colored cockerel **in the show**, best Wyandotte cockerel **in the show**. My pen, young, laid way over second pen, the judge stated, but owing to a very slight defect in male's wing, he set it back. This means that birds from all over the country were brought to Albany to win, and, **as usual**, Duston turns the trick.

Besides bringing home an armful of ribbons, \$180 came along, too. That's going some in a class of 300 White Wyandottes. Also remember I took out, on a wire from an old customer, from my fitted string before shipping, a cockerel, pullet and cock, and **won** for my customer in as hot a show if not hotter than Albany, 1st cockerel, 1st pullet, 2nd cock, (no one but the judge could see why the cock did not win 1st, my customer writes.) That's only a sample of the way I won for my trade all last Fall and Winter. The birds have begun again. Read this:

Oct., 1913. —, Texas.

Dear Mr. Duston: More good news. Am just back from — show. Entered one cock, won 1st; one cockerel, won 1st; three hens, won 1st, 2nd, 3rd. Pullets entered, four, won 1st, 2nd, 3rd, 4th; 1st pen, special for best cock, cockerel, hen, pullet, all classes competing. One of my pullets won special for best shaped female in show, all females competing.

It is almost a mania for me to have my birds win the blue for my trade, and they do. It's a habit from 25 years' constant practice.

**I can win for you!** Now it will cost you only 15c for a catalogue that's worth the money, or you can have it for nothing, to find out what I have and guarantee to ship you. So write, and I'll **honestly** serve you or your money back.

THE BREEDER THAT HAS MADE POSSIBLE THE "WORLD'S BEST FLOCKS."

**ARTHUR G. DUSTON, Box 1020 SO. FRAMINGHAM, MASS.**

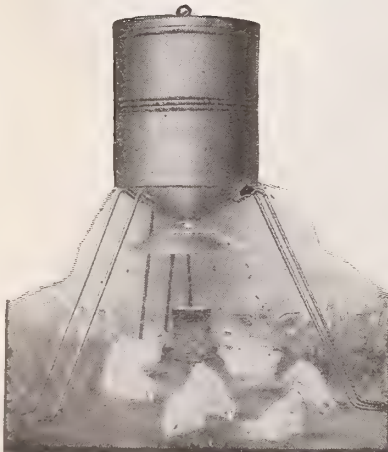

# GET THIS FEEDER

**Because** It will save you money; make your hens lay; give your birds lots of exercise; keep them healthy; increase fertility and develop your young stock quicker than you can possibly do it by hand feeding.

**These are proven facts and can't be disputed. Besides, it is on the job all the time, feeding your birds while you are attending to other work.**

**WE GUARANTEE**—That the Simplicity Feeder will pay for itself many times during the year by saving in grain. It will increase egg production and fertility.

Prices Delivered \$1.25 to \$3.50

Baby Chick Size—Perfectly Simple

That it will work perfectly at all times, scatter the feed farther, give more exercise than any other way. That it will operate from any direction, will not choke up and will feed all grains, mixed or separate. If not satisfied after thirty days we refund your money.

**WHAT AND HOW TO FEED**—We send you this valuable book without cost to you. It gives the formulas for feeding chicks, growing stock, fattening for market and for egg production. Also Spring, Summer, Fall and Winter feeds, as well as a variety of grain mixtures, and it tells you what these feeds will do and why they do it. These feeds can be fed by hand or in our feeder. This book is worth many dollars to you; we want you to have it and we send it free.

### 100 Per Cent Hatches—Ostrich Eggs—On the Other Side of the World

The following report, published in the "Agricultural Journal of the Cape of Good Hope," issued under the direction of the British Government, shows remarkable results of Standard Cyphers Incubators in hatching ostrich eggs in South Africa:

"... All of our chicks are incubated in Cyphers Incubators and most of the parent birds were also incubated. You will see by our egg record that we have sixteen camps of breeding birds, one cock and two hens to a camp. Of these only fourteen laid; the other two were only mated this year.

"For reasons of our own we separated our birds at the end of September, although you will notice they were mostly all laying well at the time, but of the 603 eggs we hatched 410 chicks, nearly 400 of which are alive and doing splendidly.

"This, in a year when so many are complaining of having few or no chicks, you will admit speaks well for the incubator.

### Bowden Hall Egg Record, 1910

Total, July .....	110
Total, August .....	238
Total, September .....	255
Grand Total, 603	

### Some of Our Best Hatches

40 Fertile eggs .....	40 chicks
38 Fertile eggs .....	35 chicks
38 Fertile eggs .....	36 chicks
37 Fertile eggs .....	37 chicks
38 Fertile eggs .....	38 chicks
41 Fertile eggs .....	40 chicks

"Altogether, out of 603 eggs laid, 430 were fertile, from which we got 410 chicks. Yours truly,

ROELOF B. KÖTZE"

# S·C·WHITE LEGHORNS

## THAT LAY, WEIGH AND WIN

There is more real proof in a teaspoonful of experience than in a demijohn of talk.

If you have ever bred the GROVE strain of SINGLE COMB WHITE LEGHORNS, you know from experience that they represent just what we claim for them.

Upon receipt of 50 cents in stamps or coin, we will send you postpaid our new sixty-four page book on poultry, which explains in detail the method of raising, feeding and conditioning line bred poultry for successful results.

**E. W. Grove, Jr.**

Route 1, Clayton, Missouri

# \$4,223 in One Year on a Town Lot

IS WHAT H. CECIL SHEPPARD OF BERE, O., ACTUALLY MADE BY KEEPING CHICKENS FOR PLEASURE

Mr. Sheppard was a city man; he lived in Cleveland for a number of years, but being in poor health, he was obliged to move to the country in order to prolong his life. He knew nothing about the chicken business when he moved to Berea in 1906, but he was an apt pupil. He discovered mistakes when he made them and was continually on the lookout for improvements. He started with a small flock and increased this with his knowledge of the business, and incidentally increased his business from \$160 the first year to \$9,500 the sixth year. In submitting the manuscript for his book, Mr. Sheppard wrote:

"Several parties have come to my place and sought information regarding my methods of conducting my chicken business. Some have told me they would pay \$5.00, others as high as \$25.00, if I would tell them how I run my business. I have told them that I have no secret, but it would take considerable writing and time to give them a detailed description of my methods. I decided to write it up and put it in a book so that anyone can have it for a reasonable price."

In his book, Mr. Sheppard clearly describes every detail of his business; the start and progress; the care of housing, feeding and mating the birds; the secrets of his success are explained in plain English. What a poultryman says about it:

"Mr. H. Cecil Sheppard, Berea, Ohio.

Dear Sir:—I wish to compliment you upon your book, "How I Made \$4,223.00 in One Year on a Town Lot with Chickens." I read it through very carefully and am pleased to say that anybody purchasing a copy of it will get many times the value of the small sum you sell it for. I found it full of excellent poultry advice and while I have handled poultry for years, and found therein things I already knew, I still found plenty of advice that will help anyone make a success with poultry if they will only do as your book tells them. Yours respectfully,

Watervliet, New York, January 26, 1913.

EDWIN G. GLASS, Manager Arsenal City Poultry Yards."

## BE INDEPENDENT

Keep chickens as a side line. Follow the footsteps of successful poultrymen like Mr. Sheppard and make good.

**OUR OFFER:** This book, "\$4,223.00 in One Year on a Town Lot," and **\$1.50**

**"THE LARGEST PRODUCERS AND EXHIBITORS OF THIS ONE BREED IN AMERICA"****Make Your Hens Lay**

**A FREE  
BOOK  
FOR YOU  
ON  
MAKING  
HENS LAY**

**When Eggs Are Worth Most**

**H**ENS relish juicy bugs and worms because these supply the protein feed they require to make eggs. The craving for meat and bone food—protein feed—is simply nature working out the egg-laying proclivity. Hens **must** have food rich in protein or egg-making elements, or it will be impossible for them to lay.

Our little book tells you all about the how and why of this. It makes you master of egg-getting. It's a book that opens up to you the real possibilities with poultry.

It's simply a matter of knowing what food to supply and how to prepare it. It is now established beyond all doubt that raw, green bone, with adhering meat and gristle, cut fine, is the ideal egg-producing food. Its cost is a mere trifle and its preparation is easy with a

**Mann's Latest Model Bone Cutter****Sold On 10 Days' Free Trial—No Money Down**

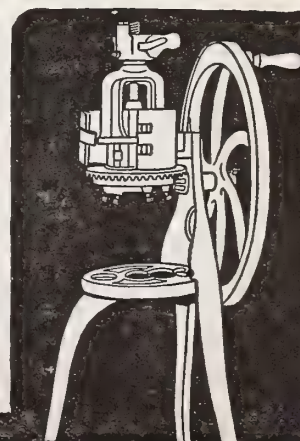

It turns easily and rapidly, cutting green bone, with adhering meat and gristle, wasting nothing.

Its self-governing feed automatically adapts the cutting to your strength, so that anyone can use it.

Its open, hinged cylinder is easily cleaned, and it takes in large bones. It is strong, durable, and requires few repairs. We want you to try one.

We will send you a Mann's Latest Model Bone Cutter on **10 Days' Free Trial**—no money down. If satisfied **after the trial**, buy it. If not, return it **at our expense**.

You want our good books, at any rate, send for them. We'll forward by return mail.

## "Dandy" Bone Cutter

You needn't pay one penny for this bone cutter until you try it and it satisfies you. Feeding green bone is one of the first steps to gain a big egg yield. But the bone must be cut right. The Dandy Green Bone Cutter cuts across the grain of the bone, enabling the hen to digest the nutritive elements better and convert same into eggs, blood, feathers. Our terms on the Dandy Bone Cutter are

### NO MONEY IN ADVANCE 30 DAYS FREE TRIAL

The Dandy costs less than most bone cutters and it works infinitely better. Also cuts meat, vegetables, roots, etc. To ensure big sales this year we have made special reduction in prices. Write quickly for free booklet. Prices are liable to rise next month, owing to big demand for raw material.  
**STRATTON MFG. CO., Box 17, Erie, Pa.**

The kind the reliable dealer recommends

## Why Does the U. S. Government Use This Roofing in Panama?

Because NEPONSET Paroid Roofing best stands the test in the trying conditions of the tropics—blistering heat—driving rains and hurricanes.

The U. S. Government has been especially careful in the selection of all materials used in Panama. Over three million square feet of NEPONSET Paroid Roofing have been used there, in Cuba, and the Philippines.

Isn't this roofing which received the "O. K." of government engineers the roofing for your barn—your store-house—your buildings? It is "spark-proof." Shingles are a fire risk. NEPONSET Paroid Roofing is an insurance against fire. Anyone can lay it.

# NEPONSET

## Waterproof Building Products

### Roofings

NEPONSET roofings are a fire protection, leak-proof and long lived. Anyone can lay them. NEPONSET Paroid Roofing is for general use. NEPONSET Prostate Roofing is an ornamental roofing for dwellings. Attractive colors.

### Building Papers

If NEPONSET Waterproof Building Papers are built into walls and floors, the building will be warmer, will cost less to heat and will last years longer. Recommended by architects, engineers and building owners everywhere.

### Wall Board

NEPONSET Wall Board is a scientific product which takes the place of lath and plaster; comes in sheets 32 inches wide. Remember, it is the only wall board with waterproofed surfaces that requires no further decoration. Anyone can put it up.

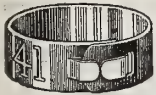

Are you going to build? Write for more facts about the products in which you are interested. Send for samples, free booklet and name of nearest NEPONSET dealer.

CHARLES G. PAPE, Box B74, FORT WAYNE, INDIANA

As a table fowl their meat is juicy, tender and well flavored. If you are just starting an egg farm—want to improve your flock or want 1913 hatched or yearling show birds for any competition, write today.

All stock sold on approval.

## ORPINGTONS OF THE SUPERB KIND

White, Buff, and Black. Imported and choicest of domestic stock, show birds, excellent breeding trios and pens, and young birds for sale at small prices. Catalogue Free. Correspondence solicited. Mention American Poultry Journal when writing.

## OLD HONESTY HEATER CO.

Just what poultrymen were looking for this long time. A new invention to get Winter eggs and raise chicks successfully. Patent granted March 26, 1913. Write for circular (free). Tells you all about it.

Old Honesty Heater Co., Dept. A, New Washington, Ohio

## 10 IMPORTANT FEATURES

These 10 Important Features should be considered when you are at a loss to know just which Hover to select. 1. The Ideal Hover may be carried with lamp burning. 2. It broods the chicks the natural way. 3. Can be used in a Brooder, Colony House, Henhouse, or any place where it is suitable to brood chicks. 4. It sets on level floor with no bridges for chicks to climb. 5. Has a Hot Air Double Drum Heater that produces 15% more heat than the Single Drum Heater used in most of the better class Hovers.

6. It is the best Hover made for winter and early spring use. 7. The new Automatic Lamp is perfection in itself, oil fount is outside of the lamp box feeding cool oil to the wick and will never cause trouble by smoking. 8. Lamp flame is always in plain view. 9. It is 24 inches in diameter and will brood 100 chicks. 10. While the quality ranks with the best it sells at a lower price.

Before selecting your Hover for 1914 we want you to write us for Circular showing how the Ideal Hover is constructed, also showing it in actual use on the State Farm at Dayton, Ohio, where seventeen were used last June with excellent results. We will also send you Circular of the Queen Incubator which we sell. It tells all about our Special Combination Offer of the Queen and the Ideal Hover, and you will mention this paper when you write us we will include a copy of "How to Raise 90% of Your Chicks." Write us today. Dealers wanted to handle the Ideal Hover.

NEW CARLISLE MFG. CO., New Carlisle, O., Successors The Duplex Incubator Co., Tremont City, O.

## TYPEWRITER SENSATION

TWO DOLLARS  
A MONTH

Buys a genuine standard No. 2 SMITH-PREMIER Typewriter and at \$71.20 less than the manufacturers price.

Never before has anything like this been attempted. Dealers get \$3.00 a month rent for this make of machine not nearly as perfect as the one we will send you, and you pay only two dollars a month and own it.

A Guaranteed Typewriter, \$28.80

Perfect machines only, complete outfit, nothing extra to buy, no strings of any kind to this offer. Just think of buying such a typewriter for \$8.80 down and \$2 a month. Cash price, \$27.40. Thousands of people have paid \$100.00 cash for Smith Premiers. It's standard, by many considered the best typewriter ever built. A key for each character, so each character is always the same; two-color ribbon; a type brush for cleaning the type built into the machine; the tilting carriage throws all writing instantly in sight; comes to you with tools, rubber cover, everything ready. It runs beautifully. It's wonderfully simple and strong. It will last a lifetime. I sold a similar supply of these beautiful machines about a year ago to everybody's satisfaction.

Send the Coupon and We Will Ship You This Smith-Premier Typewriter

When the typewriter arrives, deposit with the express agent \$8.80 and take the typewriter three days and try it. If you find it to be the best typewriter you ever saw, satisfactory in every respect, keep it and send us \$2 each month, until our special price of \$28.80 is paid. If you don't want to keep it, return it to the express agent, and he will give you back your \$8.80 and return the typewriter to us. We will pay the return express charges.

You won't want to send this machine back after you have seen it and tried it. You can't imagine the perfection of these machines till you see one, and the price is \$71.20 less than the catalogue price, and it is guaranteed just as if you paid \$100.00.

Only 200 Orders Will be Filled on This Offer—Act Today to be Sure

The coupon states the terms. Fill it out, send it now, today. You can't lose, and it's the greatest economical typewriter opportunity you will ever have.

### COUPON

HARRY E. SMITH,  
No. 180 N. Dearborn St., Chicago.

Ship me a No. 2 Smith-Premier f. o. b. Chicago, as described in this advertisement. I will pay you the \$20.00 balance of the special \$28.80 purchase price, at the rate of \$2.00 per month. The title to remain in your name until fully paid for. It is understood that I have three days in which to examine and try the typewriter. If I choose not to keep it I will carefully repack it and return it to the express agent. It is understood that you give the standard guarantee for 1 year.

Many improvements in this cutter. 12 different sizes for hand and power, costing from \$6.75 to \$195. Write for free catalogue and free trial plan.

STANDARD BONE CUTTER COMPANY, Milford, Mass.

PRICE

\$8.80

## A Natural Poultry Land

Poultry do best in an open winter country. It is artificial to house birds 4 to 5 months in the year.

In the open air, with ample green feeds the year around, they lay better, grow faster and are more vigorous.

The Southeast is a natural poultry region. A growing season of 200 to 300 days annually (varying with locality) allows for a wide range of green foods the year round and reduces the cost of maintenance to a minimum.

If you intend starting in the poultry business and have but limited means, no section can offer you more certain success than the Southeast.

### Land at \$15 an Acre up

prices varying with improvements and location, can be purchased in many sections near to good local markets. A Northern Florida poultryman sells his eggs the year around to a local hotel for 40 cents per dozen. Thus profitable home markets are assured. Small fruit growing in connection with the poultry business makes a profitable combination.

Send at once for the "Southern Field" magazine, lists of farms for sale and other information you may desire.

## Increase Egg Yield This Winter, Save Money on Feed, Make Chicks Grow Rapidly, Strong

by installing an Ideal Grain Sprouter and feed your hens the green food that is absolutely necessary to insure prolific egg production.

Eggs are going higher in price every year, the demand is far exceeding the supply, and it looks like good times and plenty of money for the man who has one of our sprouters.

## The IDEAL Grain Sprouter

- is the best machine for sprouting grain ever made;
- will produce sprouts over two inches long in 24 hours;
- sprouts any kind of grain better, in less time and without fuss or muss;
- produces three to four bushels of feed from one bushel of grain;
- pays for itself in a single month by saving in feed bills, increasing egg yield, supplying food that makes chicks grow strong and vigorous.

The "Ideal" is made in several sizes—for a few hens up to hundreds. Can be used in summer (with-out lamp) as it has proper arrangements for moisture and ventilation to produce quick results and crisp feed.

### CONSTRUCTION

Made of best lumber—double walls, insulated with heavy deadening felt—inside lined with galvanized iron—frame of trays heavy galvanized iron—bottom of tray heavy wire netting—front of machine glass, which induces green sprouts. These sprouts require very small amount of artificial heat which is produced by the Ideal Safety Lamp, the fumes of which pass through ventilators.

### Get Special Low Price Offer Today

Don't delay but write at once for special low price freight prepaid introductory offer, full particulars and description of this perfect grain sprouter. No poultry man should be without it. It is the *Eggs' Money Maker for the Poultryman since the Incubator was invented.*

Made by J. W. Miller Co., Manufacturers of Incubators, Brooders and Poultry Supplies, which is sufficient guarantee of its excellence.

J. W. MILLER COMPANY, Box 600 ROCKFORD, ILLINOIS

## CELLULOID LEG BANDS

Made in Seven Colors—Red, White, Blue, Pink, Amber, Black and Ruby. They mark your poultry so that you instantly know without handling, individual birds, one mating from another, and pullets from hens. Prices: 12 for 25c; 25 for 50c; 50 for 85c; 100 for \$1.50.

Bands for Half-grown chicks in Five Colors—Red, Blue, Pink, Amber and Black. Prices: 12 for 25c; 25 for 40c; 50 for 75c; 100 for \$1.25

Baby chick bands in Six Colors—Red, Blue, White, Amber, Pink and Black. Prices: 12 for 20c; 25 for 35c; 50 for 60c; 100 for \$1.00. Address all orders to

CHAS. L. STILES, 232 NORTH THIRD ST. COLUMBUS, OHIO

## FEED

More Phosphorus and Less Protein!

"Hen-o-la" Dry Mash

Fed in conjunction with

"Hen-e-ta" and "Succulenta"

Requires Absolutely Nothing Else

Because the three make a complete balanced ration, rich in phosphorus.

The Lack of Stamina and Vitality

In the birds is the cause of 95% of the failures in the poultry business. Therefore see to it that you are one of the successful 5% this year by putting your birds on this economical scientific horse sense system that produces Stamina and Vitality; convince yourself by giving it a thorough trial.

Let us send you report from a leading experiment station that has fed 31,500 lbs. "Hen-e-ta" during the past four years, and is still feeding same.

The above system makes poultry-keeping wonderfully simple and cheap.

If your dealer will not supply you, please write us for full information and prices on "Hen-e-ta," "Hen-o-la" Dry Mash and "Succulenta" tablets—green food substitute.

Valuable Booklets Free

## Get Humphrey's "Golden Egg"

—Tells How to Cut Feed Bills in Half—  
**HOW TO DOUBLE YOUR EGG YIELD**

Do you expect to get as many eggs from your hens this winter as you did in the summer? If not, why not?

Did you ever satisfactorily figure why hens do not generally lay in winter time?

It's not because of the cold. Whoever got cold under a feather bed? Hens are protected against cold.

It's not because they are of a mean and ugly disposition.

No, it is just because under ordinary winter circumstances they cannot lay.

The food a hen ordinarily gets does not force her to lay. The supply of insects, grasshoppers, worms she gets in summer time is gone; she gets nothing to replace it.

Give your hens the right food and they will lay as many eggs in winter as in summer.

Fresh cut raw bone prepared in a Humphrey Bone Cutter is the one right food.

"The Golden Egg" tells how to do this—fascinating facts told in a simple,

truthful way. It shows clearly why Humphrey's Green Bone Cutter doubles the egg yield.

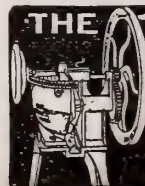

"Feed is the foundation of egg production." High-priced food cannot pay out. You may get a few eggs, but the profit is "eaten up."

Corn and other high-priced food will not give you winter eggs. It will eat up your egg profit.

A piece of raw bone the size of a turnip will feed 10 to 20 hens and cost you—perhaps nothing—at the most 2 or 3 cents.

The Humphrey Green Bone Cutter will make your hens lay in winter, will get you the eggs.

"The Golden Egg" will be sent to your address, free, just write me how many hens you have. Write today.

**THE HUMPHREY**

**GREEN BONE and VEGETABLE CUTTER** will save half your feed bills and double egg yield. Guaranteed to cut more bone, in less time, with less labor, than any other. Send for Special Trial Offer and handsome catalogue.

CLOSING-OUT SALE

THE WORLD'S BEST S. C. BLACK MINORCAS AND CANADA'S BEST S. C. REDS

We have disposed of our flock of Rose Comb Black Minorcas and have now decided to dispose of all our Single Comb Black Minorcas. At the American Black Minorca Club Show (two years in succession), the greatest Minorca show on the continent, we won the directors' \$50 cup for best collection. The dates are recent 1910-1911 and 1911-1912. The Provincial Show at Guelph is Canada's greatest show. Our strain won at Guelph, December, 1912: Single Comb Minorca cock 1-2-3, hen 3-4-7, cock-erel 1-2-3-6-7-9-10, pullet 1-2-4-5, 144 Single Comb Black Minorcas in the class and the best ever shown in Canada. The quality of our birds is higher than ever and at about half the usual price. Please send for sale list and testimonial. We please our customers. Mention American Poultry Journal.

T. A. Faulds -:- London, Ontario, Canada

MONMOUTH FARMS

S. C. White and Buff Leghorns

Monmouth Leghorns have been equally successful in prize winning and egg production. Here on our commercial egg farm, you will find the same large vigorous birds from which we breed our "ribbon winners," making enviable egg records—that's why we call them

THE TWENTIETH CENTURY DUAL PURPOSE FOWLS

Monmouth Buffs have won first prize pen at Madison Square Garden for the past five consecutive years—a record unequaled by any other leghorns. Monmouth Whites won champion cock of show—and 50 other prizes from 60 entries at Atlanta, 1912.

At present we have about 3,000 vigorous, pure line bred youngsters of best leghorn type, which we are selling at surprisingly moderate prices, quality considered. Also the most promising lot of exhibition stock we have ever bred—in perfect condition for early fairs. Prices on request.

Write for our beautiful catalogue, including colored illustrations.

**\$20.00**

**E. F. HODGSON CO., Room 332, 116 Washington St., Boston, Mass.**

It's a great big free poultry book offer on back inside cover

## SINGLE AND ROSE COMB REDS

Winners at Cleveland, Indianapolis, Detroit, Mansfield, Lansing. Also in customers' hands in all parts of the country. Stock and eggs of the best quality. Write for prices. Mention American Poultry Journal.

Carl C. Beatty Successor to Bickford & Beatty Van Wert, Ohio

## Rich's Rose Comb Reds

Bargains in eggs, baby chicks and breeding stock. Drop me a postal for my 1913 mating list and large illustrated catalogue. It's free to A. P. J. readers. : D. W. Rich, 513 Vine Street, Mt. Pleasant, Iowa

## MINORCAS

### GIANT STRAIN OF S. C. BLACKS

Minorcas with desired size, shape and color. 300 early hatched chicks now ready for Fall and Winter shows. Stock from Chicago, Buffalo, Memphis and Indianapolis winners. John L. Brown, Member A. B. M. Club, 2337 Brown St., Anderson, Ind.

## THE BEST IN WHITE RUNNERS

We have bred, sold and exhibited more strictly high class White Runners than any one. Can furnish you winners or selected breeders.

Mrs. U. R. Fishel : Box A : Hope, Indiana

## Billings' R. I. Reds, Both Combs

I wish to say to the public that I am this season better prepared than ever to furnish winners for the coming fall and winter shows. They have the shape, color, markings and head gear that appeals to the most careful breeder. Also have good breeders at \$3.00 to \$5.00 each. Utility stock \$1.00 each. Satisfaction guaranteed. Mention American Poultry Journal.

B. M. BILLINGS, Box A, Oberlin, Ohio

## Keep Your Hens by the "O. K. Plan"

and you will save more than a fifth of the grain you now buy. That means 20 per cent additional profit from the flock. The Oakes common-sense grain and mash feeders feed the fowls just what they need

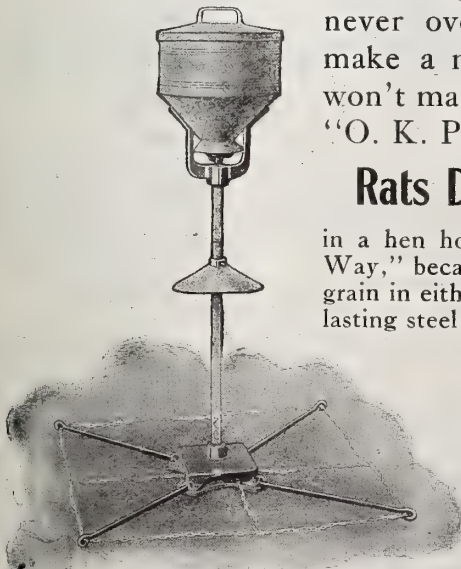

when they are hungry, but they never over-eat. You cannot make a mistake and the hens won't make one if you use the "O. K. Plan" with your flock.

### Rats Die of Starvation

in a hen house managed the "O. K. Way," because they cannot get at the grain in either the feeders or the everlasting steel grain bins.

### Ask Us to Tell You

about the self-feeder illustrated here and the other labor and feed saving devices that go to make the "O. K. Plan" the only sure way to get winter eggs. Ask for catalog B.

THE OAKES MFG. CO., Factory and Home Office, TIPTON, INDIANA

Eastern Branch—64 Cliff Street, New York City  
Canadian Branch—415 Symington Ave., Toronto

Did you read back inside cover?

### Poultry Raising in Virginia

is especially profitable owing to the mild climate, good transportation facilities and nearness to big markets. Suitable farm land in desirable localities can be purchased for

**\$10 an acre and up**

Write to us today for information, illustrated booklets, list of farms, etc.; also for latest issue of our magazine.

## Feed Cut Clover For More Winter

Keep hens in egg-a-day-class all winter by feeding egg-making food. Cut clover, alfalfa, vegetable tops, etc., is cheapest and best poultry food.

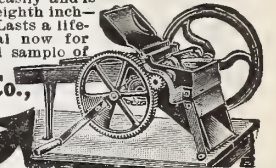

## Eggs

### "New Model" Cutter

Knives easily removable for sharpening. Cutter bar adjustable. Runs easily and is geared to cut one-eighth inch—the right length. Lasts a lifetime. Write postal now for price, circular and sample of cut alfalfa.

Silver Mfg. Co.,

283 Broadway,  
Salem, Ohio

## The Roofing that Needs No Painting

## Amatite ROOFING

THE Amatite mineral surface will hold its own against the weather for a long time. You don't have to look over your Amatite Roofs to see whether they need painting every year or two.

The cost of paint, therefore, is done away with—all that trouble and nuisance and bother is gone. Simply lay your Amatite, nail it down, take away your ladder and forget that you have a roof.

A sample of Amatite will be sent free on request, together with a handsome little booklet, giving details. Address our nearest office.

### Everjet Elastic Paint

A low-priced black paint—tough and durable. Stands heat so well that it can be used on boilers. For wood or metal. "rubber" roofings, fences, iron work, farm implements, tanks, etc.

### Barrett Manufacturing Co.

New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburgh, Cincinnati, Kansas City, Minneapolis, Seattle, Birmingham.

# Tremendous Saving If You Can Use Any of These Odd Lots

## ROOFING AT HALF PRICE

**Galvanized  
Steel Roofing Is  
Fire, Water and  
Lightning Proof**

**\$1.25**  
Per 100 sq. ft.  
Buys Best  
Steel  
Roofing

Here's an odd lot of Corrugated Iron Roofing which we were fortunate enough to buy at a price which enables us to sell it for only \$1.25 per square—just about half what it is really worth. Is brand new, perfect, first class in every respect, but light weight. Not galvanized but black steel roofing. Sheets are 22-24 ins. by 1 1/2 in. corrugation. Specify Lot No. BB-700. Price is f. o. b. cars Chicago. Write for our Special Freight Prepaid Prices on new galvanized roofing. Our prices lowest ever offered in the roofing business. Galv roofing \$2.50 per square and up. Anything you want in metal Roofing, Siding or Ceiling.

## 62c Per 108 Sq. Ft. Buys Best Rubber Surfaced "Ajax" Roofing

This is our one-ply "Ajax" brand, guaranteed to wear as long and give as good service as any rubber surfaced roofing on the market. Put up in rolls of 108 sq. ft., containing 8 to 4 pieces to the roll. Price of 62c per square is f. o. b. Chicago and includes necessary cement and caps to lay. At 75c per square we Prepay Freight to any point east of Kansas and Nebraska and north of Ohio river provided order is for at least 8 rolls. Write for prepaid prices to other points. Other grades of ready roofing fully 50% below regular quotations. Send for free samples and roofing catalog.

## Previous Price Records B-U-S-T-E-D WIDE OPEN!

We're always smashing prices—and it sometimes happens that a lucky purchase enables us to smash them a little harder than usual. This is one of those out-of-the-ordinary occasions. There isn't another firm on earth that occupies the unique position in the commercial world that we do. Our enormous buying power represented by our ten million dollars capital makes it possible for us to buy for spot cash, entire stocks at manufacturers' and jobbers' forced sales, receivers' and sheriff's sales, etc., that are beyond the reach of ordinary buyers. Often our purchases enable us to sell the goods for actually less than manufacturing cost—and usually for about half what dealers ask for the same goods. Mind you, this merchandise is brand new, and exactly as represented. The prices here quoted tell their own story of your saving. These are odd lots we're offering and to move them quickly we've cut the price to the limit. It would be nothing short of business suicide for any other firm to offer this quality of merchandise at such ridiculously low prices, but, owing to our method of buying, we can easily afford to do so. Can you really afford to pass up a chance like this? Remember your saving is from one-fourth to one-half.

## No Money Down

You can buy a carload of material from us without paying us a cent in advance. All we want to know is that the money will be paid us as soon as the material is received, unloaded and checked up. We certainly would not dare do this if we furnished anything but strictly first-class material. Our building material is right, and our terms more liberal than that offered by any other concern.

**GUARANTEE** This Company Has a Capital Stock of Ten Million Dollars. Its honesty and upright methods have been known for 20 years; we have thousands upon thousands of customers who have yearly taken advantage of our special sales. We say to you, that no matter what you buy from us, if you fail to find the material absolutely satisfactory and according to your requirements and expectations, then we will take back such unsatisfactory material, refund your money and pay the freight charges both ways.

## WIRE AT CUT PRICE

**BARB WIRE  
Less 2C  
Per  
Than 2C Rod**

# BUILDING MATERIAL

**\$739.00**  
Buys the Material  
to Build this Home

This beautiful modern, full 2-story, 7-rooms and bath home has been sold nearly 1,000 times; copied and imitated all over the United States. It is not only a beauty but is thoroughly practical for any climate. Substantial construction throughout. No. 1 joists, rafters and studding; clear siding, clear flooring, clear shingles. Beautifully grained clear yellow pine interior trim. All material necessary to build with exception of plumbing and heating and masonry material for only \$738.

This price positively cannot be equalled anywhere else—easily \$5 to \$60 per cent below any local dealer's prices. By long odds it's the biggest home bargain we've ever offered and is a special for the fall of 1913 only. We have hundreds of unsolicited letters from customers who have bought this house some of whom saved as much as \$1,000 on the complete home. At this special price you should do so well, or even better.

We guarantee prompt shipment right from our Chicago stocks, where if you wish, you can come and see it loaded. No money down. Even if you do not plan to build now it will pay you big to order the material now and build later. It's too big a cash saving for you to overlook.

**\$2.00 Buys Complete** Perfect Blue Print Plans and Architectural Specifications, including the size, style, quality and catalogue of the various items entering into the construction of this home.  
**\$10,000 Book of Plans Free** Contains over 100 pages of plans for bungalow, portable houses, garages—the most perfect book of plans ever free away. Handsome illustrations, correct low prices. You need this beautiful book, be sure to check it off in coupon below and mail today. It's absolutely free.

## The Chicago House Wrecking Co.

prominently known for 20 years as the great "Price Wreckers" is now being operated under the name of Harris Bros. Co. There is no change in our policy, or in our business methods—we promise the same careful attention to your wants, and the same remarkably low prices as heretofore.

## Architectural Service

**Personal Service.** That's what we mean. Personal service in every sense of the word, either by mail, or if you come to Chicago. We have an Architectural Department that is developed so far beyond the attempts of others, that there is simply no comparison. In this department we offer you service of a character that is bound to appeal to you.

If you have not formed a particular idea as to just what kind of a building you want, tell us your own way, what your general ideas are, and if possible send us a rough pencil sketch.

**This Will Cost You But Two Cents** and we will reply promptly, giving you the information that will be worth one thousand times the 2c. You can sit right down in your own home, and see your plans developed step by step from crude ideas into a practical, architecturally correct and perfect design. Our charge for such service is so reasonable, that in the end it is absolutely free, for the reason that we refund such charge when your material is ordered from us. We will make you a proposition that will mean the cutting out of all preliminary worry and expense and which will show you how to proceed, point for point, with the work in hand.

## COME TO CHICAGO

If you have time. Bring your sketches and ideas with you. Our architects, expert estimators, plumbing and heating engineers will quote you while you wait, and give you much valuable information on the subject of architecture and building. Remember our business extends from coast to coast. We have taken the best ideas from all the land, have assimilated them into high quality, modern, up-to-date homes.

## Save 1/2 On Heating Plants

Most up-to-date hot-water, steam and hot air heating plants manufactured. Send sketch of your floor plans, size of rooms, etc., and we will make estimate on plant best suited to your building that will save you fully half. No experience needed to install—we furnish blue print drawings, specifications and full instructions so that you can install plant without aid of steam fitter. Plants guaranteed.

## Axminster Rugs, 75c

We bought at New York Auction an enormous stock of high grade, brand new rugs and floor coverings. 75c buys Axminster Rugs of extra grade. This is a sample of our money saving bargains. Write for our complete Free Rug Catalog, showing actual colors and designs.

## Iron Pipe and Fittings

**REJUVENATED**  
Good iron pipe in random lengths, complete with couplings, suitable for gas oil, water and conveyance of all liquids; size 3/4 to 12 in. Our price on 1 in. per foot 3c; 1 1/2 in. at 4c per foot. Complete stock of valves and fittings. Send your specifications.

## Bathtub Complete \$13

This is the white enameled cast iron, one piece, heavy roll rim bathtub; fitted with the latest style nickel plated trimmings, including Fuller double bath cocks for hot and cold water; nickel plated connected waste and overflow, and nickel plated supply pipes. It is 6 ft. long and is good enough to answer the needs of any man. Lot 5-BB-101

## DON'T BE AFRAID

Sometimes people seem to be afraid to send their orders because they think it is impossible for us to sell strictly first class merchandise at the ridiculously low prices which we quote. We want to tell you emphatically that such fears are absolutely groundless. We freely admit that our low prices often do appear to be altogether out of all reason; but just consider, please, in what manner we buy our stocks and it must be perfectly plain to you that our low price quotations are fully justified and that there is REAL QUALITY behind every article we sell. Our guarantee is to breed and binding that you take so much when you deal with us. Your money back, including freight charges, if not satisfied.

We have on hand over 1900 early hatched stock, all raised

### Direct from Our Premium and Pedigree Pens

bred to perfection in color and barring—and we can furnish you birds that you cannot get elsewhere at three or four times the price we ask.

We furnish, perhaps, more winning exhibition birds to our customers than any breeders in America. Our moderate, honest prices secure us all the business we can take care of, and our fine, large, magnificently barred birds, absolutely guaranteed, carry off the blue for those who buy them.

Send us your order for any exhibition or breeding birds you may need. We are old reliable breeders, are Specialists in Barred Rocks, have bred them successfully for 22 long years, and with our unequalled facilities for hatching and raising our birds WE ARE ENABLED TO GIVE YOU SELECTION NO SMALL BREEDER CAN POSSIBLY GIVE. You will make a great mistake if you place order before getting our prices and literature. Send for catalogue No. 3.

## NOTICE OF REMOVAL

The Rockandotte Farm begs to announce that having completed arrangements to join forces with Mr. and Mrs. W. H. Ashcraft of Janesville, Wis., we have moved 600 of our best selected White Rocks and White Wyandottes to our new location, where we shall have one of the finest equipped poultry plants in the west. We shall have selected show birds for the Winter shows for sale, but as the supply is limited, it will be necessary to place your order early. Our record of four firsts out of a possible five for two years at the great Boston Show on White Rocks and ten firsts on the two breeds at Baltimore, Md., is proof of what we have in quality.

FLANDERS' WHITE LEGHORN FARM

ROUTE 1, BOX 80, ORCHARD LAKE, MICHIGAN

**Big Special Sale on S. C. White Leghorns**

For the month of November only to make room, I will offer 500 yearling hens and 500 pullets at just one-half regular price. Write me your wants now. I have won more prizes during the last five years at Chicago than all my competitors combined, and can furnish the winners for any show in America. Catalogue free. Write your wants. Address

**Parkside Poultry Farm :: N. P. Easling, Proprietor :: Box 40, Pekin, Illinois**

**BLACK ORPINGTONS**

Again in the lead, winning four firsts and five seconds at Greater New York. We have won in all sections of the United States and found New York no harder than some of the other great national shows. The breeder that wins in different sections against nearly all the big breeders is the fellow that has the goods. **Look up the records.**

**GREAT CUT IN PRICES**

We have reduced expenses and can afford to sell cheaper than ever before. First find out who has the quality and make your purchase a business proposition. As specialists we not only offer better quality, but at cheaper prices. Our over-head expenses are not half what other breeders have that handle no more birds. One price to all. Exhibition males, \$5 to \$50. Exhibition females and breeders, \$5 to \$25. **Yes, these are the best to be had at any price.** Order early and secure the pick of 1,000 birds. Catalogue free.

**Blue Ribbon Poultry Farm :-: Box A :-: Columbus, Indiana**

**BLUE ORPINGTONS :: SILVER CAMPINES**

You can't get away from the fact that these are the two breeds of fowls that there is the greatest demand for now. Why? Because the Blue Orpington has been found the best layer and table bird of all the Orpingtons, and as an exhibition bird surpasses all, and can be reared anywhere. Remember I am the originator and introducer of this world-famed strain into America. You saw me win 1st and 2d on cks. and 1st, 3d and 4th on pullets at Madison Sq. Garden Show, and at the Crystal Palace Show, London, (the greatest international competition in the world), I won 1st cup and 3d cockerel, 1st cup, 2d and 3d on pullets, also winning the international trophy for best Orpington other than Buff, beating 435 Orpingtons. If this does not prove the highest quality, nothing will. If you want the best Silver Campines to be produced in England, I can supply you. Write me your requirements and I will quote you by return. I guarantee you a square deal. Catalogue free. Mention American Poultry Journal when writing.

**Max de Bathe, Hartley Court, Reading, England**

Member Advisory Committee Live Stock Department, Panama-Pacific Exposition, 1915

## LESTER TOMPKINS'

# Rhode Island Reds

The originator of this famous strain that has made the Reds one of the most popular breeds of fowl on earth, always at the front both in the show room and laying contests.

**My Recent Winnings at Madison Square Garden and Boston**

prove they are still in the lead, winning display special at both shows, 1st hen in both combs and all female shape specials at Garden, 1st cock and shape special in single comb. Also all display specials and state cups for both combs at recent Boston show against birds that had been considered unbeatable. My breeding pens this season are simply grand. Prices right. Some extra choice bargains in breeding stock. Both old and young stock of the highest quality ready for showing in the Fall and Winter shows.

*Write For it Today*

The most  
Interesting  
Poultry  
Book Ever  
Written

**Y**OU will never get right down to the foundation of making money from chickens—in a small or big way—until you read this book by the Johnson family. The Johnsons have half a million customers, all successful, all making poultry profits—and all started by reading earlier editions of this plain, simple, straightforward book. It is more than a catalog. It is an education of the right kind—simple, sincere and practical. **This 1914 edition, just off the press, is the most helpful, interesting and entertaining of the lot.**

The Johnsons consider it a favor for you to let them send the book. They know you will get the right idea of the poultry business and the Johnson business from this book. And they know that will help them somehow sooner or later.

### Old Trusty Incubators

**Still Less Than \$10, Freight Prepaid**

East of Rockies, or allowed that far if you live beyond.

The Johnsons have thousands of Old Trusties ahead right now ready for the big rush. They will make one hundred thousand this year and there will be a ready buyer for every one. The Old Trusty customers are sending them thousands upon thousands of more customers every year. And the price is right to insure quick sales for this great output. The Old Trusty factory is the largest in the world making incubators and brooders exclusively.

### Send Your Name

Clip coupon below to remind you and send it in, or, if more convenient, write a letter or just a postal. Any way to get your name to the Johnsons, so they can send you by return mail a copy of the handsomely covered book, stored full of the information, the suggestions, the practical money-making pointers you need. Half a million others have proved the value of this book to them—why not you?

See pictures and letters from customers. The book is free, comes to you postpaid. And the Johnsons don't want you to feel under any obligation to buy. They are different—do business differently. Write and see. Address

1st White Orpington Cock  
1st White Orpington Hen  
1st White Orpington Cockerel  
1st White Orpington Pullet  
1st Pen won by our customer, Mr. J. Eagan  
2d White Orpington Cock  
2d White Orpington Hen  
2d and 3d White Orpington Cockerel  
2d White Orpington Pullet

\$50 Cup for the Best Bird in the Whole Show

Great Allentown Fair Cup awarded to the exhibitor showing ten birds of the highest merit and the greatest uniformity of type and excellence; this cup is one of the classics of the American poultry world, and the crack prize of the show.

ON TEN ENTRIES

ALL ENTERED WON

This record has never been equalled in a show of this class before, as every bird we entered won, and beat every competitor; we won 49 points against 21 for all our competitors combined.

Every bird sent out this season has won for our customers at the large state fairs and best shows of Canada, and this fact, together with our record of 120 prizes for the past three years at practically all of America's greatest shows, is ample proof that we can supply the best White Orpingtons obtainable, and if you can advertise the Aldrich Strain, your success is assured, as people will know that you have the best. The superior quality of the Aldrich Strain is acknowledged by all as the standard of the world.

Our strain is the result of the highest skill in breeding. Our young birds this season are of full weight for their age, strong and of heavy bone, firm in comb, red of eye, pure red in lobe and without blue in leg, of the finest Orpington type, and their plumage is pure white. They are bred from the largest flock of prize winners to be found in the world, winners at the leading shows for the last two years, all mated upon scientific principles by our superintendent, Mr. Len Rawnsley, one of the most expert Orpington breeders of this or any other country, and reared under his supervision upon a system unexcelled in producing vigorous and typical birds for the show room, and breeders to perpetuate the finest types of the variety.

The demand for show birds this season is enormous, and we have already booked orders for shows in all sections of America and Canada, so that if you place your order early we can give you a better selection; and can properly train and condition the birds for the show room. Remember, we only sell to one customer in a class at any show, and that a small deposit now will reserve you the winners. Our birds are bred to lay with the same care they are bred to win.

If you need a winner or wish to introduce new blood, or want to get started right in White Orpingtons, send for one of our 56-page catalogues and let us quote you prices.

## What Is the Cost of Producing Eggs?

Does Anybody Really Know? Egg Farms and Experiment Stations Might Answer This, But Don't Dodge the Expenses Above Mere Cost of Feeding. *By Prince T. Woods, M. D.*

HAT does it cost to produce a dozen of the best quality new laid eggs? Do you know? Does anybody know?

The poultry papers and other periodicals are full of all sorts of tommyrot telling about the big profits to be made in the poultry business. We are told that "figures don't lie," but, as has often been said, "liars often figure." Figuring poultry profits on paper has produced a good many remarkable statements, but most of them are lacking in satisfying details.

The worst thing about some of these "golden dreams" is that they do deceive a good many people, who lack experience with poultry, and tend to hurt the legitimate poultry business. The beginner seizes a few wild-cat statements concerning profits, gets his pencil and soon builds himself up a sure enough "get rich quick" business on paper. Then he may try the real thing. If he has the sand and pluck to stick, after he finds that figures on paper and the real business are not the same, he often wins out and makes a success. There are a good many though that don't bear the disappointment well and make a fizzle of things in a year or so. If they had been given facts instead of fiction they might have been saved the loss.

The "pipe dreams" of golden eggs are doing more now than disappoint beginners. Food price reformers, housekeepers, buyers everywhere have been reading this polite fiction about enormous poultry profits and they appear to believe it. Every day some writer or lecturer storms away at the egg dealers and producers of eggs for daring to charge such exorbitant prices in order to reap such enormous profits. Every day some paper tells in big black type that eggs ought never to sell for more than 25 cents a dozen and to charge more is robbery. What do you think about it? Isn't it about time to try to put a stop to such nonsense and get to talking common sense?

We have visited a large number of egg farms, but we do not know of any that are making enormous profits. Some are little more than holding their own and paying the proprietor a modest living; some are paying a comfortable living to more than one family and show fair profits; a few are doing unusually well, but we don't know of any where the profits are any larger than they ought to be to pay for the hard work done on the plants and the interest on the capital invested. Producing market poultry and eggs is a good business for any man that likes the work, but it is not a "get rich quick" business and never will be. To make a business of producing first quality new laid eggs, nearly

any of our large cities, to sell for 25 cents a dozen the year around would soon break the bank of a millionaire. If you don't believe it, try it, and you'll be convinced.

Gaze on this from the pen of H. B. Green in October Poultry Tribune:

"Properly handled, there is good money in poultry for market purposes, even at the present high prices for most kinds of grain. Eggs can be produced at 10 cents to 12 cents per dozen at the present price of grain and they sell at 20 cents a dozen in most local markets in the middle west at this writing, September 10th, and of course, will gradually advance until they reach 40 cents or over. To the experienced poultry raiser the outlook for the business is very promising and it is worthy the most careful study and attention to learn the business thoroughly and thus conduct it in the most thorough and up-to-date manner possible."

Score one, Mr. Green, if you will show us how to do the trick we will give up editing a poultry journal and develop our egg farm. We have been through the mill a bit, but that needn't matter at all for we are willing and anxious to learn. We have the land and the buildings and it won't take long to get the equipment and the fowls. At present writing eggs are bringing 52 cents a dozen in the city thirty miles from our home for the fancy selected nearby product. If you will show us at present prices of foodstuffs how to produce eggs at a cost of even 15 cents a dozen we will be more than grateful.

We have known people who kept a few hens in a backyard and who did not count labor, housing, or any cost except food purchased, who claimed to produce eggs for as low as 8 cents a dozen, and at one time we thought we could produce for 12 cents a dozen, but we are cured of the illusion that it may be done where fowls must be housed in winter and where foodstuffs reach the prices they do f. o. b. cars in the midwest, plus freight here. We don't believe it can be done in the midwest.

For example, one of our experiment stations figured out the average amount of food consumed by a laying hen in twelve months. At September midwest prices this food for one hen for a year sums up as follows:

90	pounds, grain, ground feed and scraps.....	\$1.57
4	pounds oyster shells and 2 pounds grit.....	.03
2.4	pounds bone meal.....	.02
2.4	pounds charcoal.....	.01
10	pounds of dry cut clover.....	.17

Total cost of food one hen one year..... \$1.80

Bear in mind that the above is cost of food alone and it figures out 15 cents a dozen for the eggs, assuming that the hens average 12 dozen eggs a year each, and they don't

always do it. No provisions is made for cost of raw green food, for labor, housing, etc. Furthermore, if the poultry keeper made a practice of buying ready-mixed foods as many do, the cost of food alone for the hen per dozen eggs would be increased to 17 cents.

We spent a year in very close touch with the business

end of a 1,500 hen egg farm not long ago that went through periods of both high and low prices for foodstuffs. We could not get complete data concerning all food consumed as this was a commercial plant and not an experiment station. But we did get a very fair approximate of what it cost to keep a layer on that plant. Based on the data we obtained, we estimate that one egg farm hen will eat in one year about the following amounts of food:

60 lbs. cracked and whole grain at \$1.75 per 100 lbs.	\$1.05
30 lbs. ground grain and mill stuff at \$1.60 per 100 lbs.	.48
8 lbs. beef scrap with bone at \$2.50 per 100 lbs.	.20
4 lbs. crushed oyster shells at 50 cents per 100 lbs.	.02
2 lbs. grit at 50 cents per 100 lbs.	.01
2 lbs. charcoal at \$1.50 per 100 lbs.	.03
100 lbs. raw greens and vegetables at \$6 per ton.	.30
Water for one hen one year.	.01

Total cost of food alone for one layer one year.....\$2.10

Based on above table the cost of food alone to produce one dozen well-fed eggs is 17½ cents, assuming that the average egg farm hen will produce 144 eggs in a year.

Take a flock of 1,500 layers and they will be mighty fine ones if they average more than 12 dozen eggs per hen a year. Some hens will yield 200 eggs and over in twelve months, some will only lay 25 or 30 eggs and some will not lay at all. All the eggs that the egg farmer gets above 144 eggs per hen a year he earns and is entitled to all the "velvet."

In considering the table it should be observed that the prices of foodstuffs are estimated low. They were average prices for the year for purchases of three ton lots and over. The poultry keeper who buys in small quantities will today pay very nearly two cents a pound for all whole and cracked grains and in some cases more. If he buys commercial ready mixed foods he will have to pay over two cents a pound for all grains and mash, and beef scrap will cost him three cents a pound.

We expect and hope that the figures here given will result in discussion. Some will say the cost of food is figured too

high and others that it is not high enough. Perhaps some folks will cavil at the estimated cost of water. Well, it is made low enough and you don't get water for nothing, even if you think you do. Sit down and figure it out for yourself, but don't try to dodge expenses or fail to allow for things which heretofore you have assumed "cost nothing."

The table given above makes no allowance for any expense except food. Now, this 1,500 hen egg farm had the labor of one hired man and a horse besides the services and capital of the proprietor. The hired man and horse did most of the rough work. The proprietor furnished the capital, directed the plant, bought supplies and sold the product.

He figured roughly that the eggs produced cost him 25 cents a dozen on the plant when he included the labor of hired man and horse, feeding, watering, collecting eggs, cleaning, hauling supplies from station, delivering produce to station, etc., interest on capital invested in houses, yards and equipment and depreciation of same.

All that was received above the 25 cents a dozen for eggs had to pay interest on capital invested in laying stock and any depreciation on same, transportation of eggs to market at 1 cent per dozen, upkeep of plant, and services of the proprietor for overseeing plant, buying supplies and selling product. He certainly earned all the profit that was made. Don't forget that upkeep cost is real expense.

The low price received by that plant for the year was 20 cents a dozen for a brief period only and in season of best prices 65 cents a dozen was obtained. The average price per dozen eggs the year around for the specially selected product was 35 cents per dozen f. o. b. the farm station. Fifty cents a dozen would have been a more fair return, but it was not possible to get it.

About 90 per cent of the eggs collected on this plant were marketable as selected eggs. These would average 55 to 60 pounds net weight to the 30 dozen case, or practically two pounds to the dozen. They were shipped the

morning following the day the eggs were laid. Such well-fed eggs produced by healthy hens kept under sanitary conditions ought to bring 50 cents a dozen f. o. b. farm at wholesale for the selected product and 60 cents at retail delivered. We think that they are worth it and we don't consider five cents each too much to pay for selected new laid, well-fed eggs from well-kept hens. Think it over.

Now on the plant we are considering about 10 per cent of the eggs produced had to be sold as cull eggs for what they would bring. These cull eggs included washed dirty eggs, thin-shelled eggs, small eggs, cracked eggs, etc., and they averaged to sell at not over 25 cents per dozen. Practically at production cost or less, if the figures are right.

We have always heard a lot about producing eggs at 8 to 12 cents a dozen and for a time we believed that under favorable conditions the food cost per dozen eggs might be kept within 1 cent per egg, but we are forced to doubt it. Poultry keepers will tell you glibly how little it costs to keep hens and how cheaply they can produce eggs, but they don't supply satisfying details. Some will tell you bigger stories yet about excessively high cost. Who knows anything about it from carefully kept accurate records?

In 1907 we looked over the books of a White Leghorn egg farm carrying over 2,000 layers. The cost of food and hired labor on that farm figured up 21 cents per dozen eggs produced. The eggs averaged to sell for 27 cents per dozen, net. Out of the 6 cents per dozen profit the proprietor had to get his return for his own labor, interest on capital invested and depreciation. Most people would consider him very poorly paid.

On a Plymouth Rock egg and broiler farm we visited several years ago, when grain prices were lower, food cost per hen was \$1.80 per hen a year, eggs not used for hatching broilers sold for from 19 cents to 45 cents a dozen. When eggs began to go low in price the proprietor hatched more and turned them into chicken meat. He thought he could make the 19 cent eggs at a food cost of not above 12 cents a dozen and that the 45 cent eggs cost him about 19 cents a dozen for food. He didn't know and did not have sufficiently accurate books to prove it. Labor cost was not counted. In more than one way this man is a success. He went from a laborer's work in the city to a country farm and had to get a big mortgage on it. He worked early and late and worked hard. It was several years before he could get along without getting day work on other farms. He now has a one-man eggs and broiler plant and earns about \$1,000 a year, or a little more, profit to pay for his own labor. It took him a good many years to get out of debt and what profit he gets he makes out of his 45 cents per dozen eggs and broilers at \$1.50 per pair. He isn't paying his bills with the profits from 19 cent or 25 cent eggs you can be sure. Does anyone begrudge such men their hard earned living even if it is better than some city jobs? These are not exceptional cases.

We would like to see experiment stations and egg farmers all over the country take up this matter of cost of production. We are not satisfied with the figures given herein, but they are not far wrong we feel sure. But, for heaven's sake, when you figure cost of production, figure the real cost of production and don't dodge the many upkeep expenses of a practical egg farm. We don't care how cheap the "back lotter" gets his eggs, we'd be glad to learn that he got them for nothing—if he only does so honestly. But we do want to know what it actually costs to produce the best quality new laid eggs that are sold as "selected fancy fresh laid" or as "nearby hennery" and "this-day laid" eggs when they are produced under up-to-date sanitary egg-farm conditions.

Eggs that are collected and then shipped some distance are another matter, but we'll wager that it is seldom that the producer gets a new dollar for an old one when he sells these "farm" and "small producer eggs" to the collector, if the actual cost of production was really known. They cost less than the modern egg farm's special nearby product and they sell for less and are actually worth less. According to the proposed new national grading of eggs of the National Poultry, Butter and Egg Association there will be sixteen grades of regular market eggs, and these grades do not include the special "nearby hennery" product. The grades govern distance shipments in large lots and carloads. Undoubtedly they are all needed and each grade is carefully described in detail for the benefit of the trade. The best grade of the sixteen in this classification calls for a net weight of 44 pounds or over per 30 dozen eggs and states that they "shall consist of clean, fresh, reasonably full, strong, sweet eggs."

Such eggs are good, probably plenty good enough, but there are a lot of people who want something better and they should be willing to pay for it. When the first grade of the sixteen ordinary classes of market eggs is selling at 45 cents a dozen, the specially produced, new laid, selected eggs from the modern egg farm sell at from 10 to 15 cents more per dozen, and they should.

Personally, we firmly believe that an egg cannot be too fresh nor too good to be eaten by us. We want to know how the fowls are cared for and fed and we want a good, big, new-laid egg that is the best that can be produced. It costs money to produce the best quality of fresh eggs. We are willing to be shown how much it costs and we don't begrudge the producer his 50 cents a dozen net, if he can get it. He certainly earns his money and delivers good value. We don't hear any calamity howling about selected

fruits that sell for 5 cents each or more and carry small food value for the money, so why cuss the 5 cent egg so full of nourishment and so essential to the man who should be well fed?

We note that one experiment station man who should know better says: "In selling eggs at 40 cents a dozen the poultryman is getting 25 cents a pound for water. That is a pretty good price."

Gee whiz!! Yes, that is a pretty good price if the statement were really true. But it is a "slop-over." We've a lot of springs on our place we would like to cash in at the price, but we can't coax any hens to work it that way for us. There is water in all foods and in eggs there is considerably less water than in lean meat. Yet, if you bought four pounds of lean meat (which is 75 per cent water) for \$1, you would have hard work to convince the butcher that he was getting 25 cents a pound for three pounds of water.

Such arguments used to lure the unwary into poultry keeping with the idea of making wonderful profits, like selling a pound of water for 25 cents and making eggs for 10 cents a dozen at present prices of grain, are, to say the least, ill advised.

# Pullets Inherit Heavy Laying from Dam

Progeny from Cross of Pure Leghorn with Mexican Game Show High Fecundity in Pullets, Forging Ahead of Pure Leghorns.

By H. H. Stoddard, Riviera, Texas

EVER since it has been contended that hens may bestow an inferior rate of laying directly upon their pullets but that a superior laying rate cannot be thus bestowed, many poultry breeders are putting on their thinking caps and wondering whether in all these years their high valuation of daughters of hens that had been carefully trap-nested, with immense pains, and proved to be remarkable layers, was a mistaken valuation. They wonder, too, whether the \$800 Lady Show You's eggs will give cockerels loaded with the high fecundity principle, their sisters in this regard meanwhile not being worth expressage.

My experiments in crossing males of a notoriously poor laying breed with females of a great laying breed proved that hens can confer a high rate of fecundity directly upon their daughters.

The predominant characteristics of the common Mexican poultry is that of the Game. In fact, they may be properly called Black Mexican Game. The peons love cock fighting about as well as they love gambling and imbibing mescal. The prevailing shape of the birds is intermediate between the English fighting Game and the wild Gallus Bankiva. I said "common" fowls because in all parts of the world, before the era of poultry fanciers, poultry societies and poultry exhibitions arrived, the fowls were all common or "dunghill" birds, there being generally no pure strains bred to a particular type except that every county had pedigree fighting birds. The common fowls of different countries were different, but became different from local influences rather than selective breeding.

It is a fair inference that among the birds the first Spanish colonists brought to the New World were the original Black Spanish, not the modern Black Spanish, as we know them, but the raw material from which ours were developed. Indeed, black plumage, more or less adorned with either gold or silver, which is the universal type in Italy, prevails largely today in Mexican poultry. Also an ancient mixing with fowls of various countries must have occurred, among such a maritime people as the Spanish were, from a remote period, and from similar mixtures on this continent since the first settlement.

I have found a third type striving for expression. It is the Gallus Bankiva shape, resembling the fighting (not the exhibition) Game, yet less sturdy. A neat, trim, wild bird shape, suggesting plover or mourning dove and looking as if the fowl could take wing with as much ease as wild birds. Over and over again I have been involuntarily reminded of the Gallus Bankiva I had seen in pictures and also set up in museums, but have not been privileged to see alive, though always inquiring for them the first thing on visiting a zoological garden. This shape was inevitable as the wild original and the Games and Game Bantams are so much alike and, as I have said, Mexicans delight in cock fighting, but there are reasons for suspecting that climate and locality had also much to do with it. The small size and wild bird shape were brought about partly by the habits of the fowls and what they had been living on for many generations while running at large in or at the borders of tropical thickets.

Living very coarsely herself, the Mexican woman is the last in the world to pamper her fowls. In fact, the typical Mexicans of both sexes abuse horse, mule, donkey, goat, dog and every other animal they keep. Naturally the fowls, left to their own resources, roost in trees and get food and water where they can, hence the tendency in all half-wild domestic animals towards reversion to the original wild type has ample opportunity.

Like causes produce like results. All wild birds with very few exceptions are of a compact, trim shape. Witness the Mallard's neat, agile form as compared with the comparatively clumsy common barnyard duck and the Rouen, the shape of both these last showing a greater departure from the ancestral model than the plumage. The need of activity in procuring food and escaping from enemies evolved the agile form of the wild bird, and poultry accustomed as it has been for many generations to foraging for a living, tends to revert to the Gallus Bankiva shape.

Now, I was anxious, on first arriving at the Southwest, to try the Black Mexican Game and find what it was good for, especially as I did not at the time know how well or how ill poultry from the North would thrive here and thought it desirable to test the Mexican bird's laying qualities and also find out how a first cross with pure Leghorns would turn out, thinking that from the union of one race formerly accustomed to the fervid climate of Italy with another from still hotter Mexico, progeny that could stand this semi-tropical region would surely be the result.

I bred some Mexican birds pure, and also used pure Mexican males with pure White Leghorn hens as the most expeditious way to get a lot of half-blood pullets.

My pure Mexican hens were of all breeds the poorest layers and the most inveterate sitters that I ever became acquainted with in my life. My neighbors who tried them before I did, and since, and others in various parts of the state were unanimous in calling them the star non-layers. Colonel Blythe, the traveller from whom most knowledge of the wild Gallus Bankiva is derived, says that their habit is to lay about eight eggs and then sit. It is a fact that the fecundity of the Mexican hen is almost identical with that of the wild stock. Vigorous hens with brilliant glossy plumage and every indication of health, well fed and apparently in condition to lay six or eight dozen eggs before offering to sit, would never lay over a dozen and sometimes not more than six or eight eggs before becoming broody. Another remarkable thing was the early age at which they would wean their chicks and begin laying. I have known hens of this breed to lay five litters and hatch and brood five broods of chicks in the same year. To sit three or four times a year and raise a brood each time is not at all uncommon.

Without thinking about any striking result as regards laying my object being a test along the line of acclimation rather than fecundity, I found that my half-bloods were almost invariably good layers. Unattractive they were—plumage being either pure white or, through rarely, white with yellow and black blotches, and the legs being of appalling blackness. A curious thing to look at were the white bodies on legs black as the ace of spades.

Males, thoroughbred for centuries out of poor layers, mated with females as completely thoroughbred for heavy laying as any that could have been selected; in other words, the poorest and the best layers I ever knew in my life; and with these respective traits fixed and stereotyped for hundreds of years, gave pullets that in fecundity forged right ahead of pure bred Leghorns; and yet an ardent Mendelist says, *Maine Bulletin* 205, page 379: "High fecundity is not inherited by daughters from their dam."

## Extravagant Claims.

At first too much is claimed when an advance is made in science pure or applied. For instance, there were sanguine aviators a while ago who maintained that regular overland lines of airships would carry passengers, express parcels and even freight. The favorite claim of the "new" biologists is that Darwin erred in saying that species were generally formed by the cumulative additions of small variations. Yet after maintaining that progress is by leaps, they go on speaking of the heritability of minute charac-

teristics just as if they were writing in the sixties or early seventies. The culling out during generative processes of ancestral traits among billions of these all clamoring for expression was well described by Dr. Pearl, president of Animal Section of American Breeders' Association as follows:

"In the formation of germ-cells there is a sorting out or segregation of the hereditary characteristics contributed by the father and the mother and a readjustment of these into all of the combinations—both old and new—which are mathematically possible. \* \* \* The phenomenon itself is as certain as the laws of gravitation. It operates as well in regard to the minutest differences in the pedigreed specimens of the same sub-breed as in the wide differences of true hybridization." This utterance, be it noted, is dated 1913.

Now let us turn to that powerful writer, George Henry Lewis (date of 1874), and see how he recognizes the heritability of "the minutest differences" when the Darwinism was new.

He says: "The notorious facts of heredity show how habits once organized may become transmitted to descendants, so that the unnatural action of 'begging' when a dog is taught to perform it, may become a natural action in its descendants, requiring no teaching. Nay, this process underlies all development. The voluntary actions become involuntary, the involuntary become automatic, the intelligent become habitual, and the habitual become instinctive." And again: "The mind is built up out of assimilated experiences. Like the body, it is shaped through its history."

"What! Shall the trick of nostrils and of life  
Descend through generations, and the mind  
Imprint no records? Shall men bequeath  
The fancies of their palates to their sons,  
And shall the shudder of restraining awe,  
The slow-wept tears of contrite memory,  
Faith's prayerful labor and the food divine  
Of fasts ecstatic,—shall these pass away  
Like wind upon the waters tractlessly?"

The poet is right. There is no trait small or great, of mankind, the influence of which cannot pass to their descendants.

#### Inheritance of Acquired Characters.

The Mendelists could proceed scientifically in their attempts to improve domestic animals and the human race also, by means of the undisputed Mendelian laws without bringing the question of inheritance of acquired characters into discussion at all. But they generally seem bent on the claim that the gametes are the prime movers in heredity and that the individual they give rise to, no matter what its experiences may be during life, cannot transmit the results of these to the new gametes that are growing in its body. Where the gametes get their qualities in the first place the writers of the school we are speaking of do not say, but they are clamorous in the contention that individuals cannot bestow them. Professor Punnett, speaking of variations on which evolution depends, Mendelism, page 138, top, and following, says: "Two sorts of variations exist, those which are due to the presence of specific factors in the organism (meaning the gametes) and those which are due to the direct effect of the environment during its (the individual animal's) lifetime. The former are known as mutations, and are inherited according to the Mendelian scheme; the latter have been termed fluctuations, and at present we have no valid reason for supposing that they are ever inherited. For though instances may be found in which effects produced during lifetime of the individual would appear to affect the offspring, this is not necessarily due to heredity. \* \* \* Evolution only comes about through the survival of certain variations and the elimination of others. But to be of any moment in evolutionary change a variation must be inherited. And to be inherited it must be represented in the gametes. This, as we have seen, is the case for those variations which we have termed mutations. For the inheritance of fluctuations, on the other hand, of the variations which result from the direct action

of the environment upon the individual, there is no indisputable evidence. Consequently we have no reason for regarding them as playing any part in the production of that succession of temporarily stable forms which we term evolution. In the light of our present knowledge we must regard the mutation as the basis of evolution. \* \* \* as the material upon which natural selection works. For it is the only form of variation of whose heredity we have any certain knowledge."

Notice that our author's language is in this instance guarded. He does not say outright that the effect of "fluctuations" cannot be represented in gametes, but that "there is no indisputable evidence" that it can be. And further on, "the only form of variation of whose heredity we have any certain knowledge" is variation in the gametes. The professor evidently hedges, and well he may. In other passages, however, he speaks very positively.

The real truth is that we have "no certain knowledge" of the gametes ever getting an iota of any heritable quality in any way at all except through the life experience of their hosts, the individuals. The claim that the character of the gametes (the spermatozoa and the ova) is not changed through long ancestral ages by influences proceeding from the bodies and minds of the individual animals through past ages, is one of the most preposterous things any biologist ever set forth. "What," says some one, "are not the eminent professors who say acquired characters cannot be transmitted, learned, studious, candid, careful and all that?" The answer is, yes. And they are just the men exactly to fall into a stupendous blunder. They are hard workers who think a great deal. A president of a firm starting with one workman and growing in twelve years to employ 15,000 men once bought machinery to the value of \$95,000 that turned out to be a failure. He said to me: "I have worked hard and incessantly and accomplished many, very many things. The fellow who does nothing never makes a mistake."

Some of the strongest minds and ablest scholars in New England caused a man to be executed as a wizard. He was a common, uneducated individual but knew more about the witchcraft question than all the learned divines in the country after all their study of it. He pronounced it a delusion, suffering a cruel death therefore. Over and over again through all history the bigger the authority the bigger the mistake.

On page 181 of the book above cited Professor Punnett claims plainly that the qualities of men and women, physical and mental, depend primarily upon the inherent properties of the two gametes, ovum and spermatozoon, "which went to their making." Note the word "primarily." Professor Punnett insists that the quality physical or mental originated in the minute germ specks, not in the nature or growing individual animals themselves. Now hear him further: "If the mathematical quality has been carried in by the gamete (germinal speck) the education of the zygote (individual person) will enable him to make the most of it. But if the basis is not there, no amount of education can transform that zygote into a mathematician. This is a matter of common experience. Neither is there any reason for supposing that the superior education of a mathematical zygote will thereby increase the mathematical propensities of the gametes which live within him. For the gamete (spermatozoon) recks little of quaternions."

It is the last sentence to which I would call the reader's special attention. The very fact that the germinal cells, mere specks of protoplasm which start the individual life of all animals, do not and cannot directly know or perceive anything occurring in the outside world is what I insist on. They have no organs, senses, parts nor passions that can take notice of certain phenomena which the individual has cognizance of constantly. The body has such faculties. Where do the germinal microscopical specks get their heritable qualities except through the medium of the body that enfolds them and grows them?

But just at this point a beginner must be on guard. The full development of any particular gift must not be expected to be inherited but the aptitude merely. "The gamete recks not of quaternions" but in a long ancestral line of gametes the mathematical practice of the persons in whose

bodies they are grown bestows mathematical qualities upon the gametes to be bestowed in turn upon future generations of persons.

#### Dodge the Question.

Most of the whole school of professors who, as is natural, magnify the importance of Mendelism insist that the germs are the primal source of all improvements, and of all the myriads of variations which, by the survival of the fittest, enable variations (incipient species) to change into real species, always dodge the question, where do the germs acquire their qualities?

The way they squirm and wiggle when it comes to that is amusing. When it is a question of the body bestowing character upon the germs it produces, they know. Oh, yes, they know. And know to the contrary. If they are so cocksure, then why do they say they know nothing at all

tor never had the hardihood to insist that no egg ever derived characters from the bird which laid it. But in this day and generation comes a corps of learned men who insist that the fructified germ is primary to the whole business, and have the hardihood to say that the germ derives no traits whatever from its parents. That "analysis will not take us" to where or what under heaven it does derive them from!

Let us turn from Professor Punnett's sophistry concerning mathematical talent, to Mr. Lewis' clear exposition concerning musical talent.

"In discussion on heredity it has not been sufficiently recognized that only results can be inherited, and that every modification of structure is the issue of many complex experiences. Could one experience be isolated from prior and posterior experiences, it might be transmitted from parent to child; but each experience is not only complicated by

Some of the runs of Wm. Cook & Sons' Poultry Plant, originators of all the Orpingtons, Scotch Plains, N. J. All new runs now have steel posts set in two feet of cement. In the Fall, runs are sown with wheat.

about where the character of the germs does come from? Our writer, page 135 of the book cited, says: "Instead of looking at the individual as a whole, which is in some vague way endowed with an individuality marking it off from its fellows, we now regard it as an organism built up of definite characters superimposed on a basis beyond which for the moment our analysis will not take us." The "basis" Professor Punnett refers to is plainly, by the context, fertilized germ consisting of an ovum and a spermatozoon united in one microscopic cell. He repeatedly calls this cell the primary source of the individual's character, with emphasis on primary. While refusing to say where the cell got the qualities it bestows, he declares it never got them from an individual animal. He says "analysis will not take us" on the quest concerning where it did get them. But anyhow the cell "recks not of quaternions;" in other words, the next germinal cell is not influenced at all by what happens in the life experience of the body that produced it and in the whole universe that surrounds it, except, of course, in the mere physical matter of nutriment.

In the famous ancient problem of the priority of egg or bird, the arguer who claimed the egg was the prime fac-

prior experiences, its transmission is complicated by the influence of the other parent. A musical aptitude will be inherited, but no particular melody. The aptitude represents a modification of structure whereby the response to auditory stimuli takes a melodic form; but any particular melody is the form which this general aptitude takes under very special and complex conditions. In other words, the inherited organism is predisposed to play tunes of a certain character but the music it will give forth must depend upon the player.

"What we inherit is modified structure, and with that, the aptitude to act in a certain way under certain stimuli, but the inheritance of the historical result is not the inheritance of the incidents which severally converged to that result, nor of the consequences which issued from the result under special conditions. Thus the tissue of the lungs subjected to certain influences becomes so modified that tubercle is formed. The child may inherit a tuberculous diathesis but cannot inherit the causes which originated the tubercle."

Inherent aptitude in the individual comes not from gametes alone, but from both gametes and zygotes, new, and ages old.

# Is There Merit in Close Breeding?

Why Run the Risk of Multiplying Hidden and Undesirable Tendencies to Gain Little and Lose Much. *By H. E. Nospy*

THE subject of inbreeding is one that will make even laymen in poultry culture sit up and take notice. Heretofore we have not stopped to ask the reason why, because the observing poultryman will tell you that he has seen the evil effects of inbreeding in his own flock of poultry, and he has been reading of the evil effects in other folk's flocks ever since he subscribed to his first poultry paper. Now, in the year of our Lord 1913, the editor of an obscure poultry paper comes forth, backed by the supposedly good health of the "British aristocracy"

after years of inbreeding and allows us "to find out" the real facts in the case. Also a few of the leading biologists at the state stations produce "facts" to show that the poultry press has for many years led us astray on the subject.

To an intelligent person it would seem that the subject of inbreeding could easily be solved. Certainly if a half dozen or more of the stations took up the work we might know in the course of, say, ten years where we stand. As it is today, has anything been proved? My apologies to the above mentioned gentlemen.

I have been interested along this line for a number of years and I have experimented somewhat and noted experiments of others, but such work could in no way be used as proof. One experiment is of such meager value that its worth, unless conducted under similar circumstances and compared with identical experiments, is practically nil. This is indisputably true of breeding tests.

That my neighbor inbred a flock of thoroughbred fowls for five years with no introduction of new blood, and that at the end of that time they lacked stamina, that they showed decided sterility, although during these years the most rigid selection of breeders was exercised, will not prove conclusively that inbreeding is to be avoided. What we want are the real facts in the case, proved and published for the benefit of all poultrymen.

The gentlemen above referred to make much of the fact that the best improved strains of live stock have been brought about by inbreeding, but they do not take into consideration that in most, if not all, cases the very foundations of these strains were brought about by out-breeding or crossing, and this crossing was naturally for the purpose of improving the flock. The good features of a properly selected cross will make themselves felt through generations. I do not say how many, for I do not know—we want the gentlemen in charge of such work to prove these things for us.

Dr. Pearl in Bulletin 214 of the Maine station says:

"The introduction of new blood for purposes of rejuvenation or reinvigoration, which is one of the commonest practices of the poultryman, is, as ordinarily done, one of the surest ways to prevent any real or permanent improvement of his stock by breeding. The difficulty here is that when one introduces new blood he runs the risk of introducing a whole set of characters inferior in their degree of perfection to what he already has in his own stock. The real cause which so frequently leads poultrymen, who should know better, to take this risk is a failure rigorously to select breeding birds for high constitutional vigor. The average poultryman finds it very hard to discard some particularly fine specimen just because it shows a little weakness in one way or another. He is disposed 'just this once' to let the bird by, and use it as a breeder. This practice continued will make 'new blood' necessary for rejuvenating purposes."

The foregoing cannot be said to be the case with most farm flocks of poultry for there we find common dunghill,

common crosses, common grades and just plain, ordinary flocks of farm poultry, but nine times out of ten where new blood has not been introduced for a number of years we find every indication of its being needed. Practically every farmer's flock will go "to pieces," as he will tell you, after a few years unless a new cock is occasionally introduced. I have noted a good many of such flocks of poultry and I have never known of a bird that showed indication of weakness, or a noticeable lack of constitutional vigor being kept to breed from, simply because it was good otherwise. In very many of such flocks the birds roost in the trees and are for generations strictly open-air bred. They are naturally strong and hardy but they do deteriorate in size and in vitality and show a marked lessening of generative powers, where new blood is not introduced for any number of years.

The statement has been made that the greater number of persons undertaking the reproduction of animals, of whatsoever kind, produce inferior stock because of bad judgment in mating and subsequent ignorance of proper methods of growing. There is probably not one person in a thousand, or perhaps ten thousand, capable of selecting and mating fowls that are free from similar hereditary tendencies that might result in a lack of vigor, or in obscure disease, or a tendency to disease in the offspring. Where is there such a breeder? We are only beginning just now in a very small way to exercise a little thought in this direction in the human race, and even though a few of us have watched the work of many breeders of poultry and dabbled a bit in it ourselves we cannot be classed as competent to undertake intelligently a work of this kind. That is why we are all crying for the facts.

The test for determining the wisdom or folly of inbreeding should cover a multitude of things. Under this head would come power of endurance, susceptibility to disease, general style and make up (meaning general activity or the opposite, a "born tired" condition), laying ability, size of eggs, weight of eggs, fertility of eggs, hatchability of eggs, livability of chicks, growth and development of chicks, with the same things considered through the succeeding generations for a period, we will say, of ten years. The influence of food, housing and other conditions under which such tests were made would necessarily have to be taken into consideration and should be as nearly identical under all tests as possible. In the matter of the food, the same grains, green foods, etc., should be provided, allowing the fowls to do their own selecting.

Naturally only the best specimens should be kept each season to reproduce their kind and the unfit in either case (inbred or otherwise) should be weeded out. In the wild state the unfit are carried off by lack of vigor, or scarcity of food and water, or hardships under which the wild animal or wild bird must exist, and, consequently, when under man's supervision, the weeding or sorting out must be done by man, and only fit specimens kept to perpetuate the breed. Who among us can do it thoroughly? Not one in a thousand cull their flocks often enough, and very few among us know how to cull for health and vigor in the progeny. But is it not a fact that the only way to improve the breeds of poultry is by increasing their bodily vigor and their productivity, while at the same time using all possible means to repress the reproduction of the unfit?

We hear much at present of family history and genealogical descent of individuals, but it is slight in comparison to the extent to which such matters were carried in older nations in more primitive times. Undoubtedly these records in early days were first kept for the purpose of showing the property holdings descending to the members of a family. The purpose was not in all probability to determine how or where certain characteristics were inherited, but

the keeping of these pedigrees brought about these very facts, and in time they were the means of establishing certain laws regarding the intermarrying of relatives, since the evil effect of such intermarrying was noticeable in the records of such marriages and the families resulting from them. In the case of the British aristocracy, which one writer has referred to, the inbreeding has been done most guardedly. In fact, if poultry were bred along such careful lines it would not be considered inbreeding.

The evils of inbreeding have probably interested mankind since the days of Adam's grandchildren, and many men of many minds have devoted years of study and thought to it. The greater part of the published statements on this subject, however, refer to mankind, the facts of which are not wholly comparable with the inbreeding of

A famous winning Madison Square Garden Bronze Turkey Tom, bred and exhibited by Bird Bros. of Meyersdale, Pa.

animals, since in humans the mind must contribute a more or less direct influence in such cases.

In reference to the inbreeding of pigeons A. H. Huth, in "Marriages of Near Kin," states that according to J. Seabright there are fancy pigeons having some particular property which constitutes a supposed value and is increased by breeding in and in, until the particular quality is made to predominate. That in some of the most refined sorts they cannot exist without the greatest care and are totally incapable of rearing their young without the assistance of other pigeons for that purpose. This inbreeding was continued until the degree of sterility was such as to lose the breed. Dr. Woods, in his book, "How to Raise Chicks," cites such a case in the following: "A noted pigeon fancier, who has bred a lot of good ones the past thirty years, told me that he had to inbreed very carefully and that he had always kept a record of all of his birds from the start and could know the relationship by reference to his records. He had found that too close inbreeding produced undesirable results, loss of vigor, 'idiocy' (and he showed me some pigeon 'idiots' to prove his claim—they surely looked and acted the part), less resistance to disease, diseases of the nervous system and liability to fits. He considered breeding brother to sister the most harmful form

of incestuous breeding and stated that he had proved to his own satisfaction that it was not wise to breed closer relationships than uncles, aunts and second, third and fourth (or more distant) cousins. If this is true in pigeon breeding, why is it not true also in poultry breeding?"

And why, indeed? Yet the advocates of inbreeding are telling us, without the proof, that one of the basic factors "which makes for success in practical breeding is inbreeding."

A poultryman of wide experience, who is engaged in the poultry and supply business and who visits the leading fanciers and commercial poultrymen throughout the eastern section of this country, was discussing the subject of inbreeding only this week. His statements are worthy of wide circulation. He claims that of all the fanciers whose plants he has visited only one is following along the lines of close inbreeding, and that this man's stock shows in a marked degree the evils of continued inbreeding. By inbreeding, be it understood, he refers to the mating of father and daughter, mother and son, brother and sister, or where the relationship is close. On one occasion, while on a visit to this fancier, he assisted at the slaughter of numerous weak, lifeless specimens, showing that the strain has run itself out for the lack of new blood. He believes that there are fewer people closely inbreeding today than there were ten years ago.

Perhaps if I, or my neighbor, were capable of making the proper selections we might inbreed our flocks of poultry for some time with little serious result, but I cannot see wherein we gain anything, while running a heavy risk of robbing good stock of its best quality—that of vigor. The injury to the offspring in inbreeding arises from the "multiplication of pathological germs of the same nature." This influence must of itself weaken the offspring of relations, and it is confirmed in the human family by the frequency of sterility and of miscarriage, and the appearance of diseases new to the family. "The best proved results of these unions," according to Signore Paolo, professor at Pavia, "are failure of conception, monstrosities, disposition to nervous complaints, scrofulous and tubercular troubles, lowered vitality, high rate of mortality among the young, small generative power and pigmental retinitis." He further states the nearer the kinship, the greater the danger.

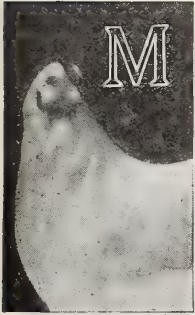

In the human family it has been found that a large per cent of the offspring of first cousins are defective. Deaf mutes are frequently the result of such unions. J. Scott Hutton, investigating along these lines, found in a school for deaf mutes at Halifax, Can., out of one hundred and ten deaf mute children of whom any definite information could be obtained, fifty-six were the offspring of cousins. Along this line I recently had recourse to the carefully kept records of an investigator who for many years was associated with Dr. Alexander Graham Bell, whose work in the interest of the deaf is well known. These records show plainly that a little peculiarity, such as left handedness, or a strangely peculiar squint to the eye, or an inclination to deafness, has been inherited from a grandsire. The offspring marries perhaps a second cousin, who likewise is descended from this grandsire. The children of this union are rarely if ever normal. The left-handedness is now exaggerated into a lack of ability to use the hands with any degree of skill, the squint to the eye becomes a positive deformity, the deafness is absolute. In numerous cases the cousins marrying were each apparently in every way normal. They showed no abnormality, but the "multiplication of the pathological germs of the same nature" in the offspring brought about an exaggerated form of the original defect in the grandparent. In tracing these peculiarities in families where defects in the offspring suggested an investigation it was found that the original defect was often in the great-grandsire, or sometimes even farther removed. There was always the possibility that had not the descendants intermarried the defect might have been bred out, but wherever the "multiplication of the pathological germs of the same nature" took place the defect in some form showed up.

Are we prepared to go on record as advocating, without proof of good results, the inbreeding of domestic poultry?

# Inbreeding, Outbreeding, Line-Breeding

Selection Is the Key to Success in Any System of Breeding. Strict Line Breeding Will Sometimes Intensify Weaknesses. *By Charles A. Simmonds*

ANY fanciers have the mistaken idea that to produce birds that will excel in standard points it is necessary to inbreed closely. About twelve years ago, when I first became interested in the poultry business, one of the first articles I read in a poultry journal described a system of line-breeding and illustrated the Felch chart, which is a system of inbreeding carried through six generations without introducing new blood, but mating father to daughter and mother to son. I doubt if ever a breeder followed this chart entirely. If he did he certainly started with a pair having powerfully strong con-

stitutions and ended with a worthless flock of weaklings. But to a beginner (who is much less able to successfully inbreed than an experienced fancier) the advantages of the system sound good and so does the argument that as inbreeding magnifies and intensifies the good qualities of the birds bred it would also intensify their weaknesses and that by careful selection, using only birds of strong constitution and never mating together birds having the same defects, one might inbreed continuously without the strain showing any loss of vigor. Granting that it is possible to inbreed continuously, there is certainly no advantage in it and the heaviest layers and the greatest winners are not produced that way. In fact many of the first prize-winners at the countries' largest shows are the product of an out-cross, though the majority are produced by line-breeding.

Selection is the key to success in any system of breeding. But to practise selection there must be variation in the type and characteristics of the birds to be selected. Talk about inbreeding continuously by always selecting strong individuals and never mating together male and female having like defects. What are you going to do when there are no vigorous birds to select and when all have the same defects and the same weaknesses, as they eventually will if inbreeding is continued long enough? No, you cannot mate birds closely related year after year and hope to be successful. But perhaps you are one of those breeders who believes in "introducing" new blood, "when necessary." Why wait till it becomes necessary? Why not mate your birds so that they are always strong and vigorous without resorting to an out-cross to infuse vigor. For while out-crossing is all right for constitutional vigor and fertility it will destroy type, egg-production and fancy points. It is not profitable to breed heavy egg-producers if you do it at the expense of fertility of eggs and livability of chicks nor is it profitable to breed strong vigorous birds from which one can almost produce a mature fowl from every egg set if in doing so one must sacrifice type, egg-production and size and color of eggs or fancy points. Neither is it necessary to sacrifice any one of these desirable qualities if one will only mate along rational lines, along the lines that the best individuals of other kinds of live stock are produced.

Inbreeding in the human race will not apply to the breeding of the lower animals so well as many writers would have it. For instance, there is the oft-quoted example of the intermarriage of the children of Adam and Eve, and the descendants of Abraham. These instances of incest resulted in producing strong and vigorous races, but can we find in the races of mankind at the present day individuals so strong physically and so well balanced mentally from which to quote instances of the result of incest? After a little thought I believe you will agree with me that no such people exist today. In the human race we have the power of thought, the will power and a highly organized mind by which the man neglects and in a measure loses his natural instincts, places himself in unnatural environments and creates unnatural or abnormal appetites for drugs and various forms of pleasure.

The above mentioned people of Bible times, while possessing the same faculties of mind, did not have many of them so highly developed as the oldest civilized races of today. They lived close to nature and did not devote themselves to professions or trades tending towards the development of only a few faculties of the mind or a few muscles of the body.

The lower animals do not possess the power of thought, but are guided by instinct which has been developed by natural selection of the survival of the fittest through countless ages

and is therefore not easily lost, even through many generations of domestication and disuse.

I have noticed that children resulting from the union of cousins in the human race are generally normal and fully equal to other children physically, but are generally simple minded or abnormal mentally, which would tend to prove that the mating of cousins in the lower animals would not result in any loss of vigor. And thus we cannot prove by examples in the human race that the practice of inbreeding the lower animals will result in weakening the strain nor can we prove that it will not result in weak progeny except when it is only practiced in a mild form or for very few generations.

Not only most breeds, but many strains as well are descended from and owe their distinctive characteristics to a single superior individual. But how different from the methods of the breeders of other kinds of live stock is the method employed by the average poultryman in endeavoring to fix upon the strain the superior type or character of the individual specimen. The average poultry breeder believes the only way is to inbreed as closely as possible, only introducing new blood "when necessary." The breeder of other kinds of live stock will occasionally mate animals closely related, but never for successive generations, and always aims to introduce the blood of his best individuals into as many strains or lines of blood as possible so as to be able to breed animals strong in his or her blood in the future without inbreeding. With a female this is not so easily done, as it is not possible to mate her with more than one male in a season and know the sire of her chicks. But with a male one may mate him to females of several strains, using trap-nests or changing the male from pen to pen every few days. The next season father may be mated to daughters and half-brother to half-sisters which is close inbreeding, but you need fear no deteriorating results, as all but the original male were produced by out-breeding, and you will not need to inbreed in the future or to mate any but distantly related birds. I have before me a chart showing a male mated to females of two different strains and the progeny inbred the next season. The lines were then carried out for eight generations from the original male, new blood introduced twice and no inbreeding practiced after the first generation from the original male. The eighth generation birds were produced, having 31 parts the blood of the original male A and 32 parts the blood of other individuals or 8 parts the blood of E, 10 parts of B, 8 parts of D and 6 parts of C. Had the birds been bred from a single pair there would have been 31 parts the blood of the original male and 32 parts the blood of the original female, which would not have given the blood of the male any dominance over that of the female in determining the character of the progeny. But where the birds contain 31 parts the blood of the original male, against 32 parts the blood of four other individuals, no one of which has contributed more than 10 parts of blood, it is easy to see that the blood of the male is strongly the dominant blood and will give progeny having uniformly the type and character of the original male. A bird so bred will show great dominance over its mates if they were produced by out-breeding or haphazard matings. But that anyone would want to carry the blood of one male the dominant blood for eight generations is not likely, I simply show how it can be done without continued inbreeding. In producing a new breed one often desires to confine himself to the blood of an individual as much as possible for several generations, but in breeding an established variety one should be able to produce several individuals each season that excel those produced the year previous. When one has a number of fine individuals that possess uniformly the characteristics desired in the strain it is not of any advantage to keep closely within the blood of any one!

I hope that the beginners in poultry breeding who may read this article will see that inbreeding and out-breeding are about equal in advantages and disadvantages and that as a system to be used continuously generation after generation neither is desirable, but that used for special purposes both are of great value. The average breeder often inbreeds for a generation or so, but buys a few birds or a setting of eggs every year or every few years (according to the number of pens he mates and number of lines of blood he carries) so as to have a number of lines of blood all within the same strain and with which he is familiar and can mate for the best results to secure his main crop of chicks without close inbreeding or out-crossing.

# The Production of Certified Eggs

The Highest Quality Product for Supplying  
the Highest Quality Trade. *By John Y. Beaty*

**C**ERTIFIED EGGS GATHERED and shipped daily from hens scientifically fed.

That's what it says on the box in which you receive your eggs from a certain grocer in San Francisco. This name is used because the eggs are produced under scientifically sanitary conditions and a certificate to that effect accompanies each dozen.

The certificate is made by a veterinary who inspects the plant and the stock every month. This certificate is printed on the cartons and is assurance

to the consumer that the product is of the high quality that is paid for. The usual form of the certificate is as follows:

"This is to certify that I have made my monthly tour of inspection over the premises of Seaton and Sons Poultry

BROODER HOUSE FOR 20,000.

This house is 285 feet long and 20 feet wide. It has a capacity of 20,000 chicks, which is the number raised to get 12,000 laying hens. It is divided into ten pens, each of which is heated with a brooder stove that burns distillate oil. The oil is supplied from a large supply tank at the farther end and is piped to ten ten-gallon tanks on the outside of the pens. From the ten-gallon tank a pipe is run under ground to the brooder stove.

Farm and have found conditions perfect, including the birds, feed, and surroundings.

"L. H. Mathers, D. V. S."

Certified milk has been used for several years, but so far as known, this is the first case of the production and marketing of certified eggs. The success met with by Seaton and Sons indicates that the certified egg will soon be a common thing—at least as common as certified milk.

Certified eggs are sold at two or three cents above the highest market price and those who have used them believe that they are worth the additional cost. The greatest value lies in the fact that certified eggs are far less likely to carry disease.

Carry disease? Yes, it is gradually becoming known that eggs as well as milk carry diseases such as diphtheria, chicken pox, scarlet fever, and many other contagious diseases.

But how does the disease germ get into the egg? Some come through the food of the hens and some develop in the body of the hen that lays the egg. Poultry is heir to many diseases exactly like those affecting human beings, but they are commonly called by different names. Roup is considered by many authorities to be the same as diphtheria in man. And in the same way, the other ailments of poultry may be found to be the same as some disease of another name that claims human lives.

Poultrymen knowingly, yes and knowingly in many cases, are feeding meat scraps and other foods that are made from flesh of animals that have died with serious diseases—dis-

eases that are transmissible to man. But in the production of certified eggs, the choice of foods is made just as carefully as for human consumption and so there is little chance of transmitting diseases.

After many years of study along this very line, Mr. E. D. Seaton and his two sons, all college graduates, have come to the conclusion that by feeding only meat scrap and ground bone that is known to come from healthy animals, the danger of infection through the eggs will be removed. In other words, the commonest source of disease transmission through eggs is the meat scrap fed to the fowls.

The advantages of using certified eggs are outlined in a small circular published by Seaton and Sons as follows:

1. Doctor's monthly certificate of inspection.
2. Sanitation and hygiene.
3. Eggs from healthy and vigorous stock.
4. Our eggs are gathered and shipped daily.
5. Scientific feeding.
6. No commercial meat scrap or meat of a like nature fed.
7. Intensive application to produce the best.

In addition to these an extract from a letter written by Dr. Harvey W. Wiley, formerly Chief of Bureau of Chemistry of the United States Department of Agriculture, indicates the danger of transmitting disease through eggs.

Dr. Wiley writes:

"I think the feeding of decayed, diseased, or unfit meat to poultry is highly prejudicial.

"The danger of spreading disease among animals, and of communicating it to a human being, by the feeding of diseased parts of animals is so great that it should call for immediate attention on the part of the authorities controlling the commerce of such bodies.

"Not only should poultry be protected against such contamination, but human beings from the diseases which would result therefrom."

It is not much more expensive to produce certified eggs than it is to produce eggs carelessly from a poor flock. Moreover, the advantages to be derived from their production more than overbalance the additional expense.

In the first place, the price at which they may be sold is two to three cents per dozen higher than the highest market price and this premium is likely to increase with the education of the public to the value of certified eggs.

With a contract for the sale of the entire output of certified eggs, one always has a sure market, and a more appreciative market—a market with a character to it. People who buy certified eggs buy them with a purpose and appreciate

FLOCK OF 155-EGG HENS.

In spite of the fact that this is one of the pens in a 12,000 hen flock, they produced an average of 155 eggs each last year. They are kept in long houses accommodating 2,200 and have a double yard in which to run. The yards are plowed every month and the houses are cleaned every day. Such sanitary precautions together with an excellent system of feeding make it possible to get a high yield from the large flock.

what they get because it is of a higher quality than what is ordinarily bought.

Such a market is not to be found in a day, however. You can no more find a ready made market for certified eggs than you can find a ready made market for a new mechanical device.

The Seaton market was developed by publishing small circulars which were distributed to the customers of the grocer that has the contract for the output. The educational campaign has extended over three years and the market is not entirely perfected yet, but enough has been accomplished to show that a trade can be developed. The present demand takes all of the eggs produced by a flock of 12,000 White Leghorn hens that averaged 155 eggs each last year. That, by the way, is a mighty good average for such a large flock. The average egg production for flocks of all sizes is only 80 per hen according to government statistics.

To tell how certified eggs are produced is to describe the methods used on the Seaton farm inasmuch as it is the only one producing them.

The three main points in the egg production there are: Health, sanitation, and feeding. The three go together, but

summer they are plowed once a month, that is, one of them is—only one being used at a time while green stuff is growing in the other. Plowing the yards avoids the danger of disease that often arises from allowing poultry to run on the same soil for a long time. It also gives the birds an opportunity to get elements from the soil that are needed but that are not furnished in the food.

The supplying of the needed elements is the chief feature of the feeding system. Analyses have been made of the foods, the eggs, and the bodies of the chickens. This analytical work is done on the farm—that's where the college education is put to use.

By comparing these analyses it is easy to see what needed elements are not being furnished in the foods. After exhaustive studies of this nature, Mr. Seaton worked out a compound of mineral salts that seemed to be uniformly lacking in the food, especially in winter, and experimented with it.

The compound thus determined theoretically has proved to be good when put to practical use. It has been tested for over two years and has been changed but little during that time. Its main ingredients are as follows:

Toynton Rectory and Miss Carey's Orpington Farm seen from the distance.

each has its special importance.

Health is maintained by carefully watching the entire flock, by providing plenty of fresh air and exercise, by proper feeding and by the unusually favorable climate in California. As soon as a bird is noticed to be listless, it is removed to the hospital pen which is far removed from the laying flock. If there is no hope of a speedy recovery, it is killed at once, for the period of usefulness on the Seaton farm is only two years, and any malady that is more than temporary is not worth doctoring.

Fresh air and exercise are assured by two large yards provided each house. The houses are 250 feet long and 20 feet wide and are made to accommodate 2,200 layers. A large yard is provided on each side of the house and each of the 2,200 birds has the opportunity to exercise in the entire space—and they all take advantage of the opportunity, too.

With so many hens in one flock, the most rigid rules of sanitation must be followed. The dropping boards are cleaned daily, the work being facilitated by a car that runs on a track at the edge of the boards. The droppings are quickly scraped into this with a wide hoe and the load is then run out at the end of the house and dumped into a wagon.

The houses are thoroughly sprayed once every six months, or oftener if there are any signs of lice or mites. The floor is kept covered with a deep litter that is renewed often, and there is a row of large windows extending the entire length of the house that admits sunlight to kill the germs.

The yards are kept well plowed the entire year. In the

Three parts phosphate in the form of calcium phosphate.  
One part sulphur (flowers of sulphur).

One part iron in the form of iron oxide.

One part magnesium in the form of epsom salts or magnesium carbonate.

In addition to these, there are small amounts of several other less common elements.

Mr. Seaton believes that the good success attained is due largely to the feeding of these mineral salts and to the feeding of bone and meat scraps from healthy animals.

The regular feedings are two: a mash in the morning and whole grain at night. The mash is made of the following ingredients: ground alfalfa, rolled barley, whole oats, ground corn, millet seed, oat middlings, bran, cooked meat scraps and ground bone, charcoal, sulphur and oyster shell.

The whole grains are varied, but whether it is wheat, barley or oats, it is shipped from the grain-growing centers of the middle West because it has been learned that the California grains are much deficient in some of the ingredients that are most needed in the production of eggs.

Last, but not of least importance—the layers are raised on the farm from eggs produced there by specially selected two-year-old hens. New males are secured from other flocks to avoid inbreeding. The babies are carefully raised and culled two or three times before they go into the laying pens. This means that about 20,000 chicks must be hatched each year because in addition to culling out the least promising pullets, a large percentage of cockerels are discarded, for a cockerel is of no value on an egg farm except in the breeding pens.

Notary Public.

## OUR GUARANTEE.

We guarantee our subscribers against  
loss due to fraudulent misrepresentation  
in any display advertisement appearing in  
the American Poultry Journal, providing  
the subscriber when ordering the fowls  
or merchandise states that the advertise-  
ment was seen in the American Poultry  
Journal, and places the order during the  
month or months in which the ad is in-  
serted in our columns and notifies us of  
the fraudulent misrepresentation of the  
advertiser, giving full particulars, as soon  
as it occurs.

## When Authorities Disagree.

"What are we poor laymen to do  
when we find such a difference of opin-  
ion in the teachings of the leading  
authorities on such subjects as mating,  
breeding and feeding?" That is a  
question frequently asked of the poul-  
try editor.

Authorities often disagree. Individu-  
ality is a pronounced characteristic of  
men who study, investigate, and ob-  
serve, in an effort to scientifically get  
at the root of things. With strong in-  
dividuality you naturally expect to find  
that the man thinks for himself instead  
of letting others think for him, as is  
often the case with the sheep-like ma-  
jority of mankind. Naturally such men  
may form opinions, based on personal  
observation and experience, that differ.

There is often more than one good  
way of doing things. Some say there  
is no ONE best way. Others believe  
in a best way, but admit that it has  
yet to be discovered. What we all  
know is very small when compared  
with what we all do not know, and we  
are learning and striving to learn all  
the time if we are really alive. Some  
folks seem to be dead and not know  
it—don't be that kind.

If there were no differences of opin-  
ion on most vital subjects this would  
be a mighty uninteresting world, and  
there would be little progress. It takes  
differences of opinion and some discon-  
tent with the existing condition of  
things to make progress possible. Other-  
wise we might stagnate and live and  
die like fungus.

Differences of opinion of authorities  
(so-called) are often more apparent  
than real. Often they are building on  
the same bed-rock and agree on the  
fundamental underlying principles but  
disagree on the minor surface details.

When you get right down to real  
work, every man must make his own  
observations and form his own conclu-  
sions. All any magazine or text book

the change.

AMERICAN POULTRY JOURNAL is  
the oldest poultry paper in America. It  
has a national and world-wide reputation.  
The best writers on poultry matters con-  
tribute to its columns. It receives the  
patronage and endorsement of the fore-  
most representative breeders of standard  
poultry and manufacturers of poultry ap-  
pliances in the country.

can do is to present you with the  
opinions of all the leading investiga-  
tors. To make any progress you should  
study all sides of the subject and try  
to see it from the various points of  
view. Read and study all literature on  
your line of endeavor, but don't accept  
some particular written word as the  
only law and gospel. Learn to observe  
and to THINK FOR YOURSELF.

## Learning to Think.

Whether you keep poultry for pleas-  
ure or profit, or are working along other  
lines, you need to learn to think and to  
form the habit of thinking for yourself.

Did you ever attend a public meet-  
ing and see a gifted orator herd his  
auditors as a shepherd herds sheep and  
get them to vote his way without think-  
ing for themselves? It is done every  
day. The thinker, with the gift of  
gab, herds his flocks of human sheep  
and makes them do his bidding, when  
if they would only take time to think  
for themselves they would undoubtedly  
do differently and in doing so better  
themselves as a whole instead of the  
few who now play herders of men.  
Think it over. Take time to think.

One good way to stimulate thinking  
is to practice along the line of the  
thoughtful physician who diagnoses by  
elimination. The physician's method  
is this: He has carefully reviewed the  
symptoms of the case before him and  
he finds that on a "snap diagnosis"  
(quick decision with little thought) the  
case might be any one of several dis-  
eases presenting similar observable  
symptoms. Were he to adopt snap or  
hasty judgment he might call it the  
most probable one of the lot and let  
the case be cared for on that basis.  
It might be the easy way, and often  
he might "get away with it" success-  
fully. The careful man takes time to  
think. He considers the various "might  
be" causes or ailments, as thoroughly  
as necessity permits. Thought is not

necessarily a lengthy process and the  
brain can be trained to rapid and accu-  
rate thinking if you only stick to it.  
Having considered the possible causes  
or ailments briefly, he now proceeds to  
eliminate or cast one side those which  
do not fit the case before him and can-  
not possibly enter into it. He may  
start with a dozen possibilities and  
rapidly, through trained thought, get  
down to two or perhaps three most  
probable possibilities. More consider-  
ation and the third is dropped as im-  
probable or impossible and only two  
are left. Elimination has reduced  
twelve possibilities to two in a very  
brief space of time, assuming that the  
observer has been a reasonably good  
student. To find the most likely one  
of two things is obviously a matter of  
careful further consideration only and  
not more difficult than finding the most  
likely two out of the original dozen.

Now, friend reader, take this elimi-  
nation process into your study of poul-  
try keeping. Try to learn to think for  
yourself and to acquire the habit of  
systematic thinking for yourself. Take  
all the most probable opinions advanced  
by various writers on a given subject  
and set each down in parallel columns  
where you can view the several argu-  
ments briefly at a glance as they are  
arranged side by side. There is noth-  
ing more effective in the elimination  
process, or in the study of various simi-  
lar but differing views, than grouping  
in parallel columns for study and com-  
parison.

When you have your comparison  
tables ready, apply your own observa-  
tions if you have any, your own expe-  
rience if you have any, or at least your  
own ability to think and get at the  
most common sense point of view. You  
won't always get there the first time,  
but if you only keep at it you will  
learn to think and form the habit of  
thinking, you will get a broader view  
of things and will have a better grip  
on your subject. You need to think.

You should learn to think and through thinking you may eventually acquire that necessary but elusive blessing, COMMON SENSE.

### The Price of Eggs and Milk.

Every time there is any attempt to get better prices for eggs or for milk a howl of protest sweeps over the country. Editors, who should know better, tell their readers that fresh eggs can and should be bought for not over 25 cents a dozen and that to charge more is robbery, and that 5 or 6 cents a quart is all any fair minded person should ever ask for milk.

Such writers do not know what they are clamoring about; if they were to become producers of really first quality eggs or milk they would be the very first to change the tune and to howl for better and higher prices.

Pure foodists all over the country are working for better and more wholesome food. Slipshod methods in production must be abandoned by the producers who cater to the markets of today. Inspection is beginning to be less of a farce and to be more far reaching in its effects. It has been demonstrated that eggs, like milk, are best for food when strictly fresh. Like milk also, eggs are very susceptible to deterioration and to contamination. Both spoil quickly as they age, even under favorable conditions of keeping, which are none too common in general practice.

Everywhere effort is being made to clean up the dairies and to keep them clean. Sanitary and more modern wholesome methods are being insisted upon in the production and handling of milk. These things all cost money. The egg farmer is going up against the same modern methods of production. He has to keep up with modern sanitation and cleanliness if he is to remain a producer of high class poultry products. Soon his plant will be subjected to official inspection. And that is not all.

Foodstuffs for both milch cattle and fowls are high and may go higher in price. Food has been proved to have a direct influence on the quality as well as the quantity of eggs and milk produced, as it also has a great influence upon the producing animal's health and condition.

We never ran a dairy, but we have visited a lot of them of all kinds, and we have kept cows and milked them for a sufficient number of years to be entitled to membership in the A. O. T. P. (If you don't know what society those initials stand for ask any man who has milked his dozen cows before breakfast by lanternlight on frosty mornings.) We wouldn't want to produce milk to sell at retail for less than 12 cents a quart. When living in the city we have paid as high as 15 cents a quart for certified milk and were glad to get it. Goat dairies get 25 cents a quart for goat milk, and diet kitchens, physicians and nurses consider it worth the price and we haven't heard any howl about it. Cow dairies have gone broke trying to produce certified milk to sell at 12 cents a quart and have been bitterly denounced for attempting to rob the public.

Milk and eggs are two of our most important foods. At the present time at present prices the consumer gets more for his money in digestible food in milk and eggs than in any other foodstuffs. To be in any way consistent with the prices of other foods milk

ought to sell at not less than 12 cents a quart and eggs for 60 cents a dozen.

This summer, at a beach resort, we had to pay the butcher 20 cents each for lamb chops, five chops for a dollar. Eggs cost us 60 cents a dozen and milk 12 cents a quart. Compared with the meat the milk and eggs were dirt cheap.

For the past year at home we have averaged to pay 10 cents each for short lamb chops. We produce eggs on the place and usually milk. Round beef for boiling costs usually about 25 cents a pound; pork roast, 20 cents a pound; porterhouse beef steak, 40 cents a pound. We don't stint the table on quality, variety or quantity of foods, and personally we believe that eggs at 50 to 60 cents a dozen and milk at 12 cents a quart supply cheaper and better food for a given cost than the meats at the prices mentioned.

A ten cent piece of meat won't make much of a breakfast, but two five cent eggs or a pint of milk and half a loaf of bread will make a substantial meal. As to food values you get by analysis practically as much from a pound of eggs as from a pound of meat and in actual healthful digestible food you get more out of the eggs. Average well fed eggs will run pretty close to two pounds to the dozen. Ours do. As compared with meat there is mighty little waste to be paid for in eggs and none in milk.

Selected, well-fed fresh eggs can always weigh 2 pounds to the dozen. Thirty cents a pound is not too much to ask for them at retail and it is not too much to pay. It doesn't take a very hearty eater to get away with a 30-cent piece of meat at one meal, but mighty few will be found to eat six 5-cent eggs at one sitting.

Sanitary methods are necessary where quality eggs are to be produced. Food has a great influence upon the quality, the size, the food value, and the weight of eggs. The layers must be well fed on wholesome food. Food also has an influence upon the flavor of eggs. It costs money to keep up an egg farm as it should be kept up. The best quality eggs are the cheapest and most wholesome in the long run. The fresher an egg is when eaten, the better for the consumer. Eggs deteriorate rapidly. Some experts have pronounced "deteriorated eggs" (salvaged rotten eggs) as wholesome and not injurious when used for food. Don't believe it for one minute. The germ infested contents of salvaged eggs have been given to guinea pigs and sickness and death of the pigs resulted. Perhaps we human beings may not be as susceptible to the poison as the guinea pigs, but why take chances? Physicians get the larger part of their incomes from persons suffering with disorders of the digestive organs and bad food plays havoc with digestion. But enough of that, you can reason and think it out for yourself.

The upkeep of a modern egg farm is considerable. The cost of feeding alone is a big item, to say nothing of housing and labor. Every producer must figure his upkeep expenses and consider them when making the price of his product. Selling expenses must also be considered. Quality eggs are not produced haphazard on farms or in back yards from waste materials. Wholesome table waste will help toward egg production, but other foodstuffs are required and cost money. Good eggs are a matter of careful food supply and healthy fowls. The saying, "eggs is eggs," is

not true in the sense of equality in food values and wholesomeness. Swill-fed eggs are not good eggs.

When a man tells you that good fresh eggs can be produced nearby our large cities to sell for 25 cents a dozen he does not know what he is talking about. He hasn't considered or allowed anything for upkeep cost. The egg-farmer can't produce well fed quality eggs to sell at 25 cents a dozen retail. He ought to get not less than 45 cents per dozen the year around for his best selected product sold fresh laid. Fifty cents a dozen would be a fairer price to the producer and would not pay him profits as great as many manufacturers today insist that they must have in order to do business. For best selected quality eggs five cents each is not a prohibitive price, and when value received is considered you get a good deal more for your nickel in a five-cent egg than you do in most other things you buy.

Think it over.

### Mr. Buyer, a Word With You.

Now is a good time to buy breeding stock for next season and a good time to place your orders for eggs for hatching for spring delivery. First come, first served, is a pretty general rule. Before you place your orders we want a few words with you personally, Mr. Buyer.

We believe that the advertisers in this magazine are reliable and dependable men. If we did not believe in them we would not accept their advertising. We believe that they aim to satisfy and please their customers. We don't know them all personally, it isn't possible for us to, and obviously we can't recommend any special ones as the best to deal with. In the first place we don't know who or what is best in most cases and in the second place it would not be fair or just for us to attempt to single out individuals for special favor. It is up to you to get acquainted with those who interest you and to size them up for yourself by their advertising and by the letters and printed matter they send you.

In ordering or asking questions please be polite and be careful to state plainly what you want. It doesn't pay to leave anything to guess work, the seller can't read your mind, you must tell him what you want and ask his price. Politeness pays and you will find that molasses catches more flies than vinegar.

Don't expect a breeder who sells fowls to win at \$100 or more each to sell you some of his best for \$2 or \$5 or \$10 each. It can't be done and it isn't done. When you buy bred-to-win or bred-to-lay stock you have to pay well for blood lines.

When describing the specimen you want don't sit down and copy the standard description of a perfect fowl and then expect to get such a fowl at any price. The standard description is supposed to represent the ideal or perfect specimen; we have never seen one and any man owning one would be foolish to sell it. Some judges have scored specimens within four points of perfect, but even that is going some and the judge probably erred on the side of generosity. You can't buy perfect standard specimens at any price. At the lower prices the most you can expect is to get healthy, vigorous, well-

developed specimens out of good blood lines.

Don't expect a sitting of 15 eggs to yield 14 or 15 chicks or to get a large percentage of fine specimens out of a single sitting. Things don't run that way. If they did there wouldn't be any big prices for fine specimens. If you get 7 or 8 chicks out of 15 eggs you are doing well and have no cause to complain. If the chicks do well and you get half of them fairly good specimens at maturity you ought to feel pretty good over it. Every egg from a good mating won't hatch a winner.

When you feel that you have a complaint, be courteous about it and write the seller telling him all about it. Courtesy is usually met with courtesy. Impolite and offensive kicks may be ignored or may bring back just as hot stuff as is sent. Sometimes there are exceptional cases where one side or the other is unfair and unreasonable, when you can't get an adjustment it is time enough to write the editor.

In buying breeding stock, see it first if you can. You will be better satisfied and so will the seller. If you know how to pick good ones and are content with your own judgment, well and good, but don't squeal afterward if someone tells you the fowls you picked were not worth the price you paid. Sometimes it is a pretty good plan to tell the breeder what you can afford to pay and ask him to pick you out the best he can sell for that price and have him mate them properly if you want mated specimens. When you put him on his honor that way he will prove a mighty crooked man if he fails to give you good value for your money. When you match your own knowledge and wits with any breeder of live stock and think you are sharp enough to buy better than you pay for, it is a pretty good time to stop dreaming and wake up. Most men, when it comes to a game of wits, and seeing who can drive the shrewdest bargain, will look out for number one and it is your own fault if you fall down in that kind of trading. 'Nuff said.

#### Now Ready.

The premium list of the Great Midwest Poultry and Pet Stock Show, to be held in the Coliseum building in Chicago, December 12-17, is now ready for mailing. Readers who have never ex-

hibited at Chicago and have not yet sent for a copy, will please write at once to Theo. Hewes, secretary, Indianapolis, Ind. The old exhibitors, unless their addresses are changed, will receive a copy without request.

#### Eggs for Hatching.

Now that the exhibitions are fairly started, booking orders for spring delivery of eggs for hatching will begin in earnest. The shows are good marts for sale of hatching eggs. At New York show last winter several fanciers and breeders told us they had booked orders for eggs that were sure to take all they could produce above those needed for incubating at home.

Sales promise to be good the coming season. We look for big sales of eggs for hatching and we want right here to urge greater care in selecting eggs and more consideration for the customer on the part of the sellers than has been in evidence in past seasons.

Get a little of the Golden Rule into your eggs for hatching business. With a big demand and prices good there is big temptation to sell any eggs that "have shells on" and come from the breeding pens. It is bad business—is not fair to your customer or to yourself.

Rather than send poor eggs, no matter how good the specimen that laid them, it would be better policy to sell fewer eggs and to refund the money on orders you cannot fill with good normal eggs.

We bought several sittings last season, \$5 sittings mostly, and very few of them were a credit to the fancier who shipped the eggs. The percentage of mal-formed, thin-shelled, watery-shelled and warty-shelled eggs was altogether too great. Many of such eggs could not stand the weight of the hen without breaking in the nest. Quite a number were broken on arrival. Mighty few of such eggs would ever produce a chick even under the most favorable circumstances. Such eggs should never be included in sittings. A small percentage of such eggs might be permissible in large lots of low priced "incubator eggs," but better not any there. The only right place for such eggs is to market them for table uses.

There are many good shipping packages for eggs and there are many more poor ones. It is a good plan for the

breeder to remember that his customer will size up a good bit by the sort of shipping package he uses, the condition the eggs arrive in, the appearance and quality of the eggs themselves. If these things make a good impression and he fails to get a good hatch or fails to raise good chicks, as he easily may, he will feel more charitably inclined toward the breeder and less disposed to complain, for the good first impression will help him to see (as is often the case) that his misfortune may have resulted from faulty incubation and rearing. Send him poor eggs in a poor package and he is prejudiced (justly so we think) against the breeder from the start. He is not likely to continue a customer of the man who disappointed him.

We have received eggs costing \$5 per fifteen in a flimsy package and wrapped with dirty newspaper and including more than half cull eggs unfit for hatching and we have had such treatment from friends whom we believe to be honest and who ought to know better. Such treatment of a customer is neither right nor decent and it ought to be stopped. We are disposed to be charitable and we know our friends in the cases mentioned did not mean to be dishonest. The fault was conceit and ignorance. They have been fanciers for years and consistent winners on fine specimens and their mental faculties have warped into queer kinks. Result, any old egg from their selected matings they believed to be worth all they asked for it. It didn't matter that possibly the breeding specimen had gone off condition; they couldn't see it and all they could see was the honors won in competition and the exaggerated value of all produce in consequence. Mighty few poultry keepers of any class can really "see a hen." They see past performance, present winnings and the glory of blood lines, but individuals and the produce of individuals they are often blind to.

We once had a breeder friend who wanted to be particularly nice to us and sent us a few of his fowls, beautifully feathered it is true, but, oh, how lacking in desirable physical qualities. They were knock-kneed, crooked breasted, hawk or crow billed and otherwise lacking in constitutional vigor. We couldn't be tempted to breed them as foundation stock. We disposed of them and, though it hap-

## Buff Orpingtons

The trapnested kind—the sort that lays the eggs, produces the birds, wins the prizes at Greater New York, Chicago, Indianapolis, Louisville, Nashville, Memphis; holds the crowd at every important show and points the way to real Orpingtons.

#### No Contest Too Keen—No Demand Too Great

We can supply your needs and will give one hundred cents in value for every dollar you care to invest with a plain guarantee, you must be pleased or the birds can be returned and we will refund your money. Thousands of exhibition specimens and selected breeders. Let us help you win and improve your flock. Send for big Orpington Fashion Plate Book—the key-flower of perfection, free.

A. E. Martz & Son Buff Orpington Specialists Box A, Arcadia, Indiana

pened several years ago, this is the first time we have mentioned it and we honestly believe our breeder friend would have been surprised to know that we found anything wrong with those fowls. He couldn't see health, vigor and vitality and, in fact, had trained himself, unconsciously, not to see it.

We hope this talkfest will help remove the scales from the eyes of some of our friends, and that the eggs for hatching season will produce more satisfied customers and more contented breeders as a result of it. It is plain talk to be sure, but it is friendly talk and intended to be helpful and not destructive. We hope you will all see it that way.

#### Harry H. Collier.

Harry H. Collier, editor of our Pacific Coast department, was born in Montgomery, Ala., in 1869. He has bred poultry since 1877. He has lived in Alabama, Georgia and Washington. He went to Washington in January, 1889. He judged his first poultry show in 1894 and has been superintendent of the Washington state fair since its inception, with the exception of the years of 1901-02. The State fair of Washington held its first exhibition in 1894 and Mr. Collier acted as superintendent as well as judge; since that time he has been superintendent and this fall had the pleasure of cooping the best poultry ever seen on the state fair grounds.

Mr. Collier was commissioner of poultry for the Lewis and Clark fair for the state of Washington, in the year of 1905. He held a similar position with his state at the Alaska-Yukon exposition held in Seattle in 1909. He was for three years superintendent of the poultry department of the Spokane Interstate fair. When Puyallup started a fair (this fair now being known as the Western Washington fair) Mr. Collier put on the first poultry show and he has acted both as judge and superintendent of this fair that is considered one of the best in the state. At present Fred A. Johnson is superintendent and he has made good, holding the best show of poultry this fall in the fair's history.

Mr. Collier has been known as a poultry writer for nearly twenty years.

In November, 1896, he began the publishing of the Pacific Poultrymen, of which he was a half owner up to 1902.

Mr. Collier began his thoroughbred poultry career with White Booted Bantams, but since that time he has bred some variety of most every breed. He made a name with his Langshans that was coastwide, and sold his fowls and good will for the best price that any breeder has obtained for a flock on the Coast. At present Mr. Collier is breeding Buff Rocks and Single Comb Brown Leghorns. He is a man of family, having a wife, three girls and four boys.

He is a practical poultryman. He has a ten acre ranch near Tacoma which he is now developing.

#### Mr. Brown Sends Thanks.

New Berlin, Ohio, Sept. 14, 1913.  
Editor American Poultry Journal.

Gentlemen: I take this opportunity to address you through the columns of the old and reliable American Poultry Journal, having received word of the decision of your committee, naming myself as the second prize winner in the White Orpington Prize Essay Contest.

Allow me to say I duly appreciate that your work in the examination of the ninety-four papers submitted was quite an arduous task and a call for good and unbiased judgment from the committee. I take this opportunity to thank you in recognition of your decision, which I duly esteem and value.

Wishing you success and still greater progress to the White Orpingtons and the American Poultry Journal, I am, sincerely yours, James R. Brown.

New Berlin, Ohio, Sept. 14, 1913.  
Mr. Louis Lee Haggin, American Poultry Journal.

Dear Sir: I desire to express my thanks to you in a more formal way than a strictly personal letter, so I take the liberty of sending this for publication in the American Poultry Journal.

I appreciate very much your kindness in the splendid prizes offered in the Prize Essay Contest as an incentive to the work and also recognize the amount of labor done by the committee in their examination and decision,

to whom I tender my thanks as second prize winner. I shall exhibit this trio at Akron, Ohio, and at our great show in the City Auditorium, Canton, Ohio, in December.

Here is to the further success of the White Orpingtons and Mr. Louis Lee Haggin. Sincerely yours,  
James R. Brown.

#### Welcome to Our City.

It is with pleasure that the editorial and business staff of the American Poultry Journal welcomes D. E. Hale to Chicago, as editor and manager of the Successful Poultry Journal, formerly owned by Frank Heck, who recently disposed of his interests in this paper.

Mr. Hale was formerly associate editor of the Reliable Poultry Journal, which position he held for over four years. We quote below part of an editorial which appeared in the October issue of the Reliable Poultry Journal, presumably written by Editor Curtis:

"Mr. Hale left his old position in a way entirely honorable to himself and took with him the sincere best wishes of all his old associates in R. P. J. office, likewise those of the writer of these lines. He has been with us four years or more, is a willing worker, upright in character, clean in speech and habits, a loyal friend and an earnest student of poultry culture in all branches."

The American Poultry Journal wishes Mr. Hale success in his new undertaking and we believe he has the ability to make good.

C. A. Webster, a graduate of the Ontario Agricultural College, Guelph, Canada, has been appointed as assistant in poultry at the University of Missouri. Mr. Webster's work will be quite largely along experimental lines and his addition to the department will result in much more efficient work.

Lew B. Windust, one of the most successful and most prominent poultry breeders in the state of Washington, died the latter part of September after less than a week's illness.

## MARTIN'S REGALS

### AT THE NEW YORK STATE FAIR

#### Judge Drevestadt's Report

"The exhibit of John S. Martin, Port Dover, Canada, was about the most typical in Wyandotte shape that this past master in the art of breeding White Wyandottes ever placed in a show room. It was a treat to find specimens uniform in shape and pure silvery white in plumage representing so strongly in both the old and young classes."

#### Note Also the Following Extracts from the Show Reports

"Mr. Martin has the goods. His line was never seen to better advantage and he was well entitled to every prize won."—H. P. Schwab in American Poultry Journal.

"When any man can place on exhibition a string of seventy birds at such a proven quality show as the New York State Fair and take home twenty-eight out of a possible thirty prizes with only two birds unplaced, 'supreme' is certainly only half expressing the quality of his offerings."—Poultry Item.

**2000 Cocks, Hens, Cockerels and Pullets For Sale.** Special—100 exhibition cockerels and 200 beautiful pullets ready now to win the blue ribbon for you. 100 well matured cockerels from my heavy laying Dorcas line, \$10, \$15, \$20 and \$25 each. ## Dr. Woods' Notes and Comment.

Everyman should have the privilege of changing his mind, since it is granted to Everywoman, and these are equal suffrage days. A few years ago when our good friend J. H. Drevenstedt was boosting hard for the sale of market eggs by the pound, we opposed it. We did not believe that housekeepers would stand for the inconvenience of eggs by the pound and existing methods of marketing seemed to prohibit any change from the sale of eggs by the dozen and the regulation thirty-dozen cases.

There is a movement on foot to change and nationalize the grading of eggs, still in dozens, however, but with provisions for minimum net weights per thirty-dozen case in most grades. With the wide difference there is between eggs in size and weight, it does not seem right or just that eggs weighing 42 to 44 pounds net the thirty dozen should sell for the same (or about the same) price as eggs that run 55 to 60 pounds per thirty dozen net. Now that eggs are to be graded to a national classification, why not endeavor to get eggs sold by the pound? It would seem a fairer proposition for the consumer and if a sane price were made, based on the production cost, the producer wouldn't kick. First quality new laid eggs ought to be worth 25 cents to 30 cents a pound and that price wouldn't cause half the calamity howling we hear about eggs at 50 to 60 cents a dozen. The best, selected, well-fed, new-laid eggs will run six eggs to the pound. Smaller eggs will run seven and eight eggs to the pound. Why not try for a fixed price the year 'round on best new laid eggs of 25 cents the pound f. o. b. farm.

This story was told us about

"Drev," the able and veteran manager of the Buffalo show. We won't guarantee that the story is true, but it is worth telling. While the judge was looking over the classes a dainty young miss stopped nearby to admire a white hen and said to him: "Oh! What a beautiful White Leghorn! How I wish she could talk; she looks intelligent enough. Mr. Judge, what do you suppose she would say if she could talk?" "Drev." is said to have replied very dryly: "If that hen could talk she would say: 'I am a White Plymouth Rock.'"

Do you keep an account with your poultry? Do you figure upkeep cost as well as labor as part of the expense or do you just count cost of food and let the rest of the expenses slide? We ought to have more accurate data concerning poultry keeping and less fiction. We don't know just what the "whole truth" is, but we are willing to learn and we believe that the truth will not hurt the poultry business. It won't hurt any legitimate business for those engaged in it to get the real facts about cost of production. Poultry keeping is a legitimate business and a good many people are making it pay. How much does it actually pay? Facts not fiction wanted. Of course some folks have sunk money in the business, but that is true of any line of work and the temptation for the inexperienced to get into poultry keeping is very great. The wonder is, not that some fail, but that so many meet with success, in greater or less measure, and retain a live and wholesome interest in spite of many discouraging experiences.

Did it ever occur to you that you can't buy an article for one dollar and sell it for one dollar and ten cents and figure that you have made ten per

cent profit? You can't do it and stay in business. Even if your business is very small, you have to figure something for upkeep expenses and often you will find that upkeep costs a lot more than you thought it did before you looked into the matter. Also, don't forget that in order to make good on a small margin of profit you have to do a very considerable volume of business. When you start out to figure profits, don't fool yourself. Be sure that you take account of all operating expenses.

No, we were not started along this line of thought by the new income tax. That tax won't worry us any for some time to come from present indications. But, if some folks figure their incomes the same way they figure poultry profits our Uncle Sam will collect some large bunches of money he is not entitled to. Just watch them, though, and see how many figure exceedingly small.

Every business has its ups and downs, its good seasons and its bad ones. Early in October we called on a friend who is in the market poultry business. For the past several seasons he has produced some of the finest chickens ever shipped to a fastidious market, and last year he turned a nice profit on a big flock of the best market chickens we ever saw. He has to buy all his eggs for hatching and gets out his chicks in late summer and early fall. This year he got hold of a lot of eggs from inferior and immature breeding stock and he is "up against it." The chickens are not growing well and run very uneven in size. It looks as if it was going to be a hard pull to make this season's business break even. He is naturally quite a bit discouraged, but he has pluck and knows how to grow good chickens when

## WM. COOK & SONS

OF ALL THE ORIGINATORS ORPINGTON FOWLS & DUCKS

Plants in America, England and South Africa Established 1873 : Box A, Scotch Plains, New Jersey

Eventually after the best Orpingtons any variety you will buy from their originators, why not now? And avoid loss and disappointment. We guarantee safe delivery and satisfaction, backed up by a reputation of 40 years' standing, this means something to you.

Now is the time to purchase your exhibition Orpingtons from their recognized headquarters. We always have a large stock on hand of imported birds from our English plant, being from stock mated up by our Mr. P. A. Cook especially for American requirements. We can ship the same day your order is received.

We have thousands of Orpingtons to choose from in S. C. Black, White and Buff, Diamond Jubilee, Spangle and Blue Orpingtons, all of which we originated.

It is natural the best can be procured from their originators.

Send 10c for illustrated catalogue, containing history of the origination of all the Orpingtons and hints on poultry keeping. Eggs from our winners and the finest Orpingtons in the world, \$20 a setting; from fine stock, \$10 a setting. Advice free. Inspection invited. Trains met. Over fourteen thousand first prizes won by us. We are by many times the largest poultry breeders in the world. Ornamental land and water fowl for sale.

he gets a decent foundation material to work with. Some day we hope to see a plant specializing in the production of hatchable eggs to produce sturdy, quick growing market chickens. There is a good opportunity open for the right man.

Pullets began laying the last week in September this year, but they have not yet fully developed. Some are five and some six months old and, as we only have a few, they have had practically unlimited free range. The eggs are fair size and the birds are still growing. We attribute the early laying to the abundance of bright fresh green food due to the unusually frequent heavy fall rains.

We have been much amused lately by the antics of a yearling male bird. He has apparently mated with one of the free range pullets and tries to keep her as much apart from the others as possible. He coaxes her into secluded places about the barn and carries straw, chips, shavings and other litter into a corner to make a nest. His efforts at nest building and the running conversation he carries on while doing it are interesting. The pullet, for the most part, stands around to watch and listen, now and then picking up a bit of litter and casting it over her shoulder, or she settles down beside the cock in the partly made nest. The cock coaxes, pleads and coos to her in the nearest approach to actual speech we ever heard in a fowl and he is becoming an adept in nest building. Already he has built three nests and the pullet has laid in each one. Just to try them out we have swept out the nest after the pullet had laid in it a few times. Now, they are trying to outgeneral us and have picked a very secluded, out-of-the-way spot which we would never have found but for the cock's continuous flow of language. The pair have a very good nest of bedding hay and shavings. As the latest housekeeping attempt is not in our way, we intend to let them do what they please with it, until snow flies at any rate.

Good prices for chickens and fowl in our section during late summer and

fall have thinned out the flocks considerably. Some folks raised few chickens on account of high cost of grain and other causes. In motoring about eastern Massachusetts we find the number of chickens and fowl smaller than in previous years. This should mean rather stiffer prices for eggs and poultry this winter. The man who has a good sized flock of well matured healthy pullets ought to get good returns between now and Christmas time. It's an ill wind that don't blow good to somebody.

We have received a copy of "The Campine Book" by B. A. Gates, published by the Campine Herald, Franklinville, N. Y., at seventy-five cents the copy. It has nine chapters and gives the history of the breed, describes Belgian, English and American Campines including Belgian and English standard requirements, tells the "main points in breeding" and how to select and mate specimens, also housing and feeding of adult fowls and chicks and has a final chapter on exhibition Campines. It has 46 pages, paper cover, and contains eighteen illustrations.

From Charles D. Cleveland, secretary and superintendent of the twenty-fifth Madison Square Garden New York Show, we received an announcement too late for the October issue. The exhibition begins Friday morning, December 26th and closes on New Year's eve. The premium list is now ready for distribution and list of judges and closing date for entries will be found therein. On the opening night of the show an informal buffet supper and reception will be given by the management to exhibitors and friends. It is expected that the number and quality of exhibits will be greater than ever before. Every effort is being made to make the show a well balanced one and special attention is being given to securing a larger entry of pens. Money prizes are to be awarded on pens and the pens will be a part of the so-called "open class," counting double display. There are some important changes in the rules and regulations and these will be found in the premium list. The entry fee on single

birds will not be raised, but the entry fee on pens will be raised from \$5.00 to \$7.50. At this sum it will cost the exhibitor only \$1.50 for each specimen entered in the pen classes. There will be a "Bureau of Information," a room for exclusive use of exhibitors, and a number of changes in the arrangements of the exhibition hall.

### The Feeding Problem.

Many men of many minds,  
Many foods of different kinds.  
Some agree with some, they say,  
Others eat and deuce to pay.  
Experts claim they know the best  
Rations proved by test on test.  
Other experts say, "'tis not so,  
That's not fit food, oh dear, no."  
Beginner's brains are in a whirl,  
Worse than courtin' his first girl,  
"What on earth IS good to eat?"  
These durned experts have me beat."  
Use your "think tank" for a while,  
Learn to read and think and smile.  
Appetite's the surest guide,  
Else, why did Nature so provide?  
Individual's wants are many.  
A well-fed stomach hasn't any  
Complaint to make to man or fowl,  
Feed it by rule and it will howl.  
So, give appetite it's normal way,  
Learn to think and make it pay.

"Eggs is eggs" and "then again they isn't."  
"Waiter, remove this egg!"  
"What shall I do with it, suh?"  
"Have it properly stuck, dry-picked  
and broiled for your supper."

The American Stock Keeper for September 27 says: "The many friends of Mr. John H. Robinson will be pleased to learn that he has become the owner of "Farm-Poultry" of which he has been editor for so many years. With a free hand in every way this old publication is likely to be a lively factor in the poultry paper game."

We certainly wish Editor Robinson all success in his proprietorship of the publication and shall await any changes he may make in it with much interest. We presume there will be a change of

**ROSE COMB RED PULLET SALE**—Hundreds of early hatched birds ready for immediate delivery. Kaufmann & Windheim's famous strain. See advertisement on page 1357.

## Keeler's Wh. Wyandottes

### "THE WORLD'S GREATEST STRAIN"

**For twenty years I have been producing White Wyandottes that win**

—Winning in mine and my customer's hands in the hottest kind of competition. New York, Chicago, St. Louis, Pittsburgh, New Orleans, Indianapolis, Washington, D. C., Kansas City, Dallas, Texas, Los Angeles, Portland World's Fair, etc. My customers win. Stock hatched from my eggs and shipped from my yards has won in every section of this country as well as foreign lands including England, South Africa, New Zealand and Australia. The coming show season will be no exception, so let me sell you the birds that will land you among the winners. Get in line with the strain that produces a larger percent of SHOW BIRDS than any other.

### The World's Greatest Strain

In producing this grand show quality I have not lost sight of the Utility points and my birds are large, mature quick and lay from 200 to 265 eggs a year. I have succeeded in raising more good birds than ever and have for sale something like 150 cocks, 500 hens, 900 cockerels and 1,200 pullets. **Selected Breeders \$25, \$35 and \$50 a pen of 4 females and Male. CHOICE SHOW BIRDS \$50, \$75, \$100 and \$150 a pen.** Get in touch with me now for your November, December and January Show Birds. Stock conditioned, washed and fitted for your show without extra charge. Sixty-Page Art Catalogue of America's Finest White Wyandottes free for the asking. (5 red stamps for postage appreciated.) Please state your wants clearly and address

**Keelersville, Chas. V. Keeler, Prop. and Mgr., R. F. D. No. 11, Winamac, Ind.**

FASHION PLATE II

name indicating broader scope of the paper. After reading the item above quoted we naturally looked for some statement in the October issue of Farm-Poultry, but we did not find any notice of change of ownership. The old sworn statement of ownership by L. B. Moody and the Boynton Estate, dated July 21, 1913, is published inside front cover. Farm-Poultry, however, has been for sale for some time with no takers and The Stock Keeper is very reliable in its news, so we shall probably get the official announcement later on.

Is the hen a bird? Is the cock bird a bird? We think that they are birds and they were called birds by early writers on poultry on both sides of the "herrin' pond" before we were born. The dictionary says that zoologically a bird is: "Any warm-blooded, feathered vertebrate provided with wings." It also says that a bird is: "A chicken; the young of a fowl." So, why are not "bird," "young bird" and "old bird" correct enough if one finds them convenient terms. We like the short word "bird." If we understood Mr. McGrew correctly at Atlantic City, he

doesn't like the word "bird" and he believes it is easily misunderstood in foreign lands where our poultry papers and Standard may be read. He had the sympathy of the majority of the voters and they voted to use the word "specimen" instead of that short ugly word "bird" and we suppose that hereafter cocks, hens, cockerels and pullets will not be considered "birds," (straight or slangy as you wish) but will be standardized as "specimens." We don't care and will probably continue to talk about birds for convenience and from force of

# *E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks*

Are the Greatest Achievement in Modern Poultry Breeding  
THEY ARE THE PRODUCT OF OVER THIRTY YEARS OF SKILL

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

**They Mean Something—They Sweep Away at One Stroke All Doubts and Settle the Question of the World's Leadership.** Furthermore, these 29 first prizes do not include the firsts won at New York by my customers on birds I sold—remember that.

My "Ringlets" have won first prize on exhibition pens at Madison Square Garden 8 times, no competitor has ever won first but 4 times. I have won both first and second prizes on pens 6 times and no competitor but 3 times.

My "Ringlets" have won at New York 11 first prizes on single cockerels and cocks—including first prize and champion cockerel and first cock at the 1910-11 show, first prize cockerel and champion male at the 1913 show—almost as many first prizes on males alone as any other Barred breeder has ever won on anything. I am the only living Barred Rock breeder who has ever won all the regular

**These winnings tell more of the sterling qualities of the Imperial Ringlets than volumes I might write—They tell what the New York Show says.**

The "Ringlet" record for 1913 at the Madison Square Garden, New York Show, is the most wonderful ever made by any Barred Rock breeder since the New York Show was founded. (See ad on back page for this remarkable record.)

Elegant breeding cockerels, trios and pens of this greatest New York prize blood for sale, and mated to produce winners if desired. Richly illustrated 70 page catalogue upon application; it is full of pictures of New York winners from life. Address

## Early Winning Show Birds

I now offer the finest very early hatched exhibition birds that I have ever produced—grand size and shape, fine heads, even clear blue color, and narrow clean-cut vivid barring to the skin. They are matchless and ready to win prizes for you in any competition in the world. The prices are very reasonable.

**My Imperial "Ringlet" Barred Rocks Have Demonstrated to All the World a Distinctive Superiority**

**THEY STAND WITHOUT A RIVAL AS THE LEADING  
1st PRIZE WINNERS AT AMERICA'S IMPERIAL SHOW,  
MADISON SQUARE GARDEN, NEW YORK**

## A Great Light on the Subject of New York Records

The "Ringlets" exhibited by me personally, have won at New York a grand total of 29 first prizes—this is more than double the number ever won by any competitor—no other Barred Rock breeder in the world has ever won more than 13 first prizes in the entire history of the show—mark the difference—these figures are as remarkable as they are conclusive—they inform the public who have hitherto been confused by conflicting claims.

prizes on pullets at a single New York show, viz: 1st, 2d, 3d, 4th, 5th and the only breeder who has ever won 1st prize cockerel and champion male and 1st prize pullet and champion female at one and the same show at Madison Square Garden.

My "Ringlets" have won every Silver Cup and Trophy that has ever been offered at Madison Square Garden to be won three times. In short every trophy on Barred Rocks that has ever been offered and won three times has been finally won by me and is now my absolute property. Among them are the \$100 Challenge Trophy and the \$100 Association Cups.

The best is none too good for my customers and if you want to show you will find that judges appreciate the wondrous beauty and sharp "Ringlet" barring of my Barred Rocks. Prices are reasonable and thousands of birds to select from.

**Amenia, New York**

habit. Anyhow, one member assured us that he saw on the boardwalk some warm-blooded vertebrates with feathers and wings on that "certainly were birds." What do you think about that, Tom? Maybe they were "chickens," too.

\* \* \*

A letter received from J. W. Parks, Altoona, Pa., the bred-to-lay Barred Rock man, says: "It sure is a shame to try to place the blame for the last depression in business on the day-old chick branch of the industry. To my notion what has brought it on more than anything else, has been the booming of the business as a sort of get rich quick game, until people are about fagged out with systems and trying to get anywhere from \$8 to \$100 profit a year per hen, as it has been pictured possible for any one to do." "Joe" has always been a good observer.

## SEPTEMBER REPORT OF NATIONAL EGG-LAYING CONTEST.

THE hens in the National Egg Laying Contest at the Missouri State Poultry Experiment Station have already made a higher average than the hens did in the first contest, and they have 46 days yet in which to lay before the contest closes. The English S. C. White Leghorns from Tom Barron, of Catforth, England, seem certain to win. There has not been a month during the year that this pen has not been among the ten highest pens for that month. The highest individual hen so far is No. 860, a Buff Wyandotte from Vermont. This hen has laid 249 eggs and has 46 days yet to lay. It is not probable that the individual record will be as high as that of Lady Showyou of last year.

There has been a grand total of 94,188 eggs laid to date. The record for September was 6,424 eggs. Pen No. 26, Buff Wyandottes, from Eagleville, Mo., won the silver cup for the highest record for September.

### The Third Annual Contest

The following countries will be represented in the next contest:

Six pens from New Zealand, 3 pens from England, 3 pens from Australia, 1 pen from Germany, 2 pens from Vancouver Island, 1 pen from South Africa, 2 pens from Canada, 66 pens from Missouri and United States.

The following varieties will be represented:

S. C. White Leghorns, S. C. Buff Leghorns, Anconas, Campines, Rhinelanders, S. C. Black Minorcas, R. C. Black Minorcas, S. C. Reds, R. C. Reds, Barred Plymouth Rocks, White Plymouth Rocks, Buff Plymouth Rocks, Silver Wyandottes, White Wyandottes, Buff Wyandottes, Buff Orpingtons, White Orpingtons, Black Orpingtons, Black Langshans.

There can be no question as to the value of egg laying competitions if they are properly and honestly conducted. With egg laying contests and experiment stations trying to solve the question of egg production, and with poultry shows encouraging the production of pure bred poultry of good shape and color, we feel with these forces combined that there are greater things in store in the future for those who keep poultry for profit. Just as time has proven honestly conducted poultry shows to be of great value in improving the shape and color of our fowls, just so will be honestly conducted egg laying contests prove to be of great value in stimulating an interest in

greater egg production. These two forces must go hand in hand. Dr. Pearl of the Maine Experiment Station in his address before the American Poultry Association at Atlantic City, said:

"It is safe to say that never has there been so keen and wide-spread an interest in the improvement of poultry in respect to egg production as exists at the present time. All over the world poultry keepers are wakening to the fact that some hens lay more eggs than others; that it costs no more to hatch, rear and care for those which lay more; and that they want this sort in their flocks.

"There would seem to be little doubt that this awakening is due in considerable degree, at least, to the rapid development during the last ten years of egg laying contests in different parts of the world. We are indebted for the inauguration of such contests on a large scale to the enterprise of the Australians. In recent years we have seen their development in this country. It seems likely that we shall see a much further growth of the laying contest idea in the United States, as well as in European countries. To be sure some of our friends of the poultry press, who apparently see little or no value in laying tests of any sort, have been predicting that the laying competition has about run its course, and that the end is now in sight; that we are, in point of fact, witnessing its last decline before utter extinction. Unprejudiced observation, however, would seem to indicate that these contests make a strong appeal to the poultry public. It is difficult to conceive of any single measure better calculated to arouse general interest in poultry keeping, and to call attention to the results which follow good care and breeding. In other words the educational value of laying contests would seem to be beyond question. That they can be so conducted as to contribute to existing knowledge of the laws of egg production also is beyond doubt."

The following ten pens have made the highest pen records thus far:

Pen No.	Eggs.
2 S. C. White Leghorns, England.....	1,984
19 Silver Wyandottes, Iowa.....	1,692
26 Buff Wyandottes, Missouri.....	1,691
1 Anconas, Missouri.....	1,670
8 S. C. White Leghorns, California.....	1,652
11 Black Minorcas, Iowa.....	1,643
10 R. C. White Leghorns, Missouri.....	1,618
20 White Wyandottes, Arkansas.....	1,609
30 Buff Wyandottes, Vermont.....	1,597
57 Black Langshans, Missouri.....	1,555

No very high records were made for September as the hens are in the midst of the moult and have not fully recovered from the hot weather of July and August.

The following is the monthly record of the ten highest pens:

Pen No.	Eggs.
26 Buff Wyandottes, Missouri.....	157
17 Black Minorcas, New York.....	154
2 S. C. White Leghorns, England.....	154
10 R. C. White Leghorns, Missouri.....	147
22 Buff Wyandottes, Missouri.....	146
8 S. C. White Leghorns, California.....	137
19 Silver Wyandottes, Iowa.....	133
23 Silver Wyandottes, Illinois.....	131
1 Anconas, Missouri.....	129
45 Barred Plymouth Rocks, Iowa.....	124
5 Black Minorcas, Missouri.....	124

The hens that have laid 200 eggs or over are as follows:

No.	Eggs.
860 Buff Wyandotte, Vermont.....	249
62 S. C. White Leghorn, England.....	246
600 Buff Wyandotte, Missouri.....	245
61 S. C. White Leghorn, England.....	239
55 R. C. White Leghorn, Missouri.....	233
77 Ancona, Missouri.....	232
66 S. C. White Leghorn, England.....	231
311 S. C. White Leghorn, England.....	219
72 Ancona, Missouri.....	218
211 New York Method.....	218
735 Black Langshan, Missouri.....	215
64 S. C. White Leghorn, England.....	215

529 Black Minorca, Iowa.....	214
2054 Black Orpington, Canada.....	213
2103 New York Method.....	212
3810 Silver Wyandottes, Iowa.....	210
151 S. C. White Leghorn, California.....	208
976 Barred Plymouth Rock, Illinois.....	208
67 S. C. White Leghorn, England.....	207
927 Silver Wyandotte, Illinois.....	204
505 White Orpington, Illinois.....	204
3807 Silver Wyandotte, Iowa.....	203
939 White Orpington, Kentucky.....	203
69 S. C. White Leghorn, England.....	203
2147 Maine Method.....	202
4 S. C. Buff Leghorn, New York.....	201
667 Buff Orpington, Missouri.....	201

### The Feeding Test.

Pen No. 70 which is being fed the same as the hens in the contest, except that the contest hens have range in yards 30x120 feet, and pen 70 has been confined to a house for one year. This pen has made an average of 139 eggs per hen for ten and a half months. The hens seem to have kept in good health and of the ten pens in the feeding test, this pen is in fifth place. The first five pens rank as follows:

	Eggs.
Ten hens fed the Maine Method.....	1,507
Ten hens fed the New York Method.....	1,439
Ten hens fed the Canadian Method.....	1,431
Ten hens fed by the Norwich Feeder.....	1,431
Ten hens confined to a house.....	1,389

Five other records lower than this.

### RANGE-RAISED LAYING-LEGHORNS

Superior as layers and for exhibition. Yesterlaid S. C. W. Leghorn Pullets lay at 4 1-2 months. Bought by 17 State Experiment Stations. Stock, hatching eggs, and baby chicks supplied in any quantity. Prices very reasonable. YESTERLAID Methods are bringing success to many poultry raisers. Write for details and prices. Yesterlaid Egg Farms Co., Dept. 5, Pacific, Mo.

**"Licene" KILLS**

One application of Licene kills every louse and "nit" on your birds and they will keep free from lice for six months.

Mr. E. B. Thompson, President of the American Poultry Association, says: "Gentlemen: I have tried LICENE with best results; it is a most excellent preventive of lice and a rapid exterminator. LICENE should have a great sale to poultrymen who must appreciate its value after trying. E. B. THOMPSON, America, N. Y." Enough for 200 birds, postpaid 50 cents. Money refunded if not satisfactory. Circulars free. Agents wanted.

**THE LICENE CO.**  
1500 Pontiac Bldg. Chicago, Ill.

# Notes from the Southwest

Conducted by H. F. Stoddard, Riviera, Texas

## BULK IN DIET.

**C**ONSTANT waste and repair of all the bodily tissues belong to the normal condition of healthy animal life. Certain portions of the food taken into the stomach are in some way not fully understood, (the term "metabolism" being used to cover the inadequacy of chemistry, physiology and histology in the matter) absorbed and used for supporting and sustaining the entire system. Other portions seem to have no such office to perform, but pass from the stomach through the alimentary canal and are taken up by the scavengers of the body—the intestines—and discharged as useless matter. And we learn from these facts that supplying mere aliment of the most condensed and nourishing sort, and in quantities just sufficient to support health, is not in the case of most animals the true way to keep all their bodily functions in their best condition.

It is just as necessary that the waste portions of food should be supplied to cattle and hogs as that the directly life sustaining constituents should not be wanting. Hence, upon poultry keepers is often urged the giving something, which, by its mere bulk may help to fill the almost insatiable crop and ever working gizzard of the fowl and while the needed share for general sustenance

is being eliminated shall also furnish the waste matter, which as generally supposed is equally important to the well being of the flock.

Yet, after all, just how important bulky stuff, like chopped hay or rowen or the hulls of oats is to fowls, can anybody tell?

Cattle and horses habitually void quantities of indigestible fiber but there are two domestic animals, the sheep and the fowl, the droppings of which ordinarily reveal nothing of a thrashy appearance to casual observation.

Are thrashy things like oat-hulls a benefit or a drawback? Will the stations answer?

\* \* \*

Test of value. Two correspondents write answering similar questions, which, if they were not of a nature similar to those one hears every day, would need no further answer than could be put upon a postal card or, if the inquirer is one of the finicky "pay no attention to postals" sort append to an ordinary letter. But as these men represent a great class it may be worth while to give our views at some length in regard to the subject of these inquiries. The nature of the two is practically the same.

No. 1 asks, "What do you think of a cross of Plymouth Rocks and Colored Dorkings? I have good fowls of both

breeds, and I have been thinking of trying a cross." No. 2 wants to know, "What is the advantage of thoroughbred fowls? I have a nice flock of mixed breeds that are good layers, are large and fine table birds, and I don't see what I shall gain by exchanging them for pure breeds that are no better and probably not as good for practical purposes as those I already have."

In the case of the last quoted writer, if he is satisfied with those he has, and quite convinced that there are no better, as the tone of his letter would seem to intimate, we advise him to continue his present stock. On the same principle, if his wife is satisfied to wear a calico dress, and he is content to have her, we should advise him not to buy her a silk. The relations are similar. The calico will answer the primal requirements of dress; it has a certain degree of warmth, and is not so costly as the more dressy material. To say that the silk looks better is only to advance a double-edged argument, as good in one case as the other. We seldom notice a man "point with pride" to a flock of mongrel fowls; it is a common occurrence for even a stranger to stop and express admiration for a uniform flock of purebred birds of any variety.

The beauty-loving instinct is worthy of more cultivation, and in many other ways we see this principle ac-

## SILVER CAMPINES GOLDEN

Quality predominates in my yards. New York State Fair, 1913—Winning 1st Silver pullet, 2d Golden pullet, 3d Golden pullet, 1st Silver cockerel, 1st Golden cockerel, 2d Golden cockerel, 2d Silver pen (young). Eggs, young and matured stock for disposal.

H. P. McDonough : : : : : Newark, New York State

## MAPLE FARM WHITE PLYMOUTH ROCKS

**A Sensational Winning** At the great Illinois State Fair was the record of the **Maple Farm White Plymouth Rocks**. Exhibiting one pen, three cocks, three cockerels, two hens and three pullets, we won first pen, first, second and third in both cocks and cockerels, first and second hen and first, second and fourth pullet. Is this not **proof conclusive** that Maple Farm of Midlothian is breeding the White Plymouth Rocks that can win and produce winners? For catalogue and all other information, address

Maple Farm of Midlothian Charles D. Ettinger, Prop. Walter A. Cook, Manager Box 105, Tinley Park, Illinois

knowledge. A well matched nicely marked span of horses will do no more work than a less attractive pair, but we notice that the eyes of the owner sparkle with pride and satisfaction as he points out their special beauties. And he clinches the argument by adding: "If I want to sell them they will bring more money." Just so, and the same is true of the pure-bred fowl over the dunghill cross. They look better, there is no respect in which they are not equally good, and if you should want to sell a few sittings of eggs, or a few birds for breeding to your neighbor, who has taken a fancy to them, and wants some for himself, you will find that they are worth more than "just what they'll dress off." "But," somebody says, "when all the neighbors are supplied they will be worth no more than any others." Well, it is hardly worth while to discuss that problem, since notwithstanding the "booming" of the poultry trade, there seems no probability that any of us who read these lines will live to see that day, so it is quite immaterial to us whether a good fowl will then be worth twenty-five cents or as many dollars. It is the present beauty, the satisfaction in watching their perfection and the charm of success in work that enlists our lively interest, and the increased money value, that make it desirable for all who have to do with fowls to breed them pure and in perfection.

The same answer applies to query No. 1. What for instance, is to be gained by a cross of Plymouth Rocks and Dorkings? Both are excellent fowls, good egg producers, admirable sitters and mothers, though not disagreeably over-persistent in their broodiness, first rate for table use, and of about the same size. There seems to be nothing gained only the peculiar qualities of each to be destroyed. This would seem to us to be rather a pity than a matter for congratulation. The Plymouth Rock is a Standard fowl in this country, in good demand, and a peculiarly desirable breed, having probably no peer for hardiness and tenacious vitality, certain strains to be excepted that through continued abuse in passing from hand to hand have completely "run out." For Dorkings, of which so few are bred in this country, the demand is increasing. Any one having good stock of this breed to spare can usually find a ready market either for fowls or eggs at good prices, and in this breed especially it would seem to be a matter of ordinary economy to utilize and make the most of all the good stock to be had.

But rules have their exceptions in the soft roaster branch of the business, pursued as a specialty, crosses between breeds (first crosses only) have their well acknowledged merits.

\* \* \*

Percentages. If each breeder will keep a small memorandum book in easy reach, and enter in it the particulars of each sitting of eggs, the name of the person from whom they were received—if not from his own stock—the number of chicks brought out, and any special incidents that might affect the result, much benefit will follow.

No one man can learn everything connected with the business from personal experience without years of labor and countless fruitless trips up north-roads. Every lucid percentage account, will throw much needed light

on subjects of great interest to every man who would breed intelligently. The more nearly we can show by figures the average successes of all the operations attendant on poultry breeding the closer we shall come to making it a true science, and the less complaint we shall hear from unsuccessful breeders.

We are inclined to believe that of all the eggs set in America since white men lived here, not over sixty per cent hatched, and not over half the chicks that were hatched lived to grow up. The fact is, hatching and rearing chickens has usually proved a very uncertain business whether with farmers, or professional poulterers, or fanciers, and whether with common breeds or pure-blooded fowls. But losses by fanciers are more noticed and commented on than in the other cases we have mentioned, the stock being more expensive.

But no amount of experimenting and reckoning of percentages will amount to a hill of beans unless care is taken in conditions. There are lots of experiments that prove nothing whatever excepting the stupidity of the experimenter. To be sure the ordinary person cannot be expected to practice a high degree of strict scientific accuracy; but at the State Stations there is no excuse for bungling.

Huddling. It is very common for a beginner in the art of raising chickens to overcrowd them. They have a natural tendency to huddle very closely. If you put a batch of different sizes and ages together, the smallest will become so packed and crowded by the older and stronger ones that they will die, and even when they are nearly of the same age and strength they will become wedged down into the angles and corners, if you have too many together. Even if not killed outright, they become so enfeebled by the effects of bad air, that they grow puny and weakly if there are very many together.

To keep them from packing too closely, cross partitions should be arranged in various directions, containing a few openings here and there, so that the various apartments may connect with each other. It must be remembered that the crowding evil is cumulative. What we mean is, that if one chick crowds to the amount of an ounce, and another one crowds him to the amount of an ounce and so on, it finally creates a pressure against the chicken at the end of the line sufficient to almost press the breath of life out of him.

Whoever has been in a crowd, on the occasion of a fire or panic of any kind, will know what we mean. Thousands of chickens have been sacrificed in the attempt to keep too many in the same box or "artificial mother." The box or apartment where these artificially reared chickens congregate nights, should be cleaned, purified by the rays of the sun, and its floor covered with dry earth every day. Besides this, openings should be placed in the top to give exit to the impure air.

When chicks are reared by hens, the crowding is liable to occur after weaning, when several broods are united, and from a crowd of fifty or more under one shelter and they have not yet learned to perch. In case of strong winds striking one side of the bunch or if the nights grow cold towards morning there may be some crushed individuals, or if not even not actually

killed, there may be quite a number that become overheated and unfit to resist the cold when they come out in the morning. To rear chicks to weaning age is one thing, and to manage them after that till the cockerels are removed and the pullets taken to the place where as pullet hens they are to stay, is another thing, and one which demands much study and ingenuity if large numbers are to be reared.

\* \* \*

The scratching question. At sundry times and divers places we have written much in favor of not only encouraging but compelling scratching.

Nature has designed that fowls should scratch for a living. We all agree that physical exercise is indispensable to men, horses, dogs and other animals. But birds are by nature more active in habit than even horses or dogs. It will not do to thwart them. The exertion of scratching soil, straw, leaves or rubbish, must be pretty severe work, and capable of calling into action most of the larger

**Is the Average Yearly Yield  
Per Hen, So Says the  
Government Statistics**

The government knows and so should you know. Do you know that in many states and in all probabilities, in your own state, there are poultry experiment stations conducted by the state governments? The nature of their work is to increase egg production both by breeding and scientific feeding. It has been ascertained that both are essential. Breeding is 75 per cent and feeding 25 per cent. No progress can be made if a haphazard method of breeding is adopted.

**Absolutely No Progress Can be Made Unless the  
Individual Records of the Breeding Stock  
Are Known**

The method of breeding from the best layers year after year is the only method that will bear fruit. This means the continual use of the trapnest. The fact that there are so many failures in the poultry business, even though market eggs have doubled in price within the last ten years, is due to the reliable laying stock. There is no doubt, but what there are good layers in every flock, probably 30 per cent are profitable, 70 are not profitable. These are the proportions your purchase will represent if you are buying from the breeder who does not trapnest.

Would you not rather pay a little more, or not buy as many, knowing that your purchase is stock from **profitable layers only**. This deserves your serious consideration. You cannot succeed with stock others are making failures with and upon careful investigation you will find that 99 per cent of the breeders of this country are not breeding for eggs. They are breeding for show purposes and are offering the inferior specimens to you as egg producers.

See ad on opposite page, also photographs of my White Rock and Barred Rock layers. My catalogue is **free**, write for it.

muscles. Then, of course, artificial deprivation of such efficient exercise must ordinarily tell upon health and thrift.

Who has seen a dozen hens at large in garden time, with freshly raked flower beds near by, and not learned what the predominating instinct of the animal is? Philosophers have tried to define man as a laughing animal or a cooking animal—there need be no doubt whatever that a hen is a scratching animal.

We believe that in most climates a scratching place should be provided winter and summer for fowls. It not only keeps them in good condition, but the fun of seeing them work at it is worth more than all it costs, yet down here, though by the use of plow, and harrow or cultivator we see to it that there is an abundance of loose soil on the range so that there is constant temptation to wallow, we do not believe that our birds, being most Leghorns and consequently good travelers, need any special scratching exercises in procuring food. It is too hot here for that. They are forced by the sun to spend a large part of their time cuddled in the shade during most of the year, and when they come out they need all the time they have for exercise to run about and pick green stuff.

\* \* \*

Anent outcrossing. Whenever a defender of close breeding is cornered, he almost always resorts to the old yarn about Bates and his cattle and a few other like cases. I have shown in previous issues that wherever close breeding has won out is the very place to look for signal benefits of crosses. The stamina and prepotency desired in the incipient new breed comes from fortunate outcrossing.

Take the Suffolk breed of swine for instance. H. C. Millender, a good authority says:

"This breed is generally known in England as the Small Black breed. The precise nature of the crosses by which this breed was produced is unknown, but it appears to have been based chiefly on the Improved Essex, with a dash of the Berkshire blood added. The Essex resulted from the introduction of Neapolitan blood to the native breed of the country, until, in the words of Lord Western, the breeder, 'The breed could not be told from the pure bred Neapolitan.' Inasmuch as the Suffolk was in large part based on the Essex, it also took many of the characteristics of the old Neapolitan; but the introduction of Berkshire and other outside blood gave the Suffolk more hardness than the Essex had."

The same breeder says concerning Victoria swine:

"This breed originated in Lake County, Indiana. Mr. George F. Davis claims the honor of being the founder and it is stated that the breed arose from crossing the Poland China, Chester White, Berkshire and a breed known as the White Suffolk. English authorities, however, state that there is no such breed but that the hog known as the White Suffolk was in reality the small Yorkshire."

\* \* \*

The fireless brooder proposition. Come right down to it, when you try to keep animals of any kind, human beings included, warm by means of their own heat, by crowding them together in any sort of box or apartment, you pay for the heat in poisoned air. Before the era of the open-front

idea, much was said about building warm poultry houses. I erred in this direction with a large crowd of fellow sinners, but have experienced a change of heart. No building is warm of itself. If it is to be warm, it must be heated somehow. There are four methods of warming poultry houses—by animal heat, by the heat of a fire, by solar heat, and by the heat from the interior of the earth.

The method of warming by animal heat is one that serves to raise the temperature readily enough, but as just remarked, at the penalty of bad air. The quantity of heat generated by the bodies of animals is very great. Many a lost traveler on the western prairie, or in the Arctic regions, has perished by freezing, when if he had understood that by getting under his sleigh and covering himself entirely with his overcoat or robe holding down the edges so tightly as to entirely prevent the ingress of air, the heat from his body and his lungs would have kept him alive. In this case he secures heat at the expense of breathing rank poison. He must nearly stifle himself, and only as a last resort push away the covering to admit a few breaths of fresh air, at very rare intervals.

Now much is said about warm fowl houses, but viewing the matter closely, we shall find that animal heat is retained by denying the admission of fresh air. We have seen an elegant barn with one story devoted to a stable of Jersey cows with a height between the floors barely sufficient to allow the keeper to stand upright, and on entering it of a cold winter's morning the visitors would at once look around to see where the fire was kept, the temperature resembling that of summer, owing to the radiation of heat from the cows' bodies. To turn from the barn to dwelling houses, who does not remember many a social assembly where, as the evening progressed, and the apartment became more crowded, it was necessary to stop the fires on account of the oppressive heat?

Let it be repeated that there is no such thing as a warm building, per se. Heat must come from the employment of one of the four methods mentioned above; from the interior of the earth, from animals' bodies, from the sun, or from artificial heat. Whichever of these modes is resorted to, they are all more or less, antagonistic to ventilation, and the method by animal heat is particularly so because a pretty close crowding of the apartment with animals goes with it. What we mean is that a goodly number of animals must be kept in a comparatively small room. In keeping the heat in, we keep the cold air out. But the cold air is the fresh air, and only fresh pure air is suitable for the lungs, whether of man or of brutes. In supplying or conserving animal heat we must make up our minds to lose a part of it by ventilation or poison the inmates of the apartment more or less.

Newly hatched chicks by a salutary provision of nature, appear to withstand unusually well the carbon dioxide their breaths produce, when they are closely packed. Some of the foolish objections to shipping baby chicks are evidently due to ignorance of this fact. Do the younglings breathe very slowly and infrequently when huddled? Anyhow it is a matter of common observation that they seem almost incapable of being smothered.

## Why I Breed for Eggs

**E**GGs are the logical source of income for those who wish to succeed in the poultry business. I breed for eggs because there is a demand for them that has never been supplied, and at prices that yield a good profit. The more eggs I produce per hen means that much additional profit. By trap-nesting and breeding from my best layers, and by the judicious introduction of new blood, my fowls are capable of producing good profits.

I breed for eggs because I can see more **real money** for my products. Ninety million people demand eggs. They constitute the market—the best market in the world. No one ever made a failure because he could not sell eggs, but thousands have made failures because their hens would not produce enough eggs to make success possible. The average hen is not a success. Your stock will have to be above the average if you are to be successful. I have made a success because I breed for eggs from stock that is very productive and has been so for many years.

You are assured of a market. Your success, therefore, depends upon your judgment in selecting the right kind of layers. Do you expect to find these layers on a farm where eggs are of secondary importance, or on a farm where eggs are given every consideration every day of the year?

### MY PRICES:

Pullets .....	\$4.00 and \$5.00
Hens .....	\$4.00, \$7.00, \$12.00
Cockerels .....	\$6.00 and \$10.00
Cocks .....	\$10.00 and \$15.00

15 percent discount on trios. 20 percent discount on pens.  
25 percent discount on ten or more.

Write for my catalog and revised price list.

# Pacific Coast Department

Conducted by H. H. Collier, Tacoma, Washington.

IT shall be our intention each month to give a picture of some prominent Pacific Coast breeder. We want to put the readers of the American Poultry Journal in touch with the men that we will have to mention from time to time. We begin this series with W. M. Coats, of Vancouver, British Columbia, Canada. Our reason for selecting "Billie" Coats is the fact that he has recently been licensed as an American Poultry Association judge. He came before the committee on licenses (of which I was a member) well recommended by five judges. These judges came from all parts of America and they told not only of the qualifications of Mr. Coats as a judge, but they gave the committee an idea of what kind of man Mr. Coats was. Temperament in judges is one thing to be looked into. A man might be a good delineator of fowls, yet might be unfit to judge a poultry show. A man to be a good judge must be a good man. A man to be a good judge must have backbone when needed and diplomacy to equal that of a Blaine. When a man says in a poultry show that a certain bird in a "hot" class is the best specimen shown, he must be able to tell the exhibitors why that bird is best, and he must be able to prove he is right by the Standard of Perfection. The Standard may or may not be faulty, but there must not be any faults with the judge.

We have always said that the score card may not get the best bird in a show room, but it will always show up the best judge. There are times in the show room when a score card is hard to write. A bird comes before you so good that you hardly know how to put its defects down on the card, but if this same bird was compared with another fowl in the class, then the defects can be seen. Comparison together with the score card is the best system I ever used in my nineteen years' experience with the duster. The score card will write down the defects and comparison will show you how good the class of birds that you are handling. I have made it a habit in recent years to have from five to ten coops in some well-lighted corner of the show room. It is hard to get a room where one can have the same light on all birds, but if you have ten coops, you can bring all of the birds up to the same light, and there is no reason why you should not be able to pick the winner whether you use score card or comparison. Have these five or ten coops. If you are scoring the show, take the best bird as he comes and put him into No. 1 coop. Now make every bird that reaches you come up to No. 1 the minute that No.

1 is beaten by some fowl that comes up, put him or her into No. 2 coop and let the other bird take first place. Do this with the birds as they reach you. If a poor bird shows up, score it and send it back to its coop. If you have done your work well you have the five winners in the coops. Now score the five birds, beginning at No. 5 and ending at No. 1. If you do good work, No. 1 will be the high bird and No. 5 in low place. By handling the show this way, you are certain not to let a disqualified bird get by you, and what is

he had a host of friends among the best breeders. While Mr. Coats is a Canadian, yet he was born in New York state. Like many men of the coast, he grew up somewhere else and came west to get room to broaden out in. Mr. Coats has judged poultry shows all over the Pacific Coast, both in Canada and the United States. He is a man of family and a breeder that has produced some of the best birds that have been exhibited on the Pacific Coast. His hobby at present is Anconas and he has a bunch of good birds.

\* \* \*

Eggs on Puget Sound reached the lowest level this spring that they have reached since the panic times. For one day Tacoma market offered as low as 18 cents per dozen. Low water mark for the egg market. This low price came just at a time when hatching eggs were being demanded and as a result many got frightened and there was less eggs sold for hatching than in former years. Some predicted that the low market showed that poultry was overdone in this country and there was much unfavorable comment in the poultry press by the poultry breeders themselves. This low price did not last over a day and the egg market rallied and those who know say that this summer showed a larger average price for eggs than 1912. The scare that the poultryman got with the low price in the spring prevented many from making their usual hatches, and as a result eggs are higher at this time (October 7) than they have been at the same time of the year for many seasons. Eggs will bring a larger price this winter than they have for years. The cause of the drop in eggs was purely speculative. The commission men threw many eggs on the market just at the wrong time and prices went a tumbling, but this winter the commission men will be paid well for their work in the spring as they will not get a chance to handle as many eggs this winter as usual.

Eggs will average in the Puget Sound market about thirty cents per dozen, and the whole cost, even to the inland towns of the northwest, will average twenty-five cents. Portland, San Francisco, Tacoma, Seattle, Spokane, Victoria and Vancouver are all good poultry markets. Seattle is about the best market in Washington for poultry and eggs, while Vancouver in British Columbia, eggs and poultry bring a better price than they do in Seattle. The tariff on eggs will not affect the Northwest in the least. We can get better prices for our eggs in British Columbia than we can at home, so there is no

W. M. COATS  
Pacific Coast Poultry Judge

better, you handle every bird in the class. The man who pays an entry fee has as much right to have his bird handled as the man who wins the blue ribbon. I have found that by handling each bird I was in a position to talk intelligently with each exhibitor as he asked me about his fowl.

But to get back to the subject matter. I have known William M. Coats for many years. I was one of the judges at the first show he worked in where he used the score card. He was and is a man that will ask questions. If he is in doubt he is always willing to learn. I want to say that in the shows where I have seen him work and in the shows where I have followed him, I found that

# Fifty Dollars in Gold

paid to users of the

## Ajax Improved Oxygen Vitalizer

by the Reliable Poultry Specialty Co.

Editor American Poultry Journal.

In the spring of 1913, and at the time that we were advertising our Ajax Improved Oxygen Vitalizer in the columns of the American Poultry Journal, we instituted a contest, with prizes aggregating fifty dollars in gold, for the best reports of those who were using the Vitalizer during the season.

We did this for two reasons. First, we thought that it would have a tendency to increase the sales of the Vitalizer; and, second, we wanted the public to know, at the proper time, the results that the Vitalizer had produced in the hands of those who had used it.

If you shall think that the poultry world will not be interested in this report as a matter of news, then we will gladly pay for the space, because we want the poultry world to know what this device is actually doing to put the poultry industry on a better paying basis.

Among the hundreds of reports received, the committee in charge of the contest at last, and after a careful examination of all, narrowed the contest down to five names.

The successful contestants are those whose names appear below, and the report of each is set forth in brief form. So close were the results obtained by the leaders that we finally placed them all on an equal footing, and awarded the sum of ten dollars to each.

Dr. J. Oren Bearstler, president of the Pottsville, Pa., Poultry Association:

"I secured three 98 per cent hatches of the finest, biggest chicks I have ever hatched, and consider the Oxygen Vitalizer the most valuable device presented to the poultry world in twenty years. Not a single case of white diarrhoea during the season."

(Signed) Dr. J. Oren Bearstler.

The "Two Ruths" Poultry Farm, South Jacksonville, Fla.:

"Four hundred and fifty-six big, lusty chicks, from 460 eggs, is my record for the season of 1913, with the Oxygen Vitalizer. Not a case of bowel trouble. Let anyone write me who chooses, it will be a pleasure to speak in the highest praise of your device."

Edwin O. Gunn, Gen'l Mgr.

From W. S. Crowl, manager Rogers Lumber Co., McAlester, Okla.:

"For 1913, with the Ajax Oxygen Vitalizer, we hatched 1,377 chicks, and the finest we ever had in ten years' experience. We used the same machines in 1912, set more eggs, and hatched 50 per cent less chicks, and half of these died with white diarrhoea; but not a single death from this cause in 1913. We figure the Vitalizer actually saved us \$100 in one season."

(Signed) W. S. Crowl & Son.

From E. F. Cameron, Lindenville, Ala.:

"Three hatches with the Vitalizer attached to hundred twenty egg machine. Twice I got a chick from every egg but one, and the last time I lost five, owing, I think, to too high temperature the 16th day. You may have my sworn statement if you wish."

(Signed) E. F. Cameron.

Miss Laura G. Wilson, Martinsburg:

"Three hundred twenty-nine of the finest White Wyandottes from 360 eggs. The last hatch were untested, but every egg that pipped produced its chick."

(Signed) Laura G. Wilson.

(State omitted, because contestant mentions breed of fowls that she raises.)

As soon as time will permit a full account of the contest will be printed and mailed to all contestants.

Yours very truly,

Reliable Poultry Spec. Co., Alexander, N.Y.

danger from that score. Seattle and Tacoma has Alaska's market on the north to ship any eggs we may have left over after supplying the home consumption, and at that we do not nearly begin to supply our home demand. Eggs are shipped into every Washington town and city during the winter and in summer we seldom sell for less than twenty cents per dozen, and in winter they often go up to sixty cents per dozen and have been known to reach even a higher price. From the utility standpoint the Northwest has nothing to fear, as one can sell every egg his hens lay, as well as every fowl that he can grow, and what is best, get a good price for both eggs and poultry.

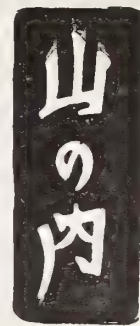

From a fancier's standpoint the Northwest is very much alive. We will hold more poultry shows this season than ever before. There will be a show in nearly every town of any size in the states of Washington and Oregon, while California will have more shows this season than ever before.

The eyes of the Northwest are now on San Francisco and her big fair. The poultrymen all expect to be in San Francisco when the big Panama-Pacific exposition poultry show is pulled off. We expect for the first time in history to meet the poultrymen from the east. We have sent our good money back to the east and middle west and paid any price that the breeders may ask for their fowls, and we believe that in many cases we have improved over what we bought. What is now wanted by the Pacific Coast poultrymen is for the east and middle west to bring out their best birds in 1915 and give us a chance to compare our birds with them. We have had breeders send their fowls to the big eastern and middle west shows and while we did not always get the blue ribbon, yet we taught those fellows back there that we were at least rivals when it came to producing good fowls.

From what we can understand from the management of the live stock department of the Panama-Pacific exposition, the poultry department will have the best prizes ever given a poultry show anywhere in the world. We are promised plenty of good coops and a good building in which to show our fowls. San Francisco has an ideal climate and we all know that it will not hurt our birds to send them to the Golden Gate city. If we can be assured that the east and middle west will bring their best birds out to compete with us, then our cup of joy will be full to overflowing.

We want to impress one fact on the eastern and middle west breeders. If you bring out birds that will take the blue ribbons, and you make a price on such birds, you will never have to pay express on them home, for every bird will remain here on the Pacific Coast, even if we have to mortgage our home birds to get the price.

You will find that you will get a royal welcome when you come out. We members of the American Poultry Association on the coast are counting on the middle west and east to give us the meeting in 1915 of the American Poultry Association at San Francisco, and we here in the Northwest (Washington, Idaho, Montana and Oregon and British Columbia) want all of the members when buying their tickets to San Francisco to be sure that they read via the northern route. In other words,

A Record of Winnings  
Never Before Equalled

## YAMA FARMS

S. C. BLACK MINORCAS  
BARRED PLYMOUTH ROCKS

Make Clean Sweep at  
Syracuse, New York,  
State Fair

AT this great show, where the country's most prominent breeders competed with the pick of the finest birds in all breeds, Yama Farms scored an unparalleled victory.

Yama Farms Barred Rocks won: 1-2-3-4-5 cock; 1-2-3 hen; 1-2-3-4-5 cockerel; 1-2-3 pullet; 1 and 2 pen old; 1 and 2 pen young.

These awards carried with them additional specials.

S. C. Black Minorcas won: 1-2-3 cockerel; 1-2 pullet; 1-2-3 cock; 1-2 hen; 1-2 pen young; 3 pen old.

And in this class we likewise took all specials.

Every winner was bred and raised on Yama Farms. Their showing at Syracuse but repeats and adds to the remarkable string of victories the birds from Yama Farms have won for years past at the greatest shows, against the keenest competition.

If it is worth your while to breed chickens at all--why not breed the best? We specialize in but these two breeds. We have birds for sale—let us fit you out for breeding for the coming shows with winners and line bred birds that will enable you to more than hold your own against the strongest competition in the world. You can do it with Yama Farms' birds—and you can secure these superior birds at prices no greater than you would be compelled to pay for stock of uncertain quality.

We invite correspondence and will gladly furnish you with full information and prices. Our catalogue will prove interesting. Shall we send it?

## YAMA FARMS

Napanoch, Ulster Co., New York

Japanese Entrance to Yama Farms

we want you to see our cities, mountains, valleys and great inland waterways before you return home, and would advise you to take a ride on the Pacific ocean from the Puget Sound basin to San Francisco. You can sail from any point: Portland, on the Columbia river, Seattle, Tacoma, Vancouver or Victoria, all on Puget Sound.

\* \* \*

A two years' membership on the committee that looks over the applications for judge's licenses in the American Poultry Association has convinced me that some other method should be used. Under the present system an applicant for an American Poultry Association license must be endorsed by five judges that have seen him work in a show room. He must be endorsed by others as to his honesty and good character. The better endorse-

ment he gets from his home people has always helped such applicants with the committee. The trouble with the present system is that some men have a chance to work with five judges who can vouch for them, while on the other hand men who could do equally good work in the show room live in communities where there is only one judge used and for that reason he can not get a chance to work with other judges. Then, again, owing to the fact that the American Poultry Association has licensed many judges, it is now easy for poultry organizations to get judges who have already obtained a license, as a result the bright young fellows that might get a chance to judge are not used as they were in years gone by. It is all right to get the endorsement of the licensed judges but, on the other hand, how can a young man get those

endorsements unless he has a chance to work with licensed judges?

Another point that I want to make against the present system is the fact that the judges who do give endorsement are not always frank with those who ask them to endorse their applications. Some judges will tell a young man that they will endorse him, but when the papers are sent to such judges to fill out their answers are so vague that it is nearly impossible for the committee to tell whether such judges want to endorse their applicants or not.

If the judge when asked to endorse an applicant would be frank and tell such men that they know so little of their work that they could not honestly give them an endorsement, we would see few applicants turned down by the committee in their report to the executive committee of the American Poultry Association. When a judge signs his name to the endorsement papers and then fails to answer the question there propounded, then the committee can not do anything but turn the applicant down. For instance, the judge is asked the question: "Did you ever observe the work of the applicant in the show room?" And the judge answers no; the committee then throws out that answer. When the judge is asked many similar questions and his answers are either vague or not explicit, the committee has to return an adverse report. If those judges would be frank with the applicants and tell them for the lack of knowledge as to their work they could not endorse them, then the applicant for a license would be saved the embarrassment of having himself advertised as an applicant for a license and was turned down.

Someone should offer an amendment to the constitution making a man appear before the committee at the annual meeting. This committee should be composed of three men that are thoroughly acquainted with the American Standard of Perfection, and they should have had experience in the show room as judges. The applicant should come with as good endorsements as it is possible for him to get. He should go through the same form as at present but it should be left to the committee, after a thorough examination, to either

## The 3 GREAT EGG MAKERS THAT PAY FOR THEMSELVES IN A YEAR.

**CROWN BONE CUTTER \$5.50**  
Has hardened steel knives, Price, like picture, \$8.50; for bolting to table, \$6.50. For larger sizes see our Book

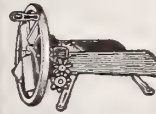

Unless fed plenty of FRESHLY CUT GREEN BONE, with the meat and gristle still sticking to the bones as you get them sweet from the butcher, and CUT CLOVER, hens can't lay as many eggs as they should. The bone must be freshly cut or it's tainted, and spoils the eggs, and often poisons hens. Clover must be cut into short lengths, or most of it is wasted, and what is eaten is fibry and often clogs the crop. If you don't give hens lots of ground SHELL and GRIT they can't digest properly nor get out of food what they must have to make eggs.

Don't depend on buying cut bone because you can't get it fresh, and dry bone and meat scrap are poor substitutes. The only satisfactory and profitable way is to own these three splendid machines. They're not expensive, are easy running, not complicated, and built to last a life-time.

**GEM CLOVER \$9 CUTTER**

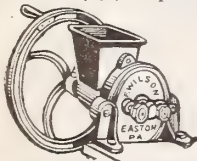

Cuts green or dry clover even and easy. Screw feed & adjustable cutter bar. Blades always square to bar. Price, like picture \$9; high legs, \$10.

## WILSON BROS. BONE CUTTERS, CLOVER CUTTERS & GRINDING MILLS

**GRINDING MILL \$5**

Best hand mill for grinding easily, quickly, Dry Bones, Shells, Grit, Charcoal, Corn, Wheat, etc. Price with Stand, \$7; like picture \$5. Large sizes, hand and power.

**WRITE FOR FREE BOOK**

**DON'T KEEP HENS UNLESS YOU CAN OWN THESE MACHINES**

They won't pay you well enough for eggs or table. Keep a record of results and you'll soon prove that these machines will pay for themselves in a year.

Handled by nearly all dealers and hardware stores, or shipped direct. Write for our prices on all sizes—hand and power.

Do your neighbor's cutting and make money. We also make the CORNING FEED MIXER, the best mash and grain mixer in the world. Every Wilson machine is absolutely guaranteed. Write to-day for FREE BOOK & Price List. **WILSON BROS. DEPT. F 25 EASTON, PA.**

## R. C. RHODE ISLAND RED COCKEREL SALE

A breeder from \$2.00 up. A show bird from \$10.00 up. All rich in the Bill Taft blood. Kaufmann & Windheim's famous strain. See advertisement on page 1357.

## DUNE-ALPIN

# S. C. White Leghorns

Have won more first and special prizes in the past four years at Grand Central Palace, New York, Boston, Hagerstown, Philadelphia, etc., than all competitors combined. They have won in almost every large show held in this country and Canada for our customers. They can win for you. Our birds are better than ever this year. Proof:—Twelve firsts and ten seconds on twenty-two entries at live Long Island shows. At the

## Great Hagerstown Fair, 1913

The greatest poultry show of the year, (7,000 entries), and in the strongest class of Leghorns out this year, we won cock 1-2-3, hen 1-2-3, cockerel 1-2-3, pullet 1-2-3, old pen 1, young pen 2-3, special for best bird in the show, special for best cock, special for best bird in the Mediterranean class, etc. Write for catalogue and prices.

Dune-Alpin Poultry Farm, Geo. J. Kerr, Manager, Box 561-J, East Hampton, New York.

give or not give the applicant a license. Of course their report should be subject to the approval of the executive board.

A committee has been appointed to draft a new constitution for the American Poultry Association. Out of that committee should come a better method for granting judges' licenses, and it is up to the members of the American Poultry Association to offer suggestions to that committee on every phase of the constitution. The judges of poultry should write the committee their ideas on judges' license.

For one, I am in favor of granting licenses. I believe that it is up to the American Poultry Association not only to make a standard for fowls, but they should also create a standard for judges. Judges should be protected and so should exhibitors of poultry. Incompetent judges have done a lot of harm to the industry and it is up to the American Poultry Association to weed out those that are not "up to now" and substitute men that will give good satisfaction. A man that goes out and judges poultry and refuses to follow the Standard of Perfection should have his license revoked as much as a breeder should be punished who fakes his fowls in the show room.

A license to judge poultry given by the American Poultry Association should mean something to the man that gets it, and it should mean a whole lot to the association that grants the license.

The fair poultry shows have been by far the best this season that the Pacific Coast has ever seen. The Oregon and Washington state fairs this fall have been crowded to overflowing with good birds. The writer has been superintendent of the Washington state fair for fifteen years and he has judged the Oregon fair two years and exhibited there many seasons. This fall the dates of the two big northwest fairs conflicted and as a result I did not see the Oregon exhibit this season, but I have just received a card from Judge Coats who placed the awards that Oregon cooped sixteen hundred birds and that the quality was fine. The Washington state fair was a splendid show this fall. In fact the exhibit was by far the best that I ever saw on the grounds. Judge E. C. Branch, of Lee Summit, Missouri, placed the awards, and he said it was a great improvement over last fall and he was surprised at some of the quality that he handled. It has been the policy of the state fair management to always get as good a judge as the middle west or east could furnish. There is not a well known judge back east or in the middle west that has not been out here at some time. For the last two years E. C. Branch placed the awards at the Washington state fair, and he succeeded James A. Tucker, Michigan's noted judge. We have had Theo. Hewes and J. C. Clipp from Indiana and many other notables to come and pass on the Washington state fair birds, and we hope in time to give many of the eastern and middle west judges a chance to come out and compare notes with us.

James A. Tucker will judge the Tacoma show this season. He is also booked at Spokane and North Yakima. J. H. Drevenstedt will officiate at the Walla Walla show in January and Charles G. Hinds of Oakland, Cal., will judge at Aberdeen, Wash. William M. Coats, the British Columbia judge, will

have quite a few shows in Washington and Oregon, while I will judge several myself, beginning the first week in December at Mount Vernon, Wash. There are more shows this season than ever before and the fancy is looking up despite of the fact that things have been a little dull in other lines. When you middle west people quit building it affects the lumber trade and that trade is one of the big things of the Puget Sound country.

The crops of all kinds have been good in the Northwest this fall. Wheat, and for that matter all kinds of grain crops, has been good, and the fruit crop not so large as last year but the prices are fine and the fruit people are happy.

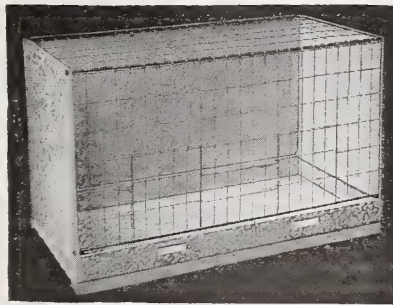

Washington is beginning to go into live stock of all kinds. The forest of Washington has retarded farming. Our trees leave such large stumps that clearing land has been a problem. The state has taken a hold of the matter of clearing lands. A law was recently passed in the legislature that will make improvement districts in each county. These districts will issue bonds and the money will be used to clear the logged off lands. The state owns many acres of these lands and when cleared they will be sold to settlers on long time payments. The western part of Washington is one of the most fertile countries imaginable. From a standpoint

of dairying western Washington can not be beat for the reason that the winter is so mild that grass will grow the year around. As soon as the big timber is cut the land will grow up with grass, and white clover seems to be native to the soil. Good pasture can be had at nearly all seasons. There is a dry spell in the month of August, but as soon as the rains of the fall comes on grass will spring up and good pasture can be had well into the winter.

I look for a great live stock revival and from the interest shown in the live stock exhibits at the fall fairs a lot of people will take up live stock another year. Over in the Yakima and Wenatchee valleys, as well as the Kitis valley, fruit has been all the go, but the low price of last fall taught the farmer a lesson and more attention will now be paid to diversified farming and in time much of the beef and pork used in Washington will be grown at home. Beef is now so high that it is cheaper to eat chicken than beef, and there is no reason why the price of poultry will not rise, but at that any old hen will sell for twenty cents per pound wholesale and one can not get a chicken of any size dressed for less than a big silver dollar.

Fresh ranch eggs are quoted today, October 8, at 45 cents per dozen.

**Better read that back inside cover right now. Its a sure base hit**

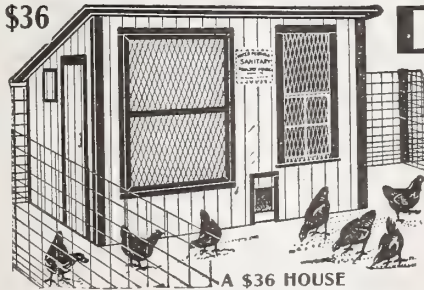

## GET READY

Buy coops now for county and state fairs. We make training and exhibition coops, brood, setting and colony coops, fireless brooders, portable hen houses, trapnests, portable fences and runways, collapsible show coops to coop poultry shows, etc. We will be at the state fair, Springfield, Illinois, under a large tent south of the Dome Bldg., next to the covered walk on lot 90 don't fail to see us there. Write now for catalogue, it is free. Address

Niemann Bros. Mfg. Co., Box 677, Mt. Olive, Ill.

## Don't Build

YOU can buy better, cheaper, more complete ready (factory) made hen-houses, roosting and nesting fixtures, coops, etc., from Potter & Co., because they buy lumber in carloads, cut and fit all parts perfectly by automatic machinery and deliver the house, coop or fixture you need in convenient sections all ready to set up.

### Potter Poultry Houses and Fixtures

Portable, Sanitary, Inexpensive

Have been on the market for over ten years and are used and recommended by thousands of poultry keepers who want the best and buy the best in poultry houses and equipment. You start right when you buy a Potter portable with complete outfit of roosts, drop board and nests. A clean sanitary house means healthy hens and lots of it is only one of the twenty styles of houses

A \$6.60 HENNERY OUTFIT

No. 19, style "A" 6-ft. 3-perch complete Potter henery outfit for 36 hens. This same style made in 12 sizes.

# Questions and Answers

Conducted by  
Prince T. Woods, M. D.

## Inbreeding.

Q. (1) I have noted comment in recent issue of A. P. J. concerning inbreeding when mating birds for high egg production—namely, that it was detrimental to best results. Do you consider Felch's plan, by chart, for line-breeding in this same class? Can not good laying characteristics be perpetuated by this method of mating just as are exhibition points?

A. (1) You will find a modern interpretation of the Felch line-breeding system in the chart on page 123 of the A. P. J. 1913 Year Book. We do not know how many breeders have consistently followed this plan of line-breeding through ten generations, if any. The actual data of pedigree and proof is still wanting. We would be glad to get facts from carefully kept books on pedigree line-breeding covering ten years.

This is a subject where every man has to read what is written and draw from his own experience and his observation of the work of others. Careful, consistent, long continued pedigree breeding, as it is conducted with other live stock, is practically unknown as applied to poultry. You have to get together such data as is obtainable and think for yourself.

The American people are a decidedly crossbred race as compared with old world peoples. We, in this country, like to believe that we are a very superior race in physical perfection and

along most lines of endeavor. Close inbreeding or incestuous inbreeding was made taboo early in the history of the human race. It was found necessary to make laws forbidding mating of certain relationships—and there must have been a reason. Statistics prove that where there have been frequent intermarriages of first cousins the results have been disastrous. There has been a loss of mentality, loss of constitutional vigor, less power to resist disease and an intensified tendency to contract disease. Sterility has also resulted. Even the most ardent advocates of inbreeding, who claim that there is no actual harm in inbreeding per se, admit that inbreeding results in a "multiplication of pathological germs of the same nature."

In other words, if two fowls possess a certain undesirable tendency (even if you can't see it on the surface) that undesirable tendency along with the other things will be intensified in the offspring when such fowls are mated.

Now, mighty few people can see a healthy fowl on the outside and know what they see. How many there are who are capable of seeing the real inside values in a fowl, we don't know. They have not yet been able to show us. It is inside values that count when breeding, not mere surface values.

We don't know how much truth there is in the claim that if specimens of high constitutional vigor are al-

ways selected for breeding, and if both sides of the mating (male and female) do not possess similar faults or tendencies to abnormalities, the close inbreeding may be carried on indefinitely without any apparent harm.

The great trouble is to find anyone who is competent to tell what points of similarity exist in inside values and inside faults in a given mating. Who knows and who is competent to judge?

Everybody admits that there is danger in careless close inbreeding. Nobody has yet proved that there is no danger in the most carefully conducted close inbreeding. The results that we see everywhere about us as a result of close inbreeding as generally practiced are: A certain uniformity in type, features and general appearance, or family resemblance. Indifferent constitutional vigor. Indifferent reproductive powers. Later we get gradual decrease in size, loss of power to resist disease, deformities, and sterility. How many times have you known of a certain winning strain that was finally "bred out" of existence? The highway of poultrydom is strewn with the bleaching bones of such bred out strains. Only the willfully blind fail to see them.

How many breeders do you know who breed as carefully as some "authorities" would have us believe? It has been said that the wonderful and exceptional layers are freaks. Isn't

# American Poultry Association

The poultry industry of this country amounts in the aggregate to one billion dollars per annum. These figures paralyze the imagination.

The American Poultry Association is the largest live stock organization in the world and its membership is increasing with tremendous rapidity. On its roll are the leading breeders and representative poultrymen of Canada and every state in the union.

**Every breeder, fancier, man and woman in the United States and Canada who is interested in poultry of any kind should join this great organization.**

## The American Standard of Perfection

The **Standard of Perfection** is the official guide for the breeding, mating and judging of all poultry. It gives a close and detailed description of every breed and variety of chickens, ducks, geese and turkeys, with illustrations from living models. This book is published by the American Poultry Association at an enormous expense and is the American authority. You can not raise poultry successfully without this American Standard of Perfection. Prices postpaid from the publishers of this paper. Cloth binding, \$2; leather binding, \$2.50. Send all orders to American Poultry Journal, 542 So. Dearborn St., Chicago, Ill.

**On its shoulders rest this gigantic Billion-Dollar Industry.**

Your interests will be promoted and safeguarded. You may compete for the association diplomas and gold and silver medals at the shows, and be entitled to all the help that honest organized effort can give you.

You will have a voice in shaping the course and policy of the association. Making it recognized by nations and governments. Your name should be one of the thousands of the honored members of this association.

We urge you to write immediately for information and application blank. Address

E. B. THOMPSON, President, Amenia, New York  
S. T. CAMPBELL, Secretary

**American Poultry Association, Mansfield, Ohio**

that pretty nearly true of all phenomenal specimens? Some of the specimens, perhaps most of the specimens, that come so close to standard perfection are also freaks. They seldom can be depended upon to reproduce their equals or anything approaching their own perfection. Some of them may be the product of years of careful breeding and some are just accident. More than once an accident, purchased by a knowing observer, has carried off a ribbon.

Consider again that the new varieties are the product of out-crossing. When the new varieties first make their appearance they are heralded far and wide for their wonderful egg producing ability, etc. Later on, after they have been closer and finer bred they don't produce as well, and they have more difficulty in proving their good qualities which they possessed to the full when the blood was closer to the original mixing.

Now, fowls are not human beings and probably can stand closer breeding than human beings. Also, bear in mind that guinea pigs are not fowls and may be able to stand longer and closer inbreeding than fowls. Also consider that environment has a lot to do with the make up of all individuals. It has an influence. Related fowls grown at a distance from one another and under different conditions may differ enough in inside values and inside faults to be bred with less danger than fowls of the same blood that are brought up together. All White Rocks (for example) are more or less related. They must be, it can't be helped. If you grow them under the same conditions and breed in and in under the same conditions, year after year, you get trouble. It is not necessary. You can always get White Rock blood raised under different conditions and only remotely related to your own stock that is safer to use with the home flock. Apply the same care to selection of the breeders when introducing "new blood" of this sort that you should to selections of home grown stock for breeders and you won't have half the troubles that some folks would make us believe come from outcrossing.

Think these things over. Also consider how many men you know who are capable of using their X-ray eyes to see the "pathological germs of the same nature" inside the living fowls, of both sexes, which they select for breeding. When you must take chances, it is a good plan to take the chances on the side of safety.

Experimenters in all lines are human and liable to human failings. Some are apparently exceedingly conscientious and some seem to spend most of their time playing politics or four-flushing to the gallery. It would be interesting to know just how much time they personally give to the careful conduct of any given experiments and just how much of the work is done by careless or incompetent helpers, who let the work slide along any old way to get it done.

We believe that all the benefits that may accrue from any inbreeding can be gained through breeding no closer relationships than second cousins. If this is true, there will be no need to breed closer relationships and the danger of increasing unknown inside faults should be less. Of course, in any breeding, the greatest care should be observed to breed only from specimens

possessing the greatest degree of constitutional vigor you can get.

Bear in mind that where inside faults, the possession of "certain pathological germs of the same nature" (hereditary tendencies to trouble), exist, they are particularly liable to be found in most representatives of that family. Hence, where there are faults; father and daughter, mother and son, brother and sister, are likely to possess these unseen inside faults in common, to a greater or less degree, and such individuals mated as indicated would be almost certain to multiply the faults. Would the most ardent advocate of close inbreeding allow, if the law permitted, brother and sister to mate in his own family? If not, why not? Surely he must have some other reason than mere sentiment. Also, why is sentiment so sure to rise and forbid such unions? Nature is said to always supply warnings against anything that will result in death or deterioration of a race. Isn't this abhorrence of incest one of Nature's warnings?

Q. (2) Would it be advisable to breed from a cockerel having a cross bill? I have a bird of splendid type and very good in all sections but this one, but hesitate to use him unless I can be convinced that there will be no tendency on the part of offspring

to inherit this defect as they would a side sprig.

Saugatuck, Mich. H. D. W.

A. (2) We wouldn't breed the specimen. Kill him and send him to the market. For breeding the best specimen, entirely free from observable deformities, is none too good.

### The Best Breed.

Q. (1) Which is the best all purpose breed, eggs and meat combined?

A. (1) We don't know. All of the leading popular varieties are good. For eggs and meat the American breeds probably rank first in popularity. The more popular of the Asiatic and English breeds are a close second. The heavier varieties among the white egg breeds are good.

We would not hesitate to take any one of the leading popular varieties, of a type which we liked, and would expect to get good returns in eggs and meat. We have tried a good many and found all good.

The results obtained from any variety depend as much upon the man who cares for the fowls as upon anything else. Observe which variety or breed is most popular and in most demand in your section. Does it lay the kind of eggs most in demand by your trade? Do you want eggs and meat or eggs

## WARD'S CHAMPION DARK CORNISH

Let Ward quote you a price on that exhibition bird or pen. Remember the best flock of imported birds ever brought to America are in Ward's yards and "blood will tell." : John W. Ward, Box 7, Pennington, N. J.

## SPRING WATER FARM SINGLE COMB WHITE LEGHORNS

All of our this season's breeders, including our prize matings, must be sold to make room for our oncoming young stock. These will be disposed of during July and August at tempting prices. Write us before placing your order and request one of our free booklets, describing our stock and plant. Mention American Poultry Journal when writing.

Spring Water Poultry Farm, R. F. D. 1, Stockton, New Jersey

## TRAPNESTING IS COMING

### To be Recognized More and More as an Essential Part of Successful Poultry Breeding

The most successful breeders are now trapnesting. The birds that are now producing the most cash are found in trapnested flocks. Lady Showyon, the world's champion laying hen, was bred from trapnested stock. The man who produced her, Mr. J. A. Bickerdike, Medford, Oregon, (formerly Millersville, Illinois), has not only made trapnesting his life work, but has given special attention to the kind of trapnest best suited to give practical service. He is in position to know what it takes to constitute a good practical trapnest. With all his extended experience, covering many years, Mr. Bickerdike has just completed a new trapnest that is a winner. The Medford Trapnest is in a class by itself. Nothing like it ever before offered. The trap will fit any nest and can be attached or removed in an instant. For accuracy, convenience, simplicity and low cost, the Medford Trap is the same of perfection. No springs, wires, pulleys nor intricate mechanism to get out of order. Nothing to wear out. Nothing in the nest but the hen and the egg she lays. A child can operate it.

### Here's What the Breeders Say of It:

- "Is sure a winner. Better than high priced trapnests."—H. W. Halbach, Waterford, Wis.
- "So simple anyone can attach and operate it."—C. F. Williams, Salem, Oregon.
- "Your trap is a very good one."—D. T. Heimlich, Jacksonville, Illinois.
- "Is very simple and effectual and is certainly a winner."—S. A. Noitzger, N. Manchester, Ind.

Hundreds of others, breeders, judges, editors, are testifying to the exceptional merits of the Medford Trapnest. Install them in your laying houses and get bigger profits. The Medford Trap is sent to any address, all charges prepaid, including one trap complete with full directions, and individual right to make and use, for only one dollar.

### Special Introductory Offer

To introduce our trap to the readers of A. P. J., we will send one of the Medford Traps, complete with directions and right to make and use, all charges prepaid, for only fifty cents (stamps will do). We will please you or return your money. Even if already equipped with trapnests, it will pay you to investigate the Medford Nest. Order now and get it at half price. This offer good for this month only. Address

# FRENCH'S Poultry Mustard

Absolutely Pure Patent Applied For

## The Original Poultry Mustard

French's Poultry Mustard is now in general use on about all the leading fancy and utility plants giving universal satisfaction to every user. Its properties are beneficial and valuable to all alike. Try it and be convinced.

### Moulting

When used during the moulting period it **invigorates** the birds, **strengthen**s weak and lost tissue. It is an aid to rapid moulting and claimed by users to be just the stimulant essential to the growing of the richest plumage.

### Condition

The record you will make the coming season in the show room depends largely on the condition of your birds, unless at their best, the other fellow has the advantage. You owe it to yourself to carefully condition and exhibit your stock. French's Poultry Mustard has met with pronounced success in this line. Breeders know its value and believe as we do, that it is just the thing to feed liberally when putting your birds in show condition. It keeps them at their best. Try it and be convinced.

### Laying

French's Poultry Mustard insures an increased egg yield. The large egg farms buy it in barrel lots; their own experiments have proven it of value and an assurance of the greatest possible egg production when regularly fed.

### Old and Young Thrive on It

Experiments here and in England have proven its value. It is used and recommended by thousands of poultrymen as an aid in moulting makes it **quicker and more natural**. It is beneficial and insures the **richest plumage**. It keeps the birds toned up to show at their true worth and has given general satisfaction to every user.

### French's Poultry Mustard

Is sold by the leading poultry supply houses. If your dealer hasn't it, send us his name and order direct from us. It is sold at 20 cents per pound, in six and ten-pound boxes and 25-pound kegs. Sample package, one and one-half pounds, 35 cents. A trial will convince you. Write for it today. Poultry pays best and does best when French's Poultry Mustard is regularly used. A teaspoonful to six to twelve fowls fed daily in wet or dry mash will insure results.

#### Beware of Imitations

Insist on Having French's Poultry Mustard; Sold in Sealed Pkgs. Only

Booklet for the Asking

The R. T. French Company

Department A

Rochester, New York

mostly? If you want meat and eggs both, get a variety producing good sized specimens. If you size up the demand you will be apt to take a liking to the sort of fowl that is equal to producing to meet the demand. You want to pick something that will sell and it is not difficult to find out what sells best in your locality. There are varieties enough in most breeds to suit any taste. Choose that which can supply the demand and will suit you best, appeal to your fondness for the beautiful and be something you can be proud of owning. Then go ahead and make the most of it. You can raise fine, beautiful fowl that show uniformity and you can make them produce for you, if you put thought and work into the business. There have been plenty of specimens among the heavier fowls that have proved just as good producers as the best among the lighter weight ones.

The quality BEST is not in the breed, of itself, it is in what you make of the variety you select. It depends on YOU.

A. (2) What is the best laying strain of the variety you consider best? Missouri. Max.

A. (2) There are good and indifferent layers in all strains. We don't know which is the best. After you pick your variety, choose a breeder, who, so far as you can discover, has made a habit of selection for heavy egg production. Get eggs, day-old chicks or stock of him. If you can get a similar stock from another breeder of the same variety who seems to have equally as good a foundation. Try them both out. Breed the stock straight and mixed and note results and try to build up a strain of your own. Introduce new blood season after season to a part of your flock. Right here you can help yourself a lot if you will abandon the customary procedure of buying a new male and buy new females instead. Insist on getting females known to be good layers. Mate them to one of the best males out of your own best laying mating. Use the pullets from such matings to work into your breeding pens and market the males. By breeding your males at home and getting new blood through females you can control your breeding better for the simple reason that you use a number of females to one male and in a flock of fifteen hens and one male have to count the male half of the flock. You have fifteen chances on the female side to make good with and one on the male. When you must get a new male, get one out of bred-to-lay stock if you can. Don't forget health and vigor.

#### Is Heavy Laying Inherited from Male?

Q. Is heavy laying inherited from the sire only, or from the dam, or from both sire and dam? Have seen so much discussion of this subject by men I supposed authorities and they differ so much I am all at sea. I can't see how a pullet can get her good laying qualities only from her sire but not at all from her dam, while a cockerel gets his power to transmit heavy laying qualities from his high laying dam and also from his sire? How is it and why is it?

Buffalo, N. Y.

Novice.

A. The claim that the sire has the most influence, or the whole influence,

on egg laying ability of the pullets of his get has not been sufficiently proved. We doubt if any man has yet attained sufficient proficiency in seeing into fowls, as well as in observing fowls, to be able to say positively how much is, or is not, transmitted by either parent when male and female elements combine to make a complete, individual, impregnated, original seed from which the chick is developed. It reads more like exaggerated ego.

Recently, in tracing the genealogy of a New England family back for nine generations, we found that the daughters in each generation down to the eighth generation all had large families like the first mother of record. The daughter in direct line in the ninth generation had a small family, but it is quite evident to me, as a physician, that her small family is not because of lack of ability to have a large one, but because of circumstances and the high cost of living.

As yet, we are only on the outside fringe of the study of heredity and competent students have been at it many years. All of the so called laws and isms relating to heredity are subject to many, a great many exceptions, and are anything but the last word on the subject. Inherited physical peculiarities go back many generations and take in a surprisingly large number of ancestors. When sperm combines with ovum no one knows how much or how little goes into that union or from how far back it may have come. We observe that some certain tendencies seem multiplied in the offspring of a certain mating. Individuals acquire tendencies and transmit them to their progeny, if this were not so there would have been no progress.

Observe the various families you know intimately. See how many and varied the bodily characteristics, mental traits, and other easily noted items are inherited alike, or to a greater or less degree, from both parents. The son may be the replica of his father or his grandsire. It often happens. Or, he may be a male duplicate of his mother or he may combine the characteristics of both parents. The same is true of the daughters. It doesn't matter what some individuals steeped in his books and theories may tell you is the law, look and see for yourself, the evidence is all about you, and bear in mind that some of the greatest scientific authorities have made the biggest mistakes because habit and concentration narrowed their viewpoint.

It is the hen that lays the eggs, laying is her most important function in life. She was put on earth to lay eggs that her kind might multiply and replenish the earth. Isn't it absurd to say that she has no part in transmitting her ability to lay, early and often, to her daughters? Wouldn't such a vital trait be one of the first to be handed down to the progeny? It isn't essential that her daughters shall lay as well as she does, though they sometimes do, but such as may be transmitted of any qualities may be handed down to granddaughters or great-granddaughters of that dam. It is admitted that she gives to her sons, and, if she gives to her sons, she gives to the daughters also. It will take more than a few years of more or less indifferent breeding of not over healthy mongrel-blooded specimens to prove to us that we are wrong.

We believe that H. H. Stoddard is

on the right track in this matter of inheritance of heavy laying. We don't know how much of high fecundity is transmissible, but it is pretty certain that whatever there is that is inheritable in laying qualities the female parent gives as much as the male.

#### Canker.

Q. Are there other forms of canker in poultry besides diphtheritic roup? I notice one supposed authority makes the statement that canker is caused by too much carbonaceous food such as corn. I have found birds at times which had a canker sore in the mouth which seemed to be identical with the growth in diphtheritic roup, but the bird kept right on laying, appeared in perfect health otherwise and the canker neither spread or disappeared.

Michigan.

Breeder.

A. Canker is a name that is more or less generally used to apply to any ulceration of the mucous membrane of mouth or throat in fowls. You may get real diphtheritic roup, cancer, or one of many infectious ulcers, presenting similar appearance but to be differentiated by comparing the constitutional symptoms, or lack of same.

In case of your bird the trouble may be simple or mildly infectious ulceration of the mucous membrane. Such sometimes comes as an after result of fighting or abrasion of the mucous membrane from other cause and subsequent infection. Some such germs are always to be found in mould and filth and easily find their way to an abrasion in mouth of fowl. The source of infection may also be found in musty, mouldy straw litter, or grain or forest leaves, or dried swamp muck.

Unless the corn is spoiled and mouldy or musty it has nothing to do with canker. There are plenty of flocks feeding almost exclusively on good, sound, wholesome corn where there are very few cases of canker or none at all. Predisposition on the part of the individual has a good deal to do with contracting the disease. We would prefer to breed from fowls not subject to ailments of this sort.

If the case you have is one of simple infection it should yield fairly promptly to treatment. Mix one grain of finely powdered permanganate of potassium with five grains of finely powdered gum acacia and then add sufficient sugar of milk, (finely powdered) to make one ounce. Use a straw or blow pipe to apply this powder to the canker once a day, or more often if necessary. When improvement is noticed apply less often. You ought to cure it in a week or ten days unless it is of a more serious nature, than the symptoms indicate.

#### Culling.

Q. When and how often should I cull my chickens to select best for breeding and laying? How many chickens will I have to raise to get one thousand first class pullets for laying and breeding stock? Is there any use in trying to grow the runts and stunted chicks?

Mass.

J. D.

A. Culling should be a continuous process. Cull now, and all the time. Begin when the chicks are taken from the nest or incubator and get rid of the weaklings. It will pay better to devote your time to doing your best with the most promising chicks. As the chicks grow, mark for identifica-

tion those which grow best and continuously from the start. You will get some of your best breeders from among this lot. Note which chicks do not grow uniformly but seem to develop by fits and starts—most of these it will be best to market.

Some chicks are runty and stunted at first but after a while, when more than half grown, begin to develop rapidly and look as good, or almost as good, as those which made steady growth. Identify these by bands or

#### DIRK'S RED MITE KILLER

One application kills all mites and prevents their reappearance during the season. Cleans scaly legs. Keeps fowls free from body lice.

During the balance of 1913 I will ship one trial quart for 35c. Trial gallon \$1.00. Write for information and testimonials.

M. E. DIRK, Box 102, North Baltimore, Ohio

#### 25c THE SIMPLE TRAP NEST 25c

Separates the drones from the layers. Made in a few minutes from a common box or egg case, by attaching the simple device I send you. A cheap, practical trap nest that cannot get out of order. Send 25c for complete printed and illustrated instructions and device for making your own trap nests. Nothing else to buy. Geo. A. Blood, Bellwood, Ill.

#### R.C. MINORCAS

First prize winners New York, Chicago, St. Louis and elsewhere. Trap-nest bred for egg production. Stock and eggs for hatching, at all times. Catalogue free

G. A. Clark : Seymour, Ind.

#### Bourne "Bignum" Poultry Band

Send for these bands. They're what you need. Double big number. Long wanted, it's here now. Something you can SEE. No matter how the bird is standing, one of the two numbers shows. Neat, workmanlike. Big, bold figures. Number slip heavily glazed, one piece only, in aluminum carrier, half inch wide. Easily applied, tongue and slot large and strong, double lock, cannot be pulled off. Made for wear. Best band out. Sizes for Bantams, Leghorns, Reds. Black numbers from 1 to 100 indelibly printed on white, light blue, pink, red, green, cherry and yellow celluloid. Withstands weather and water. State size, color and numbers wanted. Send cash with order. SPECIAL TRIAL OFFER AT OUR RISK. Send sixty cents in U. S. stamps or money order for twenty bands. Keep them for a full month and if at the end of that period you are not fully satisfied that they are what you want, return them to us and we will refund your money, no matter whether you have used them on your poultry or not. We leave it to YOU to decide. Mention A. P. J.

Bourne Manufacturing Co.

Dept. M. 216 Howard St. Melrose, Mass.

toe-marks when they are in runty stage. They may make good or fair laying stock but, as a rule, it is safer not to use them for breeding.

Good care, a good feeding, grooming and constant attention will do a lot for even a very unpromising chick, one that looks like a hopeless runt when half grown. Some marketmen, by segregating such chicks and giving them special attention, have been able to "put them on the cart" in the pink of market condition, but they assure us that it don't pay for the extra fussing. Some fanciers will take a sickly runty specimen and by constant attention build it up into a ribbon winner. We don't believe that it pays and we believe that breeding from such "rescued runts" is certain to have bad results and will show up in loss of constitutional vigor in the generations which follow.

When you put the young and old stock into winter quarters cull again and cull hard. Mighty few of us cull close enough or sufficiently often. Few can cull as close as they should and keep up the number of the flock to the number they wish to keep. We once culled a flock of 5,000 head of young stock to get 1,500 pullets of the sort we wanted to winter. Out of the 1,500 there were many that were not as good, even for laying stock, as we would like to have them. 500 more were culled and marketed out of this flock before the breeding season began.

Culling should go on all of the time. Cull for the purpose of retaining the chickens which make the best development. Cull to get uniformity in the flock. Cull to secure the maximum of constitutional vigor. Cull to secure the best in type and beauty. Cull to keep only the best producers. Discard all of the unfit. Discard those with any tendency to disease. Culling in this way will be a continuous process. If you cull close and cull often you will find less culls to discard as the season advances and less need of culling. Make constitutional vigor, (or health, vigor and vitality) the chief requisite for a place in the breeding pens and you will find that productivity follows close upon constitutional vigor.

#### Miscellaneous Questions.

Q. (1) What is the cause of wry

neck in young chickens and remedy for same?

A. (1) Hereditary tendency to nervous diseases. Any form of intestinal irritation. May be indigestion, spoiled foods, poisoning from any source, and worms. Spoiled or green heart corn is a common cause. Soured grain food sometimes is a cause. Indigestion and "puffed crop" from overfeeding on wheat, especially poor quality wheat may be a cause. Prevention is the only real remedy. Breed only from healthy, vigorous stock, hatch and rear the chickens properly, observe sanitary precautions and feed wholesome food. Treatment—find the cause and remove it. You can't do much for the sick chick, in most cases it is too far gone when you notice the trouble.

Q. (2) Cause of points on young cockerel's comb turning black and remedy?

A. (2) Out of condition from any cause. Diseases of digestive organs. Heart disease. If the latter cause you can't help it. Get the bird out on a grass range. Feed hard grains only and let him hustle for the rest of his living on the range. Provide open front roosting quarters.

Q. (3) What is a good tonic for laying hens that are housed up?

A. (3) Feed an abundance of green food in addition to regular ration. Use a small quantity of prepared poultry mustard in the mash four or five days a week, every other week. If you feed properly, allow a sufficient quantity and variety of wholesome food and an abundance of fresh raw greens, you will seldom need tonics or condiments. Always season mashes lightly with salt.

Q. (4) Why do commercial egg plants keep Single Comb Leghorns instead of Rose Comb variety? Do they lay better?

A. (4) We don't know. Presume it is largely personal preference of the proprietor and belief on his part that his choice are the best producers. All commercial egg farms do not keep Leghorns, some carry other popular varieties. The S. C. Leghorn has been pretty well advertised as an egg machine and is in demand. It is policy to stock a farm with the sort of fowl

that sells easily, and—advertising pays.

Q. (5) If Minorcas are such good layers, would it not be more profitable to keep White Minorcas than Leghorns?

A. (5) Minorcas are good layers. It is, however, difficult to get stock in sufficient quantity that averages as hardy as the Leghorns. Properly bred they should be just as hardy. We have seen Black Minorcas open-air bred and reared without other shelter than evergreen trees that were as hardy and prolific as any fowl we ever saw. It should not be difficult to grow Whites with equal constitutional vigor. They appear to need the right kind of a "booster."

Q. (6) I have twelve two-year-old White Wyandottes that are heavy layers. In September, during their moult, they are laying eight to ten eggs a day. Would you keep them the third year for breeding?

Cresskill, N. J.

W. E. B.

A. (6) It would pay you to breed the most vigorous of these hens next spring. Breed only those which winter best. Begin to hatch their eggs early and keep at it until late. They should give you some good chicks, if well mated, and it will be well to toe-mark the chicks when hatched.

### Easy Way to Get Lots of Eggs

OCULUM produces more eggs than anything known. Two cents worth lasts a chicken a year. It cures the worst poultry diseases almost instantly. It is selling in every continent and state.

Sold by dealers or direct. Price per bottle 50c and \$1.00. Money back if unsatisfactory. Postal brings particulars. AGENTS WANTED.

## A Review of the Origin and History of Our Domestic Poultry

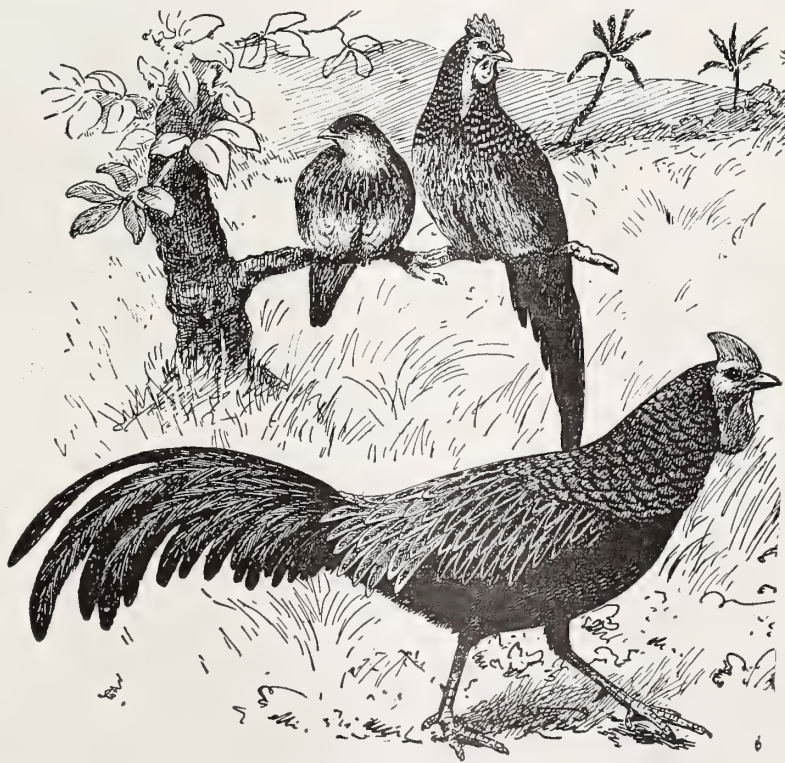

**H**ISTORICAL data regarding the origin and history of our domestic poultry is not available to any great extent, but there are many reasons and conditions, however, that point to the wild fowls of India as the probable parents of our domestic poultry. That the fowl was domesticated and extensively spread over the world at a very remote period is most evident; for when the Romans first invaded the shores of Britain, they found both the fowl and the goose in a state of domestication, but not for the purpose of food, for Caesar says: "they deem it unlawful to eat the fowl, the goose or the hare; nevertheless they breed these animals for the sake of fancy and pleasure."

Sacred history, in the enumeration of the provisions for the supply of Solomon's household, mentions the "fatted fowl." After the Babylonian captivity we cannot doubt that the fowl was among the domestic animals of Palestine, for Nehemiah (B. C. 445), in his rebuke to the Jews, says, *e. v. ver. 18*: "now there were at my table prepared for me daily one ox and six choice sheep, also fowls." Antecedently to this period the fowl was abundant in Persia, thus *Pessthetairus* (Aristophanes): "no lack is there of proof to show the truth of our opinions: that birds, not gods, o'er men and kingdoms reigned, and kings and sovereigns were of yore. At first I instance in the cock how he the scepter bore; how long their monarch the Persians him obeyed, or ere Darius or Megabyzer swayed. And so he's named the Persian bird—and still he struts; no other bird is there that wears the turban cock'd but he." Not only do the classic poets and historians speak of the antiquity of the fowl, but medals and coins proclaim the same, and bear its figure stamped upon them; nor is its delineation absent from their relics of the remote periods. Among the Greeks and Romans, the fowl figured in the

public shows. The cock was dedicated to Apollo, to Mercury, to Esculapius and to Mars, and its courage and watchfulness was well appreciated. The Rhodian fowls and those of Delos, Chalcis and Melic were celebrated for their superiority in fighting and for the excellence and delicacy of their flesh. At every Roman banquet these birds formed a highly esteemed dish, and then as now they were fed and fattened up to a great proportion. The custom was to cram the fowls with meal, and keep them in the dark, that they more readily fatten. Cock fighting was a diversion in accordance with the taste of the Romans, and they were as much devoted to it as the Malays of the present day, who

will stake their all upon the issue of the battle.

Considerable attention has been given to the study of the origin of our domestic fowls, especially during the middle part of the last century a number of naturalists have made great efforts in this direction, especially in England. Mr. Charles Darwin, whose attention has been devoted for many years to the study of the subject of variation of our different animals, and Mr. T. C. Jerdon, author of that admirable work, "The Birds of India," and Mr. E. Blyth, whose present investigation into the standard of

ABOVE, GALLUS SONNERATI. BELOW, GALLUS FURCATUS.

these birds has been unusually great. They came to a similar conclusion respecting the origin of our respective breeds—a conclusion that must be acquiesced in by all who have studied their premises. Working independently from each other, these three most eminent naturalists locate the same facts from different points of view; they came to a similar conclusion and, according to their views, there is but one species from whence all of our domestic varieties have descended and that special species is the common Red Jungle fowl, the *Gallus ferrugineus* of India.

The facts on which other inferences are based are too numerous to be detailed in the small space available in this section of our magazine, but many of our readers have in

## AMERICAN POULTRY JOURNAL

their library the book of Charles Darwin: "Variations of Animals and Plants Under Domestication," or perhaps can obtain it at the library. This book gives perhaps greater detail regarding this matter than any other book in existence. While the opinion of these three naturalists that all our domestic fowls are derived from one stock, the jungle fowl, found almost general acceptance, but more recently doubts have been thrown upon that view. The question is, therefore, still in a state of uncertainty, and in the absence of clearer information than has yet been obtained, it is likely to remain so. There is one thing certain, however, that the majority of our breeds of fowl are derived from the wild-fowl named above, and also that the fowl originated in eastern and southern Asia.

Naturalists recognize four members of the genus *Gallus*. These are as follows: (1) The *G. Sonneratii*, which is found in the more southern districts of India. At one time it was thought to be the parent of our domestic breeds, but stu-

Indo-Chinese countries, the Philippine Islands, and the Malayan Archipelago as far eastward as Timor. This species varies considerably in the wild state. Mr. Blyth informs me that the specimens, both male and female, brought from near the Himalayas are rather paler colored than those brought from other parts of India, whilst those from the Malay Peninsula and Java are brighter colored than the Indian birds. The wild *G. Bankiva* agrees most closely with the black-breasted red game breed in coloring and in all other respects, except in being smaller and in the tail being carried more horizontally; but the manner in which the tail is carried is highly variable in many of our breeds. It is a significant fact that the voice of both male and female *G. Bankiva* closely resembles, as Mr. Blyth and others have noted, the voice of both sexes of the common domestic fowl, but the last note of the crow of the wild bird is rather less prolonged. Captain Hutton, well known for his researches into the natural history of India, informs

CEYLON JUNGLE FOWL (*GALLUS LAFAYETTI* OR *GALLUS STANLEYII*)

Illustration made from stuffed specimens in the Field Columbian museum, Chicago, Ill. Female resembles the color of *Gallus Bankiva*, the male, however, differs not only in the coloring but also in the peculiar group of feathers immediately following the saddle hackles, which, instead of being long and flowing, are shaped like a shovel. The plumage covering the breast, neck and wing is very beautiful, each feather being a brilliant orange red striped with black in the center. The feathers are long and narrow in all sections of the body and in this respect they differ from the *Bankiva*.

dents have noted in it marked differences. The domestic fowl does not exhibit, so far as has yet been seen, any of its peculiarities, and there is now no one who accords it that position. (2) The *G. Stanleyii*, which is only found in the island of Ceylon. With the exception of the color of the comb, this genus resembles the domestic fowl so closely that some naturalists were at one time inclined to regard it as the parent species. It has, however, a singularly different voice, which is unknown to domestic fowls. (3) The *G. fureatus*. This variety inhabits Java and the islands eastward as far as Flores, but it is so different in many characteristics from the tamed fowl that no one regards it as the parent of any races. It has green plumage, an unserrated comb, and a single median wattle. (4) The *G. ferrugineus* or *Bankiva*. Of this variety Chas. Darwin says: "It has a much wider geographical range than the three previous species. It inhabits northern India as far west as Scinde, and ascends the Himalayas to a height of 4,000 feet; it inhabits Burmah, the Malay Peninsula, the

me that he has seen several crossed fowls from the wild species and the Chinese Bantam; these crossed fowls breed freely with bantams, but unfortunately were not crossed inter se. Captain Hutton reared chickens from the eggs of the *G. Bankiva*; and these, at first very wild, afterwards became so tame that they would crowd around his feet. He did not succeed in rearing them to maturity, but, as he remarks, "no wild gallinaceous bird thrives well at first on hard grain." Mr. Blyth also found much difficulty in keeping *G. Bankiva* in confinement. In the Philippine Islands, however, the natives succeed much better, as they keep wild cocks to fight with their domestic game birds. Sir Walter Elliot informs me that the hen of a native domestic breed of Pegu is undistinguishable from the hen of the wild *G. Bankiva*, and the natives constantly catch wild cocks by taking tame cocks to fight with them in the woods. Mr. Crawford remarks that from etymology it might be argued that the fowl was first domesticated by the Malay and the Javanese. It is also a curious fact that wild specimens of

BANKIVA JUNGLE FOWL

Painted by Louis A. Stahmer from description and specimen of stuffed *Gallus Stanley* in Field Columbian Museum, Chicago

the *G. Bankiva* brought from the countries east of the Bay of Bengal are far more easily tamed than those of India. Nor is this an unparalleled fact; for, as Humboldt long ago remarked, the same species sometimes evinces a more tameable disposition in one country than in another. If we suppose that the *G. Bankiva* was first tamed in Malaya and afterwards imported into India, we can understand the observation made to me by Mr. Blyth, that the domestic

fowls of India do not resemble the wild *G. Bankiva* of India more closely than do those of Europe."

We have given at length these particulars respecting *G. Bankiva*, for whether the opinion that all our domestic breeds do not owe their origin to this genus ever becomes an established theory or not, it is certain that the great majority of our varieties are its descendants, and, therefore, it claims from us the greatest share of attention.

## Color and Shape of the *Gallus Bankiva* Jungle Fowl

The cock measures, from the tip of the bill to the tip of the tail, about 26 inches; 2 feet 3 inches across the stretched wings; the length of the closed wing is from 8 to 9 inches; the tail measures 15 inches; the leg or tibia is 4 inches long; the tarsus or shank, 3 inches; the middle toe,  $1\frac{1}{4}$  inches; the spur, 1 to  $1\frac{1}{2}$  inches; and the weight of the bird is about  $2\frac{1}{4}$  pounds.

The hen is only 1 foot 5 inches long, the length of the tail 7 inches, and the wings spread 2 feet.

These dimensions, which are taken from average-sized specimens, show how domestication and feeding have increased the size of our common breeds, some of which almost rival the turkey in size.

The following are the points indicating the pure wild breed:

The form is bulky, broad across the back and shoulders, the bird standing high and very erect, with protruding breast and a nearly horizontal tail, the tips of the center feathers of which barely clear the ground. The plumage is thick, and the feathers of the neck and upper tail-coverts are linear, pointed and drooping. Head and face bare, with a circular patch of feathers over the ear-hole. The comb is high and serrated, rising from nostrils and overhanging the occiput. There are two wattles under the base of the bill, and a smaller pendulous flap under each ear; in the female both comb and wattles are rudimentary. The bill does not alter in domestication. Legs stout, rather lengthened, with a single row of scales in front, and a double row behind, the sides of leg being reticulated. Toes rather short, and webbed to nearly their first joints; a large spur on the inner side of the shank, about three-quarters of an inch above the thumb, attaining a length of one inch and a half in old birds. The wings are short and bowed; the quill feathers suddenly narrowed from near their bases; the fifth and sixth primaries are the longest; the secondaries very little shorter. The tail is composed of fourteen feathers, shaped as in the barn-door cock, but not held so vertically.

In the cock, the iris is orange; the bill, horn color; legs, blackish-lead color, with a slight green tinge; the face, comb, wattles and throat, fleshy carmine; neck and head feathers, bright orange, pale and golden where flowing over the back; the feathers at the bottom of the neck, black at the bases; back, rich deep vinous rust color; lower back and upper tail-coverts, fiery orange, the latter golden-tipped; tail and its longest upper-coverts, or sickle feathers, black, glossed with green; wing-coverts like those of the back, but the two last rows black, glossed with green; the secondaries, chestnut on the outerweb, and dusky within, the primaries dusky; all the lower parts black; the ear coverts are white in the Bengal birds and orange rusty in the Burmese and Malayan varieties.

The hen has the skin of the face a paler red than in the male; legs, livid horn color; crown, ear-coverts and throat, vinous rusty; rest of neck, golden tawny; each hackle is centered with brownish-black, and the larger ones are shafted with tawny color within the black. All the upper parts are full burnt-umber brown, the feathers vermiculated and centered sepia, with pale tawny shafts, the side tail feathers are plain sepia, as are the inner webs of all the remiges; all under parts vinous reddish-brown, the shafts pale; primaries and their coverts, plain sepia, with the outer margins ashy.

The breast and under parts of the young cock-birds are much broken up with rusty-colored feathers, and in the first moult both sexes are similarly colored mottled brown, with dusky wings and tail; when first hatched, the chicks are covered with cream-colored down, and have sepia-colored bands along center of head and through the eyes.

The following literature was used in compiling the above article:

W. B. Tegetmeyer, "The Poultry Book;" Martin Doyle, "Illustrated Book on Poultry;" C. Darwin, "Variations of Animals and Plants Under Domestication;" E. Brown, "Races of Domestic Poultry."

When we look at the illustration of the Polish it seems almost unbelievable that the original ancestors of these fowls could have been *Gallus Bankiva*. It is only a few centuries ago when but eight or ten varieties were recognized, while at the present time we can count them by scores. All these improvements in type and color have been brought about by proper selection. The poultry breeder who is a close observer can produce almost any shape or color fowl he desires by observing occurring variations in specimens. Almost any length of plumage or texture of same peculiar formation of combs and heads can be produced in this manner, taking, of course, the color limitations of the original breed into consideration. From the small size of the Bantam, and the silky plumage of the silkies, the stateliness of the Langshans to the massiveness of the Cornish fowls all are living proof as being the production of careful selection.

## CONCERNING RECENT BUSINESS DEPRESSION.

**Is the Day-Old Chick Branch of the Poultry Industry to be Made the Goat for all Business Troubles?—**  
By J. W. Parks, Altoona, Pa.

ONE would think that someone wanted to make a goat out of the day-old chick business after reading the report of the American Poultry Association's closing session and the comment of a number of editors. It is only natural for breeders to look for a place to lay the blame for business depression, and that some would lay it onto the day-old chick branch.

First, I want to pay my respects to those who have been blaming loss of business entirely to the weather and flood conditions the past few years; perhaps such causes did have some influence but to my notion not to the extent many would have us believe.

It is not giving our billion dollar industry the credit that is due it for breeders to talk about over-stocking the country with these large hatcheries. There are today only eleven states in the Union that produce enough poultry and eggs to supply their home demand, while I note that one of our western cities advertises that it can handle the eggs of 62,000 more hens, with eggs and poultry bringing the highest prices on record. Eggs at present selling for prices far in advance of any former years.

It is true that the industry did have a slump and it is now beginning to recover. Let us see if we cannot give the adversaries of custom hatching a few more facts to consider, before they form any more conclusions.

Has not the poultry industry been boomed harder and longer at one stretch than ever before, and to such an extent that no other line of live stock would have been able to have endured?

You know, too, that in any other line of live stock keeping the breeders are glad to be able to impart through their publications any new and practical ways of helping their breed and the industry. While with the poultryman in the last few years he has received very little information that did not come in book form, called systems, at high prices. The publishers of one of the earliest systems are even now issuing an entirely new system book, and claiming that the one they sold a few years ago is a back number, stating that things move swiftly in the poultry world. They surely have been moving fast in the system line. I wonder if they, too, have not helped to create the depression in question.

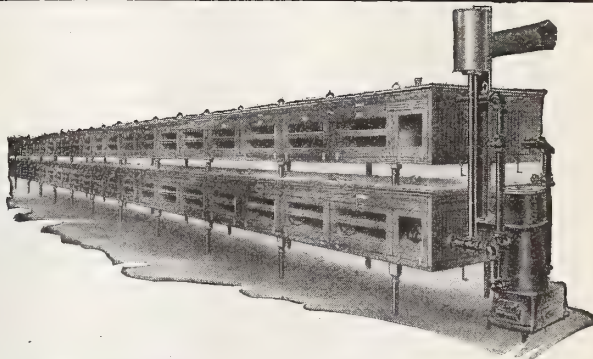

Don't you know of a number of good friends of yours who have been swept right along with the different breed booms and who today in perhaps their fourth or fifth year have had nearly that many different breeds or varieties, and are still up in the air?

This all takes money, and is not consistent with a healthy development of the chicken fever. Still you can hardly blame the novice for not settling down to one breed, for with a great number of breeds it is a question of whether it would be using sound judgment, for the way the popularity of a breed drops on short notice you would run the risk of having what you might like, but not what the other fellow

wants—and it's what the other fellow wants that counts nowadays.

Isn't it a question as to whether it is a benefit or a detriment for a breed to have a boomer back of it with lots of money who has not started in and grown up with the industry? Don't you think the buying public, as a whole, are coming back to the old reliable breeders that have made the industry what it is today, and whose claims are backed by years of success? As a recent New Zealand customer put it, when sending in his order, "It's a relief to be able to buy of a breeder instead of a boomer."

'Tis said that one-half the people in this world know little or nothing of how the other half live and it surely holds good in the poultry industry. Like most other poultrymen that are making a success of the business, I am not able to spare much time away from home and especially in the spring, but seem fortunate, however, in being able to catch a jaunt or two each season. I like to make trips during the busy season to learn how the other fellow is handling his plant. This spring's trip revealed an amazingly large number of wasted opportunities, and while we all have room for im-

## A Turn of a Handle Turns All the Eggs

You need no longer endure the monotony and drudgery of turning your eggs by hand. The Newtown One-minute Trays Turner will turn all of them for you by the turn of a handle at the end of the machine. It will earn the cost of your Newtown Incubator by its great saving of your time and labor.

It will increase your profits by giving bigger hatches and better chicks. With the Newtown Automatic Trays Turner, you can turn all your eggs as often as the hen without the excessive loss of heat which frequent turning by hand would cause.

Those eggs not to be turned are held stationary by simple adjustment at each compartment. You, who conduct a custom hatchery or a baby chick business, will be able to take care of more business and give customers better results with this tried and proven Incubator, whose every operation is automatic.

## Newtown GIANT Incubator

1914 Model

No other incubator has these automatic, labor-saving, result-improving features:

**The Automatic One-minute Egg Trays Turner.**

**The Automatic Regulator of Heat, Ventilation and Moisture at each compartment.**

**The Automatic Coal Feeder at heater. The Automatic Temperature Indicator.**

**The Automatic Alarm. Five Automatic Safeguards.**

With the Newtown Double Deck construction you can install double the usual capacity in the space required by an ordinary machine. This saves half in cellar construction.

Modernize your large incubator with Newtown features, no matter what its style.

Double your capacity without spending money on another cellar; have a Newtown Giant placed above your present machine, whether you remodel it or not.

Turn all your eggs in 60 seconds; coal your fire but once in 24 to 48 hours; have your temperature and moisture accurately and automatically regulated in each compartment without attention; let the five Newtown Safeguards make hatching a pleasure for you instead of a worry and a "grind." **Send now for Incubator Catalog and Giant Circular 1, which tell why so many Newtown Incubators have already been ordered for next season.**

New Address:

**NEWTOWN GIANT INCUBATOR CORPORATION**  
**Harrisonburg, Virginia**

*Manufacturers of Giant Incubators, Brooding Systems and Colony Brooders.*

provement, yet we can generally see other people's shortcomings before our own. Regarding one of them, I had a solicitor of one of the poultry papers visiting me a few days after my return, and upon inquiry as to where he was going next, was informed that he was going to one of these plants I have in mind, with the intention of boosting them a little as their cash balance was getting on the wrong side of the ledger. I told him that what they needed most was general house cleaning and that it was an imposition on the industry to think of trying to make that business pay under the existing conditions. In fact, it would not be considered in any other line of stock keeping.

The plant in reality did not have, all told, more than 1,000 birds, young and old, and was said to be done hatching for the season. They had employed and were trying to make the plant support four men in addition to the proprietor and his stenographer. A superintendent was employed who did not do much more in the way of work than give orders and look wise. While, during my visit, another man put in one hour packing two sittings of eggs, that were then not properly packed for a long journey, and that could have been properly packed in ten minutes. Two other men were given the general work to do. The existing condition of the pens gave one the impression that each fellow depended upon the other, and that only about half the work was getting done. The proprietor kept guard of the cash box and introduced the visitors to the superintendent. Would you wonder that in spite of their doing a nice business and getting more than three times the price I get for eggs, that they were going in the hole? Perhaps in a few years more this plant will be left standing idle, another monument to the cause, and the novices that took to their breed and strain can look up another or quit. While dozens of others that have been interested and would have made desirable breeders will drop out entirely because Mr. So and So, with all his money, could not make it go.

There are just as good if not better opportunities to make money in the poultry business today as there ever were, but the man to get the money out is the fancier with the true love for poultry to the extent that he can go out and do the most distasteful job and be glad to do it.

The man who will start in slow and steady will win, but not with big bubbles that burst. When your plant gets to the stage that you need a superintendent, you will find it advisable to inform him from the start that you are still manager and see that the methods which built your success are carried on. Remember this—never get above cleaning dropping boards yourself if necessary.

Although not classed with some of the largest shippers of day-old chicks,

I ship each season, several thousand. The day-old chick industry has not affected the sale of breeding stock at all but it has affected the sale of eggs for hatching a little. To hold your trade, it is necessary to be able to supply customers with chicks, something possible for all breeders to do. The buying public will have what they want, and if you don't supply them, some one else will.

It has been claimed that the day-old chick branch of the business should be discontinued on account of the cruelty, and the danger of spreading disease. I believe they place the most stress on the cruelty part of it, and there may be some few cases of cruelty. I have made some of the longest shipments to date, and had very favorable reports on same. I will be frank to say that where there are any complaints they generally come from long

MRS. T. F. WALDRON, OGDENSBURG, N. Y.

distance shipments. I have for years stated in my chick circular that I did not advise or guarantee safe delivery of chicks where it required more than thirty-six hours under ordinary conditions to make the trip. When the industry was in its infancy there were more or less complaints due to both the ignorance of the shipper in failing to provide proper carriers for the transportation of chicks together with the express companies' inexperience in handling same. I have learned to know that it is not practical to risk long trips with chicks in the early spring when the weather is liable to sudden changes, and especially where the chicks have to be transferred a couple of times before reaching destination. I have learned also that it requires a little larger box and a little more ventilation for May shipments than March shipments. If possible, it is best to start the chicks off late in the day or evening, as it is natural for

them to be better contented at this time. I give the express company short, sweet orders, in big letters right on the top of the box: "KEEP WARM AND RUSH DELIVERY," and chicks from good, healthy stock, properly packed and handled, invariably arrive in good shape.

The attack on the chick industry sure bears the toe marks of being a retaliation for the falling off of business the past few years. While it may have affected the egg sales to a certain limited extent, it has also opened up an entirely new field, getting a class of customers that did not even own a chicken, much less an incubator or building. I have in mind a Mrs. Foutz, of our town, who early in the spring of 1912 bought 200 day-old chicks from me, and practically kept them in her sitting room until they were a couple of weeks old, in the meantime having a place built for them. She was very successful in raising them, and before spring came again had sold enough eggs to pay for the entire outlay for chicks, feed and house, and this year bought several hundred more. However, I will say that where you have the facilities and time, and especially where there is any great distance between buyer and seller, I would advise securing eggs for hatching. I would want them properly packed, that is, to insure safe delivery and prevent loss from breakage, insuring a good hatchable condition. It was the carelessness along this line that made many that have taken to the buying of chicks feel relieved from depending upon eggs. There has been just as much improvement in the method of packing and shipping eggs for hatching in the last few years as in any other branch of the industry, but there are still a surprisingly large number, including some of our largest breeders, sticking to the old methods. Shipping eggs in such a way that they do not arrive in hatchable condition is not cruelty; it is worse, for it brings disappointment and discouragement, after three weeks of patience and anxiety. This is hard for the buyer to forget. I believe, however, that while we may need, and eventually will get, rules laid down regarding the shipment of chicks that will eliminate the objectionable features of the business, that it will be well to look after the other branches also. You can go to the markets in any of the big cities and see the chickens crowded into coops until some are trampled to death. Not long since a crate of market chickens that had only been on the road an hour came into our express office with four trampled to death. Another case that struck me hardest, happened just a short time ago, when a coop of six valuable Buff Orpington hens from a well known eastern breeder billed to an Ohio customer, had three dead by the time they reached this part of their journey. They were simply smothered from having been packed in a box eighteen inches high and a trifle less than two feet square, with solid sides. Had the box been slatted on the sides it might have accommodated that number of Leghorns. So far as cruelty is concerned, some of the other branches of the industry are still pretty well afflicted. In closing, I want to say that I consider the chick industry a good, strong, healthy baby, and do not hesitate to predict for it a long and useful life.

## CHICKEN POX CONTROLLED BY VACCINATION.

**T**HAT CHICKEN POX or sore head, which is the source of enormous loss to the poultrymen of this country, may be controlled and very largely prevented by vaccination has been lately demonstrated by Drs. F. B. Hadley and B. A. Beach, of the College of Agriculture of the University of Wisconsin. They are responsible for the introduction into the United States of the Manteufel system of vaccination, which promises to be of economic importance to the poultry industry of America.

At the fiftieth annual meeting of the American Veterinary Medical Association, held in New York City in September, they reported their findings, which proved of unusual interest to the veterinarians attending that conference.

This disease, which has been known in this country since poultry raising be-

year. Early in October, 1912, several small poultry raisers in and about Madison sent hens, which were sick and others which had died from unidentified diseases, to the agricultural college for detailed examination. A diagnosis of chicken pox was made in several cases, from sections quite widely separated, before the outbreak occurred in the university flocks. Chicken pox was recognized by Professor J. G. Halpin, of the poultry husbandry department, among fowls on exhibition at several mid-winter poultry shows.

When, during the winter of 1912-1913, chicken pox appeared in the flock maintained at the Wisconsin Experiment Station, steps were immediately taken to control it. The infected birds were given the ordinary treatment and quarantines were established, but the ordinary methods of treatment and disinfection were found ineffectual in controlling the outbreak. Accordingly an attempt was made to make all the

A well-developed case of chicken pox. Note the nodules on the comb, wattles, ear lobe, eyelids and face. (Univ. of Wis.)

came extensive enough to be termed an industry, is often rapidly fatal and invariably greatly reduces the egg production of a flock. Its prevention or control is therefore a matter of prime importance to fanciers and farmers.

In the northern states, where the trouble usually occurs in the late fall and winter months, the prospect for recovery is good unless complications develop. The mortality is not great and depends to a large extent upon the condition of the birds when attacked, and the care and treatment subsequently given. Where a progressive form of the disease involving the mucous membranes occurs fatalities are more numerous. Blindness results when the mucous membrane of the eye is extensively involved. This makes it impossible for the birds to see food, and death soon follows. It has been found that, with good care and treatment, 90 per cent of the afflicted birds should recover, but if left to themselves 50 per cent may die.

This disease has been particularly prevalent in Wisconsin during the past

healthy fowls immune by a vaccination process. The treatment proved effective and seems to have solved the problem of prevention and control.

The vaccine treatment, which was first tried by a European, named Manteufel, consists in injecting under the skin a quantity of a specially prepared vaccine. It was used successfully last winter on several hundred fowls in the university flock and less than 1 per cent of the vaccinated and exposed fowls later developed the disease.

After closely watching the action of the vaccines in producing immunity to the disease the Wisconsin experimenters concluded:

That the vaccination treatment for chicken pox was most valuable when used as a preventive, where it was effective in fully 98 per cent of the cases.

That the immunity which resulted from the vaccination is estimated to be effective for 1½ to 2 years.

And that while the identity of chicken pox and roup has not been definitely proved, the similarity of

# Winter Eggs

WINTER EGGS and cleanliness are very closely related, in fact more so than most Producers imagine.

A great many Poultry and Egg Producers spend hundreds of dollars on so-called egg-producing foods; and, at the same time, shamefully neglect the interiors of their Poultry Buildings. This is neglect on the part of some and thoughtlessness on the part of others.

**IN ORDER TO GET** the most work out of Employees, Employers find it necessary to make the working conditions as attractive as possible. Buildings must be kept clean and sanitary. Walls and ceilings must be white coated so as to improve the light, and artificial lights must be placed in advantageous positions so as to throw the most light on the work-bench.

**MANY CONCERNS** have spent thousands of dollars to improve the light and sanitary conditions of their work shops.

**ECONOMY EXPERTS** consider this money wisely spent and true economy. When the interiors are lighted, it makes a longer day for the Employees' usefulness, it makes a more cheerful day and it makes conditions more advantageous to the productive abilities of the Workman.

**IN ORDER TO GET THE MOST OUT OF A MAN, IT IS NECESSARY TO MAKE HIS SURROUNDINGS AS PLEASANT AS POSSIBLE.**

**THIS SAME THING APPLIES TO POULTRY** and is more especially true in the Winter Months when the days are short and the nights are long. The interiors of Poultry Buildings should be sanitary. They should be white. They should smell sweet. They should be free from vermin.

**WHITEWASH WILL NOT DO THE WORK**, neither will Oil Paint. White-wash peels and will not kill vermin, while Oil Paint has no good essential except durability.

**PEERLESS POULTRY PROTECTOR**, the snow-white disinfectant coating, does kill vermin. It does produce a sanitary interior and a weather-proof coated exterior. It is a permanent coating and the cost is so small that the smallest Producer can well afford to use it.

**THIS SNOW-WHITE DISINFECTANT** is put up in dry powder form; and, when mixed with water, makes a liquid coating which can be applied to all kinds of surfaces with brush or spraying machine. It is especially manufactured for use in Poultry Buildings.

**IT TAKES ABOUT 5 POUNDS OF THIS MATERIAL** to make a gallon of liquid and, a pound properly mixed, will cover from 20 square feet on real rough surfaces to 35 square feet on smooth surfaces two coats.

**THE SMALLEST PACKAGE** is the 25-pound box which sells for \$3.00 but it is also put up in 100-pound Kegs, 200 and 350-pound Barrels. The price in the larger sized packages figure much lower in proportion.

**FIGURE THE COST FOR YOURSELF** and then you will recall that there is nothing on the market today for double the cost that will do the work which can be accomplished by using the snow-white disinfectant coating.

**REMEMBER THAT YOU GET A SNOW-WHITE INTERIOR** for only a fraction of a cent per square foot and you can use the same material for outside work provided you use two coats. It makes a weatherproof job which will last two years on the average surface.

**WE GUARANTEE SATISFACTION IF PEERLESS POULTRY PROTECTOR IS USED ACCORDING TO OUR PRINTED DIRECTIONS.**

**THIS IS OUR BUSY SEASON; AND, IN ORDER TO INSURE PROMPT SHIPMENT, YOU SHOULD SEND MONEY ORDER AND SHIPPING INSTRUCTIONS AT ONCE.**

**Peerless Poultry Promoter**  
Port Richmond, New York

these diseases is so great that it seems possible to control roup by vaccination.

The virus used in this vaccination process may be prepared by any well qualified veterinarian or expert poultryman. As its cost is not high, the remedy is considered particularly practical and effective.

(Note.—The above comes to us as a bulletin for publication from the College of Agriculture of the University of Wisconsin. While we are still "from Missouri" in this matter of vaccination for chicken pox, we are willing and even eager to "be shown," and we will welcome from Drs. Hadley and Beach further and detailed information concerning the virus, the disease as observed by them and their treatment, with results obtained. At the present time the rather meager information furnished seems to have, to say the least, a rather broad scope for virus and a somewhat limited period and field of observation. We hope we may receive more complete information soon. It is an important matter.—Editor.)

### SUCCESS WITH POULTRY ON LAND VALUED AT \$1,000 PER ACRE.

By John Y. Beaty.

HERE is the story of a California man (or rather a man and his wife) who has made good with fowls. It is given in his own words, because it could scarcely be written more interestingly.

"Starting with only enough to build a brooder house, my wife and I have built up a flock of 3,000 laying hens that bring us an income better than is received in most salaried positions. From our experience, I do not hesitate to say that a man with an extra \$500

cannot invest it to better advantage than in a flock of chickens.

"Ours are the White Leghorns—we raise them for the eggs. Most everyone here has the same breed, so it is easy to add to the flock by purchase if we don't care to raise the chicks ourselves. Baby chicks can be purchased at a day old for 10 cents apiece, and many who do not care to bother with incubators, renew their flocks in this way.

White Leghorns are used on the \$1,000 land.

"When I said '\$500,' I didn't mean that it was necessary to have that much to start in to raising poultry. I have known men who didn't have more than a shoestring to go into poultry raising, and who make a success of it.

"Again, I have known men who sunk \$30,000 to \$50,000 in the business. It all depends upon the man. As an average, I think the man with little capital is better equipped for the venture than the one with too much money.

"I believe our success has been due to the fact that we have learned to know a good hen when we see her, and know how to feed her to make her produce the most.

"It requires four or five acres of good fertile soil and a bountiful supply of good water to run a flock of 3,000 layers. But important as these are, they do not make the profitable egg farm. With all the other advantages, the farm must be near a good market.

"Eggs must be marketed cheaply and quickly, and the nearer one is to the market, the more regular and the larger will be the income.

"I believe one is justified in using land that is worth from \$300 to \$600 an acre for poultry, providing that land is near a good market. My own poultry is grown on land that is easily worth \$1,000 an acre, and I realize better returns than on \$150 land located farther from the market.

"I would not advise anyone to work with less than 2,000 laying hens. It will take that many to make a comfortable living and put an emergency fund in the bank. Of course, one don't need to buy that many on the start, the flock can be increased gradually. By setting aside five acres, you can start with 1,000 hens and increase to 4,000 hens, which is the capacity of five acres if all of the green food is to be raised.

"With a system of double yards and plenty of water, the yards can be kept free from taint and disease. Most farmers leave the work of caring for the poultry entirely to the wife. Her judgment is often best, but the man of the house should do his share of the heavy work, for he benefits by the results."

The fact that thirteen is the number of eggs generally placed under the sitting hen ought to make every superstitious henist feel that they are immune from any and all demons of the superstitious world. No other superstition is so widespread and far reaching in its supposedly evil influences as the number thirteen; yet with the henist it is the number which he thinks insures the best hatch. "What a world of grown-up children we surely are," magnifying the little things and minimizing the big things. "Our joys are fleeting; our sorrows never forgotten," writes the poet. The general run of men who do things in hendom move so smoothly and unobtrusively that they are hardly ever taken into account, whereas the would-be's make loud noises from the hilltops against their common enemy "bad luck." Thus it is that failures are listed in black faced type and successes in small print.

Mandy—"Whar'd you git dat chick-en, Mose?"

Mose—"Skuse me, Mandy; I can't tell a lie an' I don't wanter commit myself."

# Current News of the Poultry World

by J. F. Shureman

The Missouri State Poultry Show will be held in the Convention Hall, Kansas City, instead of in Chillicothe as had been planned. The change was made because the building being erected in Chillicothe will not be completed in time for the show.

Mankato, Minn., lays claim to being the second largest poultry center in the United States.

Don Raefel Carrion, the pioneer poultry raiser of San Juan, Porto Rico, has come to this country to study our methods of raising poultry and will spend most of his time on the big poultry farms in the vicinity of Roosevelt, L. I. He will also visit other large plants over the country, famil-

a dozen. During that time 876 chickens were sold which brought \$673.20. He estimates that with the eggs used at home, on the table, for setting, etc., his gross receipts will be \$3,200 for the year, with an expense of \$1,200, leaving a profit of \$2,000 for his work.

After several years of experimenting, Rev. James Houghton, pastor of the Universalist church in Hutchinson, Minn., has developed and perfected a new type of chickens which he has named Shawnees. He has a flock of about 200 of them and claims they breed true to type and color. The male bird has a black body, legs and tail, the hackle and saddle are white, the wing bars green and black, and the back and wing bow a deep cherry

G. M. Waters, a poultry buyer and shipper in Morrice, Mich., looked over his books recently and discovered that poultry prices are now the highest they have been in thirty years. Showing how prices have advanced, Mr. Waters says that at this time of year thirty years ago he was paying five cents per pound for hens, while today he is paying thirteen cents. Thirty years ago it was predicted that the business would be ruined by an overproduction, but the production and the prices have both steadily advanced.

At a meeting of the Wisconsin State Poultry Association, held in Oshkosh early in October, the following officers were elected for the ensuing year: President, C. R. Morgan, Oshkosh; vice president, C. A. Smith, Oshkosh; secretary, Frank Pugh, Oshkosh; treasurer, E. E. Beals, Oshkosh.

A brand new variety of Leghorns was shown at the recent poultry show conducted in connection with the Allentown (Pa.) fair. They are called Rainbow Leghorns, being true Leghorn type and with plumage that resembles the plumage of the English pheasants.

No admission fee will be charged at the coming exhibition of the Winona County Poultry Association, to be held in Winona, Minn. An increase in the entrance fees and the appropriation from the state has enabled the asso-

## WARREN HATCHERY CO.

A. A. Carver and family, Seville, Ohio, whose Queen Quality Reds put Seville on the map.

iarizing himself with American methods of raising and caring for the birds. Eggs sell at 50 cents per dozen in Porto Rico the year around and poultry is proportionately high.

The Rochelle Poultry Company, of Rochelle, Ill., recently made a shipment of 70 tons of chickens to a firm in Chicago, for which they received a draft for \$40,000.

Governor W. C. McDonald of New Mexico donated a magnificent and massive silver cup, handsomely engraved, as a premium in the poultry department of the Texas-New Mexico State Fair in October. The governors of other states might do likewise.

L. K. Cogswell, the well-known poultryman of Chehalis, Wash., reports that on half a city block in Chehalis during the past eight months he produced 60,000 eggs, worth an average of 30 cents

red. The undercolor is slate. The female is steel gray, with laced hackle and salmon breast. He used Brahmas, Leghorns and game fowls in producing this new breed.

Articles of incorporation have been filed by the Sunshine Poultry Farm of La Crosse, Wis., the capital stock being \$30,000. The incorporators are: S. Y. Hyde, Jr.; J. H. Boynton and G. M. Erickson, all of La Crosse. The company will engage in the poultry business on a large scale.

Turkey growers in the vicinity of Cuero, Tex., are getting ready for their annual "turkey trot" this month. Cuero is the center of a rich turkey raising country and the marketing of the birds calls for an annual celebration in which the governor and his staff join. The turkeys are driven to market in great herds of thousands of birds.

ciation to open the show to the public without admission charge.

A unique lawsuit was settled in Omaha in October in which the court officially placed the wages of a hen for hatching out a setting of goose eggs at 97 cents and gave her owner judgment for that sum against the owner of the eggs. Two lawyers represented each party and the case occupied the attention of the court for nearly three days. The owner of the eggs threatens to appeal the case.

M. J. Thompson and R. R. Bly have purchased a 30-acre tract of land near Eugene, Ore., and will engage in the poultry breeding industry on a large scale. They are erecting pens to care for 6,000 laying hens and expect to market their product in Portland.

At the recent annual convention of the National Poultry, Butter and Egg Association, held in Chicago, W. F. Priebe, one of the big Chicago shippers, made the statement that eggs broken on the way to market represent \$75,000,000 a year in wasted energy on the part of the American hen. About \$1,000,000,000 per annum, he added, is the value of the total egg output of the hens of the United States.

The International Correspondence School, of Scranton, Pa., is negotiating for the purchase of the Rancocas Poultry Farm at Brown's Mills, N. J.

### REASONS WHY THE WHITE ORPINGTON HAS COME TO STAY.

By O. W. Aldrich, of Aldrich Poultry Farm.

WHEN a variety of fruit, vegetable, grain, animal or fowl comes on the market, the question arises, is this variety as good or better than those already popular? If not, even if widespread advertising makes it popular, it will not last. In order to become a standard or established variety it must equal or excel its competitor in such matters as required by the masses, it must not only appeal to the fancier, but must be a general purpose fowl. This is especially true when there are already varieties which have merits and fairly deserve popularity.

In applying this test to any breed of chickens it is well to consider briefly what are the requisites to make a general purpose fowl. The first things to be considered are its utility qualities. We need poultry for meat and eggs, and we need breeds that will produce these with the minimum of cost. If we can add other desirable traits such as hardiness, beauty of form and color, adaptability to varying conditions, etc., we have a bird that cannot fail to gain not only a temporary success, but one that must of necessity become standard and take the place to which its merits entitle it.

When we apply these tests to the

White Orpington, we firmly believe that no variety which has ever been developed has a greater claim to the regard of the people either as a utility fowl or one for the fancier.

Do we want a good layer? There are very few varieties that will produce as many eggs, or as great a weight of eggs, in a year as this, and still fewer that will furnish these eggs in winter, when the price is high, and those few varieties are inferior in many of the qualities which are desirable in poultry. They generally are inferior in weight and in the present state of the meat market we must depend very largely upon poultry to make up the deficiency in the beef, pork and mutton supply. If, then, we have a variety of poultry that produces the same weight in eggs, with from 60 to 80 per cent more meat; this of itself makes one of the strongest inducements to grow it and the quality of the meat also counts. While the smaller birds may equal the White Orpington in fineness of grain, there is none superior and but few equal in flavor and sweetness, and no person who has tasted the meat of a White Orpington will have much use for the coarse-grained Asiatic varieties. The White Orpingtons are quick growers and fairly quick in maturing.

On our farm we have raised the young to broiler size—1¼ pounds—in from five to six weeks, less than half the time that the largest Leghorn farm in the world claims that the Leghorns are fit to use as broilers; and at six months old we have laying pullets

## Don't overlook big free poultry book offer on back inside cover

### R. AND S. C. BLACK MINORCAS AND R. C. BROWN LEGHORNS

We are offering for sale hundreds of breeders and show birds at mid-summer prices. Prize winners at Chicago, New York and St. Louis are being offered at reduced prices. We can supply you in pullets and cockerels in almost any numbers, as we raised 3,000. Remember we can fit you up with a show string to win at any Fall fair. Our Special Buying Position Is Offered to You—It is our ambition to place 3,000 birds in the hands of honest people. Order whatever you are wanting, make a small deposit and the balance can be settled in monthly payments. Our mating and Summer price lists are free. Send five red stamps for our big catalogue. ## Forced Sale S. C. White Leghorns BIGGEST BARGAINS EVER OFFERED

Seventy-five per cent of my entire stock consisting of more than 1,200 Peerless Exhibition Strain White Leghorns must be sold before January 1, 1914. The severe tornado of last March devastated three of my largest and best coops (together with my home) and I am not in shape to carry over such a large stock of birds. Also, to be perfectly frank, I am short of funds to rebuild as contemplated. In this sale are dozens of young birds better than the finest individual male and female that I ever owned in previous seasons. My birds are reared under ideal conditions and for vigor and immunity from disease they have no superior. Owing to the circumstances, I am offering you

### Exhibition Birds at the Usual Utility Prices

and every shipment on approval. Furthermore, I guarantee sound health of birds for thirty days after arrival. Foreign shipments, same terms.

SPECIAL MATED PENS OF (12) clean-cut, young hens and (1) big, vigorous, showy cockerel, only \$25. These hens are of splendid type and I will use a cockerel to make every one of these pens worth double the price asked. Score card [by myself] with each bird if desired.

Remember PEERLESS EXHIBITION STRAIN WHITE LEGHORNS are larger than most Leghorns and lay a much larger egg. Also that for more than fifteen years they have been bred very carefully for increased laying qualities and vitality. The finest blood from reliable Eastern strains has been used annually in replenishing.

I HAVE SEVENTY-FIVE FINE EXHIBITION COCKERELS that I will let go for half what I ought to get for birds of their quality. Also Ten Cock Birds on the same basis. In this lot I have fully a dozen birds that are BETTER than my FIRST PRIZE AND CHAMPION COCKEREL at CHICAGO, DEC., 1911. My male line this Fall would be pretty hard to match anywhere in this country.

FOREIGN SHIPMENTS HANDLED TO ADVANTAGE. "HAWERA, NEW ZEALAND, May, 1913. Birds arrived in excellent condition and I thank you for fine selection and fair treatment. Respectfully, PERCY L. JEFFRIES" These birds travelled some 9000 miles and the total transportation charge on the three birds was less than \$25.00.

Extra Special 100 extra big and vigorous Cockerels well up in fancy points and just the thing for egg farms for new blood, 2 for \$5.00

and absolute satisfaction or your money back. Write at once for particulars with lowest price for just the birds you want.

LEON C. HUNTINGTON, State Vice-President Am. White Leghorn Club Box 12B, OMAHA, NEB.

weighing 7 pounds and cockerels 9½ pounds this year. No other fowl can excel the Orpingtons as broilers, as they have a greater fullness of breast than any other variety known to us.

They can be successfully grown and kept over as great a range as any other fowl; they will thrive in the moist and cool climate of England, their native home, and in the hot and dry climate of southern California; of Australia and New Zealand, and also in the cold climates of Newfoundland and British Columbia. We make a good percentage of our sales in Canada and Newfoundland, with a large proportion in Manitoba and British Columbia, and we have sold birds and eggs in every one of the United States, and we have yet to hear from any locality that the White Orpington does not do as well as any other class.

The hens are docile and quiet and a five-foot fence will keep them without roofing over your farm with wire netting to keep from paying damages to your neighbor's garden. They are good foragers and active for so large a bird, good setters and the best of mothers, but are not hard to break up when broody.

Thus we see that they are possessed of every quality needed by the people at large, and one has only to see a flock on the lawn or in the breeding pen to say that there is no fault for the amateur or fancier. White in plumage, red in comb, lobes and eyes, beautiful in shape, unexcelled by any other, they are the pride of their owner and the delight of the beholder. Besides this, they are very susceptible to improvement at any point where they were originally lacking, when properly bred and mated. When first sent out in England, many of them had white in lobes and wattles; were pale in eye and with blue tints in their legs, which resulted from breeding back to some of the features of the Leghorn and the Hamburg.

In England these things were not considered as disqualifications, and but little care was taken to correct them, although to the American breeder they are decided blemishes, and at first greatly detracted from the success in introducing the breed to the masses, but our experience shows that with proper care in mating these defects can be bred out and the bird can be bred as true to the standard required by the American fancier as any other variety known.

At first the plumage of the male, like that of all other white varieties when first introduced, was liable in our hot and dry climate to take on a creamy or brassy tint when exposed to the weather, and at this point we wish to say that when imported birds, raised in the cool and moist climate of England, have been here a few months they will show that, if possible, their color becomes worse than that of birds hatched and grown in this country. Of course, looking upon this as a defect, breeders desiring to improve the variety have for the last three or four years been breeding to secure a bird that would stay white and not require even the slightest bleaching for the show room. Those who have followed the show room for the last three or four years all know what decided advances have been made in color, and our experience now is, and we have demonstrated it within the past two years, that the White Orpington can be bred to as pure a white as

any of the older white varieties.

Another thing should be considered in the breeding of this variety if we do not wish to retrograde. In England meat is more valued than eggs or beauty, and there is a tendency there to breed the White to the shape of the Black, to increase size almost to that of the Cochin or Brahma, and by the infusion of Asiatic blood to get a fluffiness of feather and cushion. In following this method of breeding we foresee the greatest danger to the White Orpington. In the discussion at the last convention of the American Poultry Association at Atlantic City it was shown that this last method of breeding the Blacks had resulted in a great loss in their egg-producing capacity. Excessive size results in clumsiness, loss of activity, and decrease of fertility, as well as loss in egg production, and we say to American breeders of White Orpingtons: "Do not accept birds of the Cochin or Brahma type for White Orpingtons," but demand them with their fairly close plumage, their present weight, and their present egg productiveness, with their fine-grained, tender and sweet flesh, and you can rest assured that you will be satisfied with them and that they have come to stay. We are glad to see that the committee upon the revision of the Standard, in making changes in the White Orpington variety, have made changes which recognize the fact that there has been a tendency to breed the bird too low down, and with too short a body, and have provided for a little longer shank

and a longer body than in the present Standard.

As to the demand for birds of this breed, we have demonstrated that when breeders do the fair thing by their customers and send them birds and eggs that are worth the money paid, they need not fear that they will lose their business. Our trouble is, not that we fear that we will not be able to sell all the eggs and stock we can raise at fair prices, but that we cannot raise enough to supply the demand upon us.

The popularity of this variety as a show bird is clearly demonstrated by the fact that at the large or medium shows throughout the country during the last year the White Orpingtons have in nearly every case equaled the number of entries of the other most popular varieties, and in the great majority of cases have been the largest in number. A variety with the merits of this one for utility purposes, and which so commends itself to the amateur and to the fancier, must certainly retain its place as one of the most popular fowls in England, Canada and America.

S. C. White Leghorns White Wyandottes  
Imperial Pekin Ducks Rouen Ducks

Excellent Cockerels, Pullets and Pens For Sale both for Utility and Exhibition Purposes. Our Ducks are winners at Philadelphia, Camden, Ambler, Baltimore, Allentown and Hagerstown.

THE ART OF CAREFUL SELECTION.

TO those contemplating taking up the chicken business, and who are undetermined as to the best all-round variety to take up, I can heartily recommend the White Orpington, for, by careful selection of breeding birds, one can raise both high-class specimens of cockerels and pullets from the same mating, for we have proven this beyond doubt this season.

Our earliest cockerels and pullets, hatched on February 4th, weighed on July 9th 8 pounds and 6¼ pounds respectively, which shows the rapid growth and development they make for their age; these pullets will commence to lay very early in the fall, just when we most desire eggs, and lay right through the winter months; if properly housed and fed the severest weather will never check their laying.

Last year we had our breeding pens mated in open-fronted colony houses, and our birds were laying well in January, which was very mild, but during a very cold spell in February which lasted about 10 days, when the thermometer dropped far below zero, these birds con-

tinued to lay as though the weather had not changed a particle.

As a table fowl the White Orpington cannot be beaten, for the meat is delicious and juicy; this chicken, being a very deep-keeled bird, has more plump breast meat than almost any other breed. If they are properly fed and cared for they should make 2 pounds each 8 weeks after hatching; we average cockerels on this farm that weigh 4 pounds at 12 weeks old and pullets 3 pounds—this makes them invaluable as broilers, for they can be so easily put on the market at so little cost.

Considering their exhibition qualities, to obtain the most satisfactory results one should start with the very best, mating them carefully and correctly. I know of no other breed where one gets so high a percentage of good birds and so low a percentage of culls, and I have been raising chickens all my life, and bred many winners—Wyandottes, Orpingtons, Plymouth Rocks, and most varieties of standard bred fowls and bantams.

I never realized, until this year, that it was possible to produce, through careful study and selection in mating, such universal quality in one season's breeding, and we have advanced over 100 per cent on the parent stock; for instance, one of our best males, a true Orpington in every point, with the exception of being a little weak in eye, was mated to strong-eyed females of ideal type and color, and of 106 chicks from this mating, only two showed a

light eye, and they were stronger in eye color than the male bird. I took a pen of eight prize-winning females that were a little weak in eye, mated them to a male bird, a winner at one of America's greatest shows, with a perfect head, fine five-point comb, and fiery red eye, and up to the present time I have not found a chicken from this pen that has not got a beautiful head and comb and a strong red eye, while at least 90 per cent were of ideal type and color; in fact, all of our pens were mated to produce the very best results possible, and our percentage of red eyes, sound lobes, five-point combs, with excellent color and type, is simply wonderful.

So I feel that the man who is thinking of starting in the chicken business is safe and wise in selecting the White Orpington, for as when the utility qualities of the Orpington are thoroughly known throughout the world, the demand, which is now so great, will become tremendous, there is no breed that will adapt itself to different climates so well, for I have personally visited Orpington farms in South Africa, Australia, New Zealand, Canada, America, and every well-known one in England, and I have never yet met a breeder who would exchange the White Orpington for any other fowl, which goes to prove beyond doubt that they have no equal.

Most of the best and noted poultrymen of the world today who are making poultry famous and are organizing the poultry fraternity are enthusiastic breeders of Orpingtons.

In concluding this short article, I would like to say, "Let us all try to give the worthy Orpington the place it so justly deserves."

Len Rawnsley.

## Newtown Giant Colony Brooder

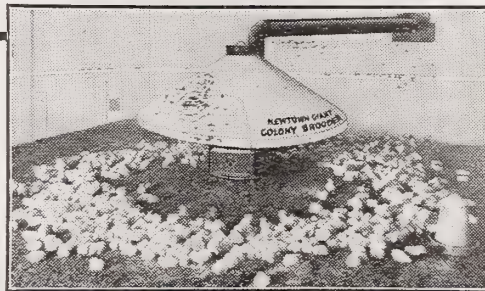

It runs itself—use in any building. It's purely automatic in feeding coal and regulating heat. You want a Giant brooder that insures perfect ventilation, room for exercise, right temperature, no crowding, no worry.

## Raises More and Better Chicks

Leading poultrymen are all enthusiastic over this Giant Colony Brooder. You will be, too, when you see it. Two sizes—No. 1, for up to 500 chicks. No. 2, any number up to 1500. Ask your dealer. If not there, write to us for Colony Brooder Circular A.

NEW ADDRESS

Newtown Giant Incubator Corp. Harrisonburg, Virginia

The poultry feeding station of the F. M. Stamper Produce Co., at Carrollton, Mo., is said to be the largest institution of this kind in the world. Forty thousand birds can be taken care of in the fattening pens at one time. The company maintains its own cold storage system, electric lighting plant and all modern equipment.

A special train, consisting of five carloads of eggs, four carloads of live poultry and one carload of dressed poultry, left Morristown, Tenn., on July 12, making a total of eleven cars of eggs and nine of live poultry shipped from that place during the first twelve days of July.

Ralph Searle, of Topeka, Kans., has been appointed vice director of the Missouri State Poultry Experiment Station at Mountain Grove.

## Good Things for Everybody

Helen F. Woods  
Editor

The baby was crying, she didn't know why  
The dinner was burning and she couldn't save it.  
She'd a pain in her back and a tear in her eye.  
And it wasn't her fault, she could make affidavit.  
In college she'd learned such details as just how  
The ancient Egyptians wrapped linen 'round mummies,  
But how could that help her to find out, right now,  
How to wind flannel bands around small yankee tummies?  
So "Rock-a-by, Baby," she sang to the girl,  
Who kicked in her arms and strongly protested,  
"I wish that the teachers who set in a whirl  
My brain in this jumble could just be arrested!  
Rock-a-by, Baby! And let us agree,  
If ever by luck or God's grace I can raise you,  
I'll teach you the things that they didn't teach me,  
And maybe your children will rise up and praise you!"  
—Ted Robinson.

**W**OULD IT NOT prove interesting, in this day of high cost of living, if at the end of a week, or a month, or a year, the housekeeper could sit down in some quiet corner and sort out the wheat from the chaff in her expenditures? We all know that it is costing more and more to live, and that the necessities are actually higher than they were a few years ago, but how much of the family income is scattered to the four winds for nothing in particular is well worth finding out.

There isn't any better way to get at the root of the matter than by keeping accounts. The fact is, even in the best regulated families, a well kept cash account is a good thing to read over occasionally. It gives such an insight along the line of one's natural tendencies. It shows as nothing else can show where the family income has made its exit. So it is unfortunate, but nevertheless a fact, that only about one housewife in fifty keeps a cash account. It is not to be supposed that one in fifty has the time in which to do it, but taking into consideration the little time the average housekeeper has at her disposal after the "must be done's" are out of the way, there is probably no better way to make the best of it than by keeping accurate accounts of the family's expenditures. Frequently the reason given for neglecting this matter is that so little cash goes through the housekeeper's hands that an accounting seems out of her province.

There are women unfortunately, as there are men, totally unfitted to have the spending of money. They either never had an opportunity to learn its value or they were incapable of learning. But it can hardly be expected that a woman who is unable to purchase supplies wisely, will be able to prepare or use them to the best advantage. She is either deficient along the line of making "two blades of grass grow where one grew before" in her household affairs, or she is able to carry them through successfully—and if she cannot manage her household affairs with some degree of wisdom, it would prove greatly to the advantage of her family as well as herself if she tried another line of work better suited to her capabilities; since there are other ways that a woman

may prove her usefulness: If she has not the natural ability for exercising some degree of household economy and seems unable to acquire it, there is no way she can so easily show her utter uselessness and extravagance as in the attempted management of household affairs.

So let us get down to bed rock as

no stated amount of funds at their disposal, and "buying on a book" has become a habit with them, with no fixed amount for a given length of time. No one is ever able to manage finances successfully in this slipshod fashion. If a man works for a company that provides him with so much credit for his labor, and a book to have the account kept in, he never accumulates much wealth, and if by chance he should suddenly become possessed of wealth, he would not have the ability to use it wisely or well. His faculties in that direction have so long remained dormant that money—actual cash, in his hands would easily and naturally slip through his fingers. He has so long worked for a mere sustenance that he has no ability to plan or formulate ideas for the accumulation of funds for his hour of need.

First prize pullet at Illinois State Fair and Green County Fair

soon as possible and see in cold black and white what the family income is buying. After a week or two or a month of this, we may be able to see what it had best not buy, or wherein it could buy greater value. The great difficulty with hundreds of housekeepers has been that they have never taken the trouble to get at the root of the matter, chiefly because they have had

It is altogether a wrong idea for a person to attempt to conduct a business without some idea of the means by which it is to be carried on. For, once knowing the amount at hand, a plan can be found that will keep the necessary expenditure a little inside of it, if a concentrated effort is made to do so.

Along this line Edward W. Bok, in

## POULTRY FLATS

Are sure to revolutionize poultry raising for profit. Build one and you will always be glad. Not half the work and that done out of wind and weather. Need not move three feet from one spot to water, feed and clean. No brooders to buy. Each flat will brood 600 chicks. Build as many as you like. Raise all you want. One occupies 24x36 feet of ground and includes six runways. They have been erected in every state in the Union. No business today is so safe and sane as the poultry business when properly conducted and you do not need much money to start. One man made \$800 the first year from one flat.

He tells you all about it in the book, Poultry Flats, also twenty-four others from nearly as many different states tell you what they have done with this new and easy way of raising poultry. This book tells you about the Ott-Omatic Fountain, whereby you can water 10 000 birds as easily as one.—No work. You do not need a section of land to make money from poultry. The book tells you why, also about the ten point perfect laying house, line-breeding guide and many other things that we all ought to have known long ago.

Poultry Flats is one of the greatest side lines yet. It works while you work as well as while you sleep.

Send us ten cents in coin or stamps and we will mail you this 124-page book, or better yet, send 25 cents and we will send you a six months' trial subscription to our paper, recognized as one of the best published and also send you FREE this book, Poultry Flats.

Under no circumstances build or buy until you have read this book. Address

**Inland Poultry Journal**  
SPENCER BUILDING  
Indianapolis :: Indiana

the October Ladies' Home Journal, asks his readers some very pertinent questions, and ones which, but a small proportion of housekeepers can answer intelligently. Mr. Bok is undoubtedly entirely correct in his supposition that an investigation of one hundred homes taken at random, as to how practically and intelligently the women at the head of these homes are spending the income brought into it, would result in showing a more or less lax state, in the spending of the family income. Statistics show us that American women have the spending of seventy cents out of every dollar whether they handle the cash or not and certainly, seventy women in a hundred are unfitted for this undertaking. Probably a much greater per cent. Most women marry and take over the management of a house and family without knowledge as a backing, but they can in marriage. There are always plenty of takers, no matter how great the chances for losing out.

Undoubtedly, there will be a day of reckoning as Mr. Bok tells us. In truth, is it not at hand? Have we not been weighed in the balance and found wanting? And for this very reason, resent conditions that have caused our unfitness. No woman ever as the manager of a household but that regretted her lack of training and that is the chief reason why the "women are getting restless" as Mr. Bok puts it. Thousands of them are realizing their unfitness for their work as housewife and housemother, and there will continue to be more or less unrest in this quarter until the training and fitness for this work has begun with the children, "for the housekeeping and homemaking of the future are not going to be what they have been in the past, or are today."

All the questions, however, which Mr. Bok puts up to womankind, while she may study them with advantage to herself, do not properly belong to her. The men make the laws and fill the offices. They are paid to see that the grocer's scales are honest scales, they are paid to see that food labeled as "pure" under the pure foods act, is pure, they are paid for the inspection of milk and meat and if these foods have passed the inspection, how is the housewife to know when it is not properly done, as is often the case. The inspection of meat is such a farce in most instances that if it were not so serious a matter it would be ridiculous. Watch the inspector, stamp in hand, as he rapidly imprints the well known purple inspection label, on beef, lamb, veal or pork, talking politics or the weather meanwhile with a crowd of bystanders, while the carcasses of meat are rapidly passed in front of him. Yes, there would have been occasion for a pure food law even if the women had been competent buyers, and there will continue to be need for such a law and the enforcement of it as long as foods are manufactured and put up for sale. And the thing that would be the least conducive to the discontinuance of such a law, would be a lowering of prices on staple food articles. Pure foods cannot be produced and sold for the prices they once were. Mr. Bok asks, "why are eggs fifty cents a dozen?" and "why should they not be thirty cents instead of

fifty cents?" The American woman at the head of the average home perhaps cannot answer these questions, but if she ferrets the matter out, she will find that first quality eggs cost fifty cents a dozen, because they cannot be produced and sold for a profit for less. Producing first quality eggs and selling them for thirty cents a dozen would mean a loss to the producer. Cheap eggs can be bought in practically all markets but the purchaser is not getting any more than he is paying for, and if he wants real eggs, he should pay fifty cents a dozen for them; and it is the same thing with milk and other staple articles of food. The difficulty lies not so much in the housekeeper having to pay fifty cents a dozen for eggs, as that of through a lack of training in her chosen work, she is unable to differentiate between the egg that is worth it, and the one that is in many cases not even fit for human consumption. The freshness of an egg can be told by the appearance of the shell; its purity and "well-fedness" can be told by both the looks and taste of the contents and every housekeeper ought to be able to know a good egg when she sees one. But with butter, a manufactured product, unless the adulteration is marked in taste or smell, how is the housewife to recognize it? The employment of experts with needed apparatus for conducting such investigation is much more to the point for this purpose. The housewife is out of her province attempting it.

This important work of a better knowledge of housekeeping and home making must be carried more extensively into the schools, for obviously if the mothers of today do not know themselves, they cannot teach their daughters. But it will necessitate not only a much larger expenditure than has been made in this direction heretofore in the public schools but a keener and broader knowledge of the subject in hand. It will require the services of instructors "born to teach" and those knowing whereof they speak. The American woman has found that housekeeping is a big job, and that with all the branches that come under this head, there is no other undertaking calling for such all round competence.

## SHOEMAKER'S POULTRY BOOK

AND ALMANAC.

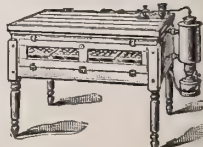

There is nothing in the world like it. It contains over 200 large pages, with many fine illustrations. A number of BEAUTIFUL COLORED PLATES OF FOWLS—showing them in their natural color. Tells all about all kinds of thoroughbred chickens, with like-like illustrations. Prices of eggs for hatching and fowls for breeding purposes. TELLS HOW TO RAISE POULTRY SUCCESSFULLY, their care and management and how to treat all diseases common among them. Gives illustrations and descriptions of convenient poultry houses, and plans to build them.

ALL ABOUT "GLOBE"

## INCUBATORS & BROODERS

with fine illustrations, complete description, and lowest prices. ALL ABOUT OPERATING THE INCUBATOR. This chapter is marvelously complete, and worth much more than the price we ask for the whole book. This Poultry Book is worth dollars to anyone interested in the raising of fowls. IT IS AN ENCYCLOPEDIA OF CHICK-ENDING, and no one can well afford to be without it. Will be mailed to anyone upon receipt of only 15c. Money refunded if not pleased.

C. C. SHOEMAKER, Box 605, Freeport, Ill.

# Recent Inventions for Poultrymen

By *Bester L. Sargent, Patent Attorney, Washington, D.C.*

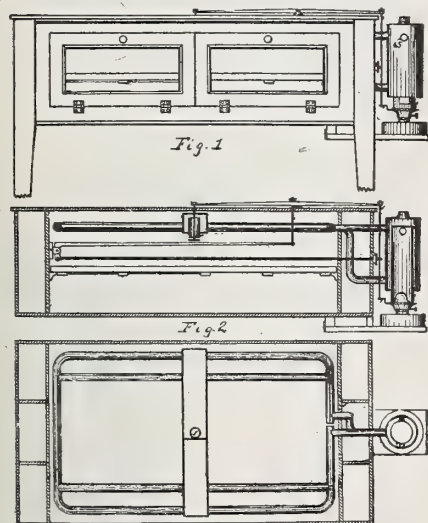

**P**OULTRY inventions patented during September include an incubator, an egg tester, a drinking fountain, a hover, a brooder and new devices for the shipment of eggs.

Several novel features appear in the new incubator. One of these is the new thermostatic control. This consists of a bell-crank lever pivoted to one wall of the chamber, connected by rods with a cover so as to open the vent for the admission of steam to the chamber below as the temperature rises and to close the vent as the temperature drops. This effects the desired result of the maximum of moisture supply to accompany the maximum of heat. The inventor depends entirely upon the gravity action of the bell-crank lever and the expansion and contraction of a thermostatic rod connected

moved, those resting upon the slide are moved over on the screen so that by the time the eggs hatch the slide is clear, may be slid back under the wire and an opening provided for the chicks to go down into the nursery area. This gives a substantial increase of egg capacity in any given tray. The patent rights have been sold by the inventor, Edwin W. Andrews, of Buffalo, N. Y., to John Jepson and Emma U. Andrews, trustees, both of Buffalo, N. Y. Patent 1,073,314.

Leslie W. Potter, of Rockford, Ill., is the inventor of a new hover for chickens, designed to provide thor-

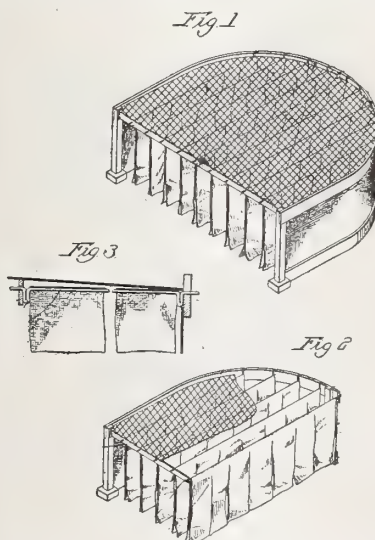

George Thomas Cripps, of Toronto, Ont., Can., has patented the egg tester illustrated. In it the egg is illuminated

Incubator, patented September 16, 1913, by Edwin W. Andrews, Buffalo, N. Y. No. 1,073,314.

with it and arranged to govern the lamp flame as well as to regulate the moisture supply, thus dispensing with all springs or weights. In the illustration, 29 indicates the thermostatic rod, which operates the cover to a vent leading from the water tray and also operates the vertically movable sleeve which fits over the wick tube. The elevation of this sleeve upon the flame has the same action as turning the wick down. Air circulation flues are provided at the ends of the incubator, and the piping for water circulation is disposed near the top of the chamber for uniform heating.

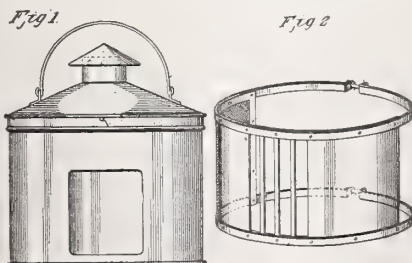

An interesting feature of the egg-tray arrangement, not covered by the claims, is the employment of a thin wood slide to form a flooring for a part of one section of the tray. The wire screen is cut away over this slide, but the tray is entirely filled with eggs. As the incubation process goes on and sterile eggs are found and re-

Hover, patented September 2, 1913, by Leslie W. Potter, Rockford, Ill. No. 1,072,029.

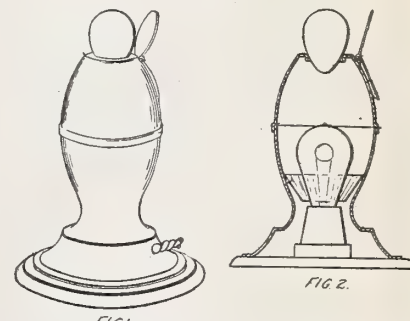

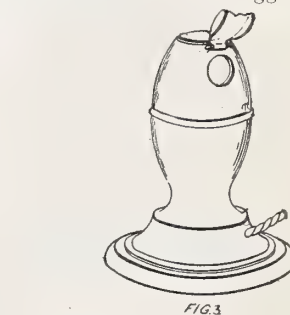

ough ventilation. The semi-circular frame is provided with a wall of fabric. The top consists in a removable screen. Patent 1,072,029.

James A. Elliott, of Sycamore, Ill., is the inventor of a new brooder for incubator chicks. It is of cylindrical

# Win With Good Layers

**T**HERE is no need to keep White Leghorns that are not good layers just because you want prize winners. **Ferris Leghorns** have been bred for eggs and exhibition more than thirteen years. They have been trapnested and only the best layers used for breeding for so many years that **laying qualities are bred in the bone.**

Trapnested records of 160 or more eggs a year are required from all our best exhibition birds. We never breed from birds that fall below this standard, no matter how good they are from an exhibition standpoint. This is why the laying qualities of Ferris Leghorns are so widely known. Size, health, vigor are present in every bird—we raise no other kind.

Standard qualities are given extra attention. If you could see the hundreds of fine exhibition birds we have for sale you would find just the birds you have always wanted. They have splendid shape in every section—good heads, long concave backs, low wide spread tails. Their plumage is perfectly white, their shanks are a deep yellow. They are the kind that are winning for our customers all over the United States in strongest competition.

## Ferris Leghorns Win

Here are a few of the recent winnings that help establish the superior quality of Ferris Leghorns:

**Iowa State Fair, August, 1913**—Silver cup for best cockerel and numerous other prizes.

**Maryland State Fair, September, 1913**—First and second cock, first and second hen, first pullet.

**West Michigan State Fair, September, 1913**—First and second cock, first and second hen, first and second pullet, first pen.

**West Virginia State Fair, September, 1913**—First and second cock, first chl

We will exhibit at twenty or more of the leading fairs and shows this fall and winter. Watch our winnings and remember we can furnish equally good birds for your show.

Prices are reasonable. We have good breeding cocks and cockerels at \$5, \$7 and \$10. Good exhibition males at \$15 to \$30. Pullets and hens for breeding, \$2.50, \$3.50 and \$5; for exhibition, \$7.50 to \$15.

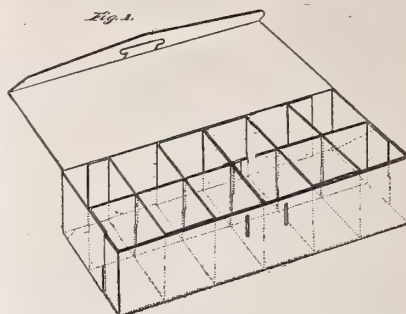

**We ship on approval—Your money back if not satisfied. We also insure all stock for thirty days—Replace free all that die or become ill.**

You should have a copy of our 132-page catalog. It is the most complete White Leghorn catalog ever published. It gives prices and description of all grades of stock—tells you just what we have to sell. It also gives a lot of information that may be of interest to you—how we feed and house our stock, how we breed for eggs, how we produce exhibition stock, etc. Write a postal today and let us prove to you that Ferris Leghorns will suit you. You will be surprised at the low prices we will quote on the stock you need.

**George B. Ferris, The Ferris Leghorn Farm**  
905 North Union Street :: Grand Rapids, Michigan

Greatest work ever written on the selection and breeding of poultry for eggs, the fancy, or the market. **Indispensable to the egg producer. Invaluable to the fancier.** Satisfaction

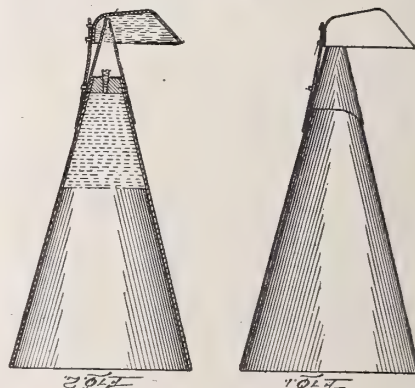

Cassius C. Smiley, of Indianapolis, Ind., has patented an egg carton. His carton comprises a single sheet of flexible material bent and forming the lid, bottom, front side and rear side

Egg carton, patented September 2, 1913, by Cassius C. Smiley, Indianapolis, Ind. No. 1,072,185.

of the carton. A single long strip is arranged as illustrated, to form egg compartments in connection with a longitudinal strip having slits and interlocked at the intersections. Patent 1,072,185.

A sanitary drinking fountain for fowls is the invention of James Mason, Jr., of Charleston, W. Va., "It is a common occurrence," the inventor says, "for disease to be transmitted from one fowl to another by reason of a contaminated water supply; and in numerous instances large numbers of chickens thus become diseased for a time, or are lost, and the real cause is unknown to the owner." The in-

Drinking fountain, patented September 2, 1913, by James M. Mason, Jr., Charleston, W. Va. No. 1,072,344.

ventor provides a cone-shaped main receptacle, a small connecting cone-shaped conduit, and a dish or drinking receptacle proper, to which the supporting cone member is attached. A body of air is interposed between the two supplies of water. A small sinuous passage through the base of the main water supply receptacle permits the desired degree of flow to the dish below. This may be easily regulated by a screw. Patent 1,072,344.

Word comes from "Turkey Neck," located in Kent county, Delaware, that the supply of turkeys this fall is 50 per cent greater than that of last season when the record was broken. This is one of the largest turkey producing sections of the country.

The month of Thanksgiving—let's all give.

\* \* \*

We have much to be thankful for. Cape Cod folks claim a bumper cranberry crop, Missouri a bumper turkey crop and Billie Atherton a Greater-Bumper Boston Show.

\* \* \*

Some of our last chats have hit home. Well they may.

\* \* \*

The Van Dyke brothers, C. Demonical Cleveland and L. Paul Graham (address unknown) were in evidence at Allentown. Drew says that pair have it over all else.

\* \* \*

The general quality of the young birds seen at the great fairs this season gives us greater hopes and more confidence than ever.

\* \* \*

The times and general poultry conditions also are better than even we could hope for. Full of confidence, the breeders are at it, and we look forward to the best business and show season ever.

\* \* \*

Show your birds. It is the first and last step to your success.

\* \* \*

We are writing from Hagerstown. The John L. Cost monument has been duly dedicated. It was a grand event and a beautiful tribute to the memory of one we all loved so well and that was so richly deserved.

\* \* \*

The idea of erecting monuments to our past leaders in poultry is a sublime one—one no other branch can boast of. We are proud of being a poultryman.

\* \* \*

A suggestion has been made and has met with favor to erect a monument to the beloved Philander Williams, the man, the breeder and judge whose work and life was a beautiful example to follow. Let us do this so that future generations can point with just pride to his deeds.

\* \* \*

The Philander Memorial Committee, to receive subscriptions and to erect this monument, is: Wm. B. Atherton, 30 Broad St., Boston, Mass., chairman; Jas. W. Bell, 542 S. Dearborn St., Chicago, Ill.; Grant M. Curtis, Buffalo, N. Y.; Theodore Hewes, Indianapolis, Ind.; F. W. De Lancy, Sellersville, Pa.; A. E. Alt-house, Sellersville, Pa.; W. Frank Spahr, Hagerstown, Md.; H. P. Schwab, Iron-dequoit, N. Y., and Wm. Ellery Bright, Waltham, Mass.

\* \* \*

It is the idea to make this a general fund and to limit contributions to \$10. No larger amount will be accepted from any one man. Send in your contributions to any one of the committee. The committee will hold special meetings at the Boston and New York shows.

The poultry associations will come to it and have the names of exhibitors on every coop. Why not begin now? Augusta and other associations have found this the best plan.

\* \* \*

The American Barred Plymouth Rock Club will hold its annual meeting at Indianapolis, Ind., February 2 to 7, 1914. Two hundred dollars in cash and several cups will be offered. This should be the season's greatest Barred Plymouth Rock Show.

\* \* \*

Wilson—"Has that charming widow any property?"

Bilston—"Real estate or personal?"

Wilson—"Personal."

Bilston—"She has six children."

\* \* \*

Scotty Bowers judges the cattle and joshes the poultryman. His speech at the Hagerstown banquet made a hit.

\* \* \*

Others of note were also heard to advantage. The banquet was a real jolly affair, with Messrs. Spahr and Baker receiving due credit for their successful efforts. There were about 7,000 entries.

\* \* \*

Baltimore has the Water Fowl Club meetings, and with from \$300 to \$500 in cash specials our web-footed friends will have the quack there.

\* \* \*

The presentation of flowers to Geo. O. Brown at Hagerstown, where he has served for over twenty years as judge, was a feature of the banquet. We hope Mr. Brown will serve more than twenty years more.

\* \* \*

Don't forget the Williamsport, (Pa.) Show, November 25 to 28. The P. L. is out and full of good things. Address Sec'y McCormie Dawson.

\* \* \*

Many a man gets to be conceited by thinking he isn't.

\* \* \*

The Trenton Fair, with Fred Huyler as superintendent of poultry, was larger and better than ever. Mr. Huyler has served his last term and in future will have charge of a new and great plant.

\* \* \*

Mr. and Mrs. D. W. Young are good mixers. It was cheering to see them at both Allentown and the New York State Fair.

\* \* \*

Exact Rhode Island Red color—that is one of the questions.

\* \* \*

Our show dates for this season include the following:

Hagerstown, Md., Oct. 13 to 18, 1913.

Ridgway, Pa., Nov. 18 to 20, 1913.

Williamsport, Pa., Nov. 25 to 28, 1913.

Palace, New York, Dec. 1 to 6, 1913.

Guelph, Ont., Dec. 9 to 12, 1913.

Philadelphia, Pa., Dec. 15 to 20, 1913.

Washington, D. C., Dec. 22 to 26, 1913.

Madison Square Garden, New York, Dec. 16 to 31, 1913.

Baltimore, Md., Jan. 6 to 10, 1914.

Boston, Mass., Jan. 12 to 17, 1914.

Indianapolis, Ind., Feb. 2 to 7, 1914.

Pittsburg, Pa., Feb. 16 to 21, 1914.

\* \* \*

John W. Ward, Jr., Pennington, N. J., the champion of the Dark Cornish fowls, is meeting with great success. The classes of this variety have been very large and choice at the great shows. They deserve unlimited popularity for their sterling quality.

\* \* \*

The scrap is on, and it again is a question of who is who. We can't see where either party deserves credit for fathering an un-American principled rule. Let's all forget it.

\* \* \*

H. P. McDonough, Newark, N. Y., made a splendid win on a choice line of Campines at the New York State Fair.

\* \* \*

We are pleased that Supt. W. H. Manning liked our report of the New York State Fair. The exhibit and his work deserved all we said of it. Mr. Manning is headed right.

\* \* \*

The first prize White Wyandotte cockerel at Hagerstown was a finished bird of rare type and fine head. F. M. Eakin, Bucyrus, O., the breeder, has shown a choice line.

\* \* \*

The entire Barred Plymouth Rock class at Hagerstown was good to see. It was the largest ever had there. The leading winners were H. D. Riley, R. J. Walden and C. N. Myers. Buff Rocks also were a very large and beautiful class. Columbian Rocks, great first cockerel, a wonder in type and markings, shown by L. P. Graham. First pullet we believe the best female we have ever handled—the best of form and markings, fine head and a great wing. Shown by the Wilburtha Farms, Trenton Junction, N. J.

## The Paradise Way

Insures greatest success in hatching chickens. Satisfied customers throughout the world. Write now for big free circular.

## THE RANCOCAS POULTRY FARM.

**America's Largest Poultry Farm Covering 375 Acres—A Mile of Buildings—Over One Hundred Thousand Egg Incubator Capacity—By H. P. Schwab, Eastern Representative of A. P. J.**

IN writing of our late visits to the Rancocas Farms, Browns Mills, In-the-Pines, N. J., our only fear is that our readers will fail to fully appreciate the size and magnitude of this gigantic establishment, for no pen picture can be drawn to do it full justice. It should be seen to be comprehended at its value and the lessons so derived would ever linger in memory as a glowing example of poultry possibilities. It is our mode to rather underrate than overrate, but in this case we feel it a duty to go the limit and spare no pains to fully describe this great plant and the works of a wonderful man.

Five years have passed since our first visit to this plant and we, like others, had a wise look and some doubts. It was a great plant then (a sort of forerunner of poultry possibilities and doubts were common); it is a gigantic plant now, safe and prosperous with thousands of customers and friends throughout the land that assure its future success. And all this is due to but one man—Mr. Joel M. Foster, a natural born leader, not only of chickens but of men. Mr. Foster, we may say, is a bundle of nerves, but not erratic. He is quick to comprehend and to act; he looks right through a fellow and has his number before he has his coat off, and he will try, also take chances, all of which combined account for his success. His inventions, his work and his examples have been of positive value to poultry and the breeders, and his success well deserved.

The Rancocas Farms contain 375 acres of land, with the large laying and breeding houses fenced off in two-acre plots, closely but not densely covered with pine trees. There are 36 houses that range from 100 to 150 feet each in length and about 14 to 16 feet deep, and in each are from 400 to 600

birds. Single and double colony houses cover the farm and here are housed each year the growing stock on unlimited range. These houses set end to end would reach over a mile and there are close to 9 miles of poultry fencing on the place. All buildings are kept very clean. They are light and of the fresh-air kind.

The incubator cellar and brooder houses were of interest to us. In the incubator cellar there are machines of 104,000-egg capacity, there being 260 incubators of the 400 egg size, with gas used for heating. This size machine is in favor here and will be as long as their results are obtained.

The executive building, built of brick and concrete, is three stories high. Here are the offices, stock, supply and testing rooms, with their mill and power rooms at one end. Then there is the drying house, where all the sand used is dried properly. The oat sprouting house, built according to Mr. Foster's original ideas, with over 500 large trays, from which the entire plant is supplied with sprouted oats; the packing and shipping houses, etc., making it a complete plant in detail and in fact. Here also are two large silos, where corn stalks are cut and put up in the regular fashion and used for green food during the winter. This was first tried on a small scale last year and proved a success. This season they are putting up 500,000 pounds cut in quarter-inch lengths. Mr. Foster said this was the best green food he had found for general purposes with matured and laying birds.

At the time of our visit Mr. Foster had nearly completed another original idea. An oat sprouting house, the first we know of, and of which we will give particulars later. To us this promises to be a feature of the plant.

At the time of our visit we found that 20 of the large houses were filled with upwards of 10,000 yearling S. C. White Leghorns for next season's breeders, and that the balance, 16 large houses and all the colony coops, contained the thousands of pullets that will be used for producing market eggs the coming season. All hatching is done with the hens' eggs and the following season the pick of these pullets will have their chance to show

quality. This plan has been followed ever since it was established and to a large degree is responsible for the success made. It insures strong fertility in hatching eggs and strong, vigorous baby chicks. In 1909 the total output of this farm was 500,000 market eggs, 59,380 day-old chicks, 92,210 hatching eggs, 5,000 broilers, besides cockerels and pullets sold for breeding purposes.

### Rancocas S. C. White Leghorns.

What a sight to behold, as you enter the pine wood. The healthful aroma of the pine is a delight and all about you houses and coops of the thousands of birds in their snowy-white costumes, red combs and yellow legs make a contrast admirable, doubly admirable when viewed from a quality standpoint. It was evident here before we had passed through the first two-acre plot, with its 500 pullets, that Rancocas Leghorns are being bred to a high standard type and quality. The striking small combs, the long bodies and the excellent stations all combine to make this a valuable quality flock. They were surprisingly fine in quality, and we complimented Mr. Foster liberally, for he has proven himself a believer in high-grade, Standard-bred stock and has freely shown it to be the most reliable and best paying, a claim we have made for years and again substantiate here.

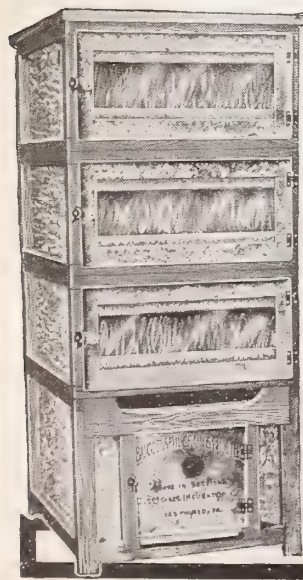

It was the same story throughout this gigantic plant. We went from yard to yard and from house to house, with the same beautiful quality in constant view. If there was an ailing chick or a cull on the entire place, we did not see it, and rest assured, we looked them over well. The hens were coming through the moult well and in pullets there were early birds fully matured and laying, and other flocks rapidly coming into their paying ages. All flocks are carefully graded for size and age and their uniformity, a feature.

Separated in flocks by themselves were 3,000 cockerels, all selected birds, to be sold for breeding purposes and used in time for breeders. These also were of a rich, equal grade, with quality and vigor as features.

To the visitor it is plain to understand just how Mr. Foster has been able to achieve his success and within half a dozen years to make the Rancocas Farms the largest and most famed in the world. He has bred with care for quality stock. He has introduced and worked out a system of "units" that has placed every man on his metal and that has assured the best possible results from every flock of birds. Proper range, sunlight and shade, cleanliness and healthful food in a proper and well balanced ration tells the story. His success is only extraordinary in its magnitude. It is no more than others can do if they will but try, for he has shown the way that will pay to follow.

Mr. Foster gives his entire personal attention to every detail and branch of the work here, and between finds time to write books and complete inventions along poultry lines. His international sanitary hover is known world wide, and we have seen thousands of them in use on both large and small plants. He now has nearly completed a new feeder that promises well, and he also is the author of the poultry book, "The Million Egg Farm," a substantial work that should be read by every poultryman, woman and child.

The great big "Year Book" given away free---see back inside cover now

## Think of This!

**Finest Egg-Making Feed—Fresh Green Feed—For Less than 10 Cents a Bushel!**

### Here's How To Get It!

Sprout grain! Do it with the aid of the "Successful" Grain Sprouter—the original grain sprouter—the first one ever made and the first one marketed—the leader of them all! It is made in sections—capacity from 50 to 500 hens. Makes money for both little and big poultry raisers. Gives each just the size each needs. Grows as your needs grow. Made of all steel throughout. Double steel walls. The newest, best idea in sprouter construction—being positively fire-proof and absolutely safe.

### "Successful" Grain Sprouter

can't warp, shrink or swell, like other sprouters. Prevents moulding of food. Made with large glass doors—metal trays. No wood to rot. Lasts practically forever. With it you can make 1 bushel oats go as far as 3 bushels ordinarily. You turn your idle hens into industrious egg-layers just at the time egg prices are highest! Makes early winter hatches possible. And it sprouts grain in 24 hours! Gives an inch of crisp green sprouts every day after that! Sprouts wheat or rye. Makes winter chicks thrive wondrously—protects their health—saves usual loss of chicks in winter—assures quicker maturity—enables you to sell chickens earlier when prices are highest. Write for the facts—find out for yourself. Get our Free Book.

## NOTES FROM ENGLAND

CONDUCTED BY

MISS GAREY, TOYNTON RECTORY, SPILSBY, ENGLAND

### WON'T YOU HELP THE BOYS AND GIRLS?

The great convention of the American Poultry Association is over, and what a wonderful meeting of breeders from all over the world it was, covering the world as far east as England, as far west as California and taking in visitors from Canada on the north and Porto Rico on the south. Truly the greatest international convention ever held in the poultry world.

Perhaps it would be hard to find a place so ideally suited to such a great meeting as Atlantic City, which might well be termed the playground of the world. Here tired workers could find every form of enjoyment and those whom the business side of the convention kept busy all the day found pleasant recreation as soon as business hours were over, while the delightfully cool breezes from the ocean tempered all inconvenience from heat usually experienced in inland towns at that season of the year.

As a visitor from England, the whole great scheme, with the interesting exhibit of poultry and bird life, was most attractive to me, and as I stood aside and looked on I could not help noting the vast possibilities and future that lay before the poultry industry of America and the American Poultry Association, and only at one point did I feel that those inside the ring were missing a great opportunity, an opportunity no doubt overlooked by the concentration of their thoughts on the work they have in hand and the possibilities of the moment.

Throughout life, however, it has ever been my practice in whatever work I have taken up to work for the future success of an enterprise with equal or greater energy and interest than one places on the success of the moment and by probing the innermost workings of all successful business enterprises you will find that at least 80 per cent owe their success to foresight; and now, I would ask breeders to stop one moment in the great work they have in hand and ask just one question—What of the future? What are we doing to educate a body of true fanciers to carry on the great work when our turn comes to go? What are we doing to instill into the minds of our children the true sportsman attitude of the fancier, to teach them at an early age to tend and care for bird and animal life, to value and study the points of a fowl, to compete in a manly, open, straightforward manner at our shows and take a keen interest in the workings and success of the various clubs, to learn to accept defeat like a sportsman, and take success without undue brag, to despise the member who, unable to breed a good specimen seeks artificial methods to win the blue, instead of going right back home and putting effort and money into breeding better stock. Are we using our individual influence as older breeders to improve

the general tone of the fancy as the years go on?

A short time ago a little body of breeders saw a great work among the children of the country lying before them untouched, and greatly through the untiring efforts of a young fancier, Elbert G. Lawrence, a junior branch of the A. P. A. was formed, the age of members being limited to twenty-one years, unless already holding office by

fee is only \$1 a year, and he has about forty paid-up members on his books, and a lack of capital alone prevents his doing the work he is not only keen to undertake, but fully capable of handling.

Up to date the club has been managed by an executive board chiefly drawn from the older members, but at my suggestion as honorary member of the club, Mr. Lawrence has decided to form a Board of Patrons from among adult breeders only, who we hope will take the young club entirely under their guidance and support it with necessary funds until able to run alone, giving advice and guidance to the young executive committee in the outlay of such funds. Money at the moment is urgent-

Unretouched photo of Madison Square Garden winner. Bred and owned by H. N. Hanchett, Jackson, Mich.

general election of members on the executive board. This young fancier, now secretary of the club, has put in unstinted effort, time and money to get a club formed for the younger members of the fancy, but up to the present time he has met with only a very half-hearted support from the breeders whose influence could do so much to increase the membership. I believe the membership

ly needed to advertise in the papers that go largely among boys and girls in the country, to get out a year book and necessary printed matter, and to send lecturers around to schools and clubs to arouse interest, and above all, to provide a very large number of cups, ribbons and prizes so that the club may have specials to offer at every show possible

and encourage exhibiting among the members.

Now, breeders, will you help us to get the club going? Patrons contributing \$25 and upward will hold the right to be on the advisory board of patrons, and we want quite a few with love for the children, and interest and readiness to encourage their work so when the day comes when they are old enough to step into our rank, they will come in educated up to the standard we would like to see among fanciers throughout the world.

In the proposition we have a great nursery bed where hundreds of fanciers can be drawn into our circle whom otherwise we might never touch, for how often the pleasure of those early days at school and at home come back to the man who having made his pile in business seeks recreation and a hobby for spare hours later in life.

Any lessons learned in early life that tend to raise the morals build up the character of our boys and girls and teach kindness and valuation of the dumb creatures around us can only do good. Is it not worth your while, then, to put your hands in your pockets today and send Mr. Elbert E. Lawrence, of Craig, Mo., a check and enroll on the Board of Patrons of the Junior A. P. A. and sending with that letter your promise of warm-hearted support to the young fancier who has started such a splendid work right in your midst.

At the convention there was some discussion as to the advisability of calling the club the Junior A. P. A., since it might lead to difficulties in the advertising of awards by the two clubs, but the Junior A. P. A. are quite ready to meet the A. P. A. on this point, and a meeting will shortly be called with the idea of renaming the club, the Junior American Poultry Club or other name of a complete distinctive nature.

As English representative of the club and taking a keen personal interest, I shall be very pleased to correspond with anyone regarding its future prosperity, and feel sure the appeal to the old fancier for the young will not be in vain.

Readers of my articles may be interested to hear that while in your country I have found a base in America in coöperation with Mr. Sidney Clark, of Harmony Park, Scotch Plains, N. J., where my English stock in Welsh ponies, Orpingtons, Faverolles, Campines, poultry and dogs will be available without customers having the delay of writing to England. We intend to create for our joint enterprise a world-wide name and reputation for supplying good value for money, and as time goes on, we hope to make it a great depot where all kinds of English stock from noted studs can be purchased by personal selection of the American customer in their own country. I believe this depot will be eventually unique of its kind in the States, as absolutely every breed of beast or bird procurable in England will be obtainable to order there at the shortest possible notice.

#### Profit Possibilities With Capons.

Although caponizing is not a difficult operation, it has been more or less neglected in the United States until recently. But with the market demand for capons constantly increasing, and an excellent opportunity thus afforded for securing better profits, more poultrymen are now beginning to ca-

pimize their surplus cockerels, instead of selling them for roasters at lower market prices.

Caponizing is the operation of unsexing a male bird and is most successfully practiced upon cockerels of the heavy American or Asiatic breeds when they are about three months old. Caponizing not only increases the size and weight of the fowl at killing time, but produces a tender, juicy flesh, sweeter and finer flavored than that of an ordinary fowl. This accounts for the increasing demand at a higher price per pound.

The reason for the greater weight and finer quality of the meat of a capon is that the same energy and vitality a male bird puts into fighting and breeding is used by the capon entirely for development of flesh and bone.

The capon is quieter than a cockerel and consumes less feed in proportion to his weight, making a lower production cost. It is possible to produce capons that will weigh in a few months just twice as much as they would have weighed in that time if not caponized. For example, a Plymouth Rock or Brahma cockerel should weigh from five to six pounds when nine months old. The same fowl, if caponized, could be made to weigh from ten to twelve pounds at the end of that time,

and the flesh would be superior. The capon will bring at least 30 cents a pound, against the lower price of about 15 cents a pound for the cockerel.

The same feed is used for capons as for fattening any fowl. They are quiet and gentle and do well in close confinement. The South Carolina Agricultural Experiment Station found that capons often would hover young chicks and "mother" them better than hens.

The operation of caponizing, when properly performed with a good set of modern instruments, is not dangerous. The only loss is when the operator makes a "slip." The correct age to caponize a cockerel is just before he begins to develop sexually. It is important that the bird be in good condition and he should be allowed to fast from 24 to 36 hours before the operation.

An empty barrel, turned bottom up, makes a good operating table. Full instructions regarding the operation come with each set of caponizing instruments.

After the operation, turn the bird loose, water and feed the same as usual.

Try caponizing all your surplus cockerels this season and you'll be surprised at the larger profit you get from the same amount of feed and less care.

## Let Chas. A. Cyphers Save You 50% On A Standard Buffalo Incubator

The Cyphers who is "The Recognized Authority on Artificial Hatching"—The Cyphers who made Commercial Hatching possible—The Cyphers who discovered the Cyphers principle—The Cyphers whose Incubators Circle the World—The Cyphers who will sell you his latest creation, the "Buffalo" at

## Half the Standard Price

Every vital Principle that made my Original Cyphers a world success is embodied in the "Buffalo". The same three-compartment heater; the diffusive ventilation; and sensitive and accurate regulation; combined with heavy insulation and durable construction. For Durability, Reliability and Quality, the "Buffalo" is a wonder. "Buffalo" Incubators insure you big hatches of strong chicks that live and are easily raised to make money for you. 80 percent of the output of "Buffalo" Incubators are sold to poultry raisers who must make a success of their work to live. 80 percent go to men who know; who have used my incubators in the past; who

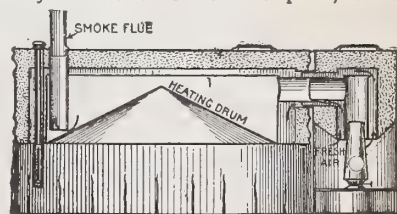

would use no others. You can't make a better selection.

## BROODER STOVE

## Have You Decided on ? Your Brooding System

Why don't you investigate this brooding system? It will save you 90 per cent of your labor—it will save you 75 per cent of your operating expense, and it will raise for you 20 to 50 per cent more chicks than is possible with old fashioned apparatus.

Now is the time you should investigate and decide upon the best brooding system for your coming season and to figure on your building before the cold weather sets in.

Just think what it will mean to you to adopt a system that costs you only one-fifth as much as brooders—that you can operate in almost any room—that saves nine-tenths of your time and work—and that nearly doubles the number of chicks you raise.

**The "Simplex" Eliminates White Diarrhoea**  
Read this letter, it proves that we know what we are talking about when we say the "Simplex" will prevent White Diarrhoea.

Send for free catalog that is full of valuable information and that explains the Simplex method. We will send you, with it, a book of testimonials that prove every claim. A post card will do. Write today.

Chicago, Illinois, April 9, 1913.  
Simplex Brooder Stove Co.,  
Grand Rapids, Michigan.

Gentlemen:—Enclosed please find my check for \$29.50 in payment for brooder stove shipped me on the 7th. This is the second stove I have purchased from you this season, and of course the last one is purchased because the first one is doing the work. The stove works entirely satisfactory, and does all that you claimed it would do. I believe you have solved the bothersome problems in brooding. The stove has entirely eliminated White Diarrhoea from which I suffered heavy losses, losing 50 per cent of my hatch. The losses with the stove have been very small. Very truly yours,

Judge J. C. Everett.  
Farm at Holland, Michigan.

# Associations and Shows

*Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department*

## Specialty Clubs to Meet at Chicago.

The Partridge Plymouth Rock Club will hold their annual meeting December 15th and more than \$100 in specials is offered. This should be the greatest show of Partridge Plymouth Rocks ever caged in this country.

The Black Langshan Club holds its meeting in Chicago and has \$150 in prizes offered, also a box of silverware, donated by Mr. Franklin L. Sewell for the best trained and conditioned Black Langshan. This special will be known as the Sewell trophy and should be the most valuable prize ever won at this exhibition.

A number of other specialty clubs are now voting on a place of meeting and will be announced in our premium list.

Write at once to the secretary for list, which will be ready for mailing November 1st. Remember entries in all departments close November 25th at 12 o'clock noon. A day late means the return of entries. Be on time. For full information, address Theo. Hewes, secretary, Indianapolis, Ind.

## The Light Brahmas.

Eleven wise men followed the "star" of the feathered race to Philadelphia and put up one of the grandest exhibitions ever seen in the history of the Light Brahmas. Thanks to the American Light Brahma Club, this good old breed is getting a small portion of the boom it rightfully deserves.

The following officers were elected during the club meeting at this show: President, J. W. Shaw, Brockton, Mass.; vice president, Joseph Elias, Philadelphia, Pa.; secretary-treasurer, Frank P. Johnson, Station "A," Indianapolis, Ind.; assistant secretary, Isaac R. Hinchman, Merchantsville, N. J.; executive committee, C. I. Balch, Manchester, Conn.; A. E. Wohler, Narberth, Pa.; Frank L. Platt, Toledo, Ohio; George W. Flecher, Belmont, Mass.; George Underhill, Fort Ann, N. Y.

The next annual meet of the club is to be held at Boston, and inasmuch as New England has always been the hotbed of the Light Brahmas, we may safely look forward to the greatest and grandest display of Light Brahmas the world has ever seen.

Let each and every one of us, who is interested, put our shoulder to the wheel of justice due the Light Brahmas and boost with all our might—make the entries in our class at Boston the largest and best ever shown by a single breed. This can be accomplished if each one helps, even if only a little. The club is trying hard to raise a large amount of cash for specials, and looks hopefully forward to the sum of \$500 or more. This should make every breeder sit up and take notice, and bring out a large class.

Secretary Johnson says: "Let every member who feels duly interested in the cause contribute to the specials, either cash, cups or some useful article in the way of merchandise. And to save time in correspondence, please address all contributions to Mr. C. I. Balch, Manchester, Conn., who is chairman of the executive committee, having full charge of placing the specials."

We are glad to see the Light Brahmas taking on new life and forging toward the front again. There is no good reason why they should not be the most popular breed today. The reason that they are not is because they were not a "new thing" and have not been fortunate enough to "catch" a Kellerstrass. They are the best general purpose fowl; the best winter layers; great "summer" layers; best table fowl; quickest growers; great foragers; very hardy; easily confined; the largest breed, and the most beautiful birds on earth.

If you happen to be one of those interested in Light Brahmas who for some unaccountable reason have not joined the American Light Brahma Club, we most

respectfully urge you to send stamps at once for the new club catalogue, to Frank P. Johnson, Station A, Indianapolis, Ind. Or, better yet, send a dollar for membership and one year's dues. The catalogue is the best ever issued by the club—"hats off" to Mr. Johnson—yes, it's full of interesting and helpful matter from cover to cover.

## Notice to Black Langshan Breeders.

If you are interested in this grand old Asiatic fowl you are at least given an opportunity to show your interest by joining the National Black Langshan Club, or contributing some cash specials for the Chicago show, December 12-17, 1913. It is the intention of the club to make this the largest class at this great show and we have every assurance from the association that the most liberal cash prizes will be paid, provided that we, as members, show our willingness to co-operate with them with cups and cash specials.

Through our efforts the association has employed Mr. Franklin L. Sewell to place the awards at Chicago and every breeder in the country knows what this means to Black Langshans.

In addition Mr. Sewell will offer a prize to be known as the "Sewell Trophy"

for the best conditioned Black Langshan, male or female. This trophy should be the most valuable prize ever awarded in America on this breed. For full particulars in reference to club membership address me at Cedar Rapids, Iowa.—John A. Rhodes, secretary-treasurer.

## To Breeders of Blue Andalusians.

During the past year there has been a growing sentiment among Blue Andalusian breeders throughout the United States toward the organizing of a club to promote the interests of our most useful and beautiful bird. Scores of names and quite a sum in cash were received by me some months ago. The cash was returned, as I was unable to attend to the matter of organizing the club at that time.

Mr. William Udell, my manager, and myself have lately received word from some of the state secretaries of the A. P. A., inviting us to make their show our headquarters for the organizing of such a club, and if the Andalusian breeders would get together and make a good entry, they would offer some specialties. The time is now ripe to make a start, and as the Empire Poultry Association has invited us and has promised a good list of premiums, I take pleasure in issu-

## S. C. R. I. REDS

At this great 1913 show with the largest and best entry ever recorded, we won first cock, first and second hens, first and third cockerels, first pullet, first pen, first display, \$60 cup for best Rhode Island Red, the sweepstake for best Red male or female, etc., etc., This is a modern record made by our modern up-to-date line.

### This Stupendous Sweep

Is but a repetition of our last year's winnings when they led all others at Philadelphia, Cleveland and Pittsburg by winning 13 out of a possible 15 first prizes competing in the largest and strongest classes of the year. (Look up these records.)

### At Philadelphia, Cleveland and Pittsburg

Our First Prize Cockerel Was Awarded the Championship Sweepstake Special for

### THE BEST MALE IN THE ENTIRE SHOWS

This Record Stands Alone and Unapproached by Any Breeder and of Any Line

Our Allentown winnings prove we again have the winning quality for any show. Having 1,300 youngsters ripening with an evenness of color and highest merit, we are prepared to fill your wants to your perfect satisfaction in either old or young. We offer early birds fit to win now. Selected breeding birds mated for results a specialty in pens, trios or in larger lots. Write us your wants please. It is no trouble to quote you prices and give any desired information. Mention A. P. J.

### Schenley Heights Poultry Farm

C. F. Rankin, Proprietor

1202 Commonwealth Building, Pittsburg, Pennsylvania

ing a call to the Blue Andalusian breeders to meet December 4 at 11 o'clock at the "Lucky Seventh" show at the Grand Central Palace and to exhibit their best specimens there. It is with much hesitation that I send out such a call as this, but I feel that the breeders who have written to me are back of me in my desire to have such a club started and I want to start the ball rolling.

I will donate \$20 for a special prize. If any breeders wish to donate cash, ribbons or stock and will so advise me, I will arrange with the club secretary. Will you write me, telling me if you will exhibit and if you will attend the meeting? If not the latter, be sure to send an exhibit.—E. D. Bird, Greenwich, Conn.

#### National White Wyandotte Club.

The National White Wyandotte Club, probably the largest specialty poultry club in the world, will offer a set of five handsome silk ribbons during the coming show season at all shows possible. These ribbons will be for competition by club members only, and will be placed for best cock, hen, cockerel, pullet and pen. Show secretaries desiring these ribbons placed at their shows are requested to make application for same at once to A. J. Geis, secretary-treasurer, Delmar, N. Y.

Every breeder of White Wyandottes should be a member of the National White Wyandotte Club. The club issues a handsome Year Book which will be sent free to any White Wyandotte breeder upon application to the secretary. One dollar pays the membership fee and first year's dues, and all those who join now will be credited with a paidup membership to October 1, 1914.

#### Columbian Wyandotte Breeders.

The club show of the National Columbian Wyandotte Club will be held in connection with the Flower City Show of the Flower City Poultry & Pigeon Association, Inc., of Rochester, N. Y., during the week of December 15-20, 1913, and all members are urged to do their share to make our national meet a grand success, both by offering cash specials and by making an entry. It is planned to have \$200 in cash specials and numerous cups and over 300 birds at the show. J. Frank Van Alstyne has been voted to do the judging. Further information will be gladly given by Ralph Woodward, secretary, Grafton, Mass.

#### The International Ancona Club.

With deep regret the resignation of the recently elected secretary and treasurer of the International Ancona Club, Mr. B. D. Cutting, has been accepted.

Mr. Robert A. Tierney, 1555 East 82nd St., Cleveland, O., has been appointed to fill the vacancy. Mr. Tierney is well qualified for the position, so we may look forward to great things from the International. He will doubtless make up the ground lost through the protracted illness of our former secretary, Mr. McNary. Club membership fees are \$1.00 per year. H. Cecil Sheppard, Berea, O., president.

#### To Polish Breeders.

The International Polish Club has voted to hold its first annual national meet with the Flower City Poultry & Pigeon Association's "Flower City Show," Rochester, N. Y., during the week of December 15-20, 1913. All Polish breeders are invited to join the club and share in its benefits and give a lift to the boom for the return of the crested beauties. If all those interested will make at least a small entry we shall have a class of Polish that will be remembered for a good many moons to come. Pledges of cash and cups, as well as promised entries, are very gratifying, but the more the better. I earnestly solicit your support.—M. V. Caldwell, secretary, Lisbon, Ohio.

#### Attention Langshan Breeders.

The National Black Langshan Club will offer ribbons and special premiums at every poultry show in America this season; you should be able to compete for these club specials; to do so you must be a member in good standing. The annual dues are \$1, which will pay you up to October 1, 1914. Our Year Book will be out soon and your name should be in it. We still have some advertising space for sale. Address John A. Rhodes, secretary, Cedar Rapids, Iowa.

**Langhan Breeders, Attention.**

In addition to the big Mid-West show at Chicago, the National Black Langshan Club of America has voted to hold its annual national meet with the "Flower City Show" of Rochester, N. Y., December 15-20, 1913. While the dates of the two shows conflict somewhat it is expected that this in the end will turn to good fortune for the club, providing the members will jump into the harness and make good entries at either or both shows, by giving us the splendid advertising that we can hold two big events the same week and fill the classes to overflowing in both places.

In forwarding your specials, which must be done at once, please state where you wish them placed and let us divide them proportionately and justly.

Now, breeders, here is your opportunity. You know they say she calls but once each lifetime. Open your door and invite her cordially. Send me your cash special or cup offering and say you will show. —John E. Rhodes, Secretary, Cedar Rapids, Ia.

**"Spanish Lovers."**

Not lovers from Spain, but those who have an undivided love deeply rooted for the noble White Face Black Spanish Fowls. Our first Club Show is to be held in Rochester, N. Y., in connection with the big Flower City Show there and I plead with you in all sincerity to help me bring our chosen breed forward and on the top, where you know so well, it belongs. All breeders should send in their names at once so a Premium List may be forwarded to them; also that they may be enrolled, and to swell the classes we will have to offer some specials. It has been suggested that if each member would give a dollar bill we would have a beautiful list, but a large list of specials or no specials, it certainly behooves us all to make an entry to boom the club and the breed, for if we fail now we will have a very thorny path to travel. Let's all do our very best. —M. H. Lindsay, Secretary, Northville, N. Y.

**Anconas at Kansas City.**

The Missouri members of the Ancona Club of America will hold their first State Meet at Convention Hall, Kansas City, Missouri, in connection with the joint Kansas City, Missouri, State Show, December 11th to 16th, 1913. Two handsome silver cups, and cash and other specials are offered, besides the regular cash premiums given by the Show. Every effort is being made to bring out the largest class of Anconas ever on exhibition at any show held in Missouri. Anconas are becoming very popular in Missouri, and you should send a few of your best birds to the above show.

**Attention Buff Wyandotte Breeders.**

The members of the American Buff Wyandotte Club have voted to hold their national meet with the Flower City Show of the Flower City Poultry & Pigeon Association, Inc., Rochester, N. Y., December 15-20, 1913. We earnestly solicit the full support of the members and friends of the breed to do all in their power to make the meet a notable success. This they can do by offering specials and making an entry. We are looking forward to the largest class in the show and the largest entry in the history of our club's national meets. Please to do your part.—J. E. Wilmarth, secretary, Amityville, N. Y.

**All Show Secretary Copy.**

The National Silver Penciled Wyandotte Club will offer their handsome set of club ribbons for the best cock, hen, cockerel, pullet and pen at all shows that run their notice in their premium list. To win these ribbons there must be at least two members in competition. Initiation fees, \$1; annual dues, \$1. Dues must be paid before the show.—James S. Wason, secretary and treasurer, 1460 Genesee street, Grand Rapids, Mich.

**Campine Club Meeting.**

The annual meeting of the American Campine Club will be held during the Philadelphia Show, Dec. 16-20, 1913. F. L. Platt will judge the Campines. For entry blanks and premium list address F. E. Gilbert, secretary, Mint Arcade Building, Philadelphia, Pa. Cash specials will be offered and a win at this show will be "worth while."

The American White Orpington Club is offering this season at all of the Poultry Shows in the country handsome white silk club ribbons with gold fringe on the best cocks, cockerels, hens and pullets, and an engraved medal for best pen, and at many of the state shows beautiful silver cups. To compete for any of these specials, you must be a member of the club in good standing with all dues paid in full. The initiation fee, which includes the first year's dues, is only \$1.00, or life membership \$10.00. Application blanks, club book, and full information can be had of the Secretary, F. S. Bullington, Box 328, Richmond, Va.

The Club book issued by the American White Orpington Club this year is recognized as one of the best issued by any of the specialty clubs. It is full of information on White Orpingtons from cover to cover and every breeder of White Orpingtons should read the same. This club is one of the strongest in the country and growing steadily all the time. Every breeder of this grand fowl owes it to themselves and the breed to support the club, and become members of the same. Initiation fee is only \$1.00. Copy of club book can be had for 10c, to pay charges, from the Secretary, F. S. Bullington, Box 328, Richmond, Va.

The National Columbian Wyandotte Club members of the State of Illinois will

hold a meeting at the Illinois State Show at Springfield January 5-11, 1914. You are urgently requested to attend and bring your birds. There will be many dollars' worth of special prizes offered by the Club members aside from the regular premiums offered by the Illinois State Show Association. The special prizes that are offered by the Club members can only be won by members. Send in your application for membership to the secretary-treasurer, Mr. Ralph Woodward, Grafton Mass., (with a dollar, which pays all dues for a year), or write L. A. Lee, 2832 North Harding Ave., Chicago, Ill.

The National Rose Comb Orpington Club will hold its next annual exhibit at the Madison Square Garden Show, December 26 to 31, and present indications are that there will be the most extensive exhibition of the different Rose Comb varieties that has ever been shown. The club will give a special club ribbon prize on first cock, first hen, first pullet, first cockerel at all Canadian and United States shows, as well as other specials at some of the larger shows. Every Rose Comb Orpington breeder who is not already a member is requested to send in an application at once to A. R. Brown, Secretary, Melrose Highlands, Mass. One dollar pays all application fees and dues for one year.—H. C. Faulkner, President, Marshall, Mich.

C. S. Valentine, Ridgewood, N. J., president of the Cumberland White Egg Indian Runner Club, has been made American Secretary of the British Indian Runner Club. The price of the Year Book of the Cumberland Runner Club, full of valuable information, has been reduced to 25c. Can be obtained from the Secretary, Wm. C. Gegelman, 435-6th Ave., Pittsburgh, Pa.

The annual meeting of the Cumberland White-Egg Indian Runner Club was held during State Fair week at Syracuse, N. Y., under date of September 9th. Two busy sessions were held and good progress was made. The President's report stated that every definite plan made by the Club at the 1912 meeting had been successfully carried out. Both membership and balance in the treasury are satisfactory in view of the conditions. New members will be gladly welcomed. For further information, write the Secretary, Wm. C. Gegelman, 435-6th Ave., Pittsburgh, Pa.

The American Black Orpington Club will issue their 1914 Year Book soon. In this book will be published the complete names and addresses of every Black Orpington breeder in the world. Every Black Orpington breeder should write to the Secretary at once, giving their complete names and addresses, so that this information can be published without delay. Do not fail to send your name and address to the Secretary-Treasurer, Ora Overholser, Eaton, Ohio.

The Rhode Island Red Club will hold its State Meet in St. Louis Nov. 24th to 29th inclusive at 1015-17-19 Washington Ave., the headquarters of the St. Louis Poultry, Pigeon and Pet Stock Association. We expect the largest display of reds ever held in the west.

The American Cornish Club will hold its Annual Club Show at Warrenton, Virginia, December 16th to 20th inclusive. The inducements, both in cash and plate premiums, are greater than ever before. A modern hall, with excellent light, new cooping, and spacious room, insures each exhibitor prominence, especially as the Association will feature the Cornish Club exhibit. Everyone interested in boosting

the Cornish development will do well to communicate with H. M. Hubbell, Secretary, or Courtland H. Smith, Club Representative, Warrenton, Va., at their earliest opportunity.

National S. C. Black Orpington Club Meet will be held at Pittsburgh January 19-24. In addition to the regular cash and special offerings of the show the Club will offer \$200 in cash, and will give five championship cups, also ten gold medals and ribbons to members winning at this meet. State cups will be offered in nearly every American state, and in every American and Canadian show medals and cups will be offered according to the rules of the club. Those interested in Blacks are invited to send for a free 1913 catalog now ready. The 1914 catalog is nearly ready for the press and those who plan to join the club should do so in time to be enrolled in the club catalog, which now lists nearly 750 members. Dues are \$1 per year and M. W. Brown, Station L, Cincinnati, Ohio, is secretary.

The American Single Comb White Minorca Club offers its five handsome silk ribbons, one each for best cock, hen, cockerel, pullet and pen. To be awarded to any and all club members exhibiting who are in good standing, during the fall and winter of 1913 and '14. A \$10.00 silver cup will be offered where five or more members reside in a state and exhibit in competition at a show in said state. Selection of show to be decided by the members in the state, under the direction of the state vice-president. In order to compete, initiation fees and first year's dues, \$2.00, must be received before first day of show. For further information and club catalog send to C. Augustus Raschke, Secretary-Treasurer, Kingston, N. Y.

### The Great Allentown Fair.

With a week of most delightful weather, the great Allentown Fair has placed another notch to its long line of popular successes with a poultry exhibit of highest merit and one of undoubted value to the industry. Year by year this show has grown in favor among the breeders and year by year Supt. Wittman has demonstrated his ability and worth; it is he that has made this show what it is, and it is to him we wish to give every credit due. With a very fine exhibition hall and with most liberal cash prizes the breeders flock here to try out their birds and to get a line on the other fellow. The special prizes in cash and cups are attractive and the "Futurity Stakes" a pronounced feature. This year these amounted to \$480, and in the S. C. White Leghorns were \$88, surely a neat sum for the winner to pull down.

Here were seen in most every class birds from the yards of several of our best breeders and in many classes the exhibit was of extraordinary strength and value.

The Exhibitors and Their Winnings.

### The Plymouth Rocks.

The Barred Rocks are always a strong class here and this year were larger than last with 86 birds shown. We were pleased to note the evenness of quality, for every bird was a good one. The Linden Poultry Yards, Dunellen, N. J., proved the leading winner with cock 1, hen 2, cockerel 1, pullet 2, pen 1, and the Futurity on first cockerel. This is the first we have seen of this line and will hope to see it often in future. First cock a wonder in color and barring, just the right shade and a most attractive bird, under very good. First cockerel a strong fellow well shown and a good winner. Cock in first pen also a beauty, very near as fine as the first prize winner. In these two birds they have two reliable birds to bank on for breeding next spring. In this pen was seen their best hen, not wholly finished but enough to show her beauty quality.

First pullet went to our old friend, Mr. S. S. Bossert. He also exhibited two others of great worth.

Mr. Jas. T. Huston, Williamsport, Pa., won second pen on his only entry. The pullets were grandly matched, of even quality and well shown; the male was passed his best (cock) here.

In White Rocks there was the usual contest between several well-known breeders with the Fairfield Farms, Fairton, N. J., winning cock 1, hen 5, cockerel 1-4, pullet 2 and pen 2. Both the winning cock and cockerel were grand birds in type and about at their best.

The Koons Farms, Treichlers, Pa., were handicapped some in condition and finish of the birds at this time. This is the

oldest line of White Rocks we know of in this state and we have very often chronicled their winnings in the past. Here they won cockerel 2, pullet 3-4 and pen 3.

Mr. A. L. Russell, Washington, N. J., whom all our readers know, won cock 5, hen 2 and pen 1 with no young birds shown. The winning pen was one of extreme beauty and quality.

Buff Rocks a very fair sized class. Partridge Rocks a very clean and well shown class. Columbian Rocks very fine in quality. Here Mr. L. P. Graham made almost a sweep by winning all firsts but one. His line shows extra well in wing, hackle and tail color and markings.

### Wyandottes.

In White Wyandottes the class abounded in finished birds and quality; it looked like the great classes seen at the winter shows, for here were cockerels and pullets fully matured and finished to

O. K. Company

Dept. 29

157 Water Street

NEW YORK

perfection. Onlya Farm, Florham Park, N. J., exhibited four cockerels of surprising finish and fit to win at our best; here they won cock 4-5, hen 1, cockerel 1-2-5, pullet 3-5, pens 1-3; also the Futurity Stakes on their first cockerel and other specials. This bird was a show feature for with his excellent conditions and finish he had wonderful type. Back and breast of the best, tail full and neck finely arched, second close up and a rare fine bird in every way, all were strong fellows and stand well. Their first pen evenly mated and headed by another beauty male. It was a great display of great birds by one of our best breeders and Manager Chas. Staaff deserves much credit.

Mr. A. J. Fell, the "Wyandotte Wizard," West Point, Pa., was here to reckon with and a contender for honors, winning cocks 1-2, hen 4, cockerel 3, pullet 1-4, pen 2, and specials. The winning cock was as rare a bird in quality and condition as we have ever seen at this season, a stunner in every way, with second also showing well. His cockerels were rather young and were unfinished, time alone will show them to advantage. First pullet a gem, just the kind we like, and at her best. Pen a very fine evenly balanced one. In these and in hens the judge had very close work in picking, for there were several entries of the highest merit. Mr. Fell's whole display was one of class and a great credit to his line. They are, as we said years ago, consistent winners with pronounced character in every bird.

Columbian Wyandottes an excellent class in numbers and quality alike with the Wilburtha Farms, Dr. Rittenhouse, H. B. Miller, etc., winners.

### Rhode Island Reds.

The Single Combs were one of the largest classes at the show with 93 birds shown and the Schenley Heights P. F., Pittsburgh, Pa., making a clean sweep of all five (5) first prizes, championship cup for best R. I. Red, specials, etc. Mr. Rankin surely deserves special credit for this record made. His birds were shown in grand condition and with a quality most sure to win. First cock a noble "Red Man," exquisite surface and under; first hen the "Gem" of the class; first

## 4 FINGERS

You can count on the four fingers of one hand every poultry raiser in the world who can pick out all the unhatchable eggs before incubation and not use the Magic Egg Tester. Why guess? Inquire at dealers, or write for prices and descriptive literature.

Pagel Poultry Supply Co.  
Lock Box 211 Rockford, Illinois

cockerel also the Futurity winners, while both first pullet and pen were all we could wish for. This line has now made wonderful records for two years and Mr. Rankin has proven he can breed the goods to win, which adds value to his line.

We were pleased to see exhibiting here Messrs. Dearborn and Sharp, also Mr. L. W. Maxon, two of our well known breeders and men of rarest character. Both received liberal mention and both exhibited birds of merit and value. Their lines are sound and have won highest honors at many great shows, and they will win again, as they deserve to.

In Rose Combs much interest was displayed and particularly about the winning cockerel shown by Louis Anderson, a star in color and type.

### Leghorns.

S. C. White Leghorns formed a class of 115 birds and contained many fine specimens, condition not quite up to former years in young classes. The first prize cock shown by the Wilburtha Farms, Trenton Junction, N. J., a royal good one of extra fine head and style and beauty, full tail well carried. These farms also won well in Buff Leghorns and Columbian Wyandottes. We have seen their farms and describe our visits there elsewhere.

The Endicotte Farms made a strong winning in this class by taking hen 1-3, cockerel 1, pullet 2, pen 1, on a superior line of birds well shown.

Other successful exhibitors here were W. C. Wack, S. J. Twyman, F. Fryer, Geo. W. Cisco, Olympic P. F., Maryland Leghorn Farms, etc.

The Buff and Brown Leghorns large classes, the Buffs very strong with many rare birds seen. In the Browns some of the best.

### Dark Cornish.

The Dark Cornish formed one of the feature classes of the exhibit and we doubt if we have ever before seen so many high grade birds in one class. It is evident that the breeders of this variety are sincere and enthusiastic and well they may be, for such classes are bound to make for them hundreds of friends and breeders. Rest assured the Cornish have quality that is practical to commend them, and with Mr. John W. Ward, Jr., at the helm, the people are going to know this and make of them as they so well deserve one of our most popular varieties for they possess the quality that insures profit in poultry.

Mr. Ward's winnings were cocks 1-2, hens 2, cockerels 1-2-4, pullets 1-2-3-4, pens 1-2, with cups and specials. Every one of these birds should be described for they stood out strong in beauty and quality to recommend them. They were real models that must be seen to be fully appreciated, shape and station grand, close feathered and color of the best. Mr. Ward's address is Pennington, N. J. He is the kind of man and breeder we like to recommend.

The Jaquelin Farms won hen 1, cockerel 3 and pullet 5. Other winners were Dartmoor Yards, C. N. Ohl, Dr. W. A. Low and S. T. Avent.

### Orpingtons.

The Aldrich Farms, Columbus, O., with all their great winnings of the past in White Orpingtons, have never made a more worthy record with more worthy birds than their phenomenal winning here. Their stock was a sensation, to say the least. In quality and in conditions every bird was all we could desire. Their winnings are cock 1-2, hens 1-2, cockerels 1-2-3, pullets 1-2, pen 1, futurity prize, \$50 cup for best 10 birds of any variety shown, the Item cup, etc. Both the winning cocks were in prime condition and strong in type. The first cockerel a wonder in shape, color and condition. First pullet an attractive beauty. We saw this line at their home last spring and expected great progress, but they have shown us more than even we dared hope for.

Buff Orpingtons will ever be popular for Buff seems fitted to their style and is in harmony with their gentle character and form. The whole class here was one of unusual high grade and value, the first pen, in fact, of the most desired type and perfect in matched color and form, an extraordinary mating. The Sunswick Poultry Farms, South Plainfield, N. J., well deserve recommendation on that pen of birds for it was class all through. Beside first pen they won cock 3, hens 2-5, cockerel 1-3-4, pullet 4 and specials. Their winning cockerel, a rare beauty, and first pen cockerel were in a class by themselves, very even in color and sound surface and under.

Major Hugh A. Rose was also a prominent winner here, taking cock 1-4, hen 1,

cockerel 2 and pullet 1-3, all birds of merit. First cock was one of extra type and seen to advantage here. In Black Orpingtons Mr. Rose won cock 2-4, hen 1-4, cockerel 1-2, pullet 1-2. In Bantams he also was a big winner in his several varieties.

### Other Varieties.

Silver Campines formed a large class with many nice birds seen, type and color are improved. The cockerel shown by Mr. Patterson had an ideal comb and head points. He has the makings. The winners here are Schenley Heights P. F., Dr. J. H. Prudhomme, W. C. Frantz, James Simpson, R. D. Reider. The class numbered 53 birds.

Golden Campines a smaller class but with quality galore, the winners Schenley Heights P. F., A. H. Ballirt and Dr. J. H. Prudhomme.

Houdans small in numbers. Polish and Hamburgs rather scarce and rather good.

The display of ducks numbered 106 specimens, including all varieties; 16 geese and 16 turkeys were seen.

Bantams numbered 405 birds, forming a beauty display, the B. B. Reds a particularly strong class. The Seabrights in both Golden and Silver were very nice

White Wyandottes—Duston and Regal. Cup winners.

Barred Rocks—Bradley. S. C. Reds—Tompkins. Catalog.

W. W. Kulp, Box 70, Pottstown, Penna.

and Cochins in all colors again proved their popularity.

Pigeons are ever popular here and this year was no exception. They numbered 1,239 birds, keeping the judges and Mr. Ulrich busy.

We want in particular to commend the judges, Messrs. Oke, Cleveland, Drevensstedt, Fred Huyler, D. W. Young and Mr. Clemens, for their work on poultry and Dr. W. C. Cleckley and Geo. L. Young on bantams. No wonder the Allentown show is "great." The pigeon judges no doubt deserve the same mention as no series of trap-shoots was held—H. P. Schwab.

### The Rochester (N. Y.) Exposition.

Poultry gained a place in the Rochester Exposition, September 16 to 20, 1913, for the first time, and in the future will hold a prominent place as the great entry of fine birds proved a feature recognized by the officers. The poultry display was under the direct charge of the Fanciers' Association with Secretary Tallinger and Messrs. George Otto and Geo. J. Eckhardt in control.

The entries numbered over 3,000 and

## BABY CHICKS

Will have no more chicks until March, 1914. Catalog free, 20th Century Hatchery, Box 73, Chatfield, Ohio

## BARRED ROCKS

### FOR SALE

Chicago, Cincinnati and Indianapolis winners and birds bred from them at your own price. Let me know your wants.

G. Earl Hoover, R. 24, Matthews, Indiana

## SILVER CAMPINES

To Our Customers: Last season we were compelled to return thousands of dollars because of the demand for Campine eggs. We will mate this season in January, and those we could not supply last season will have first call if they will order in December. These wonderful birds are here to stay and you should get "In the Swim." The Rockland Campines always win. Ridge Egg Farm, West Nyack, N. Y.

## Closing Out Sale

Am sacrificing all my White Rocks and White Wyandottes, as I will discontinue these breeds. All stock is from "best strains" and contains many prize winners. Will sacrifice for one-third their value. Also some special bargains in Buff, Black and White Orpingtons from this years pens. Write quick and get first choice. Mention A. P. J.

F. B. CRAWFORD  
Box 115 A Rahway, N. J.

## Cochin Bantams

### Black-Buff-Partridge-White

We wish to state that we have scientifically bred the 4 Varieties of Cochin Bantams exclusively for many years and our strain has proven its exhibition quality throughout U.S. Not only when exhibited by us, but many of our customers have reported marvelous victories, (at such shows as Rochester, Pittsburgh, Pasadena and many other renowned shows), which were accomplished with specimens of our strain. Therefore

### The Real Cochin Bantams

America's Best Cochin Bantams are bred in Ohio at the Wahebe Bantam Yards and such quality cannot be found anywhere else on this great continent. If it is your intention to win this season and to breed winners write the Home of America's Best Cochin Bantams, or you will be disappointed in your undertakings.

### Wahebe Bantam Yards

Box 13B, Evanston Station Cincinnati, Ohio

came from Canada and several states in quality and quantity good to see. The classes were well filled and in several varieties were extra large and strong, with feature birds in most every class.

### Plymouth Rocks.

The Barred were first on the list with several nice specimens shown, some of the best old in poor feather.

The Whites a rare class of highest merit, the Glenn Poultry Farm, Fairport, N. Y., winning first hen, first and second cockerel and pullet, first pen and first display. The winning cockerel a rare fine bird, grand form, beauty back and extra head. Second close up. This line shows the progress we like to see and has been a consistent winner for years.

### Wyandottes.

The Wyandottes were well shown in all varieties with the Whites the largest class, Silver, Black and Partridge following close. The winners well placed and birds of merit.

### Rhode Island Reds.

One of the largest classes in the S. Combs and a very even lot. The winning cockerel and pullet were beauties and well shown. Rose Combs a very small class.

### S. C. White Leghorns.

A beauty class all through and as a rule well shown. The Maplewood Poultry Yards, Attica, N. Y., with Manager H. W. Hayner in charge, made a record of note here by winning cocks 1-4, hens 1-4, cockerels 1-5, pens 2-4-5. This line was seen in best condition and well won their awards. Their winning cockerel is one of the best birds we have seen out this year, of excellent station, carriage and form, fine back, well carried tail and a beauty head; such birds are entitled to win at any show. Their winning cock we have seen placed well before; here he was a strong winner. First hen a rare beauty. This farm is also famous for their Pekin ducks, on which they have made records for years. Here they won all first and second prizes in single entries and in pens first, second, third and fourth with four pens shown. We congratulate Mr. Hayner on his success, for the quality he has produced deserves to win.

Other leading exhibitors were the Sterling Poultry Yards, C. A. Earle and W. T. Noonan.

Brown and Buff Leghorns and all varieties of Rose Combs were here in good numbers.

### Silver and Golden Campines.

The Silvers were one of the large classes of the exhibit and here again, as at the State Fair, the Manhattan Farms, Brighton, N. Y., made a great record. This line seems unbeatable. In the Golden Campines they won every first, second and third prize. With size, shape and extraordinary color and head points, they seem fit to repeat their wonderful records of last year when they were seen at all the great fall and winter shows and swept all before them. More success to them.

The Kolaneka Farms, Pittsford, N. Y., also showed a neat line of Campines, Orpingtons, etc. Their Blue Orpingtons particularly were birds of merit with shape and even color conspicuous.

### Orpingtons.

The Orpingtons in all varieties were large and strong classes and many notable winnings were made. The Braken-dale Farms, Fonthill, Ont., with Snookums Frank Conway in charge made a most likely record both in Orpingtons and their other varieties of Dorkings, Brahmas, Minorcas, Hamburgs, Polish and Bantams, for with 288 entries they won 223 first prizes and 46 seconds, with some of minor value. This line has proven a leader for years and this like other seasons made records galore. At the State Fair they made their best record in years and at the late Toronto Exposition the week before they won on Black Orpingtons alone cocks 1-2, hens 1-2, cockerels 1-2, pullets 1-2, pen young first, pen old first. This line has won the blue ribbons at Boston, New York, Baltimore, Chicago, etc.

This whole display was one of complete beauty as all classes were well represented. In Bantams the entry was very large. Here were seen specimens of rare varieties. The Mille Fleures shown by Paul J. North, Brighton, N. Y., were specially fine and attractive. Pigeons and pet stock completed the exhibit. In pigeons Mr. August Eckert, Rochester, N. Y., exhibited his usual grand quality.—H. P. Schwab.

### Poultry Exhibit at Illinois State Fair.

The great Illinois State Fair has passed into history bearing with it the memory of the largest exhibit of poultry ever cooped in the state of Illinois. The immense poultry building was filled to its utmost capacity, the entire floor space being double decked, two large tents were filled with the overflow, while many coops were ranged along the cattle barns to the north of the main building. The classes were all well filled, there being 130 varieties on exhibition, and competition was lively. Single Comb Rhode Island Reds were the leading variety, with Buff Orpingtons, White Orpingtons and Partridge Rocks following in the order named.

While the entries were not so large in the Barred and White Rocks, competition was keen and the awards well divided.

Leghorn "alley" was well filled and enthusiasm was at fever heat there at all times. Many specimens worthy of more mention than time and space will permit us to make were on exhibition there.

In Barred Rock "alley" the honors were pretty evenly divided with J. J. Klein of Macon, Illinois, and G. A. Walker, of Polo, Illinois, taking a little more than their pro rata of the awards.

In White Rocks the principal contenders were Charles B. Ettinger of Tinley Park, Illinois, and H. E. Taylor of Petersburg, Illinois. First hen, exhibited by Mr. Ettinger, was a magnificent specimen and shown in good condition for the season. Third pullet, Mr. Taylor's entry, was very undeveloped, but showed great promise, winning over pullets of much better development.

Competition was very lively in Buff

## BUFF WYANDOTTES

Jacks' Gold Beauty Strain always on top.

### Warner "The Coopman"

Corner River and Race ALLEGAN, - MICHIGAN  
Trap-Nests, Chick Boxes, Lice Remover, Shipping Coops, etc.

Rock "Alley" with Rhom Brothers, Fountain Town, Indiana, the principal winners, while Kellog & Kellog, Cambridge, Illinois, and F. E. Linder, Greenville, Illinois, were fighting for second place.

Partridge Rocks were there in abundance, and were the class of the Rocks. First cock was a great bird, winning with ease from his coop mate of the same entry; first hen was a revelation in Partridge Rock color. The only other approaching near her was her mother, of the same entry.

In Buff Orpington "Alley" the competition was so hot the atmosphere was fairly sizzling, no one being able to claim a great advantage in the awards.

White Orpingtons were a splendid class, with Iowa Farms, Davenport, Iowa; Ralph Wollery, Bloomington, Indiana, and G. H. Woolington, Monticello, Illinois, the principal contenders, honors being somewhat in favor of Mr. Wollery.

In Single Comb Rhode Island Reds, F. E. Harrison, of Menominee, Michigan, made practically a clean sweep, winning on a class of birds that were the quality of the show. First cock was the best Red ever exhibited at the Illinois State Fair, while first cockerel was a grand specimen, showing good type with a fine back and good tail, with plenty of color in all sections. First, second and third hens were well placed and were much admired.

Rose Comb Rhode Island Reds, while not so strong, brought out a class of birds that showed plenty of quality. Asiatics were out in goodly numbers, and competition was lively, especially in Black Langshans, with most of the honors going to R. A. Hews, of Crete, Illinois.

The Water Fowl classes were well filled and the awards pretty evenly divided.

The Bantam exhibit was a show in itself, there being about 400 entries, many of them of quality to win in any show in America.

Taking the show as a whole, it was a splendid exhibit, both in numbers and quality, and much praise is due the management for the excellent manner in which it was handled. The judges who placed the awards were Theo. Hewes, of Indianapolis, Indiana; H. A. Pickett, of Greentown, Indiana; F. E. Harrison, Menominee, Michigan; D. E. Hale, Chicago, Illinois; W. C. Pierce, Indianapolis, Indiana.

diana, and J. C. Johnston, Petersburg, Illinois.

### The Missouri State Fair.

The Missouri State Fair, held at Sedalia, was bigger than ever, largely due to the able management of the old veteran, Henry Stemmesch. Dr. Le Gear, St. Louis, showed a string of White Rocks, winning all the firsts and several seconds, including champion bird of the show, "Lady Ideal." Mrs. Walter Cline, Versailles, Mo., had to be contented with second cock and third pen. This was due to immature stock. Mr. Geo. Basye, Route 2, Rocheport, showed some fine Barred Rocks, the first prize cockerel was the best we have seen this season. Edw. S. Whitehead, R. 2, Box 89-A, Jefferson City, Mo., won 2-3 cock, 1-2 cockerel and 1-2 pen on White Wyandottes. The first cockerel was a fit specimen for the New York show. E. W. Shaperkottter, Valley Park, Mo., won 1 cock, 3 cockerel, 3 hen, and 2-3 pullet. John W. Herschenroeder, Jefferson City, won 1 cockerel, 1 pullet, 1 pen on Anconas in a large class. F. J. Denny, Golden City, Mo., won 1-2 cock, 2-3 hen, 1 cockerel, 1 pen on Houdans and 1 cock, 1-2 hen, 1-2 cockerel, 1-2 pullet on Cornish. C. Carson, Mound Valley, Kans., won 1 cock, 1-2-3 pullet, 1-2-3 cockerel, and Shawnee Poultry Farm, Shawneetown, Mo., won 1-3 hen, 2-3 cockerel, and 1 pen on White Orpingtons. The S. C. Rhode Island Red class was a good one. H. C. Kemp & Son, Dresden, Mo., won several firsts and seconds, including best parti-colored bird in show. Mrs. J. C. Henderson, Polo, Mo., won 1-2 hen and 2 pullet on four entries. One of the features was a fresh air incubator exhibited by the Missouri State Incubator Co., St. Louis, Mo. This machine is a winner. W. F. Chamberlain, St. Louis, Mo., exhibited a two dozen egg incubator. This machine is a good one, having the good features of incubator and brooder combined.

### Dane County Fair.

The Dane County Fair held at Madison, Wis., Sept. 9 to 14, was this year better than ever. Every class was filled and the attendance, considering the bad weather, was good. The secretary Mr. M. M. Parkinson, the best show man in Wisconsin, promised us many reforms for next year, especially a new arsenal and the extension of the street car system to the grounds. Rufus Gillette, Verona, won most in R. I. Reds; N. C. Gerrard, Stoughton, won most prizes in White Rocks, and Dr. Culhane, Stoughton, in Barred Rocks. Mr. Otto F. Toeffer, Madison, promised us that he would exhibit a large flock of wild geese next year.

### West Michigan State Fair.

The West Michigan State Fair held at Grand Rapids was a great success, due to the hard and intelligent work of its superintendent. All classes were filled and the awards were placed by Judge Roy V. Otto. Mr. Otto's work was highly satisfactory to all exhibitors. We were unable to obtain a list of awards but the exhibit of White Wyandottes owned by Mr. Arthur Rigg, R. R. 5, Grand Rapids, Mich., impressed us the most. Mr. Rigg in keen competition made a clean sweep.

### At the Palace Show.

The S. C. White Minorca Club will hold its annual meeting at the Palace Show, New York City, December 2-6.—C. A. Raasch, Secretary, Kingston, N. Y.

The Favorelles are picking up this year and all breeders are invited to meet at the grand round-up this year at the Palace Show, New York City, December 2-6.

Get to the State meeting of the American Buff Wyandotte Club. So far 30 breeders of Buff Wyandottes are pledged to make this a record breaker for the variety. Get out and push your favorites at a show that counts for publicity and popularity. Write Willmarth, Secretary N. Y. State Branch, Amityville, New York.

I have been working hard for the good old Houdans and I want to see a great big class at the Palace Show this year. This is my home show and I appreciate the pledges given me by exhibitors and invite all who will to join me in a fine

show of our favorites.—Chas. E. Arnold, Babylon, L. I.

The R. C. Buff Leghorn Club will hold a meeting at the Palace Show, New York City, December 3, at 1:30 P. M. The following specials received too late for the premium list: \$1.00 on each first and second cock, \$1.00 on each first and second hen, \$1.00 on each first and second pullet, \$1.00 on each first and second pen, copper cup for best display, \$5.00 cash to club member winning second display. Send to L. D. Howell of Mineola, N. Y., for premium list. Entries close November 15th.—H. J. Fisk, Secretary, Falconer, N. Y.

The American Buttercup Club is out this year to put Buttercups in the front rank and to sweep the deck at the Palace Show, New York City, December 2-6. The club will refund in full the entry fee of the largest exhibit by a club member. The club will pay all express charges on the exhibit by a club member that costs most, either by reason of distance traveled or weight of shipment. The club will pay \$10 cash to the pullet scoring the highest points by a club member. And the Palace Show will give the club \$20 in cash and a free back page advertisement in the catalogue if we succeed in having the largest class in the show. This is the year for us to pull together. Will you help? Send as big an entry as you can, but send one at least. Don't worry about the prizes. Popularity for Buttercups is what we want and we can get it this year if you will help. This is the last call for entries; if you do not receive the premium list, write L. D. Howell, Secretary, Mineola, N. Y., or Isaac Tillinghast, Secretary, Factoryville, Pa.

### "The Big Show."

At Washington, D. C., Dec. 23-27 next, promises to be the finest and largest exclusive poultry and pigeon exhibition ever attempted in the National Capital.

The members of the Greater Washington Poultry and Pigeon Club are much elated at the prospects for the big show, every mail bringing in requests for premium lists and applications for membership.

## Get Acquainted

Modern advertisers rightfully expect the publications in which they buy space to guarantee and prove the circulation of each and every issue. Certain such papers are known as the **Progressive Poultry Papers**.

Each publisher of such paper is progressively striving to furnish their readers with live, scientific, up-to-date reading matter and agrees to prove his circulation, promote and protect the advertisers interests by refusing objectionable advertising. It will pay advertisers to get acquainted with these papers. For list of papers, rates and circulation information address

**E. J. W. DIETZ**  
Publishers Special Representative  
919 Advertising Bldg., Chicago

bership in this hustling poultry club. It would seem that the whole United States has suddenly aroused to the fact that these poultry fanciers mean what they say, that this show will be "second to none in the world," judging from the postmarks on the letters, which is a pretty good indication.

The premium list will be out shortly and the Secretary, Mr. P. Francis Sutor, 716 21st St. N. W., Washington, D. C., or the Assistant Secretary, Mr. E. B. McKinley, 1351 Harvard St. N. W., will be pleased to send you one on request, also circular letter and application blank. Write at once and mention this paper. It helps you, ourselves and the club.

Cleveland, December 2-7, 1913.

Fanciers throughout the country have their eyes on the Cleveland Fanciers' Club Show, December 2nd to 7th, 1913. One can hardly cite a better instance of the growth in importance of local poultry organizations than the Cleveland Fanciers' Club affords.

Believing that the big annual show should be something besides an exhibition of birds, the Cleveland fanciers are planning to bring poultry experts from state universities to lecture on different phases of the industry, afternoon and evening, and to demonstrate preparation of birds for market; to direct amateurs in housing, feeding and care of chickens, tur-

gaged for the show. This will allow ample room for a single tier show.

The entries are mounting to 3,000, an increase of 1,000 birds over the entries for last year. Evidently poultry men expect a very successful show.

The committee in charge hope by means of the lectures and special attractions to interest a great many amateurs in poultry raising, and this will result in an unusually large number of sales on the floor. Arrangements have been made for continuous moving pictures of the poultry industry in all parts of the world. Slides of the prize birds of all breeds will be shown and poultry men will be permitted to run slides of their own birds if they so desire.

For Premium List and information regarding the show write J. T. Conkey, secretary, Cleveland Fanciers' Club Co., 460 Lennox Bldg., Cleveland, Ohio.

#### Gold Leg Bands for Chicago Winners.

Arrangements have been made to band every first prize bird at the Great Coliseum Poultry Show at Chicago, December 12-17, 1913, with a gold leg band. This is a heavy seal band, made especially for this exhibition. Each band is numbered and no duplicates will be made. The letters "Chicago 1913" will be stamped on the outer surface and a careful record kept of the winners.

Realizing the importance of a first prize

beautiful ribbons, besides the silver cups and money prizes, will be awarded.

Remember, the dates are November 26-27-28-29-30, Thanksgiving week. If you care to show where the winning is worth while and carry away a handsome silver cup, write J. E. Humbach, Secretary, Hamilton, Ohio, for a premium list. They are ready for mailing.

#### Buffalo's Great International Show.

For seven years the Buffalo Poultry Association has been building up a great international show. The Chamber of Commerce, the daily newspapers, hundreds of Buffalo's leading business men, and the Buffalo Poultry and Pigeon Club with its 500 members, have all contributed liberally towards the success of this show by making each year a long list of specials as seen in the premium lists.

The management of this show has determined to make the January 12-17, 1913, show the greatest yet held.

In this show, as in the past, all exhibitors get a square deal—no special favors for the big exhibitors or the moneyed fancier.

The birds are judged on merit.

Do not confuse this, the old organization, or our show dates with the new poultry show to be held in Buffalo in November. Send a card for a premium list, which will be ready Nov. 28th, to

Cleveland's brand new Exposition Building and Auditorium—The Wigmore Coliseum. Covers an acre and a half and next to Madison Square Garden is the largest building in use for a Poultry Show. This immense building will be christened December 2nd by the opening of the Ninth Annual Poultry and Dog Show of the Cleveland Fanciers' Club

keys, ducks and geese, and to discuss knotty problems with poultry raisers.

at this great show, it is our aim and object to throw every possible safeguard around them. There are but few national exhibitions that could afford this enormous expense, but we feel that it is to the interest of ourselves and our exhibitors that some such official record is kept. Please understand this gold band is to be placed on every first prize winning bird in the exhibition, including breeding pens.

#### World's Largest Silver Cup Show.

Great credit is due the hustling members of the Hamilton, Ohio, Poultry and Pet Stock Association in getting ready for their coming show, November 25th to 30th inclusive. It is well known that Hamilton suffered more than any other city from the March floods and many of Hamilton's largest breeders had enormous losses. But once more they have collected one hundred handsome silver loving cups ranging in value from \$10.00 to \$200.00 to be given away. No strings are attached to these cups; they are all given away in the show room or expressed to the winners. The Hamilton boys have never failed to pay all premiums promptly, they have a reputation for good care of the birds and all birds are always returned to the owners promptly after the show is over. All birds are cooped in nice clean cooping furnished by the association free of charge.

James A. Tucker of Concord, Michigan, and Ben Lanius of Cincinnati have been selected to place the awards, and five

#### COLORED LEG BANDS Big Black Figures on White Background.

All colors, all sizes, for all fowls, and pigeons. Birds identified without handling. Saves time and labor. Baby chick bands 18 colors, not numbered. The best band in the world to-day. Samples and catalog 2c stamp. Mention A. P. J.

A. P. Spiller : Dept. A : Beverly, Mass

halls in the country for a poultry show. The judges, nine in number, are all good ones; the premium list says who they are, and what they will handle. The Coliseum Show will be penned, and the feeding of the exhibits intrusted to Spratt's Patent. Catalogue of the show, giving name and address of every exhibitor at the opening, and a marked catalogue showing all the winners, out Thursday.

Another feature at this show will be an exhibit and demonstration work, including moving pictures, of the Missouri State Poultry Board, Mr. T. E. Quisenberry and Mr. Ralph Searle in charge, lectures by Prof. Rice of Cornell University, and other prominent institute workers. The Coliseum is fortunately arranged with an annex for just such work; all under one roof, and all at one price of admission. For further particulars address Henry Steinmesch, Secretary and Treasurer Coliseum Show, 220 Market St., St. Louis, Mo.

#### Washington (D. C.) Show.

The official A. P. A. show will be held December 2 to 6, 1913. Spacious halls have been selected whereby one floor of the building is devoted entirely to the poultry department. Fifty cups, hundreds of specials, and a profit-sharing cash premium inducement—usual premiums for four entries—excess of entry fees over eight entries in a class will be divided as follows: Fifteen per cent to first, 10 per cent to second; 75 per cent for expenses of exhibition. Write to the Secretary, W. A. Kiefer, 710 Taylor St. N. W., Washington, D. C., for the largest premium list offered by any show in the South, and THEN EXHIBIT.

#### Third Annual Championship Show.

The Third Annual Exposition Show will be held at Pittsburgh, Pa., the week of January 19 to 24. This year the management, besides their already most liberal cash prizes, will give a handsome cash prize for the best display and a handsome cup for championship male and championship female, in most of the classes. We have the largest floor space of any show in the United States, with perfect heat and light, and we modestly assert that there is no poultry show in this country that is cooped more attractively, where the birds are kept in more sanitary condition, where greater care is used for the birds in our hands, where the entry fees are more fair and equitable and where the cash and special premiums are more liberal, and finally that no show can award premiums with greater care and greater ability and with greater desire for the absolute justice than this

#### Poultry Exhibition of Pittsburgh.

Our last year's show was one of the surprises of the year among poultrymen. We had one of the big four national shows of the season. Our coming show will unquestionably surpass anything in the past and do not believe that a doubt remains that it will not be one of the very largest shows held in America this year, both as to quality and numbers of birds, and so far as mortal man can guarantee it—the best bird will win. We want every breeder that appreciates the right kind of treatment and appreciates the right kind of competition to be with us. If we could offer greater inducements in line with higher ideals of the poultrymen, we would gladly do it. The following is a list of judges already engaged: W. S. Russell, W. C. Pierce, A. Fred Kummer, D. W. Young, Fred H. Cook, A. H. Emch, C. D. Cleveland, L. Rawsley, G. W. Webb, Theo. Hewes, Marcus Allen Northup, A. J. Edwards, E. F. Baldwin. Permanent headquarters, 303 Empire Bldg., Pittsburgh, Pa.

#### The Great Williamsport (Pa.) Show.

The great Williamsport, Pa., Poultry Show will be held Thanksgiving Week, Nov. 25th to 28th inclusive. This will be Williamsport's sixth annual exhibition and there is no doubt at all but what it will be the greatest early exhibition ever offered the poultrymen of the country. Williamsport was the first association to put on an early show and for five years their exhibition has been one grand success, in fact, the breeders from all parts of the United States made Williamsport the testing show for the Garden and other later shows. No show in the country ever offered the breeder such judging as will be done at Williamsport; every judge selected to do the work stands at the top of his profession in his breed and regardless of the fact that others have started competitive shows the same week as Williamsport, they cannot offer the judgments that Williamsport does.

Henry P. Schwab, the greatest Plymouth Rock judge in the United States, will again make the awards of the favorite breed, Richard Oke, of London, Ontario, Canada, needs no introduction to the poultry world; his awards for years past have been the cue to purchasing breeders for stock that they want to be sure of. Chas. Nixon and J. C. Punderford are at the height of their glory in the breeds they handle, namely, Wyandottes and the Mediterranean breeds, and an award under either of these judges should be invaluable to a breeder. In Herman Sonder, of Ridgefield, N. J., the association have engaged a man who will handle the Campines to perfection. Fifteen challenge cups

will be offered this year together with other beautiful cups, and valuable merchandise, to say nothing of over four hundred dollars in cash specials which is placed so that it is bound to be won. The association has also raised first and second money to a par with any dollar show, and beyond that offered by most of the dollar entry shows. From the advance request for premium lists the management feels sure that this will be Williamsport's great year. Entries positively close Nov. 12. Write McCormick Dawson, 200 Market Street, for Premium List.

#### National Fanciers' Club Show.

Encouraged by past successes and spurred on by the good will and support of its many satisfied exhibitors, the management of the National Fanciers' Club Show has determined to stage the "greatest chicken event" ever held in the country at Indianapolis, Jan. 10-16, 1914. It will be a show for the breeders and by the breeders, a show where the best bird will win, and in the "hot bed" of the poultry section where people are interested in poultry breeding and have the money to buy stock. No breeder can afford to miss the National Fanciers' Club Show this season. Many new attractive and educational features will be added this year, and it is proposed to have at Indianapolis, Jan. 10-16, the greatest gathering of poultry men ever held in this country. If you want people who are interested in poultry to see your birds, if you want business, and if you want good, clean competition, send your birds to the National Fanciers' Club Show. Address Henry C. Dippel, Sec'y., 114 N. Delaware St., Indianapolis, Ind., for premium list and entry blank.

#### Elgin (Ill.) Show.

The 15th annual exhibition of the Elgin Poultry Association will be held Jan. 5-10, 1914, at Elgin, Ill. There is every indication that this will be by far the greatest show ever held by this association, as the members are all working hard to that end. The judging will be done by comparison and uniform coops will be used. They are offering 35 silver cups as special prizes and \$2 in cash will be given for prize in all single classes and \$5 for first on pens and \$25 in gold for sweepstakes. The show will be held in the big Coliseum, with its 18,000 square feet of floor space. Mr. Geo. H. Northup will judge all varieties except the buff birds; these will be judged by Roy Waterman, a buff specialist. Send in now for premium list and arrange to make an exhibit at this show. Chris. H. Leitner, secretary, Elgin, Ill.

## RANCOCAS

# S. C. W. Leghorns and White Ply. Rocks

LIKE A HURRICANE SWEEP ALL BEFORE THEM  
AT THE NEW YORK STATE FAIR, 1913

### Rancocas S. C. White Leghorns

In the largest and best class of Leghorns with 286 birds competing our exhibit made the best record ever made at this great and popular exhibition. They win pen old, first; pen young, first; cock, fourth; hens, first, second, third, fifth; cockerels, first, second, third, fourth, fifth; pullets, first, second, third, fourth, fifth; first display; first collection; shape and color specials and the "Manning championship silver cup" for "best ten birds at the show" with a total of 5,644 birds competing.

### No Record of Any Line Equals this Astounding Victory

### Rancocas White Ply. Rocks

In a class of 106 birds exhibited by the leading breeders of the East and West, we won a pronounced victory. Old pen, second; young pen, second; cocks, third and fifth; hens, first and fifth; cockerels, first, second, fourth; pullets, second, third, fourth; best display and specials. This class was pronounced by prominent breeders the best ever seen at this season of the year with rare quality and condition features.

### The Rancocas Strain

Combines the choicest quality practical value. It is the "strain" to bank on for success. With our large stock we are prepared to supply the grandest exhibition birds and the choicest quality breeders with absolute satisfaction assured. Write us your wants and let us quote prices.

### Special Prices

Now for carefully mated trios and pens and yearling breeders. Circulars and further information on request. Remember "Rancocas stands for quality."

**Rancocas Poultry Farm, Box A, Brown's Mills, New Jersey**

**"Cleveland's Quality Show."**

Cleveland's exclusive Poultry Show given by the new association last year was a wonderful success, as every effort on the part of the members was made to have the best birds win regardless of who owned them. As this is a strictly poultry show, no dogs or pet stock accepted, the new association wishes to announce that the dates for their second show will be January 5th to 10th, 1914. The judges selected this year are as follows: J. E. Gault, L. A. Stream, A. H. Emsch, L. A. Platt, L. Lanus and G. Webb, and their reputation is known all the world over. They will again place the awards on the birds and our many friends and fanciers will be glad to send their birds as they did last year, to be judged by men who know.

Grays Armory, known for its large and spacious floor space and fine lighting facilities, has been chosen for this year's exhibit. Every exhibitor is asked to come to Cleveland and receive a cordial welcome by twenty real live poultry men, all members of the A. P. A. Competition will be keen, so start and get your birds in shape now to win the regular and special prizes that naturally go to making a good show. The secretary is A. E. Rehburg, 3040 W. 25th St., Cleveland, Ohio, who states the premium list is now being prepared and will be ready for mailing in a short time: be sure your name is on his list. After last year's show the poultry press conceded our first exhibit to be the best given in Cleveland for years. Our cash prizes, ribbons, cups and special prizes will again be in the hands of the winner before the show is over. For further information write to the secretary.

One of the largest and best shows to be held in Michigan this winter will be the twentieth annual exhibition of the Southwestern Michigan Poultry Association, Inc., at Kalamazoo, the week of December 29th to January 3rd, 1914. The members are putting forth extra efforts in order to make this the most successful exhibition ever held and they have hung up in special prizes \$300 in gold, in addition to valuable cups and other poultry supplies. The show will be held in the New Armory Convention Hall, with a floor space of 12,000 square feet, and considered one of the best show rooms in the state. All birds will be cooped in uniform cooping furnished free by the association, and a bang-up show is anticipated. Judges Wells and Strong will place the awards by the comparison method. Catalogue ready Dec. 1st. F. W. Hough, secretary, 804 Bank Bldg., Kalamazoo, Mich.

The Monmouth Poultry Club will hold its sixth annual show at the Asbury Park Beach, Asbury Park, N. J., November 24-29, 1913. Entries close November 12. Judges: Robt. Seaman, F. V. L. Turner, Fred Hugler, A. B. Dalby, John C. Kriner,

Jacob Applegate, James Ingram, W. W. Kennedy, W. B. Paterson. For premium list and entry blanks address Secretary F. H. Hodges, Red Bank, N. J.

Something over two hundred special prizes, including twenty beautiful silver cups, valued from \$10 to \$25 each, will be offered at the great Syracuse, N. Y., show, to be held under the direction of the Onondaga County Poultry & Pet Stock Association in the State Armory, December 7-13. Jos. Krenn is superintendent and H. A. Eiler secretary, 410 Prospect avenue, Syracuse, N. Y.

Warrenton, Va., will hold its third annual poultry show December 16-20, 1913. The American Cornish Club has decided to hold its annual club meet in connection with this show. Liberal cash prizes, silver cups and handsome specials are offered. For premium list and particulars address H. M. Hubbell, secretary, Warrenton, Va.

The National Western Stock Show will be held at the Union Stock Yards, Denver, Colo., January 19-24, 1914. Tucker and Heimlich will place the awards, using the comparison system. Premium list now ready; full particulars from W. C. Shuman, manager, 400 S. Emerson street, Denver, Colo.

The twenty-second annual exhibition of the Iowa State Poultry Association will be held in the Coliseum, at Des Moines, Iowa, January 1st to 7th, 1914. Judges Russell, Shellabarger, Southard, Dagle and Seyler will place the awards. George S. Phillips, Box 431, Des Moines, Iowa, is secretary. Write him for a premium list.

The Tri-State Poultry and Pet Stock Club will hold their sixth annual show January 12-18, 1914, at Toledo, Ohio. The judges will be George C. Eckert, Joe Coleman, D. D. Whitaker, Z. D. Struble and Edward W. Tripp. For premium list, entry blanks, etc., write Secretary J. S. Ball, 1237 Varland avenue, Toledo, Ohio.

Champaign, Ill., will hold its fourth annual show in the large armory of the University of Illinois at Champaign, Ill., December 30, 1913, to January 2, 1914; D. E. Hale, judge. Send at once for catalogue and premium list to Paul T. Bacon, secretary, Champaign, Ill.

The fourth annual show of the Green County Poultry Association will be held December 9-14, 1913, at Monroe, Wis. Premium list ready November 1. G. W. Hackett, judge; G. W. Wilkinson, secretary, Monroe, Wis.

The Beaver Valley Poultry Association will hold its sixth annual show December 10-13, 1913, at Beaver, Pa. A. F. Kummer, R. A. Poole and Chas. P. Mohr,

judges. For premium list write Secretary J. Mays Ecoff, Beaver, Pa.

The fifth annual show of the Dayton Fancy Feather Club will be held January 12-17, 1914. Pierce, Corfman and Stream, judges. For premium list address Secretary Walter Osterhaus, Dayton, Ohio.

The third annual show of the Ewing Poultry Fanciers' Association will be held November 12-15, 1913, at Ewing, Ill. E. H. Casey, assistant secretary, Ewing, Ill.

The Osborne County Poultry Association will hold their next annual show on December 18-20, 1913, at Osborne, Kan. L. J. Cowger, secretary.

The Johnstown Fanciers' Association will hold their next annual show January 5-10, 1914, at Johnstown, Pa. Premium list now ready. Send for one to Secretary W. S. Krise, Johnstown, Pa.

**Rubber at Back Inside Cover****Airdales**

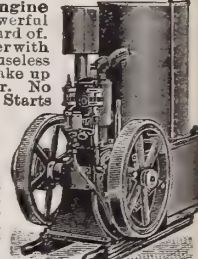

The ideal dog for the Poultry Keeper or Suburbanite. Fine raters, hunters and watch dogs. Not afraid of anything. Gentle and obedient to his master, kind and playful with children. Kennel headed Imported Tintern Perform—a trained hunter. Young and adult stock for sale. Write for particulars. F. L. SAVAGE BOX 14 St. Charles, Ill.

**Detroit Kerosene Engine****Saves Time, Trouble, Expense**

The Detroit Kerosene Engine is the simplest and most powerful engine you ever saw or heard of. Direct transmission of power with 3 moving parts only—no useless cams, gears or valves to take up power or get out of order. No trouble—no extra expense. Starts without cranking.

**Runs on Cheap Kerosene**

Will run on distillate and gasoline; but kerosene costs less than half as much as gasoline. Besides, kerosene contains more heat units than gasoline. Result—more power—steadier power—at one-half the expense of fuel. Comes to you all ready to run feed grinders, separators, pumps, saws, electric light plants, etc. All sizes in stock ready to ship.

**GUARANTEED 5 YEARS**—Sent on trial direct from our factory at lowest factory prices. Don't buy an engine until you have seen the "Detroit." Write today for catalog and agent's special introductory price on first order from your territory. (1913) Detroit Engine Works, 128 Bellevue Ave., Detroit, Mich.

**U. R. FISHEL'S AD in this issue will interest you. Read it.**

## CHAMPION BUFF WYANDOTTES

**"America's Great General Purpose Fowl"**

Again prove their superiority over all others. At the Greater New York Fair and Exposition, August 4-10, 1913, in competition with the Garden and big Eastern winners, won more than twice as many prizes than all competitors combined.

**Four Firsts, Five Seconds, Three Thirds, Two Fourths,  
Two Fifths, Silver Cup Best Display and Gold  
Special Best Display Wyandottes, All  
Varieties Competing**

## PURITAN PARTRIDGE ROCKS

**Conclusively Prove That They Are****"THE QUALITY FLOCK OF AMERICA"**

At the Greater New York Fair and Exposition, August 4-10, 1913, won more prizes than all competitors combined.

**Three Firsts, Four Seconds, Four Thirds, Three  
Fourths and Silver Cup Best Display**

**We have 2,500 youngsters. Choice breeding trios, \$10.00; pens, \$15.00.  
Guaranteed winners furnished for any show on earth.**

**Besuden Bros., R. W. Sturtevant, Manager, Box 359-B, Cincinnati, Ohio**

The twenty-third annual exhibition of the Western Wisconsin Poultry Association will be held at La Crosse, Wis., December 2-8, 1913. This is the oldest poultry association in the state and each year the number of entries have increased until today it is one of the leading shows in the Northwest. E. A. Hoffman and T. J. Roundtree will place the awards. Send for premium list to Wm. H. Hoeschler, La Crosse, Wis.

The Mansfield Fanciers' Association will hold their annual show December 1-6, 1913. This association is a member of the American Poultry Association and holds annually one of the best shows in Ohio. For premium list and full particulars address Secretary T. J. Darling, 388 Spring Mill street, Mansfield, Ohio. Judges for this show will be Chas. McClave, M. M. Barger.

The Kansas Poultry Federation show will be held at Independence, Kan., January 5-10, 1914, and promises to be the greatest show ever staged in the state. The new Kansas City uniform coops will be used and judging done by six of the leading judges of the West, by comparison system. For catalogue address Secretary L. H. Wible, Chanute, Kan.

Don't fail to make arrangements to exhibit your birds at the Goshen Poultry Show, which takes place December 8-13, 1913; H. A. Pickett, judge. By all means send for premium list, which is now ready for mailing. Address Dart Emerick, secretary, Goshen, Ind.

The West Chester Poultry & Pet Stock Association will hold their second annual show Thanksgiving week, November 26-29, 1913, at West Chester, Pa. They will have a large list of specials, including cash and cups. Six of the best judges have been engaged to place the awards. For premium list address Secretary Frank W. Temple, West Chester, Pa.

The Pittsburgh Fanciers' Club of Pittsburgh, Pa., have selected judges for their sixteenth annual show to be held in February, 1914. These are Schwab, Punderford, Minnich, Webb and Seldon. Full particulars in regard to this show will be given in later issues.

The McHenry County Poultry Association will hold their fourth annual show at Woodstock, Ill. O. L. McCord will do the judging and comparison system will be used. Premium list ready December 1. Address Secretary P. Lee, Woodstock, Ill.

The poultry fanciers of Kutztown, Pa., have organized an association and will hold their first annual exhibition December 31, 1913-January 3, 1914. For premium list and full particulars write the secretary, Jacob E. Koch, Kutztown, Pa.

The second annual show of the Hoosier Fanciers' Club will be held December 15-20, 1913, at Thorntown, Ind. Z. D. Struble, judge. Premium list will be sent on application by Secretary Floyd Wyant, Thorntown, Ind.

The third annual poultry show of the Dubuque Poultry Association will be held at American Hall, Dubuque, Iowa, December 9-14, 1913—the big quality show where Wisconsin, Illinois and Iowa fanciers meet. W. S. Russell, judge. For premium list and other information write Paul Krocheski, 83 Alumni avenue, Dubuque, Ia.

The Butler County Poultry & Pet Stock Association will hold their tenth annual show at Butler, Pa., January 6 to 10, 1914. A very nice premium list is being prepared and many valuable premiums, both cash and special, will be offered. If interested drop a card to D. H. Rankin, 112 Hazel avenue, Butler, Pa.

If you are looking for Single Comb White Leghorns you will do well to investigate the advertisement of Mr. Chas. Meyers, Carrollton, Ill., in this issue. Mr. Meyers is breeding Leghorns of exceptional quality and informs us that he has 200 from which to select exhibition and breeding stock. His prices are right and you will receive courteous treatment at his hands.

## Nicholson's Royal Blue Orpingtons and Barred Rocks

The following is a letter from one of our customers

Mr. Haldie Nicholson, Leominster, Mass.,

Dear Sir:

Have intended for some time to write and thank you for the beautiful trio of Blue Orpingtons that you sent me, and which were received in fine shape. I also wish to thank you for your more than liberal treatment of me in all of our dealings, certainly more than I had any right to expect. I am delighted with the Blues.

You will no doubt be interested to know that I won first cockerel and fourth pullet with them at the Great Conservation Exposition at Knoxville, Tenn. last month.

Please name me price on a Barred Rock cockerel, also 2 more Blue Orpington pullets.

Very truly yours, R. R. Campbell, Abington, Va.

**Haldie Nicholson**

**Leominster, Mass.**

## The Uhl Hatchery

We had a very successful hatching season as we hatched and sold 377,000 little chicks. This is the largest number we ever turned out in the 13 years we have been at it. We are prepared to turn out still more and better chicks the coming season from strictly first class show and utility stock. Place your order in good time. Catalogue free.

**M. UHL & CO.  
NEW WASHINGTON, - OHIO**

St. Joseph, Mo., will revive this year the big interstate show formerly held there. It will be held in the auditorium, one of the best show rooms in the United States, according to competent judges. Liberal regular and many special premiums will be awarded. The ribbons will be hung by judges of national reputation. St. Joseph has always been a good show town and breeders will be interested in the revival of interest there. The dates are December 19-22, immediately following the Missouri State Show in Kansas City. Breeders will be able to make both of these shows in one trip out, an advantage that is not inconsiderable.

The Missouri State Poultry Show and the Kansas City Poultry Show will hold a joint poultry exhibition at Kansas City, Mo., December 11-16, 1913. This changes the place of holding the Missouri State Poultry Show from Chillicothe to Kansas City. Judges for this exhibition will be Reese V. Hicks, C. H. Rhodes, E. C. Branch, Adam Thompson, C. A. Emry, D. T. Heimlich, V. O. Hobbs, T. W. Southard, E. W. Rankin, Tom H. Woods, J. W. Southmayd, Ralph H. Searle and L. H. Wible. For premium list and entry blanks address E. L. Noyes, Manhattan Bldg., Kansas City, Mo.

The Springfield, Mass., Poultry Club is glad to be able to announce after so long delay that the new \$2,000,000 Municipal Auditorium has at last been completed and will prove a most fitting setting for the big 1913 show which is to be held December 16-18 inclusive. Prizes aggregating \$3,000 in value are offered, and a glance at the list of judges will show the quality secured there. "Dick" Oke, "Charley" Wells, "Wid" Card, "Billy" Atherton and Paul Ives make a team very hard to beat. For full information write the secretary, H. L. Davis, P. O. Box 1424, Springfield, Mass.

The Westchester Fanciers' Club of Yonkers, N. Y., have found it necessary to change the date of their show and will give their next exhibition November 12-15, 1913. This change of date was made necessary on account of the armory building in which the show was held last year being under condemnation. A large hall in the business section of the city has been secured and everything will be done to make the show the greatest ever held by the club. Rudolph Appel, secretary, White Plains, N. Y.

The fifth annual show of the Terre Haute Poultry Association will be held December 31 to January 6, 1914. The show this year will be bigger and better than ever. Over fifty silver cups are offered as premiums besides over \$400 in cash prizes. Theo. Hewes of Indianapolis will judge the show by the comparison system. Premium lists now ready. Write or drop a card at once to M. Austin Potter, secretary, Terre Haute, Ind., and see for yourself the opportunity that is offered.

The Louisiana Poultry Fanciers' annual show will be held December 12 to 15, inclusive. They are making preparations to handle about eighteen hundred head and will give their usual high-class show. Entry fee will be \$1 for singles and \$3 for pens. Single entries cannot compete for pen prizes and pen entries are not eligible to compete for specials offered for single entries. Loring Brown of Smyrna, Ga., will do the judging. R. E. Brueger, New Orleans, La.

The Fayette Poultry Association of Uniontown, Pa., will hold their first show December 16-20, 1913. Entries close December 6, 1913. The association has purchased new coops and are preparing to hold one of the best shows in this section of the state. They are offering cash premiums, cups and specials that will insure strong competition. The premium list is now ready and can be had by writing to the secretary, M. B. Provins, Uniontown, Pa.

At a recent meeting of the Saratoga County Poultry and Pet Stock Association, Saratoga Springs, N. Y., it was decided, owing to certain conditions that have arisen, to defer holding their first annual show until next year.

The third annual show of the South County Poultry Association will be held at Westerly, R. I., December 11-13, 1913. Stanton, Ballou and Shove, judges. Send for premium list to Roger Dunham, secretary, Westerly, R. I.

**A Great Cockerel Sale.**

J. W. Parks, Altoona, Pa., has just issued his annual cockerel circular in which he describes a large number of choice Barred Rock cockerels that he has to dispose of this fall. All these cockerels are pedigreed and are from dams having records of from 217 to 236 eggs per year. Mr. Parks is not asking fancy prices for these cockerels, but is disposing of them at very reasonable prices. This cockerel

females from his noted pedigreed stock. There is probably no Barred Rock breeder in the country that is in a better position to supply the wants of the average poultryman than Mr. Parks. Write him for catalogue and prices, and mention A. P. J.

**A New Grain Sprouter.**

For the first time in this issue the Des Moines Incubator Company, one of the oldest and best known manufacturers in

to have points of exceptional merit. Unlike any other sprouter, the Successful is built in sections, which enables any one of our readers to buy the base and one or two sections of this wonderful sprouter at a small outlay. Later on, as soon as the requirements demand it, one can increase the capacity for green feed at a very nominal outlay by purchasing additional sections.

We advise every one of our readers to write to the Des Moines Incubator Co., 561 Third street, Des Moines, Ia., for their beautifully illustrated descriptive matter.

**From Massachusetts to Wisconsin.**

The Rockandotte Farm, which has been advertising in these columns for several years and have been breeders of the celebrated strain of White Rocks and White Wyandottes, has moved from Southboro, Mass., to Janesville, Wis., where they have excellent facilities for their rapidly growing business of breeding more White Rocks and White Wyandottes. They are now building an incubator cellar on their new place and expect to install three 10,200 egg Mammoth Incubators in con-

The above illustrations show some of the colony houses used by J. W. Parks, proprietor Wopsy Poultry Yards, Altoona, Pa.

sale is an annual affair with Mr. Parks and a great many breeders throughout the country take advantage of it. The accompanying illustration shows a number of colony houses on Mr. Parks' farm where he raises the cockerels that he is now offering for sale. His system of raising stock insures strong, vigorous, healthy birds, just the kind that is needed to produce strongly fertilized eggs. Mr. Parks also has for sale any number of

the United States, offers something new, practical and valuable to the poultry raisers. This concern, well established and well known to our readers as manufacturers of the highest class incubators, brooders and up-to-date poultry appliances, have now come forward with a new grain sprouter. This grain sprouter, as we notice from their literature, is not only entirely different from any other sprouter on the market, but also seems

**Grow Mushrooms**

nection with breeding the best exhibition specimens of White Rocks and White Wyandottes. They will pay particular attention to developing a trap-nested strain of these breeds. The removal of this plant from Southboro will not in any way interfere with their business, as they have moved their entire flock of breeding and exhibition birds and are in a position to fill all orders promptly.

We expect, at an early date, to be able to give to our readers a full description of this new plant, which, when completed, will be one of the largest and most up-to-date in the country. Anyone desiring high-class exhibition birds for the coming show season should write W. R. Graves, Janesville, Wis.

### A Wonderful Achievement.

During the past few years there have been some wonderful records made at the poultry exhibitions in this country, but none more worthy of mention than the record made by Guy Daily, Jeffersonville, Ind., with his White Plymouth Rocks. Beginning in 1908 at Jeffersonville he won second, third cockerel and third pullet. At New Albany, Ind., 1909, first, third cockerel, first, third pullet, second pen. At Louisville, Ky., 1909, second, third cockerel, second pullet. Again at Jeffersonville in 1909, first cock, first, second, third hen, first, second, third cockerel, first, second, third pullet, first, second pen, silver cup for best display and every special offer. At Louisville, Ky., December, 1909, first, second, fourth cock, first, third, fourth cockerel, first, third, fourth pullet, third, fourth hen, silver cup for best display and six out of eight specials. In 1910 at New Albany, Ind., first, second,

third cock, first, third cockerel, first, second pen, second hen, third pullet and three out of four specials. At Kentucky State Fair, 1910, first, second third hen, first, third cock, first, second pullet and third cockerel. In 1911 he exhibited at Louisville, Ky., Indianapolis, Ind., and the Indiana State Fair, Kentucky State Fair and Tri-State Fair, Memphis, Tenn., and Chicago, and at all of these shows with the exception of Chicago he won more first and second prizes than all other exhibitors of White Rocks.

At Chicago in a class of 186 White Rocks and 19 exhibitors he won second cock, third pullet and fourth pen. In 1912 at the Kentucky State Fair he made 20 entries and won first, second, third cock, first, second, third, fourth, fifth hen, first, third, fifth cockerel and special for best cockerel in the show, all varieties competing, second, fourth pullet and special for best pullet in the show and a great many other special premiums. At Indianapolis, February, 1912, in competition with some of the largest breeders in the country he won first, second cock, first, third hen, first, second cockerel, third pullet and first pen and many specials. At the Tennessee State Fair the same year he won first, third, fourth, fifth cock, second, fifth hen, fourth, fifth cockerel, second, fifth pullet, second, fourth, fifth pen. At the Illinois State Fair, same year, he won first, second pen, first, third, fourth hen, second, third cock, fourth pullet. At the great Coliseum Show, Chicago, December, 1912, on 12 entries of the strongest class of White Rocks ever exhibited there he won first, third pen, fifth cockerel, best and grand championship on hen.

At the New York State Fair, September, 1913, after traveling three days without feed or water and being judged in less than two hours after arriving at the fair, his birds won first old pen, third young pen, first, fourth cock, second, third hen, third cockerel and first, fifth pullet. In all he exhibited 20 birds in a class of 101 White Rocks and 17 of them were in the winning, seven being first prize winners. The above record proves beyond a doubt that the Fairview White Rocks have been steadily improving and that now they are right up in the front, and this strain is so well established by remarkable winnings it has made both for Mr. Daily and his customers that everyone can depend on getting full value for their money.

In establishing the Fairview Strain Mr. Daily has always kept the utility values uppermost. By careful study and using of trap-nests during the breeding season he is able to mate his birds with a perfect knowledge as to their blood lines, laying qualities, as well as utility standing qualities, and in this as in all other lines of livestock, blood will tell. Mr. Daily is prepared to furnish birds that will win in any show in this country and at prices that are reasonable when quality is considered. He can also furnish breeding stock that is guaranteed to give entire satisfaction. Write him for his catalogue and mention A. P. J.

### Johnson's New Catalog.

To really get the bed-rock facts on making money from chickens, one should read the 1914 catalog written by the Johnson family. It's a new issue of the book that has been the means of getting hundreds of thousands of people interested in the profit making possibilities of poultry. It explains most interestingly how half a million or more owners of Old Trusty Incubators are making profits. When it is remembered that the Johnson family made a life study and work of raising chickens themselves, one can realize the basic facts their book must contain.

The 1914 issue is now ready to mail—fresh from the press. To anyone interested in making poultry profits we suggest writing the Johnsons for a copy. Read any chapter in the book and you will carry away some idea you can make money with. If there is anything you want to know about chickens, ask the Johnsons. The book itself is the most profitable chat on chicken raising that we believe was ever written. It's mailed free—postage paid—to anyone who writes for it, addressing Johnson, the Incubator Man, Clay Center, Neb.

Sunswick Buff Orpingtons (South Plainfield, N. J.) were a real revelation to us. Buff in all richness and soundness is seen in their birds. Their Allentown winnings are but another proof of their worth. They sure have the numbers and quality.

The S. C. White Leghorns of G. L. Wheeler, Penn Yan, N. Y., are sure to be heard from at this season's shows. We sure did see exceptional quality there in his old and young birds.

The Spring Water Poultry Farm, Stockton, N. J., is one of the best and most practical plants we have seen. S. C. White Leghorns are the specialty, closely followed by hospitality.

P. A. Demgar, Brown Station, N. Y., White Orpingtons, besides winning at the N. Y. State Fair won at Poughkeepsie, cock 1, hen 4, cockerel 1-2-5, pullet 1-2-3-5, old pen 1, young pen 1. This line has splendid quality. They win.

## OLLE'S Wh.&Partridge Rocks

Chicago Winners, offering some grand \$10 and \$15 trios, \$25 pens; also single birds. These birds will be shipped on approval. Catalogue free for asking.

P. J. Olle, R. 4, Box 111A, Racine, Wis.

### A Visit to Arcadia.

History tells us that Arcadia is the central and most mountainous portion of the Peloponnesus (Morea), the inhabitants of which in ancient times were celebrated for simplicity of character and manners. At the present day Arcadia forms a nomarchy of the kingdom of Greece.

The Arcadia that we are interested in and of which we are going to talk about and the one that historians in the poultry world will write about in the future is located in the grand old state of Indiana. This Arcadia has been put upon the poultry map by Mr. A. E. Martz, the world's largest specialty breeder of Single Comb Buff Orpingtons.

During the week of the Indiana state

manner. Every foot of ground of the seven acres is utilized to the best possible advantage, but the arrangements of the yards and buildings has to be seen to be appreciated, and is certainly a masterpiece of planning.

Mr. Martz has made the breeding of Single Comb Buff Orpingtons his life's study and has the art of mating this variety down to such a fine point that he knows exactly what kind of stock he is going to get from this or that mating and the percentage of high class specimens that he raises each year proves this statement.

At the time of our visit he had several hundred head of young stock well matured that showed the most beautiful buff color we ever looked upon. But color is not all he breeds for, as his birds have

to give best results with the least labor possible.

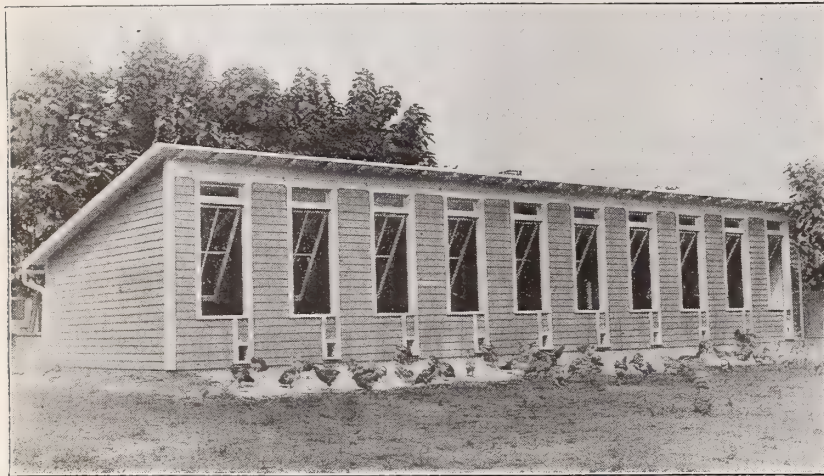

His catalogue gives list of prizes won, birds-eye view of the farm and other matters that will be interesting to anyone.

### Good Word from Arthur G. Duston.

A good word comes from Arthur G. Duston of South Framingham, Mass., good for him and good for all, for it serves as an indication of good business this coming season.

Mr. Duston writes us that the outlook for 1913-14 is remarkably bright. Calls come for high class stock, which is Mr. Duston's specialty, old customers coming back for show birds and breeders. Mr. Duston's stock in his customers' hands last season made phenomenal records of wins. He's the kind of a man that's more pleased to have a customer win than himself, although at Albany National White Wyandotte Club meeting, where over 300 of the best in the land from noted breeders' yards competed, he won the lion's share, something to be proud of after freely selling winners from Maine to Texas. It is such men as Mr. Duston who handle their trade in a clean, business-like way so as to command their respect and future orders, that have helped to put the poultry business on the high plane it has obtained during the past few years. With the numbers and quality Mr. Duston has on hand, he feels that this year will be the best he has ever had. As we see, he states in his ad you'll lose nothing by sending him 15 cents for his catalogue, for if you do not consider it worth the money it's yours free. By all means we advise you to get in touch with Mr. Duston. We guarantee he'll use you right.

If you are looking for White Rocks, look up the advertisement of H. E. Taylor's Stay White strain, which appears on another page of this issue. Mr. Taylor is breeding Rocks of splendid quality and his prices are very reasonable, quality considered. You will get a prompt reply and your money's worth if you deal with Mr. Taylor.

A new Brooder House that is a trifle out of the ordinary, designed by Mr. A. E. Martz, the well known breeder of Buff Orpingtons of Arcadia, Indiana

air the editor took advantage of an opportunity to spend a day with Mr. Martz at his home in Arcadia. We had seen photos and heard glowing descriptions of Mr. Martz's poultry farms and therefore expected to find something extra fine; but really did not expect to see the most model poultry plant he had ever visited.

The plant consists of seven acres right in the town of Arcadia and is a most pleasant sight, as every building and fence is uniform in appearance; the yards and runs are well shaded; drainage and sanitary conditions ideal. All of which lend an air of prosperity found only on the most modern and up-to-date poultry plants.

Mr. Martz is a living example of the great possibilities of the specialist and of "what is worth doing is worth doing well," for everything that is done on this plant is done in the most thorough

the true Orpington type and fine head points. In all there were about 3,500 head of stock on the plant and all of that beautiful golden buff.

Mr. Martz devotes his entire time to the business of producing and selling this one variety of fowl and has established a business that is paying him a good income. This has been done by close attention to the mating and growing the best birds possible and by giving every customer his money's worth.

During the past several years the Martz Buff Orpingtons have been consistent winners at all the large shows and therefore have a show record second to none in this country.

The accompanying illustration shows a new brooder house that was just about completed at the time of our visit. This house will be heated with a hot water system and electric lighted. It is built on the most improved plan and arranged

## FOXHURST FARM CHAMPION BLACK ORPINGTONS

Make a world's record at America's Imperial Show at Madison Square Garden, New York, 1912-13

**Won All FIVE FIRSTS, 22 Ribbons, 30 Birds Entered**

Show birds, cockerels and pullets ready to win at fairs, Fall and Winter shows, bred exclusively from our New York champions, also yearling cocks and hens shipped on approval, satisfaction guaranteed, at prices from \$10 to \$50. Write for catalogue. Mention American Poultry Journal.

**Foxhurst Farm, Lime Rock, Connecticut**

FIRST PRIZE HEN MADISON SQUARE GARDEN NEW YORK 1912-1913  
BRED & OWNED BY FOXHURST FARM, LIME ROCK, CONN.

### A Brief Sketch of One of America's Greatest Poultry Farms.

Situated twelve miles from the heart of New York City and facing on the main thoroughfare of one of New Jersey's picturesque suburban towns, Nutley, N. J., will be found the seven-acre farm of Kaufmann & Windheim, Rose Comb Rhode Island Red specialists, known around the world. Here may be seen one of the most complete poultry farms in the United States, one that was built from the finest of everything, laid out in systematic style and one that is kept in the best of condition the year around. Here may be found handsome buildings of the latest type, because these men believe that no building can be too fine to house birds of the quality they raise. Par excellence in Rhode Island Reds is the slogan here, and before you are half way around this farm you will start to wonder whether these two young men have an unforeseen art of producing specimens by the hundreds that bear close to the much-talked-of Standard of Perfection.

Neither Kaufmann nor Windheim are old men in years, but at scientific breeding, producing and rearing Rose Comb Rhode Island Reds it can be truthfully said that they are past masters. Nearly seventeen years of continuous study in this breed has given them experience which has proven a great advantage to them and a great handicap to their competitors. You could not find two more congenial, more frank or truthful men than these two. Kaufmann will tell you that "we two have been pals in business and pleasure since the days we played hockey together, and we never had a serious argument." This, he says, is the real secret of our success. "We started without a cent in the world, parents on both sides discouraged us, friends said there was nothing to the chicken business, but we started on a city lot, worked hard day and night and what you see here is but a part of the fruit of what we have sown." A farm that totals up over \$15,000 in value, growing every day, equipped from the beginning with the finest of incubators to a most handsome conditioning house and an office that contains the ribbons and cups that represent a "world's show record," one never equaled by any other Rhode Island Red breeder in this country. "It's a poor year," said Windheim in his frank way, "that we do not clear \$5,000 between us," and outside of this profit Mr. Windheim is paid \$1,200 a year as farm manager.

It matters not whether an amateur or a rival breeder drops in at this farm, he can have every question answered in a civil way. It matters not how personal these questions may be, these fellows will tell you the truth. They will tell you just how they started, just how they have bred, how they are breeding today, and they will tell you the mistakes they have made, where they have wasted money, where they thought they knew all there was to know in building this or that and found out after that they were all wrong. They will tell you that every year they put matings together that are all wrong and should not have been mated that way, even with all their experience; they will pick out this or that bird and say, "He is all wrong," and they will give you many "tips, we might say," that they use in producing quality and rearing chicks which are not usually found in books. Windheim's life study, it would seem, is to produce and raise 95 per cent of the young stock, to grow them right and to have the right bird for the right man when Kaufmann comes out of the office with his daily orders. Kaufmann says he is happy when he can please 95 per cent of his customers. It can be truly said these gentlemen have clear consciences. They are both fortunate enough to be broad-minded and know that their frank, fearless manner has played as big a part in their success as the quality they have put into the show room. A good instance of this is shown by the fact that a very great majority of their customers come back year after year. They said that sometimes it appeared useless to advertise as much as they do (and they are not what you could term large advertisers), as enough old trade comes to them each year to almost sell out. For the last three years they have been obliged to cut down their advertising right in mid-season, and they raise 2,000 and upward every year. Selling from \$10,000 to \$15,000 worth of stock in twelve months is not child's play, and when you consider that the greater part of this is trade from previous advertising, it is quite astounding. Every year since they have been in business they have been sold out considerably ahead of time, and when this farm has sold down to their breeders, that is the end of it.

Kaufmann & Windheim raise what they sell. When you visit their farm all they have is there. There are none on "this farm a few miles away," none "over the hill," or "down in the valley." All they have is right before you. You can see their very best and just what they will exhibit, and if you are earnestly interested they will catch them for you. They are strong for the fine points of a bird and it pleases them to have you handle one of their Bill Taft Line birds.

After wandering around for the best part of the morning I feel frank to say that they have at this time a flock now numbering only about 1,000 birds, but it was the most true to type and color flock that I have ever seen. I saw 500 cockerels, all with the blood of their great old ancestor, Bill Taft, their first prize Madison Square Garden, New York, and Boston cock, and never defeated. Many of these birds were three and four generations down, but they all seemed to resemble one another, in type and general color. I mentioned that they all looked alike and it should be easy picking for customers. "That is just the trouble," they said, "liable to let one go that will mature into a New York winner for a fair breeding bird price." While they were free to admit that last year they had but only a fair pullet year, this was a banner one. They have more good pullets this year than ever, and in one big 25-foot coop that was lately built they had 75 that were picked of all one size and color. I shall never forget this sight. In fact, I found them both sitting by the coop when I dropped in, pointing out certain pullets that looked their Venus first prize, color and shape winner at Madison Square Garden two years ago in the largest class of pullets ever shown at that great show. "We like to raise a nice lot of pullets," they said. We have a great male line and we get great cockerels, and

in large numbers, every year, but we must watch ourselves to get plenty of good pullets.

I saw their great Bill Taft, Jr., who is now on the retired list. This is the only Rhode Island Red in history that has ever sired, in one year, both first and second prize cockerels and pullets at the great New York show. This was accomplished year before last in the largest class of Reds ever brought to New York. He is ageing fast and you never could realize that he had been a great show and breeding bird. Then I saw their great old hen Salome, a six-time blue ribbon winner and never defeated. This hen won color and shape special in New York three years ago above all pullets, and she is the mother of their first and second New York cockerels, Bill Taft V and VI. She is also retired, and her final resting place will be in their private cemetery, where, just previous to my visit they had buried another great hen, Zaza by name, and the first prize winner at Madison Square Garden year before last. Every great show bird that dies on this farm is "planted" under their immense sign that stands twenty feet or more in the air. It reads Kaufmann & Windheim's Rhode Island Reds, known the world over, and Windheim says the birds that rest under it are what made it possible.

If you happen to be in New York City or anywhere in the state of New Jersey it will pay you to visit this farm. Whether you are a Rhode Island Red fancier or just a lover of poultry, it will do you good to visit a prosperous farm, one kept up like a "country gentleman's estate," but founded and built up from the profits made from customers who have received full value for their money, and many of whom are big rival breeders of this firm today. Here you can see a most ideal farm with its winding brook at the foot,

chicks raised the natural way with hens, chicks raised under the latest brooding methods, a show room with a hundred or more cockerels ready for immediate shipment at all times, well constructed colony coops, a late model breeding house 120 feet long and one of the finest brooder houses for its size in the country, every coop having extra long runs, well shaded with some 300 peach trees, a magnificent office and everything painted dead white with green tops on all posts. Here you will find what you need in Rhode Island Reds from a cockerel for good breeding purposes with royal blood in him for \$3 to one fit to win the blue ribbon anywhere, and above all, you can put reliance and confidence in the men who founded, developed and operate this plant.

### The Sunswick Poultry Farm.

Yearly it has been our privilege to visit the Sunswick Poultry Farm, South Plainfield, N. J., the great S. C. Buff Orpington plant of America, to see their stock and to enjoy a talk with Mr. Delafield, the owner and Mr. Arnot, the poultryman-in-chief. These are all pleasures I would wish every reader could enjoy, for to see this simply wonderful line of Buff Orpingtons as they are bred here and their ancestors for years is truly a cupful of joy long to be remembered, while a visit and a chicken-talk with Mr. Delafield is sure to be interesting and of worth to any man.

Formerly all the Orpingtons were bred here, but for the past three years the Buffs alone have had full sway here, with all endeavor and work concentrated in this one variety, with results most evident.

At this time were seen here 1,200 young birds—all buff, and basking in the sun with their beauty pronounced. Of these about 500 are now matured, selected in graded pens, showing their quality and the worth of rare true breeding in the entire flock.

Here were seen cocks and hens with a long line of winning records that have been carried up to this very month; birds that have stood the quality test at Madison Square Garden, New York, Chicago, Boston, Baltimore, Philadelphia, Allentown, Palace, N. Y., Augusta, Hagerstown, etc., etc. Birds that have won the greatest honors and that have produced stock of equal merit that in turn also have won and brought fame to this line and farm. Were it possible with space we would like to give the individual history and record of this line complete, as it is one of extra value. It is given in their catalog, a copy of which will be mailed to all requests.

In the young of this season it is evident that improvements have again been made.

The head points, particularly combs, are a choice lot of rare size and form. Eyes unusually good. They are large, rugged fellows with cockerels now weighing from 9 to 10 pounds. They stand well on legs well set and in color are a revelation of soundness and purity. Evenness in color from tip to tip is a feature. At the late Allentown show, among other prizes they won first pen and first cockerel. These two cockerels were here yarded together, a pair of surpassing beauty and value. The pen cockerel a wonder in soft even, sound buff, with ideal form and a sweep to back and tail that must be seen to be appreciated. We want to see the bird to beat him. This male, with his four mates in first Allentown pen, were a revelation in mating and matching for both shape and color, and won special for best pen at the show.

There were other cockerels here that will be heard from later. They seem to have every quality desired, and there is enough of them to go round—and then some. The pullets were of the same high grade and almost without number. In both males and females we handled several birds and were delighted with what they showed under. Buff has its natural defects which are hard to overcome, so when we see a flock of this value that are a high and uniform quality we are sure to appreciate it. Uniformity and evenness has no superior in the worth of a flock.

Baby Chicks are a feature of this farm. For the past two seasons their large incubator has been worked to the limit to supply the demand for day-old chicks. Eggs for hatching are also a leader, and we are glad to here state that several customers of this farm have recommended them highly to us for treatment received.

Now, at the approach of another show season, we note their preparedness to supply the trade with choice exhibition birds and of a quality to do credit to any show. In selected breeding birds they can also supply the wants of those who wish reliable breeders for next season's work.

It is indeed a pleasure to recommend the Sunswick line of Buff Orpingtons, the owner and the manager—they are worthy of every confidence.—H. P. Schwab.

### The Necessity of Using a Typewriter.

Today a typewriter is absolutely essential in writing business letters of any nature. It is an injustice to any business man or business house to correspond with them in long hand. Even though you write only one or two business letters a week, these letters should be typewritten. We all now-a-days have lost the ability to write in the beautiful flowing copperplate style of writing of our grandfathers, and the modern hand-written letter is re-

sponsible for an enormous number of mistakes of all kinds; some of them costing far more than the price of a typewriter. Most people, even completely recognizing the fact, that business correspondence should be typewritten, find that an expense of \$100 for a typewriter is beyond their reach. Even though they realize that it is expensive and undignified to try to get along without one.

There is an enormous demand today for a thoroughly reliable and satisfactory typewriter at a price within the reach of the man having even only one or two letters a week to write, that anyone using the complete and detailed instructions furnished with each typewriter can operate and produce perfect work with half an hour's practice, and Harry A. Smith, realizing this demand for a machine that can be relied on to do perfect work and give satisfactory service, is offering in this issue a typewriter that will write a clean-cut and perfect letter and stand up under the hardest kind of usage, at a price making it possible for everyone to enjoy this convenience and business necessity.

### The Spring-Water Poultry Farm.

From Trenton, N. J., to Stockton, N. J., 20 miles away, the traveler passes through the beautiful Delaware Valley, a section famous for its extreme beauty, fertile farms and historic value, for many of the scenes of our early struggles were enacted in this neighborhood that add zest to the visitor in these parts. Washington's crossing of the Delaware and his march through the state has left behind places and deeds of interest for the ages to come. Where war once raged, peace now grows crops of grains and fruits and has become one of our greatest poultry sections with a climate peculiarly well adapted to poultry growing.

The Spring Water Farm is but 3 miles from Stockton; the road leads you through the quaint town and out over the hills, through the woods and open places where a view of the country for miles around is had and which at the time of our visit were clad in their October beauty of colors; and arriving at the farm you have that home feeling that only experience can explain. This farm is owned by Mr. and Mrs. Frank J. Eppele, who are simply the "Boss and Missus" to all alike, but mere companions in fact.

From the upper porch of the house an odd little sign reads, "Duz-U-pleze" and it means all it says, so we entered its doors and made ourselves at "home" same as Frank Eucaliptus Platt, Baron Von Gink and other illustrious poultrymen before us did.

This plant in fact is a modern one, and with due respect to Mr. Eppele is largely the work of Mrs. Eppele, who devotes all her time to its management. The incubator cellar contains two large machines of 20,000 egg capacity, while the brooder house close by has 5,000 chick capacity. Over the incubator cellar is a large laying house where 600 to 700 layers are kept for eggs only; to the left of the house are the four large breeding houses and further on in the chestnut grove are the colony houses for special matings and the growing of the young birds. Then there is also the modern rat-proof corn crib with a 4,000 bushel capacity, the Old Stone Spring house, the club house for the "boys," the feed houses, stables, etc., all complete.

The Spring Water Strain of S. C. White Leghorns are bred here exclusively and have proven their worth, for they alone have made this beauty plant possible. Year by year both the flock and plant have been enlarged until today we find it not only a model plant but one of mammoth size with a capacity of eggs for hatching and baby chicks that runs way up into the thousands yearly.

We easily spent more than half of our day in looking over the birds seen here. While the old were in moult, we could still see enough of them to assure us of their fine quality, and if further proof were required we only had to turn to the young stock, of which there were 1,800 pullets on the place. In these we saw our fondest expectations in pure color shape and style. The long bodies, well carried tails, good legs well set, and nice heads were the rule. From first to last it was a most desirable flock and in perfect health and condition.

The cockerels also give promise for the future. Grand head points with the best of station and carriage were seen and they will bear watching at this winter's shows. A few of their hens were most in new plumage and their first Baltimore, Md., 1913 pullet was seen to

## DOUBLE QUICK GRAIN SPROUTER

### THE PERPETUAL POULTRY SILO

This is the fourth season that readers have seen in the poultry papers the following very familiar line:—

#### SPROUTED OATS — WINTER EGGS

and several thousand poultry keepers have immensely increased their egg yield by the use of the well known Double Quick Grain Sprouter—the original—the first—the oldest sprouter and made in the Largest Grain Sprouter Factory in the World. We have supplied many of the large and well known poultry plants in the United States, some having ordered as many as three to five sprouter after testing out their value.

Later—April 27—I am enclosing my check for two more of your No. 5 Double Quick Sprouters. The one I bought some weeks since is doing good work.—C. H. Latham, Beauty and Utility Barred Rocks, Lancaster, Mass.

October 7, 1912—On September 16th I ordered your No. 5 Double Quick Sprouter sent to Maud L. Kaler, Columbia City, Ind., and this one is proving so satisfactory that she wants another of the same size and therefore you will find draft in payment of this second sprouter.—Milo R. Meredith, Indianapolis, Ind.

September 14, 1912—I ordered and received from you last fall one of your 5-tray grain sprouters. This works very satisfactorily. I want one for 1,500 hens. Will you kindly advise me by return mail if you make a larger size and the price of same. Later—September 23—I enclose you my check for which please ship me rush one of your No. 6 Grain Sprouters.—E. A. Palmer, Providence, R. I.

Soon pays for itself. Makes two to four bushels of feed from one of grain. Sprouts in 24 hours and forces growth of 2 inches daily. Made in six sizes from a few pens to 1000. Send for complete Double Quick information.

Shows Oat Sprouts 8 Inches High

CLOSE-TO-NATURE CO.

38 Front Street

COLFAX, IOWA

advantage, although not as yet at her best. This female was pronounced one of the best out last year and she gives every promise of being a wonderful hen.

We believe that last year was the first that this line was exhibited at the popular and large exhibits, but enough of them were seen at the Baltimore and Camden shows to warrant their future success, for the evident improvement seen this year is their best and strongest comment. The even quality of the young was conspicuous, like peas in a pod in size and general form and carriage. With the results seen and noted here we consider Mrs. Eppele a pronounced expert in the feeding and growing of birds and we hope she will soon write of her experience and mode of work in this line, for her methods mean success for all those that will follow.

We hope to again later write of this plant, when time and space will permit and when the stock is matured and the matings are made, also showing some views of this place and a bit more of history connected with it. For the present we would advise our interested readers to write for their catalog, which fully explains their business and stock.—H. P. Schwab.

### Another Great Winning.

Dr. LeGear's White Rocks have again demonstrated their superiority by their great winning at the Missouri State Fair, September 27 to October 3, 1913. They had strong competition, but never lost a ribbon. Won every prize competed for. Made a clean sweep, and also Grand Champion bird of the whole show.

There were only three prizes offered in each class. We entered 1 cock, 8 cockerels, 4 hens, 4 pullets and 2 pens, and won 1st cock, 2d and 3d cockerel, 1st, 2d and 3d hen, 1st, 2d and 3d pullet, 1st and 2d pen, and the Grand Champion Sweepstakes bird of the whole show, all breeds competing. What more could be desired if you are looking for the best White Rocks in the country?

"Lady Ideal," our one-year-old White Rock hen, which was the Champion bird of the whole show, was the admiration of all visitors to the Missouri State Fair. She has snow white plumage, beautiful yellow legs, a long, broad back, low, well-spread tail, and is an ideal White Rock in every way. By being the best bird in the show she won the Useful Poultry Journal Silver Loving Cup offered for the Champion bird in the State Fair Show. She will be mated to the Blue Ribbon Cockerel at the Missouri State Fair, and this mating is bound to bring prize winners. We showed "Lady Ideal" last year as a pullet, and she won everywhere shown. All our birds are absolutely our own raising. We have cockerels hatched in March that weigh eight pounds, and pullets the same age that weigh six pounds. Bred and owned by Dr. L. D. LeGear, 713 Howard St., St. Louis, Mo. Farm at Kirkwood, Mo.

### G. L. Wheeler, Penn Yan, N. Y.

The "Wheeler Strain" of S. C. White Leghorns has been a leader for a great many years and is one of the two oldest and most reliable lines we know of. We have seen them at the shows for fifteen or more years, and during all this time they have been leading winners and prominent in the progress made in White Leghorns.

As an exhibition line this strain is probably best known, for they have made the prominent shows of the South, East and Mid-West with a record at each that stamps their quality of highest merit. For two years they won the leading prizes at the great Baltimore Show, and their roll of honor includes Boston, Pittsburgh, Buffalo and many of equal worth; besides these this line has been winning for customers the country over, no competition has been too strong for them; they are up with the best, and in dozens of cases we know of have won new fame for their breeders.

Our late visit was the first we have made to this farm in three years, during which time Mr. Wheeler has greatly enlarged his plant, and he has today one of the rarest and largest collections of fine birds that it ever was our good fortune to see. Here were about 40 cock birds of a class and quality to win excellent head points, large, long bodies, full breasts and correct station. Hens, many of them moulted and a rare lot, good size, combs neat and of fine texture, long tails well carried and full-feathered all positive white, with rich eyes and the best of yellow legs.

In cockerels and pullets our cup of joy

was filled. We have often written of the value of this line before, but we have never before seen the quality they have this year in their young, and it is not only found in a bird or two, but in all seen the quality was highest and of surprising merit. Here was seen dozens of cockerels, every one a prime one, with great promise and with characteristics alike as if moulded from the one pattern. In heads these birds were almost a revelation, with small, well-set combs evenly serrated. Straight and free from thumb-marks, smooth, small lobes and rich red eyes complete this section. They stand strong, up free and clean, with legs well set, full breasts, arched necks and long, sweeping backs with full, low-carried tails. To see them is to admire them, and to know their breeding and the value of their quality, for they have been carefully line-bred for just these qualities for years, is to admit them into the select class of worth and prominence they so well deserve. This line has been good for years, but it is far better now than ever before.

In pullets the same qualities in backs, tails, breasts, etc., was seen; they line up with the males in every way, for they also stand up clean with style and the best of carriage.

We were greatly pleased with all seen here. Old and young both show their excellent quality, which covers great numbers that will surely make their mark again this season. Mr. Wheeler has the quality to please. He is a dependable

breeder and can be fully relied upon to satisfy every customer with either exhibition or choice breeding birds.

A little later we will visit there again and will then write more of this line, which for general high grade pleased us greatly.—H. P. Schwab.

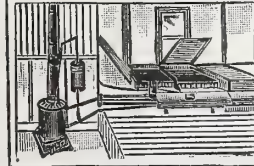

### The Rancocas Quality Farm.

The Rancocas Quality Farm, with Mr. M. L. Chapman in charge, is located nearly one mile away. This farm of 40 acres is entirely devoted to their Quality and exhibition line of S. C. White Leghorns and White Plymouth Rocks. Mr. Chapman has been at the head of this department ever since it was started some years ago and it has always been a delight to note the quality and the condition of these birds in the show room where they have been liberal exhibitors.

Records made tell the true story of worth, so let us here give a little history that belongs to this line. At the late New York State Fair, 1913, in a class of 289 S. C. White Leghorns they won a sweeping victory and cup for the best display of ten birds, any variety, at the show. Cockerels, 1, 2, 3, 4, 5. Pullets, 1, 2, 3, 4, 5. Cocks, 4. Hens, 1, 2, 3, 4. Young pen, 1. Old pen, 1. This with their winning at Trenton, Philadelphia, Hagerstown, etc., well tells the story of their worth.

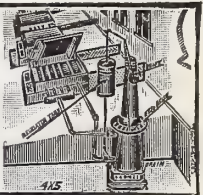

In White Plymouth Rocks this line has done equally well, winning at Boston, Buffalo, Trenton, Philadelphia, etc., in the past

### RIPPLEY'S

Combination Hot Water Heaters, Brooder and Poultry House Heaters and Steam Feed Cookers. And Ripple's Square All Galvanized Steel Hot Air Drums and Hovers. Are used and recommended by noted breeders. Will heat Hovers from 25 to 100 ft., also heat buildings or cook feed for stock, heat water in tanks. No other heaters on the market like them. Used by 20 State Experiment Stations. We furnish Piping, Hovers and Heater, or any part of outfit. Write for catalogue showing these outfits, also Ripple's Egg and Chick Shipping Boxes, Exhibition Coops, Whitewashers, etc.

RIPPLEY MFG. CO., Box 26 Grafton, Ill., U. S. A.

## USE GERMOZONE

**For Bowel Complaint** in old or young chickens: Clean up, change feed and give Germozone, a teaspoonful to a quart of drinking water

**For Roup, Colds,** watery eyes or nostrils, swelled head, nostrils stopped up, etc., a teaspoonful of Germozone to a glass of warm water. Inject through the nostrils into the head passages. Wash soiled places under the wings with same solution. Give Germozone in the drinking water as for bowel trouble.

**For Yellow Canker** or diphtheria in mouth or throat of chickens: Remove the canker and apply Germozone right from the bottle. One application generally effects complete cure.

**For Regulating Bowels:** Give Germozone twice a week as for bowel complaint. It is marvelous how much better chickens will thrive, grow, or produce when bowels are kept regular.

**For any Sore, Cut, Wound, Burn,** irritation, itching or tenderness of the skin, apply Germozone diluted, one teaspoonful to a glass of water.

**For Old Sores, Ulcers, etc.,** apply Germozone full strength (right from the bottle) once or twice a day.

**For Dogs, Singing Birds,** and pet stock, a little Germozone in the drinking water (a teaspoonful to a quart of water) is a great bowel regulator, mouth and throat cleanser. Many birds do not sing because of sore throat. Germozone will generally start them singing.

**Many other uses.** See our large pamphlet for complete list of uses of Germozone.

**GERMOZONE** may be purchased at most every town; 10,000 dealers in U. S. Fifty cents per bottle. Sample 10 cents postpaid. Booklets free.

**GEO. H. LEE CO., Omaha, Neb.**

The "ESSEX-MODEL"  
The Greatest Little Mammoth Ever Built

## Start With This Single Mammoth 800 Egg Incubator and See it Grow

With an Essex-Model 800-Egg Mammoth Incubator (the only one of its kind) you can start hatching on a fair-sized scale and grow by adding 400-Egg Sections when you please. This extraordinary offer has never before been made. Again the "Essex-Model" takes the lead. This little 800-Egg Mammoth is complete with Heater, Thermostats, Thermometers and Double Safety Regulation. Built on our long-used Standard principle, now imitated by other manufacturers. Nothing for you to do but screw on the legs and attach heater.

## Begin Right and Make Money Raising Poultry

You need dig no cellar. You can run it in your house or any other building. We manufacture

**America's Largest Line of Incubators and Brooders—19 Styles and Sizes**

87 Barclay Street, New York City

The "Essex-Model"  
Multiple Mammoth Incubator

Built on Our 10-Year Old Principle

years and this year at the New York State Fair they won: Cockerels, 1, 2, 4. Pullets, 2, 3, 4. Cock, 3. Hen, 1, 4, and 2d in both old and young pens, also first display. At the Trenton Inter-State Fair: Cockerels, 1, 2, 5. Pullets, 1, 3, 4. Cock, 1, 2. Hen, 1, 2, 3. Pen, 1. Special for best exhibit any variety, etc. At Madison Square Garden, New York, last winter they won: Cockerel, 3, 4. Pullet, 4, 5. Hen, 1. A record of class.

We came near overlooking in this year Boston and Philadelphia winnings on S. C. W. Leghorns last winter, which were: At Philadelphia—Cock, 1, 2, 5. Hen, 1, 2. Cockerels, 2, 5, 6, 7. Pullets, 3, 4. Pen, 2, 4. At Boston—Pen, 1, 4. Hen, 2, 3, 4. Pullet, 2, 4, 5. Cock, 3, 5. Cockerel, 5.

We regretted Mr. Chapman's absence, he being away judging at Trenton, but his assistant took every pains to show us around over the plant and to point out their winners. In both Leghorns and Rocks were seen their quality breeders and the growing young with great promise in all. We hope later to again visit these farms to see their matings and all birds at their best, when we can again tell our readers of the stock and doings there. It is a plant of interest, one to study and to follow, and we would advise every person who can to visit there. It is worth while. —H. P. Schwab.

### American Bred White Orpingtons.

Two or three years ago it was considered a foregone conclusion that in order to win first prizes in White Orpingtons at any of the leading exhibitions it was necessary to get imported birds from England.

That the breeding of this variety in this country during that time has changed all this may be seen by the results at the great Allentown Show in September of this year, when the two Grand Champion prizes for best bird in the show, the best ten birds in the show, the Futurity prize, and all the first and second prizes in the single classes were won by American-bred birds over the imported birds, and the prize for first pen was won by birds sold by the same farm.

This shows what can be accomplished by careful and scientific breeding, when birds of this variety raised by one American firm can carry off five firsts, four seconds, the Futurity, and two Grand Championship prizes against the imported birds as well as those of the other American breeders. This is all the more remarkable when it is considered that the Grand Championship prizes were for the best bird in the show, and the best ten birds of any variety in the show of about 3,000 entries, when it is remembered that this is the second consecutive winning at this same exhibition against the im-

ported birds, as the same firm last year won the two Futurity prizes, with four firsts and six other prizes, with White Orpington cup for best cock, hen, cockerel and pullet. It will show to the fanciers that it is not now necessary to send abroad to get the highest quality of this most popular variety.

This, however, is not a surprise to anyone who has visited the Aldrich Poultry Farm, of Columbus, Ohio, and seen the result of the matings of the present season. The visitor can there see not only a few, but dozens, and even hundreds, of White Orpingtons fit to contest and win in any exhibition in the world; one can see there what can be accomplished by careful selection and intelligent mating of one of the most popular varieties, and the members and superintendent of this firm are always glad to show their beauties to all lovers of fine poultry, and all such will enjoy a treat in seeing the stock and the beautiful yards and buildings of one of the leading poultry farms of the world.

### Tecktonius and Reed Combine Forces.

Another step has been taken for the further development of the well-known and popular Buff Leghorn. On October 1, the "Tecktonius" Poultry Farm, Racine, Wis.—known wherever fanciers of pedigreed chickens are found—was "christened" the Tecktonius and Reed Buff Leghorn Farm, and its joint owners will be exclusive breeders of the prize-winning "Tecktonius Strain"—Single and Rose Comb Buff Leghorns.

F. A. Tecktonius, whose exhibits for the past seven years have figured conspicuously at every poultry show of merit, will be senior partner. It will be remembered that Mr. Tecktonius made his start—a very modest start at that—nine years ago, on a back lot. Then, he had no experience to guide him—but he had ambition in plenty. Without prejudice, he gave seven prominent breeds of poultry an "efficiency test." As a result, he selected the Buff Leghorn as "the best general purpose fowl on earth," and today is breeding it to the exclusion of all others. He has built for himself the "Tecktonius Strain" of Buff Leghorns, with which, at every poultry show of note, he has carried the field before him, until there is scarcely a worth-while record that he has not annexed. Having swept the field at practically every show exhibited at for seven years, he has but recently determined, at the request of other poultry fanciers, not to exhibit at the December, 1913, Chicago show, unless his line has already been sold.

Mr. B. C. Reed, the new member of the

combination entered into by Mr. Tecktonius, is a professional in the care and rearing of feathered stock. His experience is wide and his efforts fruitful. He is, in fact, known as one of the most successful and scientific experts in poultry mating, and is thoroughly conversant with Buff Leghorn qualities—especially those of the controlling "Tecktonius Strain."

This combination of forces—for the further and more careful study of "barnyard eugenics"—is bound to make the "Tecktonius Strain" Buff Leghorns rank high among the "Four Hundred" of poultrydom. Mr. Tecktonius and Mr. Reed long ago decided—to their own satisfaction, and the satisfaction of many other poultry fanciers—the superiority of Buff Leghorns, both as prize winners and market price leaders. But there are, of course, always skeptics, and fanciers of other breeds, who refuse to be "convinced" until the last possible objection is removed. It is, therefore, going to be the self-imposed duty of the new owners of the Tecktonius & Reed Buff Leghorn Farm (as they say) to prove to everyone, beyond the possibility of a doubt, that the Single and Rose Comb Buff Leghorn is the best known breed for both market and show.

The Tecktonius Farm has for years produced prize-winning stock for such shows as Chicago, New York, Boston, Providence, Baltimore, Pittsburgh, Atlanta, Wheeling, Columbus, Cincinnati, Des Moines, Minneapolis, Kansas City, St. Louis, Memphis, Little Rock, Dallas, Houston, New Orleans, Spokane, Galveston, Regina, Sask.; Vancouver, B. C.; Milwaukee and Racine. Tecktonius stock is known far and near, and is represented in every state in the union and every province in Canada, extending to the remote borders of New Zealand, and into every nook and corner where recognition is granted for points of quality and productiveness.

Mrs. T. F. Waldron, Ogdensburg, N. Y.

There is nothing uncertain about the position our "lady" breeders occupy in the poultry world today. There are several who have made their care and work tell and we see it particularly in the training of their birds and in their most excellent condition. Mrs. Waldron is a breeder and exhibitor of White Plymouth Rocks, her exhibit at the late New York State Fair was one of merit and it is seldom we see birds in such grand condition as were hers. Her winnings were: Young pen, first; cock, second; hen, fifth, and cockerel, fifth—this in a very large and beauty class. In our report of the fair we were glad to specially commend her exhibit. —H. P. Schwab.

### Superb Flocks of Poultry Sold to a Southern Breeder.

To whom it may concern: This is to certify that I have this day sold to J. H. Wendler, of Lakeland, Fla., my entire flocks of Black Orpingtons, Silver Pencilled Plymouth Rocks, Columbian Wyandottes and Silver Laced Wyandottes. This sale is made without any reserve whatever and includes all of the winning and breeding birds of Owen Farms in these varieties, among the winning Blacks being first cockerel, New York, December, 1911; first pen and first hen, Chicago, December, 1912; first cockerel at Nashville and Memphis in the fall of 1912, winning the sweepstakes at both shows for best cockerel in the show, and my first and third cocks at the Greater New York Fair and Exposition. In Columbians it includes the first pullet at New York, December, 1911; first pullet at Brockton the same fall, and several other winning birds. In Silver Pencilled Rocks it includes several first prize winners at Madison Square Garden in December, 1911, and at Brockton the same year. The Silver Laced Wyandottes have never been exhibited.

This collection of birds will give Mr. Wendler without doubt the best flocks in these varieties in the South and as good birds as there are in existence, and I can heartily recommend all my friends and my customers in these varieties to go to Mr. Wendler and I know that he will give them absolute satisfaction.

My reason for selling these flocks is that I wish to give all my time and room to my five main varieties, White and Buff Orpingtons, White Plymouth Rocks, White Wyandottes and Single Comb Rhode Island Reds.

Maurice F. Delano,  
Successor to Owen Farms.

## 5,000 Grain Sprouters

## 1/2 Usual Price

Front  
Contains  
More Glass  
Which  
Gives More  
Sprouts

Made in 4 Sizes

This is exceptionally good news to thousands of poultry raisers who have long contemplated the purchase of an efficient Grain Sprouter, but felt they could hardly afford the price.

By buying large quantities of raw material—best lumber, steel, glass, etc.—for cash, we secured it at a discount of about 40%. This saving we give to you. But the low price we are thus enabled to make is

### Good for November ONLY

as we may be forced to buy additional material in the open market and pay the full price, the same as others. Today we stand as a dominant force in cutting the price on dependable grain sprouters and if you as a poultryman, realize the necessity of feeding fresh green food to your fowls, you will order one of our machines—not because it sells at about 1/2 the usual price others charge, but because

## Reliance Grain Sprouters

are the most efficient machines ever built. Thousands of these low-priced grain sprouters are in use on the most successful poultry farms in America, on country farms, in city suburbs—saving and making money for their owners.

Figure it up for yourself what the "Reliance" will do for you. Count the egg money doubled, the feed bill cut in half, the healthier and plumper chicks that bring better market prices. Then count the saving in cost of the "Reliance" and you can see you are losing money every day you delay.

The "Reliance" will produce three to four bushels of sprouts from one bushel of grain and do it quicker with less care and attention than other machines. In fact, there is

**None Better Made—No Matter What the Price**

The "Reliance" has double walls, heavier insulation, extra galvanized iron linings, galvanized trays, strong screening. The lumber is of highest grade, the heating system is better, the ventilating system is faultless, besides the front contains more glass which induces larger quantity of sprouts. Don't put it off any longer, but get a "Reliance" in action at once.

Write right now, and learn what a really low price we place upon our machines. Facts and literature will be sent by return mail. We ship same day order is received. You have several sizes to choose from. See literature.

**RELiance INCUBATOR CO., Dept. 35, FREEPORT, ILLINOIS**

Manufacturers of Grain Sprouters, Incubators, Brooders

### Removal Notice.

Mr. F. A. Kaup, the Buff Orpington specialist, formerly of Chicago, advises us that his Buff Orpington business has increased to such an extent that he found it necessary to get into larger quarters. With the profits gained from his Buff Orpingtons he has just completed a modern residence in Glen Ellyn, Illinois, which is twenty-two miles from Chicago on the Northwestern Line, and also on the Aurora-Elgin Line (Third Rail Line). By the time this appears in print Mr. Kaup will be permanently located at his new address.

In the orchard and on the several acres of land surrounding his home he has started to build a poultry plant that will be modern in all its appointments down to the minutest detail. In the larger fields he will rear many more birds to satisfy the increasing demand for his Buff Orpingtons, and he will thus be in a still better position to furnish more and better birds to his customers. Each year he shows an increasing list of customers who have won prizes with his strain.

Mr. Kaup advises that he has booked orders for many exhibition birds to be delivered in the pink of show condition next Winter and still has a few to spare in cocks, hens, cockerels and pullets that will make a splendid showing for their owners. Not only do they show their fine quality now, Mr. Kaup says, but they have years of prize-winning blood back of them which will manifest itself when breeding the birds when properly mated.

On account of not having all the new buildings on the new plant ready for the birds at the time of moving, Mr. Kaup will sell many of his last year's breeders at reduced prices. Better get in touch with him now and get one of his latest catalogs, which is one of the finest published in Buff Orpingtons. Readers of the American Poultry Journal may obtain a copy of this catalog, which contains 36 pages and many fine illustrations of his prize-winning Buff Orpingtons, by addressing F. A. Kaup, Drawer K-1, Glen Ellyn, Ill., and he will send a copy by return mail. Mention the American Poultry Journal when writing.

### The Wilburtha Poultry Farm.

The Wilburtha Farms, Trenton Junction, N. J., devoted to S. C. White and Buff Leghorns, S. C. Reds and Columbian Wyandottes, proved a surprise to us in their large plant, fine stock and beautiful location, close and running to the Delaware river, the bank of which as well as the drives and line fences lined with giant oaks, hickorys, walnuts and chestnuts, which add beauty and a background to the scene from every point. The capacity of this plant is again being enlarged by the addition of a mammoth breeding house so they hope they can keep up to the demand for hatching eggs and baby chicks made upon them in the future for their favorite line of birds.

Mr. Wm. D. Campbell is in charge of the poultry here, a man long known as a breeder, exhibitor and judge, and from the progress he has made here we look upon this as his greatest work.

The incubator cellar here is one of extreme size with high ceilings, assuring fresh air and proper ventilating for the mammoth machine. The brooder house likewise is built on same plans with proper height and is a light and airy room with an abundance of fresh air and plenty of daylight for the young to enjoy.

We could write pages of the buildings and equipment seen here, for they are practical and ideal and worthy of copy, but here also we saw flocks of chicks that interested us greatly and we will hurry on to tell our readers of the birds while in the mood, and let it suffice to say that the entire equipment of buildings are along modern and practical lines that assure results in breeding.

**S. C. WHITE AND BUFF LEGHORNS.** At the late great Allentown Fair these farms, among several prizes won on both their White and Buff Leghorns, won first prize cock in the Whites and from a large and beauty class of birds. In style and carriage as well as in head points and finish this is one of the rarest birds we have seen out this season. Their best females were in heavy moult and unshown, but with this cock and several of the young seen here they will have many exceptional matings to breed from the coming season.

In Buff Leghorns the same can be said. In these they have particularly one cockerel of extreme beauty and value. He is sound and even in color, with choice head and as fine bone and frame as we see on

the best of the Whites. Tail carried extra low and the desired sweep in back with full breast. Old birds mainly in moult excepting one hen which was seen in perfect feather and one we looked to to win easily at Allentown.

### COLUMBIAN WYANDOTTES.

These are Mr. Campbell's old favorites and they have a beauty flock of them, large in numbers and of great quality with the true Wyandotte form. In markings we believe this to be an exceptional flock of birds, handling many of them we found their great quality in wings, necks and tails, the tail coverts being particularly choice in markings. In both cockerels and pullets the one uniform quality was evident, the full, deep and broad breasts and the full cushioned backs with well spread tails tells the story of their worth, topped off with choice Wyandotte heads.

### S. C. RHODE ISLAND REDS.

This is one of the varieties that this farm looks to with pride, and well they may, for they have a line of birds that promise much more than even they expect. While we saw many good birds here in both old and young, and in both male and females, we saw two cockerels and two pullets in particular that are as sweet as they make them, positively sound in color surface and under and of

a form that set us to dreaming of their possibilities. This kind of stock has a future and the farm which has it can well expect absolute success with it. In the old birds were seen several to attract favor and attention. A noble cock (the size of the cockerels mentioned) was lording it over a pen of selected females that for color and shape were marvels, length of backs were particularly good.

There was evenness of quality and character in the birds seen here in all their varieties, and if we are again invited will surely try and pay them another visit, for we have interest in such breeding and would want to inspect their matings as Mr. Campbell would make them.

Mr. Fiske, the owner, and his son are both interested fanciers. They have the success of the plant at heart and with a natural love for poultry and a desire to have the best promise to make this a great and successful plant. They have made a right start and good beginning and can confidently look to the future for deserved success.—H. P. Schwab.

Wm. Cook & Sons, originators of all the Orpingtons, Scotch Plains, N. J., have just won at Birmingham, Ala., in Buff Orpingtons first cockerel, first pen, first cock, first hen, second pullet; in White Orpingtons, first, second cockerel.

## The Complete Report of the Best Baby Chick Raiser in America **BOOK FREE**

HOVER-INCUBATOR MFG. CO., Box 511, BROWNS MILLS, N. J.

## International Sanitary Hovers

Used in an Ordinary Laying House

Perches and Nests Removed

**T**HIS Hover has stood every climatic test from Panama to Quebec. Practical poultrymen, state experiment stations, and poultry judges indorse it. You can raise chicks anywhere with it. No specially constructed houses are necessary. Sanitary Hovers are as practical for the back-yard poultry raiser as for large poultry farms. They are warmest at the curtain—usable anywhere. No crowding or smothering of chicks—no kneeling in mud to get at the lamp—no cutting of holes nor building of platforms. In the Sanitary Hover you get the best brooding device.

The illustration shows how the Rancocas Poultry Farm used 440 Sanitary Hovers in their regular laying houses.

**6 IN 1 EXERCISER AND FEEDER.**—This Exerciser and Feeder has every advantage found in exercisers of other makes; and in addition to the grain exerciser, it contains six other compartments for dry mash, beef scrap, charcoal, grit, oyster shells, etc. It eliminates all other feeding devices.

**60-EGG HATCHALOT INCUBATOR.**—The 60-Egg Hatchalot Incubator is not only a fine hatcher but the best incubator for the price on the market today. The mild heat prevents evaporation of the moisture, so that all eggs with chicks in them will hatch, and every chick will be as large as the eggshell will allow. Price \$7.50.

first cock, first pen, first pullet; in Black Orpingtons, first cock, first pen, second cockerel; first pen in Blue Orpington and Diamond Jubilee. Also \$100 cup for best Orpingtons in show and \$75 cup for best display in whole show and cup for best bird in the show, 315 Orpingtons competing. They also won first prize at Nashville, Tenn., on a White Orpington cockerel. At Birmingham Mr. L. C. Leadbeater, a prominent attorney of Birmingham, won Wm. Cook & Son's \$100 cup for best Cook Orpington in the show. This gentleman purchased the first prize White cockerel from Mr. Cook. P. A. Cook reports business better than ever with his Orpingtons.

### Pape's Single Comb Black Minorcas.

Chas. G. Pape, Fort Wayne, Ind., has had experience covering 18 years in breeding and developing the highest type and purest strain of the beautiful and prolific Single Comb Black Minorcas which has placed the Pape strain as near perfection as that breed has attained.

When the writer visited him in the early part of September he had 1,500 head raised on four separate farms.

When we visited him last year we were very much surprised with the grand black plumage, practically free from purple, and to our astonishment they run over 30 per cent better in color and with the purple shade eliminated. They ran very large and long in back with fine carriage of tail, combs fine in size, texture and many with five points. This applies to both sexes. The real fact is they run so near perfect that a blind man could pick out winners and scores of them.

Mr. Pape has many in show condition and can furnish winners for any show in the country. He contemplates showing at the Panama Exposition.

This farm is located three miles out of the city of Fort Wayne and contains 24 acres of that Indiana land so productive and well adapted to poultry culture. His buildings are fine, practical and convenient. He is a persistent trapnester and has hundreds with 200 eggs per year records. His cock bird "Colonel Jackson," was never defeated as a cockerel or cock bird, and was awarded championship honors at New Orleans, all varieties competing. "Easy Money" was acknowledged to be the greatest Minorca cockerel ever shown. He won at New

Orleans last season first prize and gold leg band, also American Poultry Association silver medal and diploma for best shape cockerel. "Queen," longest and largest pullet, won first at Minneapolis and New Orleans for best shape bird in the Mediterranean class. At Detroit, 1913, he won first pen, first and second cockerel, first and second cock, first, second and third pullet. With two pairs of dry picked cockerels entered at Chicago he won first and second prizes on dressed poultry in the Mediterranean class. At Greater New York Exposition, August, 1913, he won first, second, third and fourth cock, second, third, fourth and fifth pen, first, second and fourth cockerel, first, second, third and fourth pullet, first and best pen, Manhattan Beach special cup for best display, gold special for best display of Minorcas, all varieties competing; cup for best display of Minorca eggs.

Mr. Pape advocates "it may be a little farther around the corner of a 'square deal,' but the road is better," and he not only preaches this but practices it also. Write for catalogue and prices to Chas. G. Pape, Fort Wayne, Ind.—H. H. Curn.

### Blue Ribbon Black Orpingtons.

Personally the writer is a great admirer of the Majestic Single Comb Black Orpington and looks forward with pleasure each season to his annual visit to the Blue Ribbon Farm at Columbus, Ind., and to talk things over with its genial proprietor, Carl J. Carter, and feast his eyes on those paragons of perfection, the Blue Ribbon Orpingtons.

This farm is one of nature's beautiful spots and lies four miles north of Columbus and forty miles south of Indianapolis, Ind., on the direct line of the Louisville division of the P. C. C. & St. L. R. R. and on the I. C. & S. Traction Co., Stop 51. It can be reached by train coming from any part of the United States and visitors are always welcome. The home plant contains 10 acres and the farm 100 acres, divided by the public highway. The farm is used for ranging young stock and has a splendid wooded pasture, corn fields, wheat fields, clover fields and alfalfa. No wonder Orpingtons on this farm have that beautiful glossy green black. Ten acres are used for breeding yards and winter quarters and for brooder runs for young stock. All yards are set with fruit trees which furnish shade as well as fruit. The buildings are all painted red and furnish a good background for the Orpingtons. A convenient distance from the residence is the office, which is well furnished and has the many blue ribbons conspicuously and tastily arranged and silver cups galore.

Underneath the office is the incubator cellar, 12x50 feet. In it is one 6,000 egg capacity Hall Mammoth incubator. Opening off this in "L" shape is a brooder house 18x60 feet in which is installed a Hall Continuous Brooder system and Paradise Brooders and several individual hovers. A passageway four feet wide and three feet deep makes the care of chicks much more convenient. The conditioning and shipping rooms are also above the incubator cellar. One conditioning room is equipped with 50 single coops and 14 pen coops, all large and roomy. All of this is under one roof and saves a lot of energy for Mr. Carter, who handles the large correspondence, selects and crates every bird sold, packs the eggs, sets the incubators and removes the chicks from the incubator to the brooders.

There are 20 colony houses, open front style, two Tolman plan houses, 20x36. There are also 48 colony houses that can be put on runners and changed from one field to another. Think of the advantages of that. In these houses most of the young stock is matured. The other buildings are barns, granaries, dairy buildings and other outbuildings. When we visited the farm there were over 1,500 head of stock with quality heaped up and running over and when it comes to type what Orpingtons can discount the S. C. Black for ideal type, and to go one better, what strain can surpass the Blue Ribbon Strain? This strain has been a consistent winner at the leading shows during the past several years and at the late Indiana State Fair they showed young birds, immature, and old birds in entire new plumage and won first pen and other prizes.

Mr. Carter has a lot ready for early shows that can win in the hottest competition. In Mr. Carter's hands his birds have proved themselves great layers. His

## ONLYA FARM WHITE WYANDOTTES

Start the season with a "killing" at Allentown, Pennsylvania. (Note other exhibitors and awards in the report of Allentown in this paper.) First, second and fifth cockerel, third and fifth pullet, fourth and fifth cock, first hen, first and third pen, grand futurity stake with first cockerel. We have a lot of fine young stock as well as old for sale at prices that bar competition for the class of stock we are sending out. Write us for what you want from a single bird to an entire string. Birds shipped on approval and ready for the show room if desired. Mention A. P. J. when writing.

Chas. Staaff, Mgr. : Florham Park, N. J.

# If PURINA CHICKEN CHOWDER

## wont make your hens lay, they must be roosters

Col. Purina

Purina Chicken Chowder is a dry mash which contains just the ingredients to insure an abundance of eggs right through the Winter. Dry Purina Chicken Chowder should be kept before hens all of the time. The more Chicken Chowder Biddy eats the more eggs she will lay. Hens should also have Purina Scratch Feed, two or three times a day, in a litter.

## Col. Purina guarantees More eggs or money back

to any poultry raiser who uses Purina Chicken Chowder according to directions and fails to get more eggs.

Purina Poultry Feeds are for sale by the leading dealers. Your dealer will order them for you, if he doesn't already carry them in stock.

### Poultry Book Free

For your dealer's name I will send you this 48-page Poultry Book, containing plans of houses, breeding and feeding charts, space for daily egg records, cures of diseases, care for baby chicks, etc. It also contains information about Col. Purina's half price galvanized iron Chick Drinking Fountain [2 for 25c] and more details about his galvanized iron Automatic Chicken Chowder Feeder [50c]. Write today.

Col. Purina, Purina Mills,  
801 S. Eighth St., St. Louis, Mo.

February hatched pullets began laying the first of August. Write him for his beautiful catalogue.—H. H. Coburn.

### Buschmann-Pierce Red Farms.

Annually we visit the great Buschmann-Pierce Red Farms at Carmel, Ind., and during the week of the Indiana State Fair we made our annual visit. This farm is owned by a stock company of which Fred Besuden is president, Jas. Hooker vice-president, W. C. Pierce secretary and treasurer and general manager. All of the above named fanciers are also directors, together with D. F. Storchmeyer and C. H. Besuden.

The main plants of this farm are located at Carmel, Ind., 15 miles north of Indianapolis and only a few minutes ride on the Indiana Union Traction Line through a beautiful country or 30 minutes ride on the Monon railroad. These farms are so nicely located, commercially and geographically, that they can reach any point of the United States rapidly, so that birds will reach their destination quickly and in good condition, and the fertility of eggs is not weakened by any delay on the road.

Plant No. 1 at Carmel, Indiana, is where all orders are received and all shipments made from. At this farm there are 36 buildings 10x16 feet with yards 50x100 feet. These are arranged in rows with drives or streets between so birds can be fed with horse power. There are also 60 colony houses 4x6 with scratching sheds 24 feet long, 100 ft. brooder house, incubator cellar, shipping room, feed room, conditioning building, setting hen houses, residence for superintendent, house for assistant and families and numerous other buildings. The houses are very sanitary and built on commonsense plan. The labor of caring for the birds is minimized to the limit. W. C. Pierce has an office on this farm with telephone connection with his main office at his home in Indianapolis. Mr. Pierce dictates all letters and has plenty of work for typists to handle during his absence at the farm, for he goes to the farm every day and superintends and selects all birds for shipment and he knows what to send the customer every time and can tell what is required to win at any show in the land. His wide and long experience as a judge enables him to do this. He has had more than ten years' experience of mating and breeding Rhode Island Reds alone. He was

chairman of the revision committee, which passed on and then admitted the Rhode Island Reds to the Standard of Perfection. As heretofore stated, Mr. Pierce has charge of all the auxiliary plants. Plant No. 2 is in charge of D. F. Storchmeyer, one of the best limited space poultrymen in the world. He stands without parallel in growing young stock and securing great egg production in a limited space. Mr. Storchmeyer is a veteran Red breeder, having bred them for more than 14 years in the West and during that time was a successful exhibitor.

Plant No. 3 is under the direction of Fred Besuden, who is president of the company and is located at East Norwood, Ohio. Mr. Besuden is a most capable young fancier to whom the raising of fine poultry is the keenest pleasure.

Mr. Fred Baker is in charge of plant No. 4, which is four miles out of Carmel, Ind. Mr. Baker has bred Reds for the past 8 years and is an artist in his line. His farm contains 36 acres with all necessary buildings and he raises pure Buschmann-Pierce Reds.

This farm had between seven and eight thousand head of stock in September and will run short before the season is over. The quality of the Buschmann-Pierce Reds is more easily imagined than described. They run uniform in rich, brilliant red, having fine undercolor, the type is grand and they are large and healthy, tail carriage at the proper angle and head points fine. They will mate their birds early in December for the early egg trade and will start their incubators about the middle of the month. Write them for Red book, which is a good one.

H. H. Coburn.

### Scranton's Reds.

B. H. Scranton, Rising Sun, Ind., lives breathes and dreams Single Comb Rhode Island Reds. He is in such close touch with his Reds that he can glibly tell the pedigree of each and every bird and what it will produce when mated certain ways. The fact is he devotes his entire time and attention to the improvement of his strain and has been working on these lines for the past ten years and now has some of the best Reds the writer ever saw.

He has the mating art reduced to a science and is reaping a most flattering harvest in return for his close application to

business. Personally he is one of the most pleasant and trustworthy men of the day. Aside from being such an enthusiastic and successful fancier he has always borne in mind the great utility possibilities of the Majestic Rhode Island Reds and consequently his Reds have size and bone and great egg records. In September he had 1,500, and a decided improvement in type from last year. He has a lot in show condition for the November and December shows that can win in any spot on this globe. He will not exhibit at the fall shows, but will make the good ones in the winter.

His birds have won at Hagerstown, Chicago, St. Louis, Indianapolis, Cincinnati, Kansas City, Louisville and many other shows for years. His Hagerstown winning cock has proven himself a great sire, as has also his first cockerel at Chicago, 1911.

Bear in mind Mr. Scranton can give you the pedigree of every bird you purchase. His birds are farm and range raised. His fine home on the edge of Scranton contains 10 acres, but most of his young stock is raised on his beautiful farm of 325 acres where he has some 20 colony houses and all other buildings necessary. He mates up some 20 pens with specials and grand champion matings included, but keeps nothing on the side for himself. He is ready for the earliest egg trade of the South and is centrally located for shipments. Write him for prices on show birds.—H. H. Coburn.

Geo. A. Kersten, Washburn Park, Minneapolis, Minn., breeder of Columbian Wyandottes, reports the following winnings at the late Minneapolis State Fair: First, second, third cock, first, second, third cockerel, first, second cock, second, third pullet, first, second, third pen.

Bruce & Abbot, Whiteland, Ind., breeders of S. C. Buff Orpingtons, state the following winnings at the late Indiana State Fair: First, second third cock, first, second, third hen, first, second, third cockerel, first, second, third pullet, third pen. The Bruce & Abbot Orpingtons are not only beautiful in color but are grand in type, head points and size. They have grand show birds to offer.—H. H. Coburn.

# FALL SHOWS ARE DUE!!

### They Fear No Competition

For just a few dollars we will send you a cock, cockerel, hen or pullet that will win the desirable prizes for you in any show.

We grow our stock on free farm range where every bird has room to find the proper insect life and to fully develop into a strong, vigorous and healthy specimen.

We can supply your every want for we grow birds by the thousand. If it is utility birds you want, remember that we keep in mind, at all times, the real purpose of the hen — meat and egg production.

Our prices are fair and right, and we take a personal pride in pleasing our customers. Send twenty-five cents for catalogue.

**J. C. FISHEL & SON, BOX J, HOPE, INDIANA**

### The Linden Poultry Yards.

As usual in the leading classes at the great Allentown Fair the battle for honors is most severe. Barred Rocks have long been one of the leaders here and for years the battle for supremacy has raged among the breeders from several states. This year was no exception and produced a new champion in the Linden Poultry Yards of Dunellen, N. J., and owned by Mr. E. B. Latham. Their winnings were first cock, second hen, first cockerel, second pullet, first pen, Futurity Stakes on first cockerel and several specials, including those for shape and color.

In their first prize cock we found a bird of exceptional quality, his wonderful color and barring making him one of the unusual kind seldom seen and we were ready to accept the proffered invitation to visit their home and lost no time in making this. There we again met Mr. Price, the poultryman, and were shown

lot, one in particular a hen of rare quality in color and barring. The even, snappy surface and the clean under-barring made her one of great beauty and value both as a show hen and a breeder of worth.

This line of birds shows merit and we confidently look to it to repeat the winnings already made, for line breeding is had here in its true state and the entire flock shows the quality we would expect in a high class of birds.

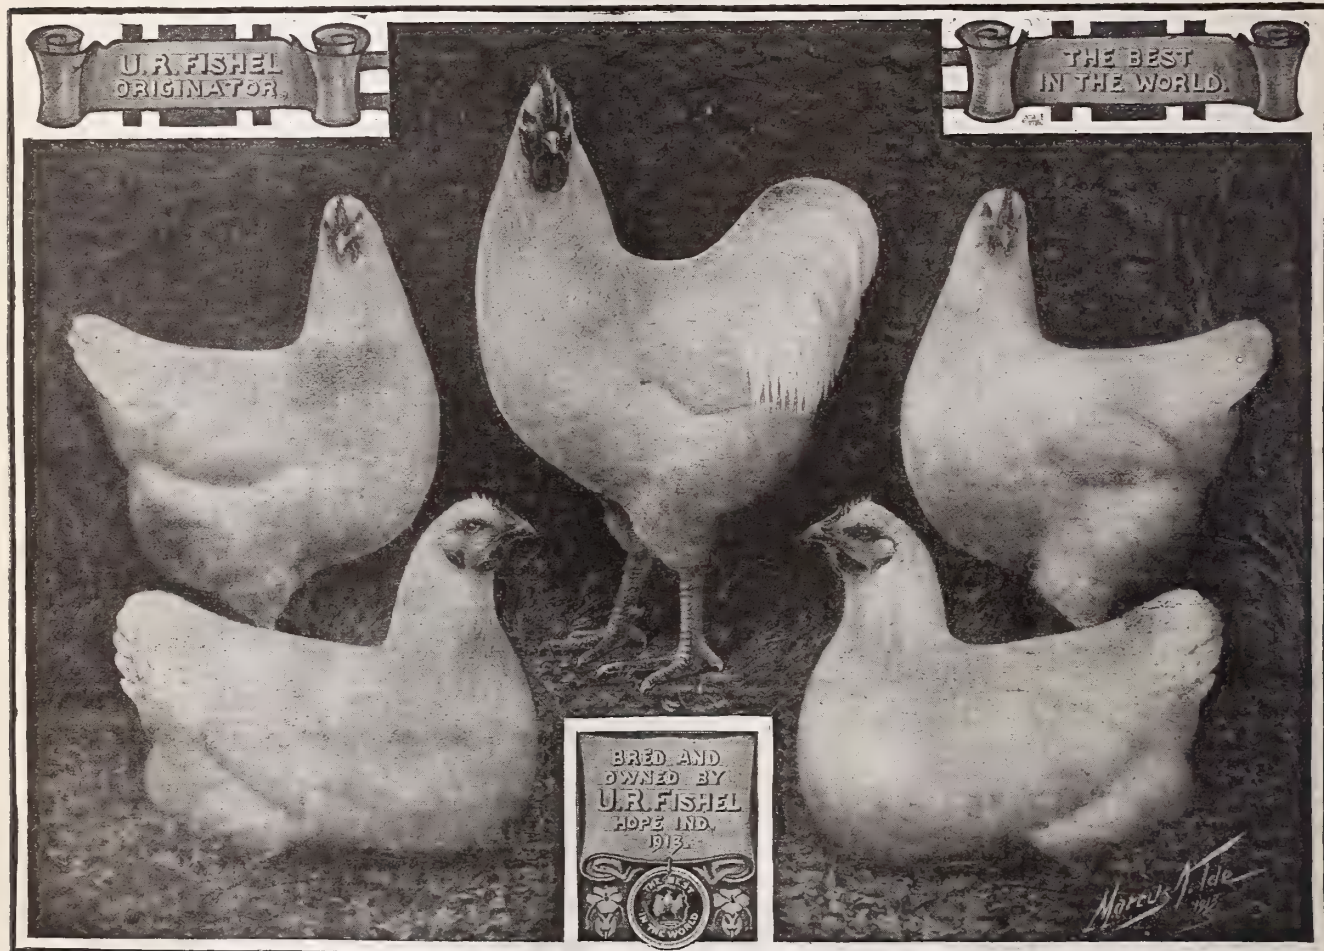

We regret that Mr. Latham, the owner, was away at the time of our visit, as he has made a deep study of this variety and we are at all times anxious to meet such men.—H. P. Schwab.

### Ralph Woolery's Farm.

The S. C. White Orpington Farm of Ralph Woolery is situated five miles south of Bloomington, Ind., on the Clear Creek road, in one of the oldest and best communities of the state. The land is lime-

tons, he won seven ribbons, club cup for third display and two special cups. At Indianapolis, January, 1912, he won second, fifth pullet, second, third, fourth cockerel, fifth hen. All the winners and all the sires of the winners were bred by him. At the late Indiana State Fair he won first, second cock, first hen, first cockerel, second pullet and first pen. If you want some show birds he can furnish them for any exhibition. Write for prices and address R. W. Woolery, Bloomington, Ind., R. No. 4.—H. H. Coburn.

When the writer had the opportunity as well as the pleasure to visit the very up-to-date little poultry plant of W. F. Zimmerman, Willoughby, Ohio, he found over 300 of as good R. C. Rhode Island Reds as seen this year. They were exceedingly fine in color and of very rich brilliant red. The type is typical Rhode Island Red, running fine in length of back and tail carriage, the combs were neat, lobes red and eyes bay, in fact did not see one off colored eye and I looked them over very carefully. Mr. Zim-

U. R. Fishel's White Plymouth Rocks have been bred in line for something like twenty years and that excellent quality known to the Fishel White Plymouth Rocks only can be seen on all his fowls. Mr. Fishel says he has the best lot of fowls this season he has ever reared

over the plant, seeing the above cock running at will and a large flock of his young and others of the same line.

In cockerels of both cockerel and pullet breeders they have a large and choice line just budding into maturity. They show the desired quality in form and in barring have the narrow bars with fine contrast of color, sharp and clean. The dark pullets are of the same fine quality and birds of promise.

Their pullet line has also made its mark by producing the second prize winners at Allentown and the first prize pullet at Trenton, also the females in winning pens.

At the Trenton Interstate Fair their winnings were: First cock, first hen, first and second cockerel, first and second pullet, first and third pen, medal for best display and winners special for best collections, etc.

Their first Allentown pen was of old birds headed by a noble cock showing similar quality to their winner in the open class. The females were a choice

stone soil, with a good southern slope, making the natural conditions for poultry raising ideal. Mr. Woolery is partial to the colony house style of building, although he has long buildings divided into pens for his layers and breeders. He has just completed a very fine conditioning house, equipped with every practical necessity, with a capacity of 90 birds, and he ships his birds already conditioned for shows. At present he has 800 youngsters developing into exhibition and breeding quality. His birds are very white, of excellent type with extra fine head points, and especially good bay eyes.

In mating his yards Mr. Woolery makes type and size of bone very pronounced specialties and has cockerels hatched June 2 that weigh 11 pounds at six months. He hatches and raises many chicks with hens and has them stationed along a corn field and these prove to be some of his best ones. At the National Club Meet, in 1912, in competition with 26 breeders, showing 136 White Orping-

merman is located among the best Red farms in Ohio and has ample opportunity to post himself on Reds. As he is located on the outskirts of Willoughby he raises all of his young stock on range. His buildings are principally of the colony house type. He will exhibit at Cleveland and Chicago and has a lot of show birds ready for the show room at the present time and can furnish winners at a very reasonable price. He will mate up his birds early for the winter egg trade. Eggs are gathered as soon as laid and carefully packed so as not to become chilled in long shipments. Look up his ad and write for prices. Address W. F. Zimmerman, Willoughby, Ohio.—H. H. Coburn.

Buschmann-Pierce Rhode Island Reds won at the late Indiana State Fair, 9 firsts, 9 seconds and 5 thirds out of a possible ten of each. This speaks louder than words for their quality. This farm is located at Carmel, Ind., and is the largest exclusive Red farm in the world.—H. H. Coburn.

**Crowther's Reds.**

When the writer visited the farm of Ira M. Crowther at Willoughby, Ohio, in September, he was pleased to see Mr. Crowther in person and enjoying good health, as a year ago he was too ill to see him. Mr. Crowther is a man of artistic taste and selected one of the finest locations for his farm of five acres, which is a continuation of Euclid Ave., which is conceded to be one of the most beautiful streets in the world. As he is located 16 miles from the Cleveland Public square, on an electric car line two miles west of Willoughby, the advantages give him excellent shipping facilities.

Some three years ago Mr. Crowther predicted the new color requirements for reds that today are here. Practically every winner at our largest shows last year were dark rich brilliant red. There is no question about the dark color being necessary to win and it has positively become permanent. Mr. Crowther wants them as dark a red as can be produced and still be red and not mahogany. Last year he discarded every female bordering on light color and cut his breeding pens from 25 to 15. In handling many and carefully looking over his entire flock I can truthfully say that they are among the finest in type, length of back, low carriage of tail and the most beautiful in color I ever saw or handled. He was preparing a large number for the show room at the time of my visit and they are coming along fine. He can furnish winners for any show room. He has branched out into Rose Comb Reds and these, too, are of most excellent quality. I never saw better type nor size.

The original Aristocrat, after which the strain was named, fixed the type and color. He has proved a great sire, having produced the first cock Indianapolis, 1910, first pullet Chicago 1910, also two pullets in each first and second pen, and Lady Aristocrat, besides many other wonderful individuals like Aristocrat III and Aristocrat IV. Lady Aristocrat II was the international champion pullet at Buffalo, 1910. It will be remembered what Mr. Crowther's Reds did in Chicago in 1910, where he went with 13 entries and won 1-2 breeding pen, 1 cockerel, 1-4 hen, 1-5 pullet and 2-4-5 cock, losing only 1st cock. He also won on his 1 cockerel club special for best color and best shape and many other prizes. At two of Chicago's great shows the Crowther S. C. Reds won 5 firsts, 2 seconds, 1 third, 2 fourths, 3 fifths, shape and color special on male twice, color special for female. He has also won at other large shows, such as Cleveland, Buffalo, Youngstown, etc.

His buildings are chiefly of the colony house type with yards running back to the New York Central and Nickel Plate railroad, and the green grass and beautiful trees present a very pleasing view. He raises his youngsters on range and many with hens. Stop 29 of the C. P. & E. lands you at his door. Write for prices and catalogue. H. H. Coburn.

**Roseland S. C. Buff Orpingtons.**

It is very gratifying to admirers of fancy poultry to visit a specialty farm so beautiful and well managed as that of Mr. Chas. Switzer, known as the "Roseland," the home of the Single Comb Buff Orpingtons, South Euclid, Ohio. The writer visited this farm in September.

Roseland contains 51 acres of perfectly drained land, making the soil well adapted on which to raise strong, healthy fowls. This home is located on Gates Mills Suburban electric line, Stop 18, out of Cleveland, making possible all the shipping accommodations of Cleveland, South Euclid being a continuation of Cleveland.

Mr. Switzer is not only a lover of Buff Orpingtons, but is a lover of flowers also and takes great pleasure in showing his beautiful grounds as well as his Orpingtons. His large lawn is bordered with choice shrubbery and innumerable rose bushes and he has a bed of peonies containing 160 varieties. Opposite his residence is a lake of pure spring water which makes very sanitary ice and on its bank is a large ice house.

Mr. Switzer is most original in his plans for poultry buildings and his buildings are in a class by themselves. At the time of our visit there were 950 youngsters and 450 adult birds, including some grand cock birds that have never been mated. Mr. Switzer has the mating art down so fine that his birds are a decided improvement each year. This year they are marvels for color, buff all over and to the skin. The type is fine and they are mammoth in size. They were raised from such birds as first Cleveland pullet, 1912; first Cleveland cock, 1912; also second in Chicago in the same year; first Pittsburgh pullet, and

many other birds with classy show records.

Mr. Switzer always gets out to our best shows and will be a hard one to beat at the coming Chicago show. His birds won yearly at Chicago, Cleveland, Pittsburgh and other large shows. Write him for prices on these conditioned birds that are winners.—H. H. Coburn.

**Smith's Buff Leghorns.**

It is known to thousands of readers of American Poultry Journal that F. S. Smith, Hamilton, Ohio, is one of the largest breeders of S. C. Buff Leghorns in the country, and is also a large breeder of Indian Runner Ducks, but for the benefit of those who are not familiar with the above statement and for the beginner, will state that he raises them by the thousands on farms in the vicinity of Hamilton, but hatches them at his home plant. The terrible floods of last spring did Mr. Smith a great deal of damage and had it not been that he had hundreds of birds out in the country his Leghorns would have been a dead loss to him, but he managed to save many of his best breeders and is thankful for having succeeded in raising about four thousand, although this leaves him short two or three thousand. Another thing he is duly thankful for is the fine quality of these birds.

He culls closely and severely and the farmers gladly keep the ones he rejects as

layers for their own use. His Buffs are a decided improvement in color, which was always remarkably good, hundreds being that beautiful shade of soft golden exhibition buff and that to the skin. It has been our custom to annually make a tour of the farms by automobile and I could but remark on the great improvement of head points and type, hundreds with the much desired longer back and lower tail carriage.

To return to the flood, Mr. Smith was one of the greatest sufferers, as 17 squares of Hamilton were submerged and the water was above the ceiling in his house, he and his family being rescued by boat. All of his poultry buildings, of which he had many, were swept away, and his 58 beautiful show cups, ranging in value from ten to two hundred dollars each, were buried in mud and battered and jammed beyond recognition. Mr. Smith is beyond putting up a hard luck story or in any way makes himself an object of pity, but the writer will take the liberty to say on his own responsibility that your patronage, large or small, will be greatly appreciated. He certainly can meet your wants, either in high-class exhibition birds, grand breeders or utility stock. Heretofore he has mated 44 pens and hopes to arrange to make good again this year. His birds have won in 13 of the largest and best shows in America as well as winning in every state and in foreign countries in the hands of his patrons.

Mr. Smith has always been a popular

## WILBURTHA S. C. WHITE AND BUFF LEGHORNS, S. C. REDS, COL. WYANDOTTES

Stock for sale. Eggs for hatching. Baby chicks. The Wilburtha Strain of Leghorns was well placed in all classes at the great Allentown Show. Our first prize S. C. White Leghorn cock was pronounced a "masterpiece." We aim to breed our varieties all up to the highest state of perfection and practical worth and assure the trade of absolute satisfaction. Write us your wants. Mention A. P. J.

W. G. Marshall, Owner -- Gerald Williams, Manager

fancier and the banquets he has given the boys who had anything to do with handling his birds, are considered the events of the season. He is mailing his water soaked catalogue, the reading of which is intact. This book fully explains how he does it and shows cuts of birds as seen on the home place, untouched or made up, for Mr. Smith is decidedly on the square. Write him for prices and address F. S. Smith, Hamilton, Ohio. H. H. Coburn.

### Foster & Johnston.

In the early part of September the writer made his annual visit to the farm of Foster & Johnston, Ft. Wayne, Ind., the well-known Black Orpington breeders. This farm is located about three miles out of the city and is among the finest locations in Indiana. It contains 40 acres of rich undulating land with excellent drainage and the beautiful grove of trees and large orchard just taking on a suggestion of autumn tints added to the glory of the scene, as well as affording plenty of shade for the comfort of the Duke of Kent Single Comb Black Orpingtons.

At the time of our visit there were 1,200 head of fowls divided into flocks on three farms and raised on range, so they had all the room necessary to grow them big and I assure you they are big, massive fellows, regular models in shape and low on shanks, which are well spread, giving them great breasts. This firm reports an excellent business for the past year and will be all sold out of hens before this issue reaches you. They have a lot of fine cockerels and cock birds in show condition for the early shows.

Mr. Johnston lives on the farm and is a "live wire," on the job all the time and a very successful fancier. He knows how to mate them right and how to keep them right and how to round them up for the show room—and here please note that a Black Orpington does not have to be washed. Just keep him hungry and hustling until a week before showing, then put him where he cannot wallow in dust and groom him occasionally with a silk handkerchief, and at the last feed raw eggs mixed with cornmeal and bran, and he will shine like a diamond.

This firm does business on the square all times and will be pleased to quote you prices on show birds and breeders. Address Foster & Johnston, Fort Wayne, Ind.—H. H. Coburn.

### Llenroc Reds.

In the future the S. C. Rhode Island Reds bred by Henry W. Alt and John E. Houck, Buffalo, N. Y., will be known as Llenroc Reds. This strain has been bred successfully for several years by Mr. Alt and he has advertised Alt's Reds. Some time ago Mr. Houck joined forces with Mr. Alt and they have decided to use a new name and will advertise and exhibit their Reds as such. Mr. Alt has exhibited his birds for many seasons and won many prizes at Buffalo and elsewhere. At the recent Toronto National Exhibition the Llenroc Reds were awarded first, second cock, first hen, second, third cockerel, second pullet, six regular prizes on seven entries. The following week at the New York State Fair, at Syracuse, in one of the strongest classes of S. C. Reds they won first young

pen, fourth cock, fifth hen, first, third cockerel, first pullet, a record that indicates they have the required exhibition qualities. They have raised several hundred head of young stock this season that have had the advantage of free range on Mr. Houck's farm at Black Creek, Ont., and these birds give promise of turning out several winners. Anyone who desires to secure a first-class exhibition bird or a good breeding pen should write Henry W. Alt, 87 Fuller Street, Buffalo, N. Y.

### An Important Factor in Hatching.

The modern incubator is a wonderful hatching machine when equipped with a reliable heat regulator and absolutely accurate thermometers. Success in hatching depends upon a correct uniform temperature being maintained throughout the incubation period. With an unreliable and inaccurate thermometer, the best incubator becomes no better than a soap box as a hatcher.

Every strong, lively chick you hatch means just that much more chance for your success. Then don't trust your hatching eggs to an incubator that has not an accurate—*"Tycos"*—thermometer in each egg-chamber. The best poultrymen use and the best incubator manufacturers equip their machines with *"Tycos"* thermometers.

Read what Mr. Walter C. Ernst, breeder of Plymouth Rocks, Houdans and Leghorns, Hillside Poultry Farm, Hinton, Iowa, says:

"Have been engaged in poultry raising for a number of years and have had a good many thermometers, but since using the *'Tycos'* I have had bigger and better hatches than ever. No one could make a mistake by buying *'Tycos'* thermometers."

*"Tycos"* thermometers tell you the exact temperature. There's no danger of chilling or overheating the eggs in your incubator if you heed their warnings and adjust the regulator to meet the heat requirements.

*"Tycos"* instruments are manufactured by the Taylor Instrument Companies, Rochester, N. Y., the well-known makers of high-grade thermometers for all purposes. They have an instructive little booklet, *"Thermometer Facts Worth Knowing,"* which tells how *"Tycos"* instruments are made. It will be mailed free to the readers of American Poultry Journal. Better write today for a copy of this little booklet.

### A Free Sample Copy.

Of the Reliable Poultry Journal, one of the most practical and helpful poultry papers published, will be mailed you upon receipt of a postal card request.

A 3-months' trial subscription will cost you only ten cents. Stamps are acceptable. Address Reliable Poultry Journal Pub. Co., Box E-13, Quincy, Ill.

Ralph Woolery, Bloomington, Indiana, breeder of S. C. White Orpingtons, made the following winnings at the Illinois State Fair, Springfield, Ill., on 10 entries: 1-3 cock, 2 hen, 1-3-4-5 cockerel, 2-3 pullet, 3 pen in a class of 106 White Orpingtons. The first cockerel was a real surprise in superior quality; he was in full feather, pure white, low five point comb, red eyes and true Orpington type. Judges Pierce and Hewes pronounced him the best Orpington in the show. Mr. Woolery is strong in quality of cockerels and has 100 in show condition. He made several fine sales at this fair. He also won at the Indiana State Fair 1-2 cock, 1 hen, 1 cockerel, 2 pullet. Write him for prices.—H. H. Coburn.

T. A. Faulds, London, Ont., Can., the well known breeder of Rose and Single Comb Black Minorcas, writes us that he has decided to dispose of his entire flock of S. C. Black Minorcas. In this variety Mr. Faulds certainly has the quality, judging from the winnings at the big shows on both sides of the line. He exhibited at Canada's greatest fall show, National Exposition, Toronto, in September, and won on S. C. Black Minorcas, fourth, fifth cock, first, second, third cockerel, first, second pullet. Nearly 100 S. C. Black Minorcas in class and quality the highest. Do not delay if you are looking for high quality at low prices.

F. L. Deer, Franklin, Indiana, exhibited 14 of his White Plymouth Rocks at the Tennessee State Fair, Nashville, Tenn., and won prizes on every bird, winning 1 cock, 1-2-4 hen, 2-3 cockerel, 1-3-4 pullet, 1 pen. The winnings of his Rocks was the comment of all who saw them.

## What Every Poultryman Should Know.

One of the first things the beginner should learn—and the old-timer, remember—is that a judicious system of feeding is not only very essential to the well-being of poultry, but care in feeding fowl has also a very great influence upon the profit or loss of the business.

That fowls cannot be remunerative if starved, can be taken for granted, so the prime object of feeding is to give the quantity and quality of food which will produce the greatest amount of flesh and eggs.

There is one important article of diet, without which it is absolutely impossible to keep fowls in health—and that is an ample and daily supply of green or fresh vegetable food. The omission of this causes about half the deaths of fowls, when kept in confinement, besides reducing the quantity of eggs laid to a ridiculously small number.

This green food is even more necessary to chickens than to adult fowls, for it is to its use that splendid fowls are built up, that the fertility of eggs is increased, that egg production is doubled. And, since this green food may be obtained in quantities averaging three to four bushels from one bushel of grain, through the

medium of the Reliance Grain Sprouter, it is also the most economical of all foods, as bushel upon bushel of it can be produced at a cost of little more than 10 cents each.

The Reliance Grain Sprouter has passed all tests and also stands in the front rank as far as construction is concerned, at the same time it sells at a price much lower than one would think possible. The concern manufacturing this grain sprouter is located at Freeport, Ill., and operates under the name of the Reliance Incubator Company. Write direct for any information and prices, and mention this paper.

## Carter's Green Food Feeder.

It remained for Mr. A. Q. Carter, Freeport, Maine, to produce the most original and practical green-food feeder that we have seen in all our travels. Having seen it in actual use we are pleased to recommend it and to call it to the special attention of our readers.

The feeder is made of strong pliable twine with a large mesh, is sanitary and should last for many years and can be used to feed cabbage, beets, clover, alfalfa, meat, bones, etc., and can be used in the coops or in the yards.

Green food is one of the most essential ration for poultry and particularly when and where it can be fed in variety. It helps to keep the stock healthy, insures more eggs and no doubt improves fertility. The best results we have seen attained have been when green food was liberally fed in variety.

The feature of this feeder is that the food can't get dirty and there is positively no waste. It answers every purpose, and for any kind of food.

Write Mr. Carter for his circular. The feeders are sold at 30 cents each, or \$3 per dozen. Try them on your plant. We have found they fill a long-felt want.—H. P. Schwab.

## Opens Branch in Galveston, Tex.

The spirit of business enterprise which characterizes the aggressiveness of the H. W. Johns-Manville Co. is once more evidenced by the opening of a new office and warehouse in Galveston, Tex. The H. W. Johns-Manville Co. now boasts three offices in the Lone Star state, viz., at Houston, Dallas and Galveston. At the last named place, in a modern brick warehouse of large proportions, will be consolidated the stock for distribution to the different offices and throughout the firm's Texas territory.

Galveston, because of its location and shipping facilities, makes an ideal concentration center. The company plans to receive direct at this point heavy shipments by coastwise lines from New York. The steadily increasing trade with Central and South America also makes Galveston a convenient point of distribution.

The H. W. Johns-Manville Co. is among the country's largest houses dealing in roofing, building materials, packings, pipe coverings, insulating materials and electrical goods, and is the world's largest manufacturer and distributor of asbestos goods. This concern owns extensive asbestos mines in Danville, P. Q., Canada, and has nine factories located in various cities throughout the United States.

## Big Profits in Eggs!

There's a good, substantial profit in eggs at any time of the year, but now, when prices are sky-high and likely to go higher still, there's absolutely no better proposition for the poultryman or farmer.

This raises the question, "How can I make my hens lay in winter?" The answer is just this: "Feed them right."

The food a hen ordinarily gets in winter does not force her to lay. In summer she gets insects, grasshoppers, worms, etc. In winter all this is missing. If you want your hens to lay, you must give them something to replace it.

What's the best food? Why, fresh cut bone is the one right thing. This food will absolutely compel your hens to lay. You'll get as many eggs in winter as you did in summer.

It means economy in feed, too. Just consider this—a piece of raw bone the size of a turnip will feed 10 to 20 hens. Cost to you at the most 2 or 3 cents—in many cases, nothing. Now can you see where you save on feed? Fresh cut bone is by far the lowest priced and most efficient egg-producing food.

The best way to prepare it is in a Humphrey Green Bone Cutter. We have tested

this machine and found it second to none for its purpose.

The makers—Humphrey & Sons, White St. Factory, Joliet, Illinois—publish a free book, "The Golden Egg," which explains thoroughly the right feeding of hens for egg production. If you desire fuller information on this money-making method, write them at once for a free copy.

## Bourne Big Number Poultry Band.

This band consists of an aluminum carrier, which has folded edges that allow a celluloid number strip to be inserted. The aluminum is one-half inch wide and varies in length to suit the different breeds. The number strip has either one or two large numbers, as shown, which are five-sixteenths of an inch high, hence can be read from a distance. The smaller sizes have only one number but the larger sizes have two numbers spaced on opposite sides, so that no matter how the bird stands, one of the numbers always shows. All other bands heretofore have had stamped or raised figures on aluminum, which could not be seen unless held close to the eye.

The number strip is protected by a transparent strip to prevent the number from being scratched. For prices and particulars address the Bourne Mfg. Co., Melrose, Mass.

## A Free Sample Copy.

Made in 5 sizes and Sold As Low As \$10.00

### A Day at Fisheldotte.

Fisheldotte has been written up and described so many years that all the older fanciers can see it in their mind's eye and hundreds have seen it with the natural eye, but for the benefit of those just entering the fancy business and having the desire to obtain all the knowledge possible about one of the oldest and grandest breeds, the White Wyandottes, we will give a brief description of Fisheldotte and this great strain of White Wyandottes, known as the world's best.

Fisheldotte is located just at the eastern edge of Hope, Ind., on Jackson street, which is an ideal suburban home. On the opposite side of the street is the pleasant cottage of the junior member of the firm, Charles I. Fishel. This farm is wonderfully well situated for the fancy poultry business, the soil being a rich sandy loam, high and rolling, with no possible chance for stagnant waters, largely preventing all possibilities of disease. There are plenty of beautiful shade trees and a large orchard and the chicks are raised on grass range. These natural conditions and the dividing of the chicks into small flocks, using colony houses exclusively, give them the best possible advantage of maturing and making good, as they always do. Many hundreds are raised with hens as well as with brooders and the system of care and feeding grows them right.

Directly opposite the residence of Charles I. Fishel is the office building, where several typewriters are kept busy. The conditioning and washrooms are in the rear of the office building; the shipping and packing rooms are on the second floor. Beyond the office is a brooder some 200 feet in length and dotting the farm are scores of colony houses.

The shipping facilities of Hope, Ind., are most advantageous, being in the center of the great buying zone and only 60 miles from Indianapolis, the center of the greatest interurban system in the world. Hope is reached by the Big Four Railroad connecting with the main line from Cincinnati and Louisville at Greensburg and connecting with the Pennsylvania line at Columbus, Ind. Indianapolis, Chicago, Cincinnati and Louisville trains make it possible to reach Fisheldotte in the morning and leave in the evening for these and intervening points.

A warm welcome always awaits the visitor at Fisheldotte and the writer anticipates with pleasure his visits there.

Of course, I found the White Wyandotte youngsters even better than last year, and I expected to find them so; how could they be otherwise with two such post-graduate masters as J. C. and Charles I. on the job? J. C. Fishel has bred them for years and Charles I. is one of the best judges in the American Poultry Association today. The Fisheldotte breeding chart found on page 21 of their catalog will show you how they do it. This line breeding is described on the preceding pages of the catalog.

We cannot imagine a prettier sight than hundreds of these snow white Wyandottes and the picturesque scenery at Fisheldotte. The type and head points are ideal and color is snow white, and when we say snow white we mean absolutely free from any suggestion of creaminess, and they are snow white because they are built that way. No bleaching necessary for a Fisheldotte bird to win the color special. They have hundreds

ers of Partridge Wyandottes, report the following winnings: At the National Conservation Exposition, Knoxville, Tenn.: First, second, third, fourth cock, first, second, third, fourth cockerel, first, second, third, fourth, fifth hen, first, second, third, fourth, fifth pullet, first, second, third, fourth, fifth pen; 74 birds in class. **Bruce & Abbott.**

During the week of the Indiana State Fair at Indianapolis I made my annual visit to the great S. C. Buff Orpington farm of Bruce & Abbott, Whiteland, Ind. This farm was formerly located at Indianapolis, but outgrew their quarters, and moved to their present location, which is 15 miles out of Indianapolis and just within the limits of Whiteland, Ind. This farm contains 40 acres of very fertile land and is ideal for raising high class Buff Orpingtons, being well drained and having abundance of shade. The location is also one of the best, commercially speaking, being centrally located and having such good shipping accommodations. Mr. Abbott lives in the fine and pleasant residence on the farm and personally superintends all of its affairs. He is a thorough fancier and understands the poultry business from A to Z and does everything in the most up-to-date and progressive manner. He is the soul of honor in all his business dealings, aiming to give the purchaser a little better than the other fellow for his money. Mr. Bruce lives in the city, but keeps in close touch with things going on at the farm and is a most enthusiastic fancier. Nothing but the best in the land would in any way suffice for him, and they now have some of the finest Buffs it has ever been our pleasure to handle. There were 800 of them, all bright eyed and healthy, on the farm at the time of our visit. The Bruce & Abbott Buffs cannot be beaten in true Orpington type and the color is that indescribable beautiful golden buff. This strain gives such entire satisfaction to the purchasers and the firm is so honorable in all its transactions that they are never able to raise enough to supply the demand. So if you want to get in on those fine show birds order now.

The buildings on the farm are principally of the colony type shape, divided into ten pens, each pen having a yard 40x150 feet, so the breeding stock has plenty of green grass and room for exercise, and this produces strongly fertile eggs. They mate up in December to be ready for the southern egg trade and test out by incubation the fertility of eggs from every mating. At the Indiana State Fair they won first, second, third cock, first, second, third hen, first, second, third pullet, first, second, third cockerel, first, second, third pen. Write for catalog and prices.—H. H. Coburn.

One of our new advertisers is Mr. F. L. Deer of Franklin, Ind. Although new with us, he is by no means new at the breeding of White Plymouth Rocks. He has been at it long enough to see his time, labor and investment crowned with success, and he now possesses some ex-

tra good ones. One mile from Whiteland, Ind., is located the farm, consisting of 80 acres, 25 of which are covered with a beautiful grove, and is the home of the Deer White Rocks. When the writer visited the farm there were 500 youngsters coming on and many ready to win for their purchasers. In carefully looking over and handling them I found them to be as white as snow and of true Rock type. Mr. Deer is a most ardent and enthusiastic fancier and enthusiasm is a valuable asset in breeding fancy poultry. He is also a man with a conscience and insists on having all of his business relations decidedly satisfac-

tory. Some of his winnings at Franklin are: Second cock, second hen, second pullet, second cockerel. At Greenwood: First cockerel, first hen, second, third pullet, first pen. At Indianapolis: Second, third cock, second cockerel, second hen, second, third pullet, first, second large pen of ten birds mated for breeding. If in the market for any White Rocks at reasonable prices write F. L. Deer, Franklin, Ind.—H. H. Coburn.

Maplewood Poultry Farm, Attica, N. Y., breeders of S. C. White Leghorns, White Wyandottes, Indian Runner and Pekin ducks, reports the following win-

## "From Every Hatchable Egg A Big, Vigorous Chick"

### Western Union Telegraph Company

Eaton, O., Feb'y 16, 1913.

Reliable Poultry Specialty Co.

Alexander, New York

First hatch 1913 off. Big,  
husky chick every good egg.

Not a single "dead in the shell."

Oxygen Vitalizer means millions  
dollars to poultry industry.

Ora Overholser, Secretary

Pceble Co. Poultry Association

**Your Money  
Back  
If It Fails**

"Dead in the shell" chicks and White Diarrhoea are the direct result of carbon dioxide poisoning. Oxygen is the only thing that will overcome the effects of this poison. The N. Y. State College of Agriculture says "Oxygen is essential. Without oxygen the chicks die."

### The Ajax Improved Oxygen Vitalizer

Supplies oxygen to the egg chamber. Nature has a chance. A big strong chick comes from every good egg. No more "dead in the shell." No more White Diarrhoea. It costs \$4 complete, ready for use, delivered anywhere in the U. S., all charges prepaid. Can be attached to any incubator in 5 minutes. Sold under our printed and officially signed money-back guarantee. The most valuable book on artificial incubation free.

Reliable Poultry Specialty Company  
Main Street : Alexander, New York

## "PITTSBURGH PERFECT" Poultry & Garden Fence

**T**HANKFUL, — because the poultry stock is always kept within bounds, safe from all prowling, destructive animals—are those who use "Pittsburgh Perfect" Poultry and Garden Fence. The one-piece fabric is easiest to string. The wires at every contact point are

### WELDED BY ELECTRICITY

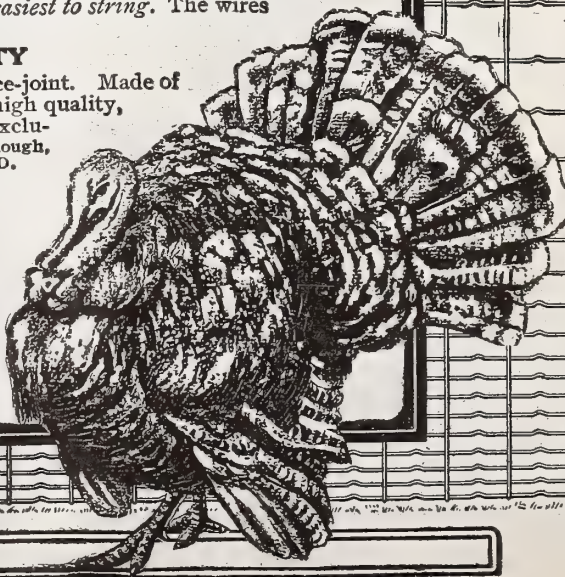

which forms the only absolutely inseparable fence-joint. Made of special-formula Open Hearth wire of uniformly high quality, heavily galvanized with pure zinc. It is these exclusive features that make "Pittsburgh Perfect" Fences so tough, strong, lasting, economical. EVERY ROD GUARANTEED.

### Sold by Dealers Everywhere

Before you buy any fencing, get our new catalogue, sent free.

**PITTSBURGH STEEL CO., Pittsburgh, Pa.**

From the ore in our mines to the finished product, we manufacture "Pittsburgh Perfect" Brands of Barbed Wire; Eight, Annealed and Galvanized Wire; Hard Spring Coil Wire; Twisted Cable Wire; Straightened and Cut Wire; Telephone Wire; Fence Staples; Poultry Netting Staples; Regular Wire Nails; Galvanized Wire Nails; Large Head Felt Roofing Nails; Bale Ties; "Pittsburgh Perfect" Fencing.

hings at Poughkeepsie, N. Y., on White Leghorns: First, third cock, fifth hen, first, third, fourth cockerel, first, second, fourth, fifth pullet, third, fourth old pen, second, third, young pen. On White Wyandottes: Second cock, first, second, fourth, fifth pen, first pullet, first, second old pen, second, fourth young pen. At Rochester Industrial Exhibition, on Pekin ducks: First, second cock, first, second hen, first, second pullet, first, second cockerel, first, second old pen, first, second, third, fourth young pen. On White Leghorns: First, fourth cock, first, fifth cockerel, first, fourth hen, second, fifth pen. They have a lot of good stock for sale and will price them right.

#### Carl C. Beatty.

Carl C. Beatty, Van Wert, Ohio, is the pioneer Rhode Island Red breeder, a classy exhibitor and expert conditioner. He lives in town and travels for a stock food company known as the Never-Fail Stock Food Company, the same name as his Reds. His young stock is raised on farms and he keeps colony matings on

separate farms. His breeding pens are mated on his town property and have plenty of room and shade.

Mr. Beatty maintains that proper mating is the secret of successful breeding, this being particularly true of Rhode Island Reds, a variety which presents a most fascinating and difficult problem, both in type and color. He is an adept at mating Reds for color and has entirely gotten away from Rock, Wyandotte and Leghorn type. Shape comes first with him and he has realized his prediction of dark rich red being the proper color.

When the writer visited him in September he had 2,500 birds, and had Empire coops strung along the main street in Van Wert containing birds already conditioned for the show room. It proved a great attraction for crowds of people, and looked like a poultry show. His birds are winning at the early shows in the hands of his customers. Mr. Beatty mates early for early egg trade and is receiving many pleasing letters from his customers who purchased eggs from him and whose birds are winning for them

in all parts of the country. He is going to show a large string at the Panama Exposition and is making his plans accordingly at this time. He can fit up anyone with winners for any competition. Write him for prices and address Carl C. Beatty, Van Wert, Ohio.—H. H. Coburn.

#### How to Make Eggs!

Elsewhere in this issue appears the advertisement of the Nabob Remedy Co., Box A, Gambier, Ohio. The company claim to have discovered a wonderful egg-producing tonic which is not only absolutely harmless to the hen, but a health promoter. Five pounds of the discovery which they call Prescription No. 4 contain egg-making elements in such concentrated form that this quantity is sufficient for 160 quarts of feed. If used according to directions beef scrap, charcoal, and grit may be dispensed with. Five pounds of Prescription No. 4 contains more egg-making material than a whole ton of oyster shell. If used according to direction it is guaranteed to make hens lay.

Letters like the following are coming to the company's office daily:

Muskegon, Mich.

The Nabob Remedy Co., Gambier, Ohio.

Gentlemen: A short time ago I received a sample package of Prescription No. 4 and gave it to the chickens as directed and have been getting more than twice as many eggs from them as I got before using it. Enclosed find — for Prescription No. 4. Yours truly,  
F. W. Marcous.

The wonderful possibilities of commercial enterprise afforded by the rapid and substantial growth of the poultry raising industry in the United States is in no better way illustrated than in the success attained by the firm of Otis & Moe, Chicago, manufacturers of Moe's modern and sanitary poultry supplies. Although this firm is but three years old its business has increased more than 500 per cent over the corresponding season. They now have hundreds of well satisfied dealers in the United States scattered from San Francisco to Boston and St. Paul to Tampa. Their success has been achieved entirely, however, by giving the poultry raiser an opportunity to buy devices that make him money, by adding to the health and comfort of his birds and which he became familiar with through your valuable advertising medium, for every article that this firm manufactures and offers for sale was invented by Mr. A. B. Moe, who is recognized in poultry breeding circles as one of the best informed and most practical raiser in the country. And Moe's line was the result of careful and intelligent thought to equip his own yard with modern, sanitary and useful devices that would better the condition and add to the health and safety of his own birds. This line now consists of the popular Moe's top-fill poultry drinking fountain, Moe's self-locking leg band, Moe's round hopper, Moe's grit and shell boxes, Moe's rat destroyer and many other useful and sanitary inventions. Write Otis & Moe, Otis Bldg., Chicago, for complete catalogue.

The Geo. H. Lee Co. of Omaha, makers of Lee's Lice Killer, Germozone, Mandy Lee Incubators and other poultry products advertised by them in these columns, have been making extensive improvements in their Omaha factory during the past summer, in preparation for a heavy fall, winter and spring trade. All of the Lee products are originals and never copies. Old poultrymen will remember the furor that greeted Lee's Lice Killer when it appeared seventeen years ago. Before that time it was not considered possible to rid chickens of vermin without handling, dusting, dipping or greasing each individual bird. The Lee Company has made wonderful strides in trade, now having factories at Omaha and Los Angeles, with distributing branches at many other points, and has especially made and retained a reputation for reliability of product and uniformity of strength and quality at all times.

"To make rapid progress toward a flock of 200-egg hens, you must breed from your best layers. Not only must you know the hen that outlays the others, but you must know what chicks come from her eggs. It is especially necessary to use males from such eggs, if you desire to reach and hold the 200-egg bird. There is no way to find out these facts except through the use of a good trap nest. Wellcome's 'Ideal' trap nest has always answered this purpose. It is practical as well as ideal." For full particulars address F. O. Wellcome, Yarmouth, Me.

## Taylor's White Rocks

The Stay White Strain in keen competition at the Great Ill. State Fair, Oct. 3-11, 1913, won 2d pen; 3d-5th pullet; 4th cock; 5th hen, no cockerel entered. I have 150 to select your exhibition and breeding stock from, don't delay, write your wants.

H. E. Taylor - Petersburg, Illinois

## RHODE ISLAND REDS

### ROSE AND SINGLE COMB

5000 REDS TO SELL

#### What 20c will do

If you are interested in poultry raising you want to know the best way to feed and care for them. You also want to know about the best breed in the world RHODE ISLAND REDS. Our beautiful catalogue, (printed in three colors) of 64 pages and cover, contains many articles on raising and caring for poultry in large and small flocks; also how to feed for eggs and their fertility. The best system to lay out a poultry plant. How to build a good fresh air poultry house with plans, etc. This catalogue will be sent post paid for 20 cents in stamps or cash. Address all mail to

BUSCHMANN-PIERCE RED FARMS  
Box 839, State Life Building Indianapolis, Indiana

## "O.K." Poultry Litter

TRADE MARK

### WRITE TO-DAY for FREE SAMPLE

We Know You'll Never Again Use Anything Else for Litter

"O. K." is the most wonderful litter for Hens, Ducks, and Geese. It's cheaper to use and ever so much better than Straw, Clover, Alfalfa, Sawdust, Shavings, or anything else ever thought of for litter. All the big breeders who try it never go back to anything else because there is nothing else they would use.

### "O. K." Litter

ABSORBS ALL MOISTURE  
DRIES UP the DROPPINGS  
PREVENTS all ODORS

"O. K." Poultry Litter keeps your houses always dry, clean, sweet-smelling and sanitary. You need no dropping boards, and

CLEAN HOUSE ONLY ONCE EVERY 3 or 4 months

#### COOK SAYS:

"There is nothing on the market that compares with 'O. K.' Litter. It is one of the best preventives of disease because it keeps the air pure."

Wm. Cook & Sons, Scotch Plains, N. J.

"O. K." Litter will not BURN. Lice will not come where it is used. TELL US HOW MUCH POULTRY YOU KEEP—WE WILL TELL YOU HOW MUCH "O. K." LITTER YOU NEED.

Write to-day for the free sample and printed matter. You need them both.

### O. K. COMPANY

Dept. 183, 157 Water St. New York

Remember, no other litter is "OK"

### Rocky Run Farm.

One of the most indescribably beautiful homes is Rocky Run; the home of W. G. Marshall, Northfield, Ohio, one of Cleveland's most prominent business men and the "Evergold" Buff Wyandottes. Rocky Run is an estate of over 500 acres of very productive land and is beautifully and advantageously located from every standpoint, Northfield being a suburb of Cleveland and on the electric line, half way between Cleveland and Akron. The grand mansion with its beautiful grounds and flowers is Mr. Marshall's summer home and is as beautiful as Mr. Marshall's originality and unlimited means can make it. When we had the pleasure of visiting Rocky Run one of the many things that impressed us most was its new office, for which Mr. Marshall mixed the colors for the woodwork, which is a beautiful shade of green. This office is one of the finest we ever had the opportunity to visit.

Last year Mr. Marshall was more than fortunate in securing Mr. Gerald Williams, formerly of Wellington, Ohio, as the manager of the poultry interests. Mr. Williams was the originator of the "Evergold" strain Buff Wyandottes, over 400 of which he took with him, including all his Madison Square Garden, Grand Central Palace, Cleveland and Hagerstown winners. "Evergolts" have for years been winners of the blues at America's best shows, winning for their originators, their present owners and their purchasers, at Madison Square Garden, Boston, Providence, Philadelphia, Hagerstown, Savannah, New Orleans, Gadsden, Nashville, Memphis, Cincinnati, Toledo, Cleveland, Springfield, Peoria, Detroit, Lansing, Denver, Los Angeles and other good shows. At the national meet of the American Buff Wyandotte Club at Cleveland, 1910, where the best from one extreme of the land to the other met, "Evergolts" won Grand Champion Trophy Cup offered by the American Buff Wyandotte Club for the best cock, cockerel, pullet and pen.

In walking over Rocky Run, enjoying the "Evergolts," one comes in contact with much beautiful scenery and many picturesque views. Some of these are shown in the beautiful catalog, which is a work of art and a masterpiece in composition and one of the most beautiful ever issued by a poultry farm. Not only is it a thing of beauty, but is also one of the most authentic books on mating, raising and exhibiting Buff Wyandottes yet before the public. Send for one. Address Rocky Run Poultry Farm, Northfield, Ohio.—H. H. Coburn.

### Easy Way to Get Eggs.

Dilute one tablespoonful of Oculum in a pint of turpentine, shake well and keep corked.

Pour a tablespoonful of the mixture in the drinking water every day. The quantity of drinking water used makes no difference as the mixture rises to the top and the fowls get it. This method of using Oculum on your flock will prove highly beneficial as a preventive of disease and as an egg producer. Your fowls will improve in weight, in plumage, in health, and you will get many more eggs.

A dollar bottle of Oculum used as above directed will last 50 chickens one year.

### Get a Good Bone Cutter.

The relation of the bone cutter to egg getting is very close. Bone is a necessity for the laying hen. It furnishes the materials she must have to produce eggs. She cannot lay without these materials, and she does not get them in sufficient quantity in her ordinary daily rations.

This is particularly true of penned-up hens. The materials must be supplied. And there is no place where these materials can be procured so cheaply and so easily as from the green bones that ordinarily go to waste at the meat market and in practically every kitchen. These bones ought to be turned into money by first turning them into eggs. You would use the bones for that purpose instead of letting them go to waste if you were equipped to prepare them for the hen's use.

That brings us to the bone cutter. Get it, have it always ready and use it daily. Get a good one while you are about it—one that will not break, one that will handle all kinds of bone, one that you will find pleasure in using every day, because it will not wear you out in turning it.

The Standard Bone Cutter manufactured at Milford, Mass., is such a machine. It does not clog or break, turns easily and has become famous as the machine which

cuts bones across the grain as well as with the grain. It is made in 12 sizes, and it has been greatly improved this year. The machine gives such certain satisfaction that the manufacturer, the Standard Bone Cutter Co., does not hesitate to send it out on free trial. If you need such a machine, you cannot do better than write the manufacturer about it. When writing about the cutter simply address the Standard Bone Cutter Co., Milford, Mass. Their booklet and full particulars will come on request, free.

### A 3-Month Trial Subscription.

To Reliable Poultry Journal, only 10 cents. Stamps are acceptable. Or send for free sample copy of the most helpful poultry paper published. Address Reliable Poultry Journal Pub. Co., Box E-13, Quincy, Ill.

The Egg-a-Day Farm made a killing on their Buff Orpingtons at Trenton, N. J., where in a hot class of quality birds, some of which came from large eastern farms, being purchased to win, yet every bird entered by the Egg-a-Day Farm was placed. Their complete list of winnings were: 1-2-3-4-5 hen, 1-2-3-4 pullet, 2-3-4-5 cockerel, 2 pen. Pullet won best Orpington in show, all varieties competing, silver cup on display over all Orpingtons, one cup on entire class, all varieties competing. This remarkable win should interest all Buff Orpington breeders. Just think of the remarkable size of these birds, four cockerels weighing 8½ to 9½ lbs. They only needed 3 or 4 weeks to get finished in order to show their true value. Their pullets weighed up to 7 lbs. Think of these weights for this time of the year. If you want birds with size,

type and color you should write to the Egg-a-Day Farm, Rahway, N. J.

On another page of this issue appears the advertisement of G. A. Walker, Polo, Ill., exclusive breeder of Barred Plymouth Rocks. Mr. Walker has won many prizes, including trophy cups, specials, etc., at the leading shows of the middle west, the winners being bred in his yards. We recently visited this plant, which is beautifully situated in the outskirts of the thriving little city of Polo, and while there handled many specimens of splendid quality. We cheerfully recommend Mr. Walker and his Rocks to those looking for something good for the coming shows. He has 400 to select from and will treat you right.

At the Tri State Fair, Memphis, Tenn., Sept. 22-27, Mrs. Reginald Stonestreet, Glendale, Nashville, Tenn., made the following winnings on White Orpingtons: First cock, second, third hens, second, third pen, first, second, third cockerel, first, second, third pullet; second prize, \$50, for best display in whole show; first for best cock in whole show; first for best pen, Tennessee breeder; first for best display of Orpingtons. Birds from Maine to Texas on exhibition. Kummer and Savage, judges.

At the late Tennessee State Fair, Nashville, Tenn., Bruce & Abbott, the well known Buff Orpington breeders of Whiteland, Ind., made the following winnings: First, second, third, fourth cock, first, second, third hen, first, fourth, fifth cockerel, first, second, fourth, fifth pullet, first, second, third pen, and a number of specials.

## Andrews' White Wyandottes

Win at Boston, First Pen Six times in past 7 years.

1st Cockerel 1910, 1911, 1912  
2nd Cockerel 1910, 1911, 1912, 1913

Let me quote you prices on a winning show bird or fine breeder. Send stamp for catalog.

J. W. Andrews, Box A, Dighton, Mass.

## THERMOMETERS NEVER VARY

"AEM" embossed on a Thermometer is an absolute guarantee of selected materials, skilled workmanship, thorough testing and unquestioned accuracy.

When you are buying an incubator, brooder or hover, see that it is equipped with the "AEM" Thermometer. Don't take chances. Remember, an inaccurate thermometer may "cook" or "chill" your hatches, causing a loss on a single hatch that would pay for more than a dozen "AEM" Thermometers, the thermometer that never varies.

If your dealer can't supply you with an "AEM" Thermometer or Hygrometer, refuse every other kind and order direct from us.

### These Are the Prices, Postpaid:

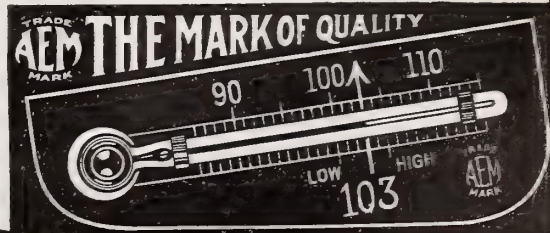

"AEM" Thermometer for any Incubator	\$ .75
"AEM" Thermometer with Patent Electric Light Attachment	2.50
"AEM" Certified Thermometer	1.25
"AEM" Brooder or Hover Thermometer	.75
"AEM" Electric Alarm Thermometer	4.00

### Special Prices in Quantities

Millions of chicks die in the shell because of improper moisture regulation. Use an "AEM" Hygrometer and always know exact amount of moisture in your incubator, and get bigger hatches of bigger, more vigorous chicks. Price \$1.50 postpaid.

A. E. Moeller  
261 Sumpter Street  
Brooklyn, N. Y.

Established 50 Years—We make more than a thousand different thermometers for all purposes. Write today for Free Illustrated Booklet and price list. Important!

Wall boards have come to stay and today they are being used for walls and ceilings in cottages and unfinished rooms in homes in place of laths and plaster, and also over-cracked plaster walls. Neponset Wall Board has been developed now to the point where different finishes are provided for use in different rooms and for different artistic arrangements. There is the plain and quartered oak finish for wainscoting and paneling; burnt leather finish for halls and libraries; and cream white finish for general use for ceilings in color, although the use of paint is not necessary. During the winter months it is a good time to use Neponset Wall Board for fixing up rooms, as it can be applied in cold weather as well as in warm weather, and it does away with dirt and annoyance incidental to lath and plaster.

Mr. G. H. Woolington, proprietor of Mary Elizabeth Poultry Farm, starts his advertisement of White Orpingtons with this issue. This farm is located one and one-half miles from Monticello, Ill., and is splendidly equipped. Mr. Woolington having spared no expense either in his foundation stock or in the equipment of his plant. His winnings at the leading shows of the middle west attest the quality of his stock, while the many complimentary remarks

heard of him at home and abroad only verify our own opinion as to his integrity and fair dealing. We have no hesitancy in recommending Mary Elizabeth Farm and Mr. Woolington to A. P. J. readers.

Dr. G. G. Billman, Sullivan, Ind., breeder of "Houdans Worth While," reports the following winnings at the late Indiana State Fair: First, second, third cock, first, second hen, first, second, third cockerel, first, second pullet. The doctor informs us that he has for sale a number of early hatched birds which he will guarantee to win for his customers. He also has a number of utility birds that he will sell at low prices.

On another page of this issue appears the advertisement of the Highland Poultry Farm, Normal, Ill. Mr. Erdman, the proprietor, is splendidly equipped for breeding Barred Plymouth Rocks that show quality all through. At the Pekin, Ill., Show, 1913, the only show at which Mr. Erdman exhibited, and showing nothing but young stock, he won 2d pullet, 36 in class, and 4th cockerel, on a bird that was cut two points for weight. We can recommend both Mr. Erdman and his stock.

W. J. Brinkley, of Iuka, Miss., the well-known White Plymouth Rock breeder, made practically a clean sweep at the Tennessee State Fair, Memphis, Tenn., winning 29 prizes out of a possible 31. He also won \$100 in gold for the best display of any one variety by one breeder. In cock birds he won first, second, third; hen, first, third, fourth; cockerel, first, second, fourth; pullets, second, third, fourth, fifth; pens, second, third, and several specials. For prices and particulars address as above.

Gensemer Brothers, Creston, Ohio, have some extra fine hen-feathered cockerels in Silver and Golden Campines. This is hard to get, especially in Golden Campines, but the Gensemers have them, for I saw them, and in carefully looking and handling their Campines I found them excellent in type, head points and hackles. The Gensemers are breeding them larger each year. If in need of a classy show cockerel or first class breeder write Gensemer Bros., Creston, Ohio.—H. H. Coburn.

When I visited Mr. W. D. Holterman, Fort Wayne, Ind., I saw his Aristocrat Barred Rocks wearing the finest and most even narrow barring I ever saw, even at Holterman's, the home of narrow barring. He has some show birds ready for the early shows. Here is the place to get a winner for any show room. It was the Aristocrats that cleaned up at Chicago last December in the hands of one of Mr. Holterman's customers. You should see his females and cockerels. His young stock is showing great Rock type and are grand in head points.—H. H. Coburn.

A. A. Carver, Seville, Ohio, has some of the finest Red cockerels we ever saw or handled, hundreds of which are from 15 of the finest Red hens that ever grew. These hens Mr. Carver has selected and placed together and will form the nucleus of his Panama exhibit. We saw these hens and can vouch for their color being non-fading. Their value cannot be counted in dollars and cents. Mr. Carver will give you extra value for your money and use you right.—H. H. Coburn.

J. D. Haupt, Easton, Pa., breeder of Buff, Black and White Orpingtons, reports he has the finest lot of birds he ever raised, having succeeded in producing a large number the past season. He also has over 1,000 yearlings that he will dispose of at reasonable prices. Anyone desiring exhibition or breeding stock should communicate with Mr. Haupt.

Lloyd's prize winning Partridge Rocks won the following prizes at the late Tennessee State Fair: First cock, first, second hen, first, second pullet, first, second pen, silver cup for best display. This winning was made in a strong class, there being five other exhibitors and 52 birds in the class. If you want some good Partridge Rocks write Frank L. Lloyd, Greensburg, Ind.

Jerome A. Leland, Springfield, Ill., breeder of S. C. White Leghorns and Columbian Wyandottes, has several males and females to dispose of in both varieties. He won several firsts and seconds at the Illinois State Fair this fall. Mr. Leland is booked to judge several shows this winter, including the Chicago and St. Louis shows. Write for his catalogue and mention A. P. J.

Elmer V. Shultz, Webster Grove, Mo., breeder of S. C. Brown Leghorns, has purchased a new home and before moving will sacrifice several of his winners. Here is a grand opportunity to get started right. Mr. Shultz can supply you with winners for any show. Write him and mention A. P. J.

Iowa White Orpingtons won at Galesburg, Ill., last month, first cock, first, second, fourth hen, first cockerel, first pullet, first pen; seven birds exhibited. For further information address Iowa Farms, Poultry Dept., R. R. No. 3, Davenport, Iowa.

Flanders White Leghorn Farms, Orchard Lake, Mich., is an exposition in itself and when completed will be the largest poultry farm in Michigan, as well as the finest, a description of which will appear in the December American Poultry Journal.—H. H. Coburn.

We wish to call your attention to J. S. Bales' advertisement in this issue of Rose Comb Black Minorcas. Mr. Bales is breeding Minorcas that never fail to win in such shows as Chicago, St. Louis and Illinois State Show. We cheerfully recommend the Bales strain of Minorcas to our patrons.

## HOUDANS

"WORTH WHILE" I have for sale a number of early hatched birds which I will guarantee to win for you; also have a number of utility birds for sale. Write me your wants, mention American Poultry Journal.

St. Louis Offices, 1211 Central National Bank Building

**Ferris Leghorns Win.**

Ferris Improved White Leghorns are making a remarkable record at the leading fairs this fall. For many years their laying qualities have been recognized as the best that careful selection and trapping could produce; but although Mr. Ferris has exhibited at two or three shows a year and has furnished winners for many of the largest shows every year to his customers, he has not exhibited extensively. This year, however, he has decided to exhibit at twenty or more of the leading shows, and started off at the Iowa State Fair, in August, by winning 1st and 2d cock, 1st cockerel, 1st and 3d hen, and a silver cup for the best cockerel in the Mediterranean class. At the Maryland State Fair the first week in September another good winning was made—1st and 2d cock, 1st and 2d hen and 1st pullet; while at the West Michigan State Fair the same week the winnings were 1st and 2d cock, 1st and 2d hen, 1st and 2d cockerel, 1st and 2d pullet and 1st pen. The next week's winnings at the West Virginia State fair, 1st and 2d cock, 2d hen, 1st cockerel and 2d pullet; and at the Kansas State Fair, 1st cockerel, 1st pullet, 2d pen and 2d sweepstakes.

If you are in need of either exhibition or laying stock, you will make no mistake if you write to Mr. Ferris. During the thirteen years that he has been breeding White Leghorns he has furnished foundation and exhibition stock to thousands of breeders in every part of the country. This year he raised nearly 10,000 birds of better quality than any previous year. They are all large, vigorous birds such as make the best layers, and they have the type that makes them easy winners in strong competition. A visit to the farm discloses hundreds and hundreds of exhibition birds with low sweeping tails, long bodies well up on legs, and good in all details of shape, such as good combs, white earlobes, full breasts, concave backs, etc. Needless to say all the birds are absolutely white, there being no brassy birds at all. Several hundred cocks and hens are offered at low prices. If you are interested in White Leghorns you should not fail to send for the fine 132-page catalog which tells all about Ferris Leghorns. This catalog is free to all our readers and contains illustrations, prices and full particulars. It is one of the most interesting and instructive catalogs ever published. All stock is shipped on approval. Your money will be refunded if any birds are unsatisfactory, and in addition to this liberal guarantee, all birds are insured for 30 days, and if they die or become ill, will be replaced free of charge. Every customer must be fully satisfied before the sale is considered closed. Better write today and ask for the big 132-page catalog and get quotations on the stock, eggs or chicks you need. Just address a postal to George B. Ferris, 905 North Union Ave., Grand Rapids, Mich.

## WHAT EXPERTS THINK OF IT

### "Most Complete and Comprehensive"

Gentlemen: Your 1913 Year Book received and carefully inspected. We find it to be a most complete and comprehensive work. Very truly yours, Leo. T. Robinson, Editor Nat. Barred Rock Journal, Union City, Mich.

Dear Sir: I am satisfied you have succeeded in giving to the public a book of permanent value, one that the editors and artists should be proud of. The Year Book is a welcome addition to our poultry literature. Yours truly, J. H. Drevenstedt, Editor American Poultry World, Buffalo, N. Y.

Gentlemen: You certainly deserve great credit for publishing such an excellent Year Book. Judging by its merits, it should meet with great success. Sincerely yours, A. G. Studier, Editor R. I. Red Journal, Waverly, Ia.

## 11 Four Color Pictures

The American Poultry Journal Year Book for 1913 contains eleven four-color pictures of fowls made by the famous poultry artist, Louis A. Stahmer. Three of these pictures are double-page in size (6½ by 9½ inches, each showing one male and four females) and they were all made from life by the new four-color photo engraving process. Eight of these colored pictures are mounted on heavy tan paper and are suitable for framing. These beautiful pictures have created a sensation wherever seen as they represent the highest type of thoroughbred fowls and they are beyond question the most beautiful and artistic set of exquisite pictures of pure-bred poultry ever published. To appreciate these pictures they must be seen, as it is almost impossible to find words strong enough to describe their natural beauty and artistic background taken from nature's scenery, with its charming hues and tints of the glorious rainbow.

## "MENDELISM AND THE LAWS OF HEREDITY,"

By Rev. F. W. Sturgus, M. A., of England, occupies 36 pages of the Year Book and is undoubtedly the best exposition of Mendelism and the laws of heredity in relation to poultry breeding that has yet been published and is worthy of deep study by our American breeders. This one article by this noted authority, is worth many times the price of the book to every breeder of fancy poultry.

## "The Poultryman's Encyclopedia"

is one of the big features of the book, giving a complete description of 29 common diseases of fowls, their causes and cures, explanation of all technical terms used in the poultry industry, and also treating briefly but fully such subjects as How to preserve eggs, Making feeding sprouted oats, Soft-shelled eggs, Right size of poultry house, Broilers, Broken legs, Curing broody hens, Care of setting hen, Capons, How to stop cock crowing at night, Cockerel and pullet breeding, Double and single mating, Color feeding, Colony houses, Contents of egg, Copulation, Grate fattening, Dust bath, Egg bound, Egg and feather eating, Feed for fattening, Grit, Flavor of eggs, Incubators and cellars, Influence of the sexes, Insect pests, Killing and dressing poultry, Mash feeding, Molt, Nests, Perches, Scratching sheds, Sitters and non-sitters, Telling the sex, Removing spurs, Watering devices, Ventilating houses, How to give medicine, Scaly legs, etc. All the above and many more items are arranged alphabetically for instant reference, making it truly a Poultryman's Encyclopedia.

The Year Book is printed on high grade enameled book paper and the binding is linen thread sewed to make it flat opening. There is nothing cheap or trashy about the book as no expense was spared to make it a representative of the best present day standard of artistic printing and worthy to be handed down to posterity as an example of what the best printer could produce in the year of 1913.

No book of this kind has ever been presented to the American public before. Think of it 379 pages, 11 colored illustrations, the best articles that money could buy, on the most helpful subjects, and complete show reports for 1912-13.

Prices—\$1.00 for the de luxe cloth bound edition and 50c for the paper bound edition, express prepaid.

You can Get the Book FREE

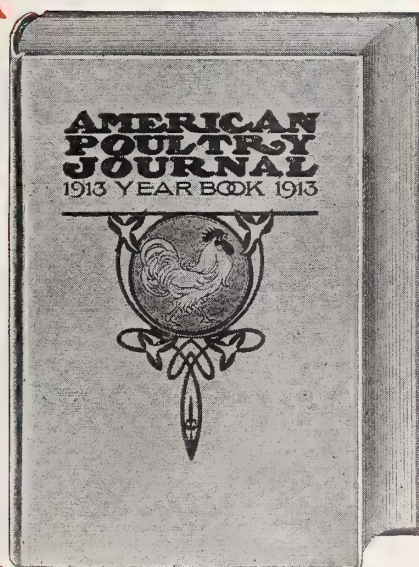

# NEW BIG POULTRY BOOK FREE

## American Poultry Journal Year Book for 1913

Is undoubtedly the greatest poultry book ever published in this country and we are giving you an opportunity to get this book ABSOLUTELY FREE of all cost. ## EVERYBODY PRAISES BOOK

### "An Excellent Book for Poultrymen"

American Poultry Journal,  
Gentlemen: We have looked over the Year Book with a great deal of interest and find it filled with valuable poultry information. It is certainly an excellent book for poultrymen. Yours truly, C. H. Chaplin, Sec'y Sheffield Farm, Part. Wyandottes, Glendale, O.

### "More Than Pleased"

Dear Sirs: Received the Year Book for 1913, and must say that I'm more than pleased with same. I think this a great book for amateurs. Yours truly, R. P. Schneider, West Newton, Pa.

### "Is Worth Waiting For"

Gentlemen: The Year Book has reached me and more than fulfills my expectations. It is worth waiting for. Yours, Edwin R. Frazer, Oakland, Cal.

## Poultry Show Reports

One of the most valuable features of the Year Book to the exhibitor and breeder is the complete reports of the leading poultry shows held during 1912-13. 1st, 2d and 3d prize winners, with judges making the awards and number of entries in each class, are reported of nine of the largest shows, and 1st prize winners of the next 32 largest shows, and shows having less than 1000 entries are compiled into a directory, giving number of entries, entry fees, date of show, name of secretary, who furnishes the coops, etc.

The Year Book also contains a Specialty Club Directory, Experiment Station Directory, Poultry Judge's Directory, Biographies of 30 successful prominent breeders, The American Poultry Association, its officers, branches, Organizers, and what it is. Complete reports of the National Egg-Laying Contest; North American Egg-Laying Competition, and the Inter Ocean-Midlothian Farms Egg-Laying Contest.

## NOT A ONE MAN BOOK

The table of contents shows that it took 29 of the best poultry experts to edit and write the great American Poultry Journal Year Book for 1913.

The editors of the Year Book are: Jas. W. Bell, Editor in Chief; Clarence Ward, Managing Editor; Louis A. Stahmer, Artist and Contributing Editor; Dr. Prince T. Woods, H. H. Stoddard, C. W. Zimmer, Helen T. Woods, Miss Carey of England, are the contributing editors, besides 21 special articles by leading specialists on poultry culture.

## The Year Book Contains

379 PAGES, all chuck full of valuable, up-to-date information for the poultry raiser, such as "The Poultryman's Calendar," telling what to do each month in the poultry yard; many articles by prominent breeders on such subjects as Line breeding with chart, Dr. Wood's Improved Open-Front Poultry Houses, with illustrations showing how to build one; Capons and Caponizing, with illustrations; Feeding the Layers, with feeding formulas and table of food values; Opportunities in Poultry for the Farmer; Advertising Pure-Bred Poultry; A Simple Indoor Fireless Brooder, with illustrations; Stoneburn Trap Nest, with illustrations showing how to build one; The Diaphragm Open-Air Poultry House, with illustrations; Gillette Open-Air House; Old and New Breeds; and many other special articles by leading specialists of this country and England.

The Book is a comprehensive review of the poultry industry for 1912-13, all thoroughly and carefully indexed for instant reference. It is worth \$5.00 of any poultryman's money.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York, Winter 1910-1911.

The Three Greatest Living Barred Rock Males

# E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

Win the most remarkable record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—this winter of 1913. Winning as follows:

First, second, sixth and eighth on cockerels. First and sixth on pullets. First, second and fifth on exhibition pens. First on cockerel mated pen. Second, third, fourth and fifth on cocks. The Imperial Prize of the show, Sweepstakes special for champion male. Sweepstakes special for champion female. Diploma presented by the American Poultry Association for best cockerel. Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety. Challenge silver cup for best exhibition pen. Special best shaped male. Special best colored male. Special best colored female. Best cock, cockerel, hen and pullet, four best cockerels, four best pullets, \$25 special prize, presented by the New York Show for finest display. All silver cups and cash specials—four times as many first prizes as any competitor. More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibition of any breed.

## My Exhibition of 56 Birds Was the Best the World Has Ever Seen

No other Barred Rock breeder has ever produced or is producing such matchless quality. Every feather in my exhibit was bred on my farm. My First Prize Champion Cockerel and First Prize Champion Pullet are years ahead of their time. They are the produce of the highest skill. No other Barred Rock breeder has ever accomplished the unprecedented achievement of winning the two greatest prizes in the world, Champion Male and Champion Female, at one show in Madison Square Garden. For 25 years at New York my "Ringlet" victories have been complete; my clean sweep of 1ST, 2ND, 3RD, 4TH AND 5TH PRIZES on pullets has never been approached at Madison Square Garden and stands alone and unequalled. The Imperial "Ringlets" are the standard by which all other Barred Rocks are judged. To meet success in winning prizes you must have my birds and eggs. I will sell you grand exhibition birds for any show, and breeders of this Richest First Prize, New York, blood. Richly illustrated 70-page catalogue upon request. It is full of original pictures of New York winners from life.

**Eggs** From the finest exhibition matings in all the world, \$10.00 per setting; four settings, \$35.00 one hundred eggs, \$60.00. One-half these prices after June 10th.

# A. C. HAWKINS' ROYAL BLUE BARRED ROCKS SWEEPSTAKES CHAMPIONS AT New York, Boston and Chicago

"ROYAL BLUE" First Prize Sweepstakes Champion Cockerel at New York.

They have produced the winners at the World's Greatest Shows for 25 years, and at the Great New York Show, 1911-1912, made a WORLD'S RECORD, winning six out of eight prizes awarded on Barred Rock Cockerels, including First Prize and Sweepstakes Silver Cup for Best Cockerel, and Grand Special Prize for Best Cockerel Mated Pen.

AT CHICAGO, Dec., 1912, in a class of over 400 Barred Rocks they won Four First Prizes and the GRAND SWEEPSTAKES CHAMPIONSHIP \$100.00 CUP for the Best Display of Barred Rocks. My White Rocks and Columbian Wyandottes have won more prizes at New York and Boston than any other strain and have no superiors.

2000 CHOICE EXHIBITION and BREEDING BIRDS for sale at honest prices. Finely illustrated Catalog of the World's Champions Free.

## KING RINGY, V.

is, (according to his photograph)

## The Best Cock Bird in the World

**Now WHY?** BECAUSE there never has been published a real, UN-RETOUCHED photograph which equals this one in genuine Barred Plymouth Rock quality throughout.

**He Challenges Comparison** Therefore, compare him with any other real, natural, not retouched photograph of a Barred Rock male in this journal, or in any other journal. (Remember, I say an actual photograph—not drawing.) When you think it over that this is a natural photograph of a bird, **just as he looks today**, you will begin to marvel at his sterling qualities. You will study him. You will admire his full, deep breast, his depth of body, his broad back, his nice sweep of tail, his perfect balance and poise in every section, his superb style, his proud bearing of majesty and easy grace. You will study with ever-increasing pleasure and delight the simply peerless, exquisite dazzling wealth of his barring, until finally—your gaze is positively riveted on his fluff and saddle hangers. Like pendants of precious pearls his long, flowing **saddle hangers and tail coverts** droop in graceful, never-equalled beauty out of the depths of his broad back, showing such wonderfully sharp, straight across-the-feather barring down to the very tips as we fanciers dream of when we think of our Ideal—putting the finishing touch on a bird whose equal has never been shown in a photograph.

### EIGHTY-FOUR BARS

Clean, snappy straight and regular bars, may be counted on his saddle hangers—for he is barred to the skin. King Ringy V. is a carefully line-bred, pedigreed

### ARISTOCRAT

He is one of those birds who is creating such a sensation among Barred Rock breeders in all parts of the world. Last season, in the hands of my

**W. D. HOLTERMAN, Fancier, Box 1, FORT WAYNE, IND.**

**JAS. W. BELL**, the editor of the American Poultry Journal, in speaking of this particular cut in a letter of Oct. 13th, 1913, says: "We would state that Mr. Stahmer DID NOT in any way retouch this photo. We were just looking at the original photo and there is **ABSOLUTELY NO RETOUCHING** on it." (Think this over.)

customers, they won at sixty-four (think of it, sixty-four) shows in America, including the largest National shows.

### TWO THOUSAND

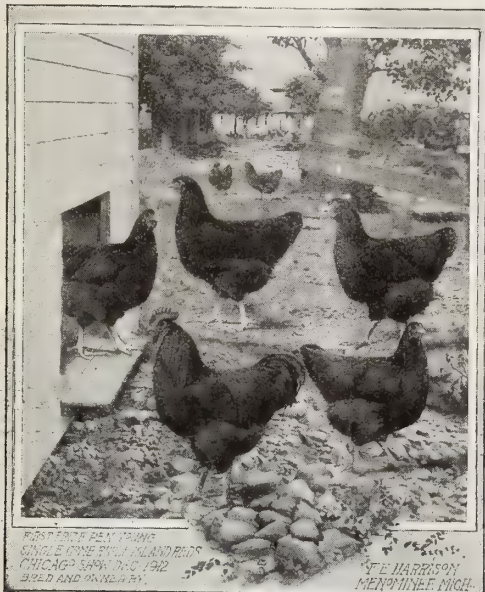

such Aristocrats, many of them sired by King Ringy V., are ripening into finished beauty for this winter's shows. They stand ready to win in any competition in any show room, East or West, North or South. Do you need a winning cock bird, a winning cockerel, a winning hen, a winning pullet, a winning pen? I have them. Call on me. I will help you. "Every Show Bird Guaranteed."

# F. E. HARRISON'S

## Champion Royal Red S. C. R. I. Reds

stand out pre-eminently ahead of all others

Bred, Owned and Exhibited by F. E. Harrison

There is a recognition of quality and supremacy in the peerless Royal Reds that makes them

### The undisputed aristocrats of the Rhode Island Red World

At Chicago, December, 1912, (note the date) they won special for best display on the largest number of points ever given at this show.

At the above mentioned great Coliseum show in what was declared without exception to be the greatest and largest class of Reds ever shown in a National Show with competitors of note from all parts of America, Royal Reds made the greatest win of all times in the history of this great exhibition by winning, as follows:

1st, 3d and 4th Cock  
2d and 3d Hen  
1st, 2d and 3d Pullet

4th Cockerel  
1st and 2d Old Pen  
1st Young Pen

I am the only breeder that has ever won in all six classes in one showing at Chicago.

Following this great victory at Indianapolis three weeks later, by winning six firsts, six seconds and six thirds and the \$100 Challenge Cup for best display.

At the Illinois State Fair, October 4-10, 1913, in a veritable hot-bed of Reds they made the greatest win ever made at the great Illinois State Fair and left with the best record of all times in the history of that exhibition by winning 1st, 3d and 5th Cock; 1st, 2d, 3d, 4th and 5th Hen; 1st, 2d and 3d Pullet; 1st, 2d and 3d Cockerel and 1st, 2d and 4th Pen.

Let others magnify their wins as they may. The fact remains that more winners of prominence are produced by Royal Reds than any strain in America.

My finely equipped farm places me in the lead of all others in points of service.

All trains met by appointment.

If you are in need of winners, breeders or eggs to produce them, send for my catalog. My egg offer for 1914 will be absolutely the best opportunity to procure a start in this foremost strain, that is impossible to obtain elsewhere.

Box 30, Menominee, Michigan

## TECKTONIUS' STRAIN BUFF LEGHORNS

90 PER CENT SHOW PRIZES

Highest Market Prices

### Are Good for the Big Chicago Show

For seven years my famous birds have captured 90 per cent of first and second prizes, cups and specials at all big poultry shows. The "TECKTONIUS STRAIN" so surely has the habit of "coming back," that this year some of my best customers—buyers of my high-grade stock—have asked me not to show at Chicago in December. They want a chance. Therefore—unless my line is already sold—I will not exhibit at the Chicago December Show. Just now, am offering

#### Unrivalled Bargains in Single and Rose Comb Leghorns

—For quick acceptance: Special values in \$10 and \$15 trios and pens Single Comb Buff; especially good values in \$3, \$5 and \$10 Single and Rose Comb males; extra good values in lots of twelve Single Comb females, mated to one male—utility grade—price \$18 for thirteen birds. This offer good only until November 15th.

Scientific mating methods have made my Buff Leghorns "rulers of the roost." What I have done for the "TECKTONIUS STRAIN" you can do for yours. Care and persistence have made "Tecktonius Buffs" ace high winners in market and show. My handsome illustrated catalog—sent postpaid, 25c, coin or stamps—shows you how to put your birds in the same class.

Get some "TECKTONIUS STRAIN" pedigreed stock—the world's feathered aristocracy—into your flock—while my prices are away down. They will show you how to get in the best prize winning, show room, and general utility class—decrease sickness in the flock—increase percentage of fertility—grow strong, early maturing chicks—breed beautifully shaped birds—reduce cost of feed—increase productiveness—and to get a Buff Leghorn that is really buff—that lays the same, regardless of climatic conditions or moulting periods, is easy to domesticate, and that thrives under any conditions. Get the "TECKTONIUS STRAIN" and you will have the best there is in Single and Rose Comb Buff Leghorns. Do you know about the "Tecktonius & Reed Single and Rose Comb Buff Leghorn Farm?"

After October 1st, 1913, the "Tecktonius" Farm will be known as the Tecktonius & Reed Single and Rose Comb Buff Leghorn Farm—breeding, exclusively, Single and Rose Comb Buff Leghorns. Mr. B. C. Reed—professional in the care and rearing of featured stock—will be my partner in the further development of the now world's best "TECKTONIUS STRAIN" Buff Leghorn. "TECKTONIUS" Single and Rose Comb Buff Leghorns are a safe and sure-return investment for any poultryman. With maximum, or minimum care—in the best, or the poorest quarters—in show room or market—summer or winter—they will earn money for you; they CAN'T HELP IT.

# Start This Year with This 1200-Egg

From a Photograph of the Candee owned by Harry Tweddle, Beaver Dam Poultry Farm, Montgomery, N. Y. He has since bought 3600-egg capacity, making a total Candee hatching equipment of 4800 Eggs.

## Safety First in Incubation

In purchasing a mammoth incubator, the fact that the Candee hatches such larger percentages, is not why the majority of people are using the Candee.

It is installed in preference to all others because it is impossible to overheat the eggs.

### Safeguard for Each 300 Eggs

One or even two regulators on a mammoth incubator is no more safeguard against overheating than it would be to try, by putting two check dampers in your furnace, to regulate the temperature in your bedroom 100 feet away.

To evenly warm your bedroom, it must have a separate regulator to attend to that room alone.

The Candee has a safeguard and regulator on every 300 eggs.

By buying a Candee, you are insured against overheating.

By buying any other make, you take your own chances.

Why gamble?

The Candee "insurers" against overheating are set to the right temperature and never touched during an entire hatch.

### Relieves the Operator of the Responsibility

The Candee automatic safeguards are the real progress made in artificial incubation. They take the place of the hand raising and lowering devices on the trays, and represent progress just the same as the heater is an advance over the oil lamps.

On the 1200-egg Candee there are five automatic safeguards against overheating. These are in action 24 hours a day and they prevent the heat from creeping up or dropping off—without any attention on the part of the operator.

Contrast this with obsolete methods where the operator frequently raises or lowers the trays after he finds the temperature is wrong. Operation then depends upon the constant watchfulness of the operator. In the Candee one adjustment does for the hatch.

As you learn the details of operation, the more you will appreciate the Candee, and the little attention it requires.

### How to Operate the Candee

The 1200 does not tie you down. Attention morning and night are all that is required. If you have employment that takes you away from home during the day, the Candee will not hold you back.

Plenty of our customers with small poultry plants operate their 1200-egg Candee as a "side line," adding materially to their income.

There is nothing about running a Candee that your wife or any other member of the family cannot quickly understand.

### How the Candee Will Pay You

Use any spare space in the incubator for Custom Hatching. That business goes naturally to the mammoth and the revenue from it counts up fast.

A 1200-egg Candee has 16 trays and at \$2 a tray that means \$32 for three weeks' work. That means \$160 for five hatches.

Can you afford to overlook this phase of the business?

At average figures you can sell baby chicks at from 10 to 25 cents each, and this business alone will amount to from \$60 to \$90 per hatch.

Can you overlook this opportunity?

### The Easy Way to Get Started

Do as hundreds of our customers have—start with a 1200 and then enlarge the next season. Larger sizes pay in proportion, but the 1200 is the stepping stone to success.

With this size the beginner has all the advantages of the larger Candees and yet it takes only a small investment.

Putting in a 1200 requires only a small outlay of money—one that can pay for itself quicker than any other investment on a poultry plant. Your revenue from the incubator begins with the first hatch.

## CANDEE INCUBATOR & BROODER CO.,

# Size Candee Colony Brooder Heater

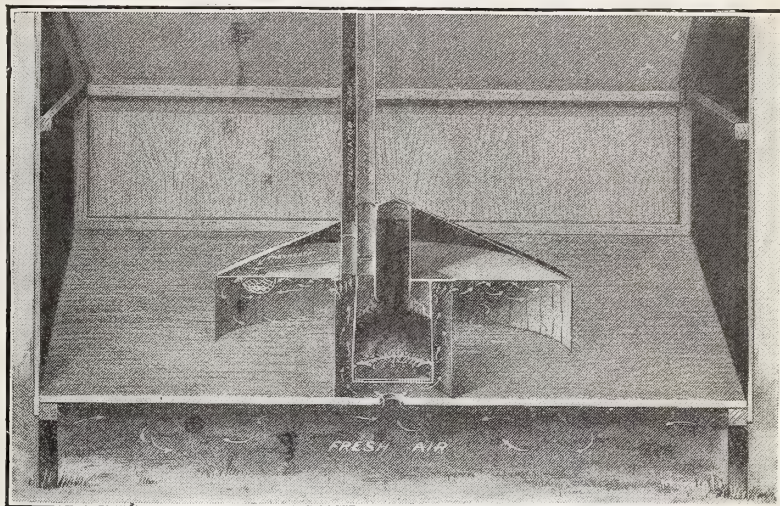

## It Heats and Ventilates

The Candee, unlike other colony house heaters, takes in fresh air from the outside and heats it to the right degree. The used heat is carried off through a ventilator pipe. This is the one feature that every poultryman has been looking for.

## Automatically Regulated

The Candee heater and air supply are both automatically regulated in a simple manner by one thermostat. Adjust the thermostat as you would in a small brooder and tend the fire once a day. With the magazine feed, one filling in two or three days is sufficient.

Write today for Colony Heater Circular

Cross Section of Our Heater—Patents Pending.

# 106 Big Candees on Long Island Alone

On Long Island, N. Y., the world's recognized experts on incubation---the duck growers---live. They tried out the Candee and all other mammoths, and today the Candee is practically exclusively used by them. They discarded more than 1,800 lamp machines and have more than 600,000 duck egg capacity.

## All Over the United States

The big poultry farms on Long Island also use Candee equipment. They have found the incubator they have been waiting for. Why not profit by their experience?

Candees are used in every section and in every climate. They are identical in construction, whether they go to Florida or to Maine. They run equally successfully, whether it is January or June---no fuss or bother.

Our goods sell themselves---one customer recommends the Candee to another. Where earlier there was one in a locality, today you will find clusters of them. We have many customers who never communicated with us until they placed their order. They had watched the operation of a Candee in their locality and made their decision from it.

## What There Is to Installation

If you have pictured getting a Candee as a big job, you are mistaken. Look at the 1200 illustrated on the opposite page. The heater comes with the fittings in place and in a half hour you have it ready for the fire. The pipe underneath the machine is already cut to length and you have it coupled in ten minutes. The legs are put up, the two sections lifted on and coupled up in half an hour.

Our customers set up their own machines and have their 1200 ready for eggs in less than a day.

As your business grows, you add one or more sections, just as easily.

Lots of Candees are in house cellars. The Fire Underwriters have approved it and the insurance rates are unchanged.

Including the room to tend the heater and to run both sides of the machine, you only need 11 x 14 feet of floor space for the 1200-egg size.

## Our Broad Guarantee

It is because of the widespread satisfaction with Candee equipment that we can make the broad proposition: "Write your own Money Back guarantee."

We know our goods and we know the results our customers have. We have personally visited scores of them and heard their enthusiastic praise.

There are no qualifications to their endorsements. They realize that the Candee is far ahead of any other incubators they ever used, that it really makes incubation easy and simple and highly profitable.

## Read Our Big Free Catalogue

Many of our customer's letters are reproduced in it. They are not cut and dried testimonials. They are the personal convictions of the customers. You will find hundreds of them from all parts of the country, illustrated with photographs of large and small poultry plants.

This catalogue is unlike regular catalogues. It has 108 pages, brimming full, telling about Candee Incubators, Brooding Systems and Colony Brooder Heaters. Better clip the coupon and send it in today.

# Are You a Double-Profit Poultryman? Or Are All Your Eggs In One Basket?

Double Profits come from poultry fitted into the mixed farm—berries and broilers, eggs and apples, capons and calves.

Double Profits come from direct selling, the poultryman getting both the producer's and the retailer's profits.

Double Profits come from growing all your poultry feeds and selling them to your hens—getting the profit on the feeds as well as on the poultry produce.

You will find the **practice of producing and the business of selling for Double Profits** discussed in every issue of *The Country Gentleman*, the Weekly of Efficient Farming on a Business Basis.

Along with good poultry keeping must go good farming for the average man. Only the expert few can trust all their eggs to the one basket as a specialty. Most men will do better with the three-legged stool of poultry, truck and fruit—and there are other paying combinations.

## In the Issue of December 6th:

**Old Farms Made New:** The story of actual cases where the Department of Agriculture experts have replanned fields, revised rotations, and introduced business system on failing farms and turned them into profit makers. The principles will apply to both large and small places—the five-acre poultry farm and the thousand-acre wheat ranch.

**Women Who Farm** usually succeed by combining poultry with fruits, or flowers, or vegetables, or bees. Personal stories tell the tale, and these you find in nearly every issue.

**Fresh Fowl—or Frozen:** Whether you sell live or dressed fowls or eggs you need to know how cold storage helps you market. The Government expert chemists tell the story of chilled fowls and eggs.

**Pecans—A Tree Crop of Tomorrow:** It fits on the poultry farm, too, along with the fruits and vegetables. Dr. Smith, the author, an authority on tree crops, has just returned from an 18,000-mile trip through the century-old nut groves of Southern Europe and North Africa.

## Other Features That Will Help You

**Progressive Agriculture:** Boiled down items on what the Government is doing for farmers.

**Everyman's Garden:** The timely methods that will make things grow in any garden, big or little.

**Commercial Poultry Keeping:** The essentials of egg and fowl farming to turn a profit.

**Everyday Farm Practice:** The things which the stockman, the fruitgrower and the general farmer need to know at the time they need it.

**The Countrywoman's Questions:** Styles of the day, recipes and cooking helps, household shortcuts, care of the children and ideas for social work.

And Other Things in Season.

# FRENCH'S POULTRY MUSTARD

Absolutely Pure

**The Original Poultry Mustard**

Pat. Applied For

We have learned that unscrupulous dealers are buying for low prices, cheap and inferior mustards in bulk and offering them in place of French's Poultry Mustard. French's Poultry Mustard is made from imported seeds in the most careful manner and is as near as possible to the mustard used in England during the experiments, excepting that it has greater strength.

In order to be sure and not get counterfeits or inferior articles palmed off on you, insist upon having French's Poultry Mustard, and see that it is in the original and unbroken packages. We do not ship this mustard in bulk, excepting to consumers, and mustard that is offered you in unbroken packages or in bulk, as French's is not French's, but a counterfeit.

If you have not already done so, write us for a copy of the booklet as published by Mr. Ralph Allen of England, upon the subject of the use of mustard with poultry, and if you use mustard, use the one that is adapted solely for the purpose for which it is intended. Don't accept counterfeits or the substitution of inferior goods.

## For the Laying and Show Season

value. **It insures an increased egg yield.** It helps the moult—makes it **quicker and more natural** and the hens get to laying right quick. It is beneficial and insures the richest plumage, and keeps the birds toned up at all times to show at their true worth. It is used by the leading breeders and highly endorsed by thousands.

Condition your stock by using  
"French's Poultry Mustard."  
There is nothing to equal it in

### Old and Young Thrive On It

Experiments here and in England have proven its value. It is used and recommended by thousands of poultrymen. It is not the amount of food a hen eats, but the nutriment she extracts from food by the digestive process that supplies all nature's demands and produces eggs. It is sold the world over—here is a partial list of the principal dealers handling it. If your dealer does not have it send us his name with your order.

Poultry pays best and does best when **French's Poultry Mustard** is regularly used. A teaspoonful to six to twelve fowls fed daily in wet or dry mash. Booklet for the asking.

**The R. T. French Company, Dept. A, Rochester, New York**

# The Gillette Poultry Feeder

## Best and Cheapest

**S**OME of the most profitable flocks of poultry in the world are fed by the Gillette Poultry Hoppers. On the successful roaster plant of Fessenden & Allen over 200 Gillette Hoppers are doing the work of a practical man. It takes exceptional ability to raise winter chickens, yet the Gillette Hoppers are feeding these chickens from the time they are three days old, successfully and economically, far more efficiently than by hand.

The long house for growing stock on the Fessenden & Allen Poultry Farm, Norwell, Mass., Growers of the Famous South Shore roaster chickens.

Wellesley College Farms,  
Wellesley, Mass., are using  
80 Gillette Hoppers

The E. B. Bowen Plant,  
Washington, N. H., are using  
over 100 Gillette Hoppers

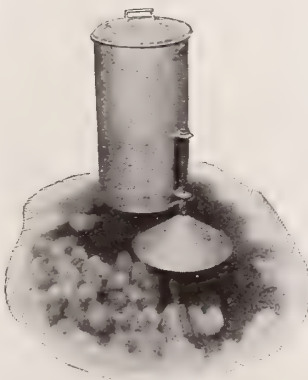

The Zelca Farms,  
Verona, N. J., are using  
65 Gillette Hoppers

F. I. Burney,  
Swansea, Mass., is using  
30 Gillette Hoppers

The list of Gillette users embraces plants in every part of the country. These plants, owned or managed by men of keen ability, have adopted the Gillette Hoppers only after careful consideration. We have proven to these men, and many others, without an element of doubt, the extravagance of hand feeding and the necessity of a uniform supply of dry mash at all times.

## The Gillette Ground Grain Hopper Solves

the dry mash problem. This is due to the Gillette method of agitation. It works wherever there are chickens, outside on the range without shelter equally as well as inside. **The Gillette Hard Grain Hopper** eliminates all hand feeding. It responds to the appetite of the birds, it feeds them just as nature intended, a little at a time during the day, with every opportunity to secure a full crop just before going to roost. It fulfills the requirements of every bird, a tremendous task

to perform by hand. The Gillette method of agitation and regulation used in connection with a ball bearing bait-bar shaft makes all this possible—therein lies the essential difference between the Gillette and all others. Whether you have ten chickens or ten thousand you surely will want to investigate the merits of the Gillette Hoppers at once. Ask your dealer to show you our line of feeders. We guarantee satisfaction or refund you your money.

*Write today for our circular. It's free for the asking. Mention A. P. J.*

# "It's a Wonderful Machine and Your Service is Unequaled"

SANBORN'S POULTRY FARM  
H. W. SANBORN, PROPRIETOR

ATTLEBORO, MASS., Sept. 2, 1913

The Hall Mammoth Incubator Co.,  
Little Falls, N.Y.

Dear Sirs:

I want to tell at this time of my satisfaction with the 9,000 egg incubator installed here for me last November and my appreciation of the businesslike treatment I have received from you.

*It is a wonderful machine and your service is unequalled.*

This machine was purchased after using a 2,400 egg Hall machine at Pittsfield, N. H. while there. It hatches exceptionally strong chicks that thrive and grow fast — developing into phenomenal layers.

Yours truly,  
H. W. SANBORN.

## The Two Most Important Things To Consider Before Buying

- I. *What kind of service will the Incubator give me?*
- II. *What kind of service may I expect from the manufacturer?*

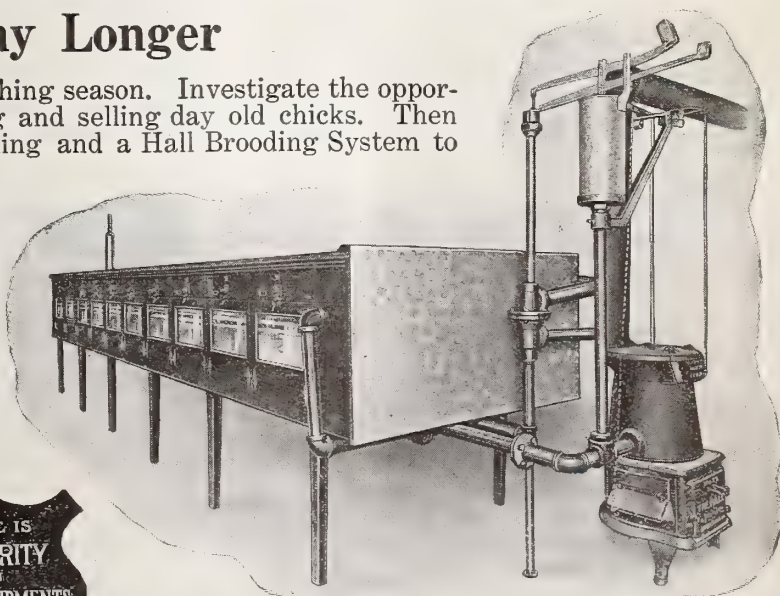

A user may seldom want real service, but when he does want it, he wants it badly. The Hall Incubator requires very little tinkering, still there must be that safeguarding of the buyer's interest, that maintenance of competent organization to meet the unexpected demand and do so promptly and without argument. The first thing then for consideration before buying is: what will the incubator do; and second: how will the company take care of me after I buy. Satisfy yourself

on these two questions and then if you want the machine that will produce maximum results at minimum cost, you will decide upon the Hall Incubator. The Hall guarantee is very broad and is included in every contract. We know the product and stand back of it absolutely. Ask any Hall customer and he will promptly inform you that this is true. Further than this, our Service Department is at the command of our customers and their correspondence is solicited.

## Don't Wait Any Longer

Prepare now for the coming hatching season. Investigate the opportunities for profit in custom hatching and selling day old chicks. Then get a Hall Incubator to do the hatching and a Hall Brooding System to raise the chicks. You cannot go wrong. Our guarantee assures you that Hall equipments give satisfaction

*Write for our catalog describing the new safety temperature control and giving general valuable information about the hatching and rearing of chicks. It will be sent free.*

**The Hall Mammoth Incubator Co.** 132 Southern Avenue  
Little Falls, N. Y.

# BLUE ORPINGTONS :: SILVER CAMPINES

At the Crystal Palace Show, London, Eng., Nov., 1913, I won on Blue Orpingtons, 3rd Cock; 2nd, 3rd cockerel and 2nd pullet. On Silver Campines, 3rd cockerel and 4th pullet.

At the great Dairy Show, London, England, held on October 21, 1913, I won on Blue Orpingtons first in a class of 34 entries, the biggest class ever known in this variety. Also 3rd and 5th. After my previous wins at Madison Square Garden, New York, and the Crystal Palace, London, in this variety, it's positive proof of the excellence of my strain. Remember, I am the originator of the Blue Orpingtons of today. It's easy to buy winners, but a different thing to breed them, unless you have the stock and the knowledge. I have got them ready right here for you and birds that will reproduce their like. I have birds now for sale that will win in the keenest competition in the world. Having attended personally the Madison Square Garden Show, New York, in 1911 and 1912, I know the exact American requirements. Write me, stating your needs. I will answer by return mail and guarantee you every satisfaction. I can ship immediately on getting your order and guarantee live delivery in New York. I arrive at the Seville Hotel, 29th St. and Madison Ave., New York City, December 24, and can book any orders then as well.

## CAUTION

Any Bone Cutter claiming to be Mann's without F. W. Mann Co. cast on its surface, is an imitation. If made in Milford, Mass., it is Genuine.

## Make Your Hens Lay

A FREE BOOK FOR YOU ON MAKING HENS LAY

### When Eggs Are Worth Most

**H**ENS relish juicy bugs and worms because these supply the protein feed they require to make eggs. The craving for meat and bone food—protein feed—is simply nature working out the egg-laying proclivity. Hens **must** have food rich in protein or egg-making elements, or it will be impossible for them to lay.

Our little book tells you all about the how and why of this. It makes you master of egg-getting. It's a book that opens up to you the real possibilities with poultry.

It's simply a matter of knowing what food to supply and how to prepare it. It is now established beyond all doubt that raw, green bone, with adhering meat and gristle, cut fine, is the ideal egg-producing food. Its cost is a mere trifle and its preparation is easy with a

## Mann's Latest Model Bone Cutter

Sold On 10 Days' Free Trial—No Money Down

It turns easily and rapidly, cutting green bone, with adhering meat and gristle, wasting nothing.

Its self-governing feed automatically adapts the cutting to your strength, so that anyone can use it.

Its open, hinged cylinder is easily cleaned, and it takes in large bones. It is strong, durable, and requires few repairs. We want you to try one.

We will send you a Mann's Latest Model Bone Cutter on 10 Days' Free Trial—no money down. If satisfied after the trial, buy it. If not, return it at our expense.

You want our good books, at any rate, send for them. We'll forward by return mail.

**R. J. Walden Box A Middleburg, Maryland**

"I certainly would have been foolish to pay \$15 or \$20 for a machine not so good as the Reliance, when the Reliance will hatch as many chicks as any incubator made. I had 3 hatches this Summer and hatched every fertile egg. My neighbors are greatly pleased. You will hear from me again."—P. W. Schaub, Columbia, Pa.

**Wouldn't You Be Foolish to Pay \$15 for an Incubator When We Sell the RELIANCE for only \$5.75?**

Not one of the higher priced incubators is a bit better than the 150-egg Reliance. Dozens of them are not nearly so good. Here's where the difference lies. It costs more money to sell high-priced machines. More money for advertising, more money for 2- and 3-color catalogs, more money for large stenographic forces to handle correspondence to close a sale, more money for postage and more money to manufacture, for where others build only a few thousand machines, we make thirty to forty thousand, and in putting out this large number, we effect savings in manufacture which we also give to you.

You can't buy a better 150-egg incubator than the Reliance at \$5.75, or a better 70-egg incubator than the Reliance at \$3.90. If you pay more, you are paying the cost of selling the machine to yourself.

**150-Egg Size, \$5.75; With 150-Chick Brooder, \$3.25. 70-Egg Size, \$3.90; With 70-Chick Brooder, \$6.50.**

**\$5.75 WORTH \$15.00**

**Reliance Incubators and Brooders**

sell themselves. The sale of one leads to another and another. Repeat orders come every day; orders from recommendations number hundreds each week; for there's no incubator like the Reliance for results. Read the letter from Mr. Schaub, Columbia, Pa., at the top of ad. That's what all write us.

Chickens hatched in the Reliance grow like mushrooms, live to produce and make big money for their owners. Our incubators are not cheaply made, either. Side walls and top are made of three thicknesses—could not get in, heat can't get out. Equipped with best regulator, thermometer, egg tester, lamp, egg trays. Beautiful finish, handsome steel legs. The Reliance makes chicken raising pay big profits. No

losses; no repair bills; no extras to buy; no waste of oil.

**RELIANCE 150-Egg, price \$5.75 — with \$3.00 brooder, \$8.25 — guaranteed.**

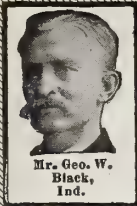

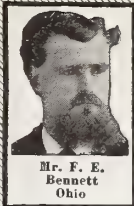

**RELIANCE 70-Egg, price \$3.90 — with \$3.00 brooder, \$6.50 — guaranteed.**

Better order direct from ad—NOW—before rush comes in. You are safe in sending money, as results are guaranteed or money refunded. If you want particulars, write for our literature. We send just a plain circular, but it's filled with Reliance Incubator facts and reasons why we can sell better than a \$15.00 hatcher for only \$3.90 and \$5.75. Send your order for immediate shipment, and start quick. Or write at once to

Winners of Eight World's Championships with Belle City Hatching Outfits

## Join the Money Making Champion Poultry Raisers

Jim Rohan  
Pres.

**I Want Your Photo Here**

Mrs. Alta Hamlyn, of Indiana, joins the Belle City's list of World's Champions. She scored TWO 100% perfect hatches with her Belle City Incubator in Successful Farming's 1913 contest. Mrs. Hamlyn says: "I can hatch every fertile egg in my Belle City." William C. Schott, of Iowa, shares the 1913 honors, his 100% perfect hatch, 140 chicks from 140 eggs, winning another World's Championship for the Belle City in Successful Farming's 1913 Contest. Mr. Schott writes: "The Belle City is the best incubator made—has given much more satisfaction than high-priced machines."

These two additions to the six world's championships already won, make Belle City now the Eight-Times World's Champion Hatching Outfit.

No other incubator made—not even the highest priced—approaches this amazing record. These eight championships were not "luck." Thousands of other Belle City hatching outfits not entered in contests are scoring 90% to 100% perfect hatches right along. I have the letters from the owners to prove it.

Now is the time to go into the poultry business for all that it is worth. Chickens are bringing almost any price you choose to ask for them. Eggs are high priced everywhere, and still soaring! Why take chances on ordinary incubators when the Belle City offers you the biggest winnings at the lowest price ever made on an incubator. Think how much bigger success you can make with

This is the "Tycos" Cup won by my Belle City Incubator in the World's Championship Contest for best hatches, beating incubators costing two to five times more.

"Tycos" Cup

**You** get an exact duplicate of the 8-Times World's Champion Belle City Hatchers. I guarantee to send you an exact duplicate of prize winning championship Belle City Incubators—a machine capable of doing the same work if my simple instructions are followed.

Back of the machine I send you my Personal Ten Year Money Back Guarantee. You cannot lose, I take all the risk. Money awaits the man who supplies the chickens and eggs this year. The most money awaits the Belle City users. Write me!

## Belle City Now 8-Times World's Champion Hatching Outfit

than with any other. I have just got out a catalog giving hundreds of the most remarkable successes ever made in the poultry business—made with Belle City Hatching Outfits. These hundreds were taken at random from the many thousands on file in my

office. Owners of Belle City Outfits give these amazing records in their own words and sign them. Anybody is welcome to look at the originals. Get in the army of poultry money makers with a Belle City hatching outfit. Do it now.

## A Postal Brings You the Belle City Book

In addition to the records of 90% to 100% hatches, it tells you how the Eight-Times World's Champion Belle City hatching outfit is made—illustrates it in actual colors. Shows that it has everything worth having in and on an incubator, yet it is the lowest priced.

My 140-Egg Eight-Times World's Champion Belle City Incubator has Oakes double disc self-regulator, correct hot water heating system, copper tank and boiler, safety lamp, double walls and double door, with dead air space all over, with roomy nursery and strong egg tray. Of course, the thermometer is

right; I use the "Tycos." I also supply egg-tester, Edw. Miller sun hinge burner, funnel, everything you need, including valuable instruction book on operation, hatching and care of chicks.

The catalogue tells you all about my famous 140-Chick Belle City Brooder—the only double walled, hot water, top heat brooder made, guaranteed to raise largest percentage of chicks every time—a fitting companion to my World's Championship Belle City Incubator.

## I Go Into the Price Question

Show you why I can send you my Belle City hatching outfit at half or less than half what others cost you! You buy direct from me. You pay no agents' or dealers' profits. I have to make thousands and thousands of my Belle City outfits to supply the demand. 276,000 are now in use. This big volume enables me to cut my profit down lower than anybody else can afford to take—and I prepay the freight to all points East of the Rockies and allow it that far to points beyond.

If you're in a hurry—if you don't want to wait for all this proof—you can order direct from this advertisement. I tell you how my machines are made and give you my money-back guarantee. The editor of this paper, or any bank or express company, will tell you your money is perfectly safe and I'll do just as I say I will. I ask you to send only \$7.55 for my 140-egg 8-time World's Champion Belle City Incubator—the best you can buy at any price, or \$4.85 for the 140-chick Belle City Brooder. You can order both together, if you wish, and save more money at my unheard-of low combination price—send only \$11.50 when both are ordered together.

Don't turn this page without either writing to me or else tearing out this corner as a reminder. Whether you order or not you get all my valuable World's Championship hatching facts absolutely free! But be sure to write me today. Just say, "Send World's Championship Hatching Facts," or order now and save delay. I guarantee to ship machines same day as your order is received. Satisfaction guaranteed. Address Jim Rohan, President

**Belle City Incubator Co., Box 27, Racine, Wis.**

**"Licene" KILLS** 

One application of Licene kills every louse and "nit" on your birds and they will keep free from lice for six months.

Mr. E. B. Thompson, President of the American Poultry Association, says: "Gentlemen:—I have tried LICENE with best results; it is a most excellent preventive of lice and a rapid exterminator. LICENE should have a great sale to poultrymen who must appreciate its value after trying. E. B. THOMPSON, Amenia, N. Y." Enough for 200 birds, postpaid 50 cents. Money refunded if not satisfactory. Circulars free. Agents wanted.

**THE LICENE CO.**  
1500 Pontiac Bldg. Chicago, Ill.

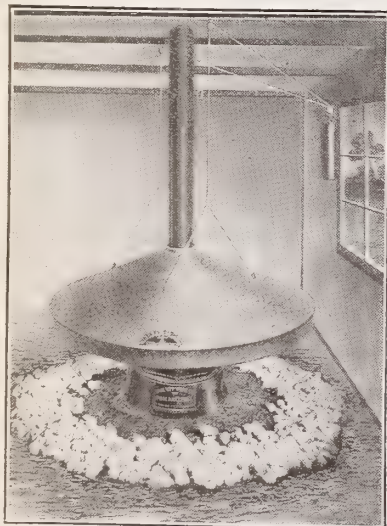

## R.C. MINORCAS

They have the shape, color, markings and head gear that appeals to the most careful breeder. Also have good breeders at \$3.00 to \$5.00 each. Utility stock \$1.00 each. Satisfaction guaranteed. Mention American Poultry Journal.

**B. M. BILLINGS, Box A, Oberlin, Ohio**

## Evergold Buff Wyandottes

"The Sky Is the Limit of Evergold Quality"

What is an Evergold? It's a good Buff Wyandotte from the world's leading strain whose home is Rocky Run Farms, Box 50, Northfield, Ohio. A beautiful catalog all about Buff Dottes, 20c. Price list free.

**W. G. Marshall, Owner :- Gerald Williams, Manager**

## Queen

**28 Points of Excellence**

"OUT of 120 eggs, my first hatch, I got 110 chicks; and the second hatch, out of 120 eggs I got 119 chicks."

Ida E. Canady, Darlington, Mo.

That's a Queen habit. It has the hatching faculty. I don't claim the Queen is a phenomenal incubator, but it is an honest, dependable hatcher, and comes as near hatching every fertile egg put into it as any incubator at any price.

## Strong, Vigorous Chicks

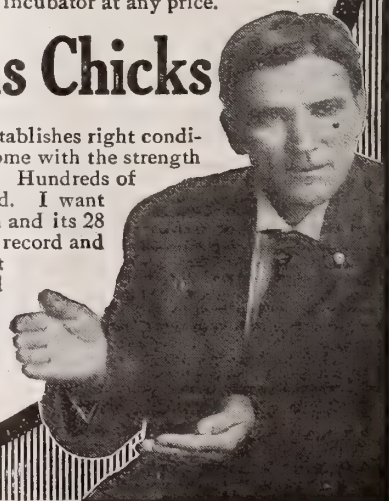

The Queen is completely automatic and establishes right conditions of heat, air and moisture. Chicks come with the strength to live. You can succeed with the Queen. Hundreds of people are equaling Miss Canady's record. I want you to know about the 1914 Model Queen and its 28 Special Features. I want you to know its record and what you may expect from it. Write and let me mail you catalog. Sold on a most liberal plan. Satisfaction or money back.

M. M. Johnson

H. H. Johnson

"Read It again Pa"

No One Ever Spun a Yarn More Interesting  
than M. M. Johnson's Real Life Story

## "The Ups and Downs of an Inventor"

*It's One of the Famous Chapters in the Old Trusty Catalogue*

HERE is a true story that has been read and re-read in more homes and by more people than many of the most popular books of fiction.

It has entertained and inspired hundreds of thousands of people who turned their efforts toward poultry raising with most gratifying success. M. M. Johnson gives you a simple narrative of his own experience and a few of his friends' and it's told so interestingly that it grips you until you reach the last line. When you finish you feel

as though you have known Johnson as a next door neighbor. You see Johnson on his farm, building his first Old Trusty Incubator. You see its success. Then you see half a million people sending in orders and you see how they have made and are still making big profits with

# The Old Trusty Incubator

It's the *real favorite* wherever poultry profits are made. It's built just as you would build it for yourself if you had the Johnson training and experience and facilities. For instance, the triple wall case is made of California Redwood. This wood costs more than others, but you would not use any other kind if you knew the difference in results. It never checks, rots or shrinks. Then as an additional protection Old Trusty is covered with first grade asbestos, and then covered with galvanized sheet metal. Bear in mind that top, bottom and four sides are made this way. If you were to insist upon it, *no one* could build you a more serviceable case. All operating parts are as simple as can be.

**Price Still Less than \$10—Freight Paid—**

East of Rockies—Or Allowed that Far If You Live Beyond

**20-Year Guarantee—You Succeed or We Trade Back**

Johnson guaranteed his first incubators for ten years. When the ten years expired he guaranteed them another ten. You can have a 20-year guarantee if you want it. Just think of what it means to get a machine that can pay back its cost in a few weeks and then keep on making profits year after year!

You will be under no obligation in writing for Johnson's Book. The Johnsons want everyone to read it. Send a postal today and get this human interest story. You will find it the most pleasant evening's reading ever written on the poultry subject. Then judge for yourself whether you would like to make more poultry profits this year and whether it would be to your interest to take the Old Trusty on trial. Write a postal *now* while you are thinking about it and get the book by return mail. It's free.

CYPHERS INCUBATOR COMPANY  
BUFFALO, N. Y., U.S.A.

Is your name on the Cyphers Company's mailing list? Have you found the way to secure the *latest*, most *reliable* poultry information?

We want the name and address of every man and woman in America who is *seriously* interested in the poultry industry. We want to get in touch with the businesslike people who are in *earnest* in their desire to make the most of their chances in this money-making field.

## Cyphers Company Free Personal-Letter Service

We want to send you *your choice* of the below listed Cyphers Company Bulletins—issued for the benefit of Cyphers Company customers. Any three of these Bulletins will be sent you absolutely *free on request*. They contain a gold mine of *reliable*, down-to-the-minute poultry information.

- No. 1—Winter Eggs and How to Get Them.
- No. 2—Dry Feeding by the Hopper Method.
- No. 3—Sanitary Conditions for Poultry.
- No. 4—Back-Yard Poultry Keeping.
- No. 5—Green Food for Poultry.
- No. 6—Dryness Essential for Poultry Houses.
- No. 7—Common-Sense Feeding of Fowls.
- No. 8—Important Don'ts for Beginners to Memorize.

- No. 9—Proper Brooding of Chicks.
- No. 10—Proper Feeding of Chicks.
- No. 11—Handling of Incubator to Get Best Results.
- No. 12—Marketing Eggs at a Profit.
- No. 13—White Diarrhoea of Chicks.
- No. 14—Poultry Raising for Profit on the Farm.
- No. 15—Poultry Houses, Their Proper Construction.

- No. 16—Special Fattening of Fowls.
- No. 17—Selection and Care of Breeding Stock.
- No. 18—Line Breeding and Trap Nesting.
- No. 19—Best Markets for Table Poultry.
- No. 20—Where to Start in Poultry Business.
- No. 21—Common Diseases of Fowls and Chicks.
- No. 22—Common Mistakes in Poultry Keeping.
- No. 23—Combining Poultry and Fruit Growing.
- No. 24—Common Poultry Pests.

Whatever *poultry problem* is on your mind, whatever advice you desire, let us be your counselors. We will gladly write you a letter on *any subject* pertaining to the poultry industry, giving you the benefit of the combined experience of the several poultry experts in our "Helps Over Hard Places" Department. It matters not whether you are a Cyphers Company customer. This advice or assistance is *gladly* extended. We want *everyone* to know

that the Cyphers Company is in business for the *greater success* of poultry keepers. Its *SUCCESS*, in the long run, depends upon the progress of the industry, upon the success of ITS CUSTOMERS. We want to see *every* chicken raiser avoiding pitfalls—and making money.

That's why we have established this Free Personal-Letter Department. And that also is why we have collected and published our truly great book of

## \$1,000 Prize Reports of Successful Poultry Growers

No poultry book like this has ever before been published. There's not a word of theory in it. Just plain, "brass tacks" day-by-day experiences of successful people in the poultry business from nearly every state in the Union.

In this book you will find reports from people whose problems were *identical with your own*—who succeeded in overcoming just the obstacles that may be in your path. Their experi-

ences—their way of *winning success* will be of direct personal value to you. A free copy of this book will be mailed to any address, domestic or foreign, on receipt of 10 cents in U. S. stamps to cover cost of mailing. The contents alone cost us \$1,000.00 in prize money. Number of pages, 176; size of pages, 7½x10 inches; fully illustrated from photographs and original drawings.

## Get Your Free Copy of "Poultry Foods and Feeding"

52 pages packed tight with the sort of everyday, *usable* information that every poultry keeper greatly needs. Begins with the first day the chick is out of the shell and continues through step by step to complete preparation for market. No matter how successful your hatch, it is the *proper feeding* and rearing that will turn your poultry investment and efforts into *profit-dollars*.

As in *all* Cyphers Company literature, the

"Best Methods of Brooding"—Free Success! Incubation is just half the battle! To produce healthy virile chicks, to rear them in safe surroundings—to market as nearly 100 per cent of your hatch as is possible, you need to know the bedrock brooding facts contained in this valuable free book. There isn't a waste word in all its 52 pages. Just the *practical knowledge* and experience of poultry experts, boiled down—the very essence of the things you need to know in profitable chick raising. Write for your copy of "Best Methods of Brooding" today.

## Get the Cyphers Company 244-Page Catalogue Also

This compendium of Poultry Facts and Inspiration pictures and describes Cyphers Incubators and Brooders—the World's Standard Poultry Equipment. Used on *more* Government Experiment Stations, at *more* State Agricultural Colleges, by *more* leading successful poultry growers than all other makes combined. Get the *FACTS*—that's our *proof*. The Cyphers Company 244-page catalogue (size of pages 7 1/2 x 10 inches) also illustrates and tells about over 100 Standard Poultry Specialties—*everything* you really need in poultry raising. Contains illustrations from photographs taken of actual hatching tests made in every land, proving that Cyphers is the World's Best under all conditions. ## Sample Results in England

Cyphers, the "Standard Hatcher of the World," In Mid-Winter Continuous Hatching

Read the following June 8, 1913, statement made by Conrad Ford of Hillside, Hollingborne, Kent, England. 3063 chicks from 3483 eggs—surely a mid-winter showing to be proud of:

"I take pleasure in saying that after three seasons' use I am *entirely* satisfied with my Standard Cyphers Incubator. I could desire nothing better as successful hatchers of *fine, strong chicks*. They are easily adjusted and do their work with *ABSOLUTE RELIABILITY* in *EVERY WAY*. From eggs collected in *freezing weather* I have secured hatches of over 90 per cent—308 chicks from 340 eggs. My hatches through the past season have been so *uniformly good* that I think you will be glad to see a record of them, which is as follows:

Date Set	Fertile Eggs	Chicks Hatched
Dec. 8	360	326
" 12	355	310
" 16	345	290
" 21	333	303
" 24	345	296
Jan. 9	350	315
" 9	343	305
" 13	357	312
" 17	350	307
" 20	340	299
Total Fertile Eggs, 3483	Total Chicks, 3063	

"I consider these results *wonderfully good* for the time of year, and am glad to give full credit to the Cyphers Incubator. A lady friend operating a No. 3 size Cyphers under my instruction has just brought off a hatch of 293 chicks—her first attempt.—CONRAD FORD."

CYPHERS INCUBATOR CO., Dept. 30, Buffalo, N. Y.

Also send me 176-page \$1,000.00 Prize Contest Book, for which are enclosed 10c in stamps.

## Vermin-Proof Poultry Houses

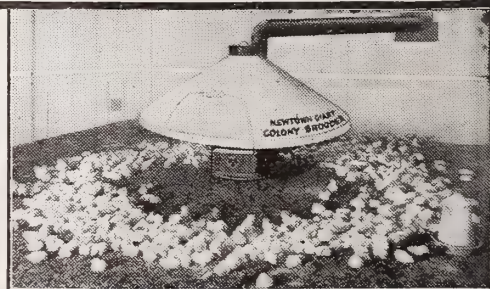

At last the poultry breeders of America can have a "Vermin-Proof Poultry House"—a house that is also rain, storm and fire-proof; neat in design and practical for all poultry-keeping purposes.

This house is made of Plasto-Asphalt Lumber—the new fire-proof material—and we guarantee it superior to lumber or any other building material for poultry house construction. Send for free sample and our free catalogue of poultry houses. Do it to-day.

The Unit Construction Co.  
138 No. LaSalle St. Chicago, Ill.

## Coal-Burning Self-Regulating

Colony Houses are perfectly safe from fire with the Newtown Colony Brooder. 8 cents a day buys sufficient coal for brooding 1,000 to 1,500 chicks in cold weather.

## Newtown Giant Colony Brooder

(Ask your dealer about it)

Fill coal magazine once in 48 hours in the severest weather. In mild weather it requires less frequent attention. Rake ashes once in 24 hours.

Heat automatically regulated by thermostat. Temperature always right. Built in two sizes to accommodate 300 to 1,500 chicks. Heat Deflector need not be raised to coal and shake the fire nor to remove ashes.

Ask your dealer to show you this economical, coal-burning, self-regulating Colony Brooder, or write direct for Colony Brooder Catalog A

NEWTOWN GIANT INCUBATOR CORPORATION

## TEST YOUR EGGS

SEE THAT "XX"?

POINTS THE WAY.  
START RIGHT  
YOU END RIGHT

before you set them under hens or put them in the incubator. Whether you buy or sell eggs for hatching discard every one that does not pass the Magic Egg Tester. Don't try to hatch weak eggs—it kills the profits. Regulates moisture in the egg chamber perfectly. Demonstrated at poultry shows everywhere. This is positively the only way to tell which eggs won't hatch before you begin to incubate them at all. Read on:

No electricity. No candling. No light. No expense to use. White or brown shells—no difference. Rapid and positive. Use for one year at our risk, and if not satisfied cost refunded. Price \$2.00 each, by mail postpaid. Prompt attention. MAGIC EGG TESTER WORKS, Dept. B. Buffalo, N. Y., and Bridgeburg, Can.

## Prevent and Cure ROUP and COLDS

Don't let roup wipe out your birds and your profits. Use

**Pratts Roup Remedy**

Pills or Powder. 25c, 50c, and \$1.00.

It purifies the system and not only prevents but cures roup, colds, fever, catarrh, diphtheria, etc. To insure perfectly healthy strong, husky layers, add to the feed daily

**Pratts Poultry Regulator** Packages 25c, 50c, \$1.00.  
25 lb. pail, \$2.50.

Refuse substitutes; insist on Pratts. Satisfaction Guaranteed or Money Back.

No. 3529

Get Pratts 160 Page Illustrated Poultry Book.

Sold by dealers everywhere or Pratt Food Company, Philadelphia, Pa., - Chicago, Ill.

## Wins in the Two BIGGEST HATCHING Contests Ever Held

Why take chances with untried machines when for only \$10 we guarantee to deliver safely, all freight charges paid (East of Rockies), BOTH of these big prize winning machines fully equipped, set up ready for use?

Why not own an Ironclad—the only incubator that has for two years in succession won the greatest hatching contest ever held? In the last contest conducted by Missouri Valley Farmer and Nebraska Farm Journal, 2,000 Machines were entered including practically every make, style and price. With 140-egg Ironclad—the same machine we offer with Brooder freight paid, for only \$10, Mrs. C. F. Merrick, Lockney, Texas, hatched 148 chicks from 148 eggs in the last contest.

140  
EGG

IRONCLAD are not covered with cheap tin or other thin metal and painted like some do to cover up poor quality of material.

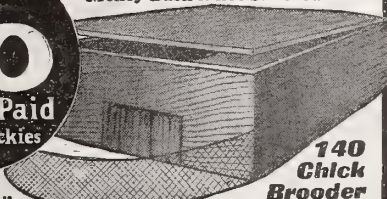

IRONCLADs are shipped in the Natural color—you can see exactly what you are getting. Don't class this big, all metal covered, dependable hatcher with cheaply constructed machines—and don't buy any incubator until you know what it is made of. Note these Ironclad specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering, galvanized iron legs, large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boiler, self regulator, Tyco's Thermometer, glass in door, set up complete ready for use and many other special advantages fully explained in Free Catalog. Write for it TODAY or order direct from this advertisement.

Normal, Illinois

## A SURE CURE

For Poultry Diseases of All Kinds  
Discovered at Last

SIXEAS GUARANTEED REMEDIES

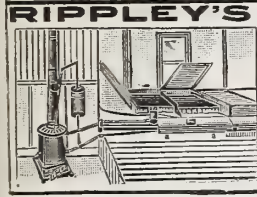

cure Roup, Canker, Blackhead and Cholera. Remember, I have handled and cured more turkeys and chickens than any living individual and have cleaned up more contaminated poultry premises than any one else. My remedies are easily given in food or water, and are endorsed by leading poultry breeders. These remedies are based upon scientific knowledge and daily practical experience. **THEY CURE WHERE OTHERS FAIL.** My Cholera Cure is unexcelled for cholera or white diarrhoea, Roup Remedy cures canker, colds and roup. Poultry Powder prevents disease and keeps poultry in good condition. **Cholera Cure, 50c; Roup Cure, 50c; Poultry Powders, 25c,** by parcels post. Reliable agents and dealers wanted.

GEO. SIXEAS, NEWCASTLE, VIRGINIA

# \$8.50 Buys 150-Egg Incubator And 150-Chick Brooder Just Think of It!—Why Pay More?

Here Is the Most Astounding Offer Ever Made for Chicken Raisers

Here is an offer you simply cannot afford to miss. This gives you everything you could want in a reliable hatcher at a price never quoted before for a machine fully guaranteed—shipped ready to use—no extras to buy. We charge only for actual cost of material and labor with one small profit, and depend upon enormous production.

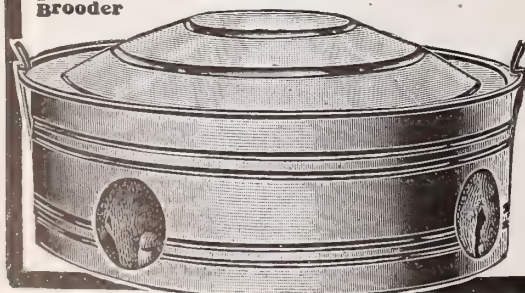

Low buying prices, our modern factory methods and our direct to you plan cuts the price. Stop! Think of what this means! Where else have you ever heard of such an offer?

The machine has the best regulator; dependable thermometer; strong, well built egg trays; all metal safety lamp with bowl stamped out of sheet steel; best lamp bracket; steel legs; best egg tester. Write for this wonderful proposition on

## THE ROCKFORD Incubator and Brooder

Incubator alone, \$6.00. Metal Brooder, \$3.00. Both Incubator and Brooder, \$8.50

\$3.00 for this 150-Chick Brooder

\$6.00 For this 150-Egg Incubator

It comes to you all set up (not in knock-down form). Just fasten the legs and lamp bracket and start the hatch.

Money-Back Guarantee

You could not ask for better quality—to pay more is needless.

It is heated with warm pure air. Foul or impure air is carried off. No chance for lamp fumes to enter egg chamber. All parts are heated evenly. Side walls and top are made of 1 inch lumber and lined with heavy deadening felt and again lined with ½ inch lumber inside. Heat cannot get out—cold cannot get in—fuel is saved.

The Brooder is water heated—fire proof and weather proof—easily handled.

## Write at Once for Full Facts

Don't let anything keep you from this remarkable proposition. The quality is so good—the guarantee so strong and the price too low to let anybody miss it. We guarantee the incubator to satisfy you in hatches and also guarantee the metal brooder to raise chicks to satisfy you or we return your money.

Write us at once so we can lay the whole proposition before you. Address—

The Rockford Incubator Co., Box 15 Rockford, Ill.

# The Home That Was Built by Hens

*A Practical Poultry Story, by "Uncle Cal" Stoddard*

An unusual book, so different from any other now in poultry literature that it is in a class by itself.

**B**ASED on actual facts and told in a breezy manner, it appeals immediately to the reader. It is not a story about poultry alone, but we are certain that the reader will absorb more practical information from the pages of this book than he could obtain from any text book published exclusively on poultry. The story tells the actual facts of how the poultry business presented unheard-of opportunities for a foreman in a foundry, who after serving his company for many years had been discharged, and how in a very short time he

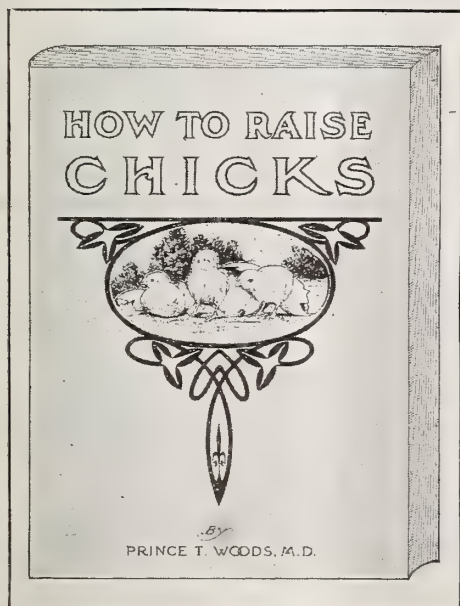

built up a business that netted him a bigger salary than he ever earned before. The appendix in the book gives complete feeding formulas, symptoms of and remedies for poultry diseases. This part of the book alone is worth dollars to anyone keeping a few fowls.

Handsomely illustrated by Leonard K. Stahmer, son of Louis A. Stahmer, the well known poultry artist, makes it a book which everyone ought to have in the library.

Handsome paper covered edition.....50c  
Cloth covered edition.....75c

**AMERICAN POULTRY JOURNAL PUBLISHING COMPANY**  
542 SOUTH DEARBORN STREET CHICAGO, ILLINOIS

## DR. PRINCE T. WOODS' NEW BOOK How to Raise Chicks

### INCLUDING REVISION OF "FACTS ABOUT WHITE DIARRHOEA"

A down-to-date manual on breeding poultry, getting hatchable eggs, incubation and brooding both natural and artificial, preparing chick foods, feeding chicks, how to raise chicks and how to avoid and prevent disease and losses. Told in plain language. Illustrated with reproductions from photographs and pen drawings. Tells how to make your own brooders and chick foods. Written by a man who knows how and how to teach others. 88 pages, 35 illustrations and 5½x8 inches in size. Printed on good paper. Well and durably bound in cloth.

**A Book for Everybody Who Keeps Fowls or Grow Chickens  
Whether Beginner or Old Timer in the Field of Poultry Work**

**It has ten chapters:** Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Incubation, Natural and Artificial. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhoea. What white diarrhoea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for four years.

**Here is a book devoted to chick comfort and to more and better chicks, 75 cents per copy postpaid. Learn to save your chicks; that means more profit; Dr. Woods tells how; send for the book now, only 75 cents, cloth bound.**

75c per copy, postpaid; with American Poultry Journal, one year, only \$1.40. Canadian subscribers add 25c for postage, foreign 50c.

American Poultry Journal, 542 South Dearborn St., Chicago, Illinois

# KAUP, QUALITY BUFF ORPINGTONS

**YOUR SHOW BIRDS ARE READY NOW TO WIN FOR YOU.** Are you ready to send for them to be shipped in the pink of condition, just before your show, prepaid? My 1913 fully illustrated 36 page catalog is the finest published in Buff Orpingtons and is called the "Buff Orpington Guide Book" because it guides the way to satisfaction and shows why **I HAVEN'T A SINGLE DISSATISFIED CUSTOMER IN THE WHOLE WORLD.** Does this mean anything to you? My **trapnested** Buff Orpingtons are the grandest fowl on Earth because they are largest in size, beautiful golden color that always stays clean and lay the most eggs in the winter.

For exhibition I have that low blocky type, sound even golden color and over standard in weight. Hundreds of cocks, hens, cockerels and pullets for sale in singles, pairs, trios, pens and flocks. The above mentioned Buff Orpington Guide Book tells all. Send for your copy now—you will be delighted with it. Address

**F. A. KAUP, the Buff Orpington Specialist. President Chicago Poultry Breeders' Association; Superintendent Great Chicago Show Box K-1, Glen Ellyn, Ills.**

# CROWTHER'S R. I. REDS

have won in practically every big show in America for the past ten years, Hagerstown last. They are known throughout the land for their excellence. I have birds fit for a king, grand shape, beautiful color, every bird guaranteed to please.

**IRA M. CROWTHER**

**Box A**

**WILLOUGHBY, OHIO**

# NORWICH AUTOMATIC EXERCISERS AND FEEDERS

Are guaranteed rat, rain and sparrow-proof. They will reduce your feed bills 25 per cent; your labor to practically nothing; they will improve the condition of your flock and thus increase the egg production. They will pay for themselves in ninety days in feed alone. Send today for free booklet explaining our thirty days' trial offer. They are for sale by live dealers everywhere, or we will ship direct from Toledo, Ohio. Write now to

**River Home Poultry Yards, Breeders Exhibition Quality Light Brahmas, 820 Monroe St., Toledo, O.**

# YOUNG'S STRAIN S. C. WHITE LEGHORNS

(I HAVE NO OTHER BREEDS)

They are the standard for all the Leghorns over all America, and the greatest layers of all varieties of domestic fowls.

I have hundreds of yearling hens for sale for from \$2 per head up, and the grandest lot of Exhibition and breeding cockerels ever bred.

Remember that you cannot win without my strain.

Mating list free.

**D. W. YOUNG**

**MONROE, NEW YORK**

## It Is Well Worth While to Consider "the Man Behind"

Before placing your order for an incubator or brooder, it will pay you to get acquainted with the manufacturer. Make sure that you can place your entire confidence in him and his machines. There are too many "dry goods boxes" with cheap tin heating arrangements sold now days for incubators and they are made by people who know very little about the chicken business, artificial incubation and its requirements. They are sold exclusively by "Hurrah advertising" and the manufacturer doesn't care if he ever hears from the customer again.

## The Globe Incubators and Brooders

are the best machines on the market and we can prove it.

The most modern machinery and the most skillful workmen that can be found enter into the construction of the Globe Incubator and Brooder, and no machines leave the factory until they pass the most rigid examination, and the great hatches which our customers obtain are the results of our twenty-five years of experience in breeding thoroughbred poultry and making incubators and brooders.

## We sell more thoroughbred chickens than any two of the leading advertisers in this country

In order to raise this great number of fowls which we annually sell, it became necessary for us to invent our own machine, one that would do the work and could be relied upon for we had tried all the leading machines manufactured before inventing the Globe Incubator and Brooder. The remarkable improvements which we are adding each year make the Globe the best artificial hatcher on the market today.

**WE HAVE SOLD THOUSANDS OF THEM.** Such satisfactory results have been obtained from our machines that we have thousands of unsolicited testimonial letters on file open for your inspection. **We have been doing business for over a quarter of a century** and have outlived nearly all the old advertisers.

Square dealing and satisfaction to the buyer have been responsible for our ever increasing trade. We want to tell you more about our great factory, our mammoth poultry plant, and our methods of doing business. We have just issued our annual poultry book and guide which has cost us thousands of dollars to produce. It is not a catalog exclusively, but as a text book on poultry breeding in all its branches it is superior to any book issued. It tells about our great poultry farm where we raise and handle thousands of high-grade birds that go to every part of the world each year. But come for yourself and see—we have the goods. Write to any bank or express company in Freeport and they will verify every statement which we have made here. Be sure and send for this book today. Send 15c to cover postage, etc., and if you think that the information on poultry keeping alone, in the book is not worth the money we will cheerfully refund it to you.

**C. C. SHOEMAKER**

**FREEPORT**

**ILLINOIS**

Poultrymen have confidence in the Globe Incubator because all the value—all the invested money—is put into the machine itself. Send 15c for our valuable descriptive book.

**SHOEMAKER'S POULTRY BOOK**

# Jersey Lawn White Wyandottes

I have five yards mated for the very best results in show or utility purposes. Cockerels all sold. Eggs, half price now. Write for mating list.

**Harry Cass** :- **Buffalo Hart, Illinois**

## Wyckoff's S. C. W. Leghorns

**Acknowledged Everywhere the World's Greatest Laying Strain**—Unequaled in standard qualities. Remember that we are the originators, and for more than thirty years specialty breeders of the justly celebrated Wyckoff Strain of S. C. White Leghorns, the most profitable strain of poultry in America today. Place your orders at headquarters and make no mistake. 2,000 choice yearling hens, fine strong early cockerels and a few yearling cocks; must be sold at once to make room, and prices will be made especially attractive to early buyers. Send for catalog and state wants as near as possible.

### ADDRESS

**C. H. Wyckoff & Son** : **Aurora, Cayuga County, New York**

## S. C. W. ORPINGTONS

## If PURINA CHICKEN CHOWDER

wont make your  
hens lay, they  
must be roosters

Col. Purina

Purina Chicken Chowder is a dry mash which contains just the ingredients to insure an abundance of eggs right through the Winter. Dry Purina Chicken Chowder should be kept before hens all of the time. The more Chicken Chowder Biddy eats the more eggs she will lay. Hens should also have Purina Scratch Feed, two or three times a day, in a litter.

**Col. Purina guarantees**

## More eggs or money back

to any poultry raiser who uses Purina Chicken Chowder according to directions and fails to get more eggs.

Purina Poultry Feeds are for sale by the leading dealers. Your dealer will order them for you, if he doesn't already carry them in stock.

### Poultry Book Free

For your dealer's name I will send you this 48-page Poultry Book, containing plans of houses, breeding and feeding charts, space for daily egg records, cures of diseases, care for baby chicks, etc. It also contains information about Col. Purina's half price galvanized iron Chick Drinking Fountain [2 for 25c] and more details about his galvanized iron Automatic Chicken Chowder Feeder [50c]. Write today.

**Col. Purina, Purina Mills,**  
801 S. Eighth St., St. Louis, Mo.

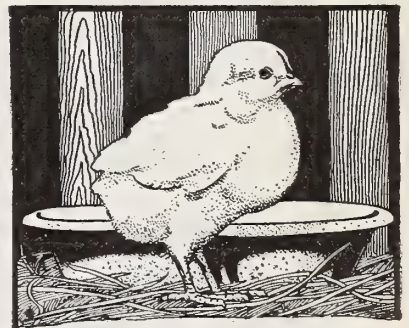

**CRY-CO GRIT (PETRIFIED SNELL)**  
99% Pure Carbonate of Lime.  
More eggs, harder shells, healthier hens,  
cost 1c per pound. Ask your dealer, look for trade-  
mark, write for booklet. **W. A. REUSCH & CO., St. Louis, Mo.**

**FOR POULTRY**  
**BROWN FENCE**  
**NEW BARGAIN BOOK FREE**  
Costs half as much as common chicken netting, lasts 5 times as long. No top or bottom boards necessary—big No. 9 1-2 wires support Brown Poultry Fence perfectly. **Use Half as Many Posts**  
Bottom wires spaced 1 inch apart—chick tight and rabbit proof as well as stock strong and rust proof. Double galvanized. Sold direct from factory, freight prepaid. Write for money-saving bargain books showing 150 styles of fence and gates for every purpose. Same prices also mailed free to test.  
**THE BROWN FENCE & WIRE CO.,**  
Dept. 3 Cleveland, Ohio  
**WE PAY FREIGHT**

## CAPON TOOLS

**CAPONS** bring the largest profits—100 per cent more than other poultry. Caponizing is easy and soon learned. Progressive poultrymen use **PILLING CAPONIZING SETS**  
Postpaid \$2.50 per set with free instructions. The convenient, durable, ready-for-use kind. Best material. We also make **Poultry Marker 25c, Gape Worm Extractor 25c, French Killing Knife 60c. Capon Book Free.**  
**G. P. Pilling & Son Co., Philadelphia, Pa.**

### Don't Take Chances With Chicks

You can eliminate guess-work and reduce feeding to certainty by using H-O Steam-Cooked Chick Feed. It contains the right grains in the right proportions. And the steam-cooking makes it more easily digested and assimilated than any other chick feed made.

## H-O Steam-Cooked Chick Feed

is a scientific mixture of Corn, Cut-Oatmeal, Cracked Wheat, Kafir Corn, Peas and Millet—steam-cooked by a special process in our mill.

Sold only in 10-lb., 25-lb., 50-lb. and 100-lb. bags, with tag showing guaranteed analysis. If you cannot get H-O Steam-Cooked Chick Feed, Intermediate Scratch, Scratch Feed, Poultry Feed, Dry Poultry Mash or Chick Feed from your dealer, write for sample and prices.

**The H-O Company**

Mills:

**BUFFALO, N. Y.**

**John J. Campbell**

General Sales Agent

**HARTFORD, CONN.**

**Feed Pearl Grit**

Serves a double purpose. It grinds the bird's food, thus aiding digestion and also furnishes shell and egg-making material. It **Makes Hens Lay**. It furnishes strength and feather making material enabling hens to molt and lay at the same time. Send for our new valuable poultry booklet giving prices. The Ohio Marble Co., 108 Cleveland St., Piqua, O.

**Build Your Own Incubator**

WANT to send every poultry raiser my large free book on home incubator construction. As easy as A. B. C. Thousands of leading poultrymen use no other machine. I want to show you how my patented Lamps, Regulation, Thermostats, Tanks, Egg Trays, etc., will save you money, time and worry and give you bigger hatches. Write for FREE book of incubator plans today. H. M. SHEER, Dept. 18 Quincy, Ill.

**POULTRY FENCE**  
60 INCHES HIGH 25¢ A ROD

Has 4 1/4 inch mesh and line wires are graduated from 1 1/2 inches at the bottom to 4 1/4 inches at the top. 60 inch Poultry and Stock Fence, 31c. Same style fence as in cut but is made from heavier wire and has six inch mesh. Write for free Catalog. **COILED SPRING FENCE CO.** Box 82 Winchester, Indiana.

**No More LICE!**

No sir, no more lice and we mean it. The lice problem won't worry you if you will do as the leading successful poultrymen have done for 30 years. Stop experimenting—get **The Old Reliable LAMBERT'S Death To Lice** and your lice troubles will be no more. Safe, sure, quick, easy to apply. Will not injure hens, eggs, chicks, or soil plumage. Sold in 10c, 25c, 50c and \$1.00 sizes. Send 2c for latest copy of Lambert's "POCKET BOOK OF POINTERS". **O.K. Stock Food Co., 501 Traders Bldg., Chicago**

**FEED**

More Phosphorus and Less Protein!  
"Hen-o-la" Dry Mash  
Fed in conjunction with  
"Hen-e-ta" and "Succulenta"  
**Requires Absolutely Nothing Else**  
Because the three make a complete balanced ration, rich in phosphorus.  
**The Lack of Stamina and Vitality**  
In the birds is the cause of 95% of the failures in the poultry business. Therefore see to it that you are one of the successful 5% this year by putting your birds on this economical scientific *horse sense* system that produces Stamina and Vitality; convince yourself by giving it a thorough trial.  
Let us send you report from a leading experimental station that has fed 31,500 lbs. "Hen-e-ta" during the past four years, and is still feeding same.  
The above system makes poultry-keeping wonderfully simple and cheap.  
If your dealer will not supply you, please write us for full information and prices on "Hen-e-ta," "Hen-o-la" Dry Mash and "Succulenta" tablets—green food substitute.  
*Valuable Booklets Free*  
If you will give us your dealer's name and address.  
**HEN-E-TA BONE CO.**  
Newark, N. J. Dept. 1, Flemington, W. Va.

You can get a big poultry book free—see back inside cover

## DEMGAR'S WHITE ORPINGTONS

NEW YORK STATE FAIR WINNERS, 1913—In a class of 100 my birds won a great clean cut victory. Pen old, 1st; pen young, 1st; cock, 4th; hen, 4th; cockerels, 1st, 2d and 3d; pullets, 1st and 2d; best display and specials. I have the largest and best flock of birds I have ever bred and can supply grand exhibition and choice breeding birds that have size and shape and are absolutely white. Mated trios and pens a specialty. Write your wants and for further information. Satisfaction assured. Eggs in season. Mention A. P. J.

Peter A. Demgar, Box A, Brown's Station, New York

## Shields' S. and R. C. Reds

Winners at leading shows wherever shown. Young stock and last season's breeders and exhibition birds at reasonable prices. No better breeding. Write today.

Chas. Shields : Library Place, North Side : Pittsburg, Pennsylvania

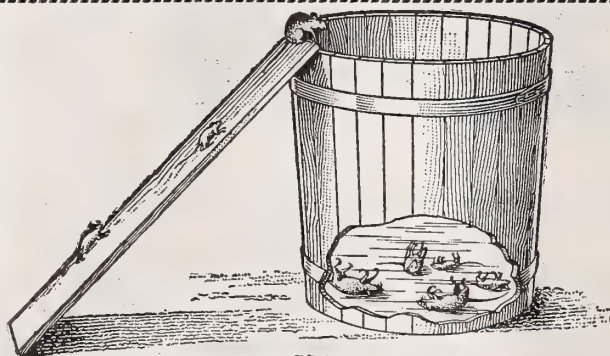

## Taylor's White Rocks

The Stay White Strain in keen competition at the Great Ill. State Fair, Oct. 3-11, 1913, won 2d pen; 3d-5th pullet; 4th cock; 5th hen, no cockerel entered. I have 150 to select your exhibition and breeding stock from, don't delay, write your wants. **H. E. TAYLOR** -:- **PETERSBURG, ILLINOIS**

## OUR ANCONAS

HAVE WON at such leading shows as London, England, Madison Square Garden, Cleveland, Toledo, Columbus, Allentown, Pennsylvania, and the late show in Cleveland Exposition we won first and third cock, first pullet, second and third cockerel, third pen, class 190 Anconas, the above winnings on Single Combs only. Write for catalog. Booking orders for hatching eggs and baby chicks, season 1914. Hatching eggs ready for shipment January, 1914, from the largest flock of Anconas in America. All matured hens—no pullets used as breeders. Mention American Poultry Journal when writing.

J. O. SOMERS Route 2 BEDFORD, OHIO

MERCHANTS

PLEASE

TAKE

NOTICE

## THIS RAT AND MOUSE CATCHER

Cleans a building of Rats and Mice in a short time, and keeps it cleaned, for it is always ready for use. Made of galvanized iron, can't get out of order and lasts a lifetime. A large number can be caught daily. Go to Catcher mornings, remove device on inside, which only takes a few seconds, take out the dead rats and mice and replace device and it is ready for another catch. A small piece of cheese is used, doing away with poisons. Merchants, Poultrymen, Private Homes and Business Places will not be without one when they learn of its great value. One will be shipped to any place in the United States, charges paid, upon receipt of \$3. The Catcher is new and stores do not sell them yet. Salesmen wanted.

The Catcher is 18 inches high and 10 inches in diameter, made of galvanized iron. Cannot get out of order; when the rats pass through device on inside Catcher they die, leaving no marks on them. The Catcher is always clean.

Remittance must be sent with order for shipping. Charges are prepaid. Send Postoffice or Express order

## Don't Kill or sell your laying hens

Use the Potter System and pick out the layers from the loafers and diseased hens. Keep only healthy laying hens. The Potter System is a secret and the greatest discovery of the century in the poultry world on the subject of Egg Producing Hens. Used by over 3,000 satisfied poultry keepers, who are saving dollars every year. Our new 100-page Potter System book, "Don't Kill the Laying Hen," contains the secret and knowledge about laying and non-laying hens. It's a revelation to poultry keepers, and you will learn how you can use the Potter System on your flock, keep less hens, get more eggs and make more money using it. Write today, sending two red stamps to cover postage on our large catalog and circular telling all about Potter Poultry Products made for Particular Poultry People. If you are particular and want to make more money on your flock, you will write us today.

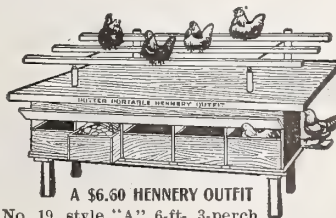

T. F. POTTER & CO.

Box E-21 :: Downers Grove, Ill., U. S. A.

YOU can buy better, cheaper, more complete ready (factory) made hen-houses, roosting and nesting fixtures, coops, etc., from Potter & Co., because they buy lumber in carloads, cut and fit all parts perfectly by automatic machinery and deliver the house, coop or fixture you need in convenient sections all ready to set up.

When writing mention American Poultry Journal.

HOMESTEAD FARM R. F. D. 9 SPRINGFIELD, ILL.

## The 3 GREAT EGG MAKERS THAT PAY FOR THEMSELVES IN A YEAR.

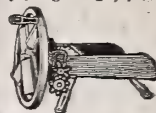

**CROWN BONE CUTTER \$6.50**  
Has hardened steel knives. Price, like picture, \$8.50; for boiling to table, \$6.50. For larger sizes see our Book

Unless fed plenty of FRESHLY CUT GREEN BONE, with the meat and gristle still sticking to the bones as you get them sweet from the butcher, and CUT CLOVER, hens can't lay as many eggs as they should. The bone must be freshly cut or it's tainted, and spoils the eggs, and often poisons hens. Clover must be cut into short lengths, or most of it is wasted, and what is eaten is fibry and often clogs the crop. If you don't give hens lots of ground SHELL and GRIT they can't digest properly nor get out of food what they must have to make eggs.

Don't depend on buying cut bone because you can't get it fresh, and dry bone and meat scrap are poor substitutes. The only satisfactory and profitable way is to own these three splendid machines. They're not expensive, are easy running, not complicated, and built to last a life-time.

**GEM CLOVER \$9 CUTTER**  
Cuts green or dry clover even and easy. Screw feed & adjustable cutter bar. Blades always square to bar. Price, like picture \$9; high legs, \$10.

## WILSON BROS. BONE CUTTERS, CLOVER CUTTERS & GRINDING MILLS

### GRINDING MILL \$5

Best hand mill for grinding easily, quickly, Dry Bones, Shells, Grit, Charcoal, Corn, Wheat, etc. Price with Stand, \$1; like picture \$5. Larger sizes, hand and power.

**WRITE FOR FREE BOOK**

### DON'T KEEP HENS UNLESS YOU CAN OWN THESE MACHINES

They won't pay you well enough for eggs or table. Keep a record of results and you'll soon prove that these machines will pay for themselves in a year.

Handled by nearly all dealers and hardware stores, or shipped direct. Write for our prices on all sizes—hand and power.

Do your neighbor's cutting and make money. We also make the CORNING FEED MIXER, the best mash and grain mixer in the world. Every Wilson machine is absolutely guaranteed. Write to-day for FREE BOOK & Price List.

WILSON BROS. DEPT. F 25 EASTON, PA.

## THERMOMETERS NEVER VARY

**"AEM"** embossed on a Thermometer is an absolute guarantee of selected materials, skilled workmanship, thorough testing and unquestioned accuracy.

When you are buying an incubator, brooder or hover, see that it is equipped with the "AEM" Thermometer. Don't take chances. Remember, an inaccurate thermometer may "cook" or "chill" your hatches, causing a loss on a single hatch that would pay for more than a dozen "AEM" Thermometers, the thermometer that never varies.

If your dealer can't supply you with an "AEM" Thermometer or Hygrometer, refuse every other kind and order direct from us.

### These Are the Prices, Postpaid:

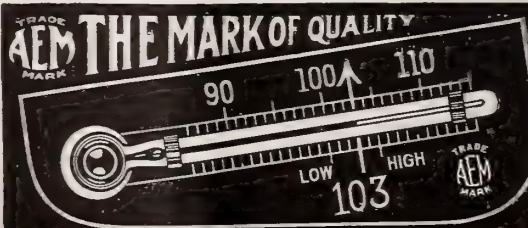

"AEM" Thermometer for any Incubator	\$ .75
"AEM" Thermometer with Patent Electric Light Attachment	2.50
"AEM" Certified Thermometer	1.25
"AEM" Brooder or Hover Thermometer	.75
"AEM" Electric Alarm Thermometer	4.00

### Special Prices in Quantities

Millions of chicks die in the shell because of improper moisture regulation. Use an "AEM" Hygrometer and always know exact amount of moisture in your incubator, and get bigger hatches of bigger, more vigorous chicks. Price \$1.50 postpaid.

Our No. 4

## Cut out that frozen water

BE UP TO DATE

How would you like to go to some pond hole and break the ice every time you wanted a drink of water? An egg is 73 percent water—the hen must have the water or you won't get the egg. Give her fresh, clean

## Warm Water in the Winter

and she will lay two-thirds more eggs. This picture illustrates our No. 4 Combination Fountain and Feeder. It keeps the water and feed warm; it will also keep the frost out of any poultry house 10x12; your hens won't have any frosted combs. Break away from the old-fashioned way of watering and feeding your poultry; get the best out of your hens—give them a chance and they will pay for one of these fountains in one month. We have several styles.

Prices \$1.25 to \$5.00

Get our big book describing 53 different articles we make for the busy poultryman.

# \$4,223 in One Year on a Town Lot

IS WHAT H. CECIL SHEPPARD OF BERA, O., ACTUALLY MADE BY KEEPING CHICKENS FOR PLEASURE

Mr. Sheppard was a city man; he lived in Cleveland for a number of years, but being in poor health, he was obliged to move to the country in order to prolong his life. He knew nothing about the chicken business when he moved to Berea in 1906, but he was an apt pupil. He discovered mistakes when he made them and was continually on the lookout for improvements. He started with a small flock and increased this with his knowledge of the business, and incidentally increased his business from \$160 the first year to \$9,500 the sixth year. In submitting the manuscript for his book, Mr. Sheppard wrote:

"Several parties have come to my place and sought information regarding my methods of conducting my chicken business. Some have told me they would pay \$5.00, others as high as \$25.00, if I would tell them how I run my business. I have told them that I have no secret, but it would take considerable writing and time to give them a detailed description of my methods. I decided to write it up and put it in a book so that anyone can have it for a reasonable price."

In his book, Mr. Sheppard clearly describes every detail of his business; the start and progress; the care of housing, feeding and mating the birds; the secrets of his success are explained in plain English. What a poultryman says about it:

"Mr. H. Cecil Sheppard, Berea, Ohio.

Dear Sir:—I wish to compliment you upon your book, "How I Made \$4,223.00 in One Year on a Town Lot with Chickens." I read it through very carefully and am pleased to say that anybody purchasing a copy of it will get many times the value of the small sum you sell it for. I found it full of excellent poultry advice and while I have handled poultry for years, and found therein things I already knew, I still found plenty of advice that will help anyone make a success with poultry if they will only do as your book tells them. Yours respectfully,

Watervliet, New York, January 26, 1913.  
EDWIN G. GLASS, Manager Arsenal City Poultry Yards."

## BE INDEPENDENT

Keep chickens as a side line. Follow the footsteps of successful poultrymen like Mr. Sheppard and make good.

**OUR OFFER:** This book, "\$4,223.00 in One Year on a Town Lot," and American Poultry Journal, one year . . . . . **\$1.50**

(Canadian subscribers add 25c a year for postage; foreign, 50c)

American Poultry Journal is the one great poultry paper of America, established in 1874, published monthly, contains an average of 150 pages to each issue, and is profusely illustrated. American Poultry Journal Publishing Co., 540 South Dearborn Street, Chicago, Illinois

## THE 1912 REVISED EDITION OF THE AMERICAN STANDARD OF PERFECTION

The only American authority on the required characteristics of all breeds and varieties of chickens, ducks, turkeys and geese. You cannot raise, mate, exhibit or sell fowls intelligently without it.

This Great Book was revised this year (1912) and gives the correct Standard shape, color and weight of every recognized variety of chickens, ducks, turkeys and geese, as well as the disqualifications of each variety. The book contains 332 pages of descriptive matter and ideal illustrations of the different varieties of fowls, photographed from living models. Also

### Five Full-Page Illustrations of Feathers in Natural Colors

to guide the breeder in getting the correct color of plumage on his birds. No one can breed birds of any variety for exhibition without a copy of the American Standard of Perfection as a guide, and it is the only book of its kind published in this country. It is authorized, copyrighted and published by the American Poultry Association. Price postpaid, cloth, \$2; leather, \$2.50

### OUR SPECIAL MONEY-SAVING OFFER

# Tremendous Saving If You Can Use Any of These Odd Lots

## ROOFING AT HALF PRICE

**Galvanized Steel Roofing Is Fire, Water and Lightning Proof**

**\$1.25**  
Per 100 sq. ft.  
Buys Best  
Steel  
Roofing

Here's an odd lot of **Corrugated Iron Roofing** which we were fortunate enough to buy at a price which enables us to sell it for only \$1.25 per square—just about half what it is really worth. Is brand new, perfect, first class in every respect, but light weight. Not galvanized but black steel roofing. Sheets are 22x24 ins. by 14 in. corrugation. Specify Lot No. BB-700. Price is 2 c. b. cars Chicago. Write for our **Special Freight Prepaid Prices** on new galvanized roofing. Our prices lowest ever offered in the roofing business. Galv. roofing \$2.50 per square and up. Anything you want in metal Roofing, Siding or Ceiling.

**62c Per 108 Sq. Ft. Buys Best Rubber Surfaced "Ajax" Roofing**

This is our one-ply "Ajax" brand, guaranteed to wear as long and gives as good service as any rubber surfaced roofing on the market. Put up in rolls of 108 sq. ft., containing 8 to 10 pieces to the roll. Price of 62c per square is f. o. b. Chicago and includes necessary cement and caps to lay. At 75c per square we **Prepay Freight** to any point east of Kansas and Nebraska and north of Ohio river provided order is for at least 3 rolls. Write for prepaid prices to other points. Other grades of ready roofing fully 30% below regular quotations. Send for free samples and roofing catalog.

## Previous Price Records B-U-S-T-E-D WIDE OPEN!

We're always smashing prices—and it sometimes happens that a lucky purchase enables us to smash them a little harder than usual. This is one of those out-of-the-ordinary occasions. There isn't another firm on earth that occupies the unique position in the commercial world that we do. Our enormous buying power represented by our ten million dollars capital makes it possible for us to buy for spot cash, entire stocks at manufacturers' and jobbers' forced sales, receivers' and sheriff's sales, etc., that are beyond the reach of ordinary buyers. Often our purchases enable us to sell the goods for actually less than manufacturing cost—and usually for about half what dealers ask for the same goods. Mind you, this merchandise is brand new, and exactly as represented. The prices here quoted tell their own story of your saving. These are odd lots we're offering and to move them quickly we've cut the price to the limit. It would be nothing short of business suicide for any other firm to offer this quality of merchandise at such ridiculously low prices, but, owing to our method of buying, we can easily afford to do so. Can you really afford to pass up a chance like this? Remember your saving is from one-fourth to one-half.

## No Money Down

You can buy a carload of material from us without paying a cent in advance. All we want to know is that the money will be paid us as soon as the material is received, unloaded and checked up. We certainly would not dare to do this if we furnished anything but strictly first-class material. Our building material is right, and our terms more liberal than that offered by any other concern.

## GUARANTEE

This Company has a Capital Stock of Ten Million Dollars. Its honesty and upright methods have been known for 20 years; we have thousands upon thousands of customers who have yearly taken advantage of our special sales. We say to you, that no matter what you buy from us, if you fail to find the material absolutely satisfactory and according to your requirements and expectations, then we will take back such unsatisfactory material, refund your money and pay the freight charges both ways.

## WIRE AT CUT PRICE

**BARB WIRE**  
Less Than 2c Per Rod

New galvanized, heavy weight barb wire, put up on reels, about 100 lbs. to the reel. Lot 2-BB-26, per 100 lbs. \$2.05. Galvanized barb wire, light weight, first grade, best made, put up exactly 80 rods to reel, 2-point bars. Lot 2-BB-28, per reel, \$1.40.

## WIRE NAILS \$1.38

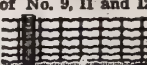

Per Keg, 100,000 kegs, put up 100 lbs. to the keg mixed, all kinds together. Lot 2-BB-33, price per keg \$1.38. 1,000 kegs of ten pennyweight regular new wire nails, 100 lbs. to the keg, while they last, per keg, \$1.25. Write for free Wire and Fence Catalog. Send coupon

## Smooth Galvanized Wire, \$1.25

Per 100 lbs., Suitable for fences, stay wires, grape vines or for any ordinary purpose where wire is used. Is irregular in length—ranges anywhere from 50 to 250 feet. \$1.25 per 100 lbs. for No. 6 gauge. Other sizes in proportion.

**Best Hog Fencing, Per Rod, 15c**  
Another remarkable bargain. High grade, perfect fence made of No. 9, 11 and 12 wire, 28 ins. high, square mesh. Put up in suitable size rolls. Lot 3-BB-31 per rod, 15c. Other heights in proportion. Staples 100 lbs. \$1.75

# BUILDING MATERIAL

**\$739.00**

**Buys the Material to Build this Home**

This beautiful modern, full 2-story, 7-rooms and bath home has been sold nearly 1,000 times copied and imitated all over the United States. It is not only a beauty but is thoroughly practical for any climate. Substantial construction throughout. No. 1 joists, rafters and studding; clear siding, clear flooring, clear shingles. Beautifully grained clear yellow pine interior trim. All material necessary to build with exception of plumbing and heating and masonry material for only \$739.

This price positively cannot be equaled anywhere else—is easily \$5 to \$50 per cent below any local dealer's prices. By long odds it's the biggest house bargain we've ever offered and is a special for the fall of 1913 only. We have hundreds of unsolicited letters from customers who have bought this house some of whom saved as much as \$1,000 on the complete home. At this special price you should do as well, or even better.

We guarantee prompt shipment right from our Chicago stocks, where if you wish, you can come and see it loaded. No money down. Even if you do not plan to build now it will pay you big to order the material now and build later. It's too big a cash saving for you to overlook.

**\$2.00 Buys Complete** Architectural Specifications including full descriptive Material List, giving the size, style, quality and catalog number of the various items entering into the construction of this house.  
**\$10,000 Book of Plans Free** Contains over 100 pages of modern homes, bungalows, cottages, the most perfect book of plans ever given away. Handsome illustrations, clear floor plans, correct low prices. You need this beautiful book, so be sure to check it off in coupon below and mail today. It's absolutely free.

## The Chicago House Wrecking Co.

prominently known for 20 years as the great "Price Wreckers" is now being operated under the name of Harris Bros. Co. There is no change in our policy, or in our business methods—we promise the same careful attention to your wants, at the same remarkably low prices as heretofore.

## Architectural Service

**Personal Service.** That's what we mean. Personal service in every sense of the word, either by mail, or if you come to Chicago. We have an Architectural Department that is developed so far beyond the attempts of others, that there is simply no comparison. In this department we offer you service of a character that is bound to appeal to you.

If you have not formed a particular idea as to just what kind of a building you want, tell us your own way, what your general ideas are, and if possible send us a rough pencil sketch.

**This Will Cost You But Two Cents** and we will reply promptly, giving you the information that will be worth one thousand times the 2c. You can sit right down in your own home, and see your plans developed step by step from crude ideas into practical, architecturally correct, and perfect design. Our charge for such service is so reasonable, that in the end it is absolutely free, for the reason that we refund such charge when your material is ordered from us. We will make you a proposition that will mean the cutting out of all preliminary worry and expense and which will show you how to proceed, point for point, with the work in hand.

## COME TO CHICAGO

If you have time. Bring your sketches and ideas with you. Our architects, expert estimators, plumbing and heating engineers will quote you while you wait, and give you much valuable information on the subject of architecture and building. Remember our business extends from coast to coast. We have taken the best ideas from all the land, have assimilated them into high quality, modern, up-to-date homes.

## Save 1/2 On Heating Plants

Most up-to-date hot-water, steam and hot air heating plants manufactured. Send sketch of your floor plans, size of rooms, etc., and we will make estimate on plant best suited to your building that will save you fully half. No experience needed to install—we furnish blue print drawings, specifications and full instructions so that you can install plant without aid of steam fitter. Plans guaranteed.

## Axminster Rugs, 75c

We bought at New York Auction an enormous stock of high grade, brand new rugs and floor coverings. 75c buys Axminster Rugs of extra grade. This is a sample of our money saving bargains. Write for our complete free Rug Catalog, showing actual colors and designs.

## Iron Pipe and Fittings

**RECOMMENDED**  
Good iron pipe in random lengths, complete with couplings, suitable for gas, oil, water and conveyance of all liquids; size 1/2 to 12 in. Our price on 1 in. per foot 3c; 1 1/2 in. 4c; 2 in. 5c. Complete stock of valves and fittings. Send your specifications.

## Bathtub Complete \$13

This is the white enameled cast iron, one piece, heavy roll rim bathtub; fitted with the latest style nickel plated trimmings, including fuller double both cocks for hot and cold water; nickel connected waste and overflow, and nickel plated supply pipes. It is 5 ft. long and is good enough to answer the needs of any man. Lot 5-BB-101

## DON'T BE AFRAID

Sometimes people seem to be afraid to send their orders because they think it is impossible for us to sell strictly first class merchandise at the ridiculously low prices which we quote. We want to tell you emphatically that such fears are absolutely groundless. We freely admit that our low prices often do appear to be altogether out of reason; but just consider, please, in what vast quantities and in what manner we buy our stocks and it must be perfectly clear that our low price quotations are fully justified and that there is REAL QUALITY behind every article we sell. Our guarantee is so broad and binding that you take no chances when you deal with us. Your money back, including freight charges, if not satisfied.

**Furniture and Rug Catalog**

A descriptive book of bargains from our Furniture, Rug and Household Goods Dept. Every item offered means a saving of 30 to 50%.

**Roofing Catalog**

A book covering this subject complete. Tells how to select the best kind of roofing for general purposes, also describes our roofing and Ceiling. It's free. Write for it today.

**Wire and Fencing Catalog**

A complete description contained in the book of all our wonderful wire and fencing. Wire, Nails, Bolts, etc. It's free. Write for it today.

**Book of House and Barn Plans**

Contains 100 designs of different kinds of buildings and houses. From \$147.50 up. Also shows the latest style barns. It's free.

**Building Material Catalog**

A 200 page book of bargains in Millwork, Lumber, Paints, Plumber's Hardware, etc. Just what you need.

**HARRIS BROS. CO. 35th & Iron Sts. CHICAGO**

## Successful Lessons in Poultry Raising **FREE**

**N**OW you chicken raisers have something to send for that is **REAL NEWS**. Hurry up and get these Poultry lessons before you hatch once.

Let Gilcrest, the successful man, start you right—keep you going right—and help you cash in on the profits this season that you hope to make, can make and deserve to make raising chickens if you start right. Just write Gilcrest a postal.

**J. S. GILCREST**  
President  
Life Member American  
Poultry Association

### These Poultry Lessons Are Really Worth \$25 or More

—but Gilcrest is glad to send them free to every man, woman or child who purchases a Successful Incubator or Brooder. A regular, simple, practical course of advice—in printed form by Mr. Gilcrest—on how to raise poultry most profitably. Beginners need these lessons which will save them failures—loss of money, time and trouble—besides showing them how to equal results with old timers. Write today for this lesson offer and

### Send Me Your Name on a Postal

Write early. Get ready now. That don't cost a cent. If you decide not to buy of Gilcrest you won't be under any obligations. His business grows by the long time friends he makes. He wants you for a friend—he wants to help you. If you buy nothing of him now he knows you will some day when you learn all the facts about his World's Best Incubators and the way he helps you to make you most "Successful" with them. Write—then decide. You don't want to miss this chance. Find out by writing us a postal.

## SUCCESSFUL Incubators and Brooders

This announcement isn't put here to make claims—exaggerated statements—or to sell you an incubator and then not stay with you and show you how to make money with it.

Time enough to give you direct factory prices this year on many sizes from \$6.75 and up when we get together and you see what *Successful Incubators and Brooders* and Gilcrest can do for you *working with you* on his *Successful Lessons in Poultry Raising* to suit your needs and experience. First price—simplicity—dependability—time saving—big hatches—big broods raised—cash in your hand profits are what you want to know.

But Gilcrest gives you, besides what others do, the personal attention and advice in his *free lessons* that no other maker ever has or ever can the way he can and will. Get these lessons—before you start—when you start—while you are hatching—how to make the biggest hatches and raise biggest broods—how to get biggest prices and sell for cash your whole year's output.

**Successful Grain Sprouter**—made in sections—supplies your chicks the year round with green food that makes 'em lay—just when egg prices are highest.

Gilcrest has mighty attractive poultry, too—high grade stock and eggs of all leading varieties—land and water fowls.

**NOTE:**—Our famous little booklet—"Proper Care and Feeding of Chicks, Ducks and Turkeys" is worth its weight in gold. Sent for 10 cents. But our big catalog is **FREE**. Send for it.

# SIMPLEX

## PERFECTION FEATHER CHICK HOVER

Fireless  
Rat Proof  
Sanitary

Raise chicks under natural feathers. Insure strong, healthy, vigorous birds.

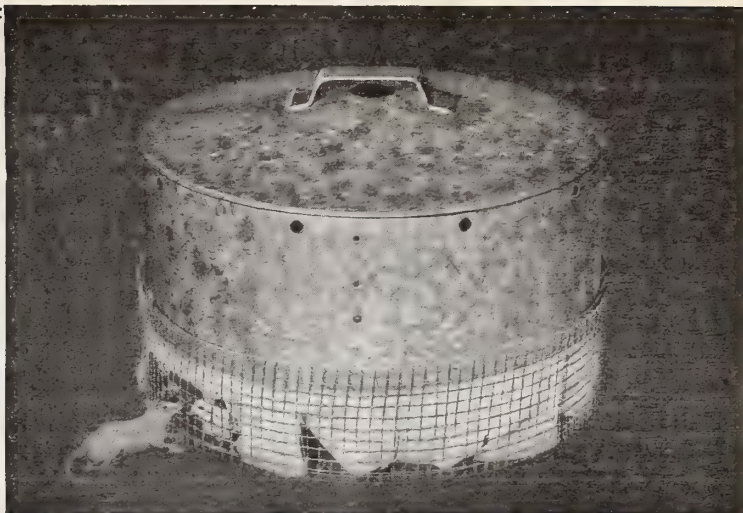

Don't attempt to raise your next hatch of chicks with old fashioned artificial heat brooders or with the aid of oil burning lamps or stoves of any kind. Use nature's means. Nature never intended that artificial heat of any kind should hatch or hover baby chicks. Nature supplied the mother hen with feathers, which together with body heat furnishes the correct temperature and at the same time the correct amount of fresh air to the little chicks so that they thrive and grow strong.

### Nature's Way Is the Safest Our Way Is Nature's Way

That's why our customers all raise a larger percentage of chicks with **Simplex Perfection Feather Chick Hovers** than their neighbors who use other means of hovering chicks. Don't experiment with untried devices or artificial heat brooders any longer if you want to raise as many birds as possible from your hatches next spring. Remember our hovers are made from **natural feathers** which furnish correct ventilation and the chicks warm themselves with their own natural body heat. No stove to go out and let your chicks freeze, or burn high and roast them. No crowding and smothering of chicks, just nature's own way of hovering strong, contented chicks until they have gained enough vitality to stand the climatic conditions without further protection.

Perfection Feather Hovers are also made on wood frames, 50, 100 and 150 chick size; special sizes made to order. Estimates furnished for complete brooder houses.

Brooder complete, showing absolute rat protection

Metal Hover showing the thickness of the natural feathers in which the young chicks thrive and grow healthy

Order your brooders now so as to have them when your hatch comes off. We were obliged to return orders last year as the demand exceeded our supply. Don't wait until you set your eggs. Order now.

*Agents Wanted—send for complete catalogue.*

#### —OUR GUARANTEE—

If these brooders do not meet with your approval, return them at once and get your money back. Your dealer will sell them to you on the same terms. Satisfaction guaranteed.

## Your Money Back If It Fails

# Where the Profit Lies

Government statistics tell us that the average yearly yield per hen in this country is only 85 eggs. With an average of 85 eggs per hen, it is self-evident that probably one-half of the hens produce less than that number, and are unprofitable. They consume high-priced feed, and every such hen means an actual cash loss to her owner. There are also many hens and many whole flocks that are producing eggs in abundance. One prominent poultry breeder is breeding 8 varieties with yearly egg records of 281, 255, 240, 236, 235, 232, 232 and 219, respectively, in each of the 8 varieties. By correct methods of breeding he is increasing egg production and the profits from his poultry.

Hundreds of poultrymen all over the land are realizing that the only way to make real progress in

## Improving the Egg Yield

is by trapnesting. There are good layers in every flock—probably 40% are profitable, 60% are not. Increase your profits, by culling out the drones, and breed only from your best layers. This is the only method that will bring results and this can be done only with the aid of the Trap Nest. One of this country's most prominent breeders, John G. Poorman, Tinley Park, Ill., says: "Absolutely no progress can be made unless the

## Individual Records

of the breeding stock are known."

The new **BICKERDIKE TRAP NEST** will do this for you. Mr. Bickerdike has made trapnesting his life work and has just perfected this new Trapnest that is a **Winner**. His life-time experience in trapnesting, testing out all the various styles of trapnests, puts him in a position to know what it takes to constitute a practicable, serviceable trapnest. His production of **Lady Show You**, the World Champion Laying Hen, and his recent invention of his new Trap Nest, both stand as notable contributions to the poultry industry. **Lady Show You** and the new Bickerdike Trap Nest each is in a class by itself. Nothing like the Bickerdike Trap Nest was ever before in reach of the poultryman. It is the acme of Perfection, Simplicity, Efficiency and Low Cost. A child can operate it. No springs, wires, levers, pulleys nor intricate mechanism to get out of order. Nothing to wear out. Nothing in the nest but the hen and her egg.

All who see and use the Bickerdike Trapnest are loud in their praises for it. Breeders, judges, editors everywhere are testifying to its exceptional merits.

## Introductory Offer Extended to Jan. 1

The price of the Bickerdike Trap Nest is \$1.00. In order to introduce it to the readers of A. P. J. we will send one of the new Bickerdike Traps complete, with full directions and individual rights to make and use, all charges prepaid, for only 50c (stamps will do). This offer positively closes Jan. 1, 1914, and no orders will be filled after that date for less than \$1.00. Order now—don't delay—and secure this remarkable trap nest at half price. It's a money maker for you. We guarantee to please you or return your money. Even if already equipped with trap nests, it will pay you to investigate the Bickerdike Trap Nest.

Your order will be filled the same day it reaches us. Address

# Aldrich White Orpingtons

Honor Roll of Victories Won at Allentown, Sept. 1913:

Grand Champion Futurity Prize on Pullet

1st White Orpington Cock  
1st White Orpington Hen  
1st White Orpington Cockerel  
1st White Orpington Pullet  
1st Pen won by our customer, Mr J. Egan  
2d White Orpington Cock  
2d White Orpington Hen  
2d and 3d White Orpington Cockerel  
2d White Orpington Pullet

ON TEN ENTRIES

\$50 Cup for the Best Bird in the Whole Show

Great Allentown Fair Cup awarded to the exhibitor showing ten birds of the highest merit and the greatest uniformity of type and excellence; this cup is one of the classics of the American poultry world, and the crack prize of the show.

ALL ENTERED WON

This record has never been equalled in a show of this class before, as every bird we entered won, and beat every competitor; we won 49 points against 21 for all our competitors combined.

Every bird sent out this season has won for our customers at the large state fairs and best shows of Canada, and this fact, together with our record of 120 prizes for the past three years at practically all of America's greatest shows, is ample proof that we can supply the best White Orpingtons obtainable, and if you can advertise the Aldrich Strain, your success is assured, as people will know that you have the best. The superior quality of the Aldrich Strain is acknowledged by all as the standard of the world.

Our strain is the result of the highest skill in breeding. Our young birds this season are bred from the largest flock of prize winners to be found in the world, winners at the leading shows for the last two years, all mated upon scientific principles by our superintendent, Mr. Len Rawsley, one of the most expert Orpington breeders of this or any other country, and reared under his supervision upon a system unexcelled in producing vigorous and typical birds for the show room, and breeders to perpetuate the finest types of the variety.

The demand for show birds this season is enormous, and we have already booked orders for shows in all sections of America and Canada, so that if you place your order early we can give you a better selection, and can properly train and condition the birds for the show room. Remember, we only sell to one customer in a class at any show, and that a small deposit now will reserve you the winners. Our birds are bred to lay with the same care they are bred to win.

If you need a winner or wish to introduce new blood, or want to get started right in White Orpingtons, send for one of our 56-page catalogues and let us quote you prices.

Eggs ready Dec. 1 from the Best Pens of White Orpingtons ever mated in America.

Mention American Poultry Journal when writing.

## Give the Laying Hen a Chance

Let Her Balance Her Own Ration. Use Automatic Feeders  
and Save High Cost of Labor. *By Prince T. Woods, M. D.*

LABOR expense is the big expense of most poultry plants, small and large. Skilled labor comes high and much hired labor, skilled or unskilled, is often unsatisfactory and not infrequently has much to do with the balance getting on the wrong side of the ledger. Where fowls are fed three times a day, twice a day, or even once a day, the labor cost is a considerable item. The more elaborate the ration and the greater the number of feedings necessary, the greater is the cost for labor. It does not appear that

the results obtained warrant this high cost of labor.

A skillful feeder with a small flock may get exceptional results in egg production from "bred-to-lay" stock. Where the poultryman has only a small amount of time he can spare for his birds, even with small town lot flocks, labor saving counts. With labor saving equipment it is possible for him to be away at other work during the hours of daylight and still be able to keep fowls with profit. On the large plant labor saving equipment and labor saving methods of feeding permit using low cost unskilled labor, more fowls well cared for by one man, and the actual loss in egg production for the flock as a whole will be so small as to be of little or no importance—and there is not necessarily any loss in production. Often results will be better than from hand feeding.

For a long time we have recommended hopper feeding or box feeding to save labor. The results of this old-fashioned method have been good, but in some cases there has been more or less grain waste. Not as much grain waste as with hand feeding into deep litter, but much more waste than there should be.

A dozen or more years ago we recommended giving the fowl a chance to balance her own ration. We are more than ever in favor of that plan today. Give the laying hen a chance. No ready-mixed food gives the fowls the same chance that they have when opportunity is afforded the fowls to select what they want for themselves. Straight grains are much more liable to be good and sound, are more easily inspected by the buyer, than are commercial mixtures. It is better to give the hen a chance to select her own food than to make her depend entirely upon the judgment of her owner, or care taker, the chances are all in favor of the hen knowing best what is best for her. A normal appetite of a normal or healthy body is the best feeding guide that has ever been produced to date.

Some poultry keepers have raised the objection that such a plan of feeding would require a big array of feeding boxes if one is to be allowed for each grain. The objection is not a valid one. The saving in labor will more than offset

the cost of the feeding equipment the first season. The results in improvement of health and vigor and in excellent egg yield are sufficient to encourage the installation of equipment. A great variety of grains is not necessary.

Corn, oats and wheat are the staple feeding grains in this country. Good sound corn is the best and most widely used grain of them all for poultry feeding. When corn is sound and good it is usually the best liked grain by the fowls and it is good for layers or breeders. Poor or spoiled corn is the worst food that can be given to fowls or chickens and under some conditions may be poisonous. It pays to have corn sound and sweet. Well cured old corn is best. Poor corn is particularly liable to be introduced into meal, cracked-corn and ready-mixtures. You can't afford to buy or use poor or spoiled corn.

Oats are excellent food for poultry of all ages and balance well with corn. Sometimes, in cases where but seldom fed, it takes a little time for fowls to become accustomed to oats and to eat them readily, but this is true of any food to which the flock has not been accustomed. Oats should be heavy, sound and well filled—clipped oats preferred. Light oats are wasted because the unfilled hulls are not eaten and the fowls lose appetite for the oats. Sprouted oats make a most desirable addition to the ration.

Wheat is a good feeding grain, when good, but has been very much over-rated as to value. A good deal of the feeding wheat which is sold to poultrymen is low in quality and not in the best feeding condition. We always aim to use the best feeding wheat obtainable, but it has been our experience that heavy feeding with wheat tends to "stall" fowls much more quickly than either corn or oats. We have seen a good many cases of sour crop, puffed crop and other forms of indigestion in both young chicks and adult fowls that we had every reason to believe resulted from feeding too much wheat. If the wheat is "scorched" or "burnt," a quality very often sold to poultrymen it is much more liable to cause digestive disturbance, but even when "milling quality" wheat is fed too heavily, and where a sufficient supply of other grains is not given with it, trouble occurs.

Food experts have never yet been able to produce a balanced ration suitable for the continued use of a number of human beings under like conditions. The so-called "scientific rations" don't prove up well in practical use. The food experts can't agree and doctors seldom agree on matters of diet. The old saying that "what is one man's meat is another's bane," holds true today. One man's food, that agrees with him perfectly, may be poison to another. It pays to give a normal healthy appetite a chance. Eat what you want when you want it and no more than you want.

The same thing holds true in poultry feeding. We know of no one who has yet produced a ready-mixed balanced

Fig. 6. Front view of the long growing house on soft roaster plant of Fessenden & Allen. This picture was taken the last of October and shows a fine lot of Light Brahma chickens destined to sell at 25 to 30 cents a pound alive next spring and to weigh from eight to ten pounds each. (Photo by George K. Gillette.)

ration that will yield any better, or in many cases as good, results as where the fowls do their own selecting and mixing. Give the laying hen a chance.

It costs money to prepare food mixtures for poultry feeding and not infrequently it is money wasted. We have fed various mixtures and considered them favorably. For a long time we have tried to mix the grains according to the wants of the birds as expressed by appetites. The results were good in all but one thing, labor excepted. With mixtures there was always considerable food wasted thrown out by the fowls in their endeavor to get the kind of grain which suited them best.

Taking the cost of mixing, or increased cost of ready-mixed grains, and the waste, into consideration, we find that it seems best to let the fowls do their own mixing. In the end it is the cheapest way to feed and the results are excellent in health, vigor and productivity. We have tested the plan of feeding, outlined herein, very thoroughly and we had a friend of ours, George K. Gillette, give it a thorough test with a flock of 125 Reds which he had from our farm. We never saw any fowls show up better in constitutional vigor, in the production of large sized eggs in abundance and eggs that hatched fine strong chicks that live and grow. Mr. Gillette invented an automatic feeder and wished us to try out the experimental type and make suggestions for improvement. We had a large number of them in use during the season of 1912 and made numerous

suggestions for improvements which were adopted. We are using the improved automatic feeders in our poultry keeping.

There are many good automatic feeders on the market and these have become a valuable factor in labor saving and food saving in modern poultry keep. We believe that the best way to give the laying hen a chance to balance her own ration is to use a sufficient number of good modern automatic feeders and swinging food hoppers. Figure 1, shows our plan for giving the hen a chance. The diagram shows an interior view of the south front of the high or monitor section of the Wood's open-front house and the method of equipping the house with automatic feeders and hoppers. The feeders and hoppers all swing by two wires each from the plate which supports the rafters of the low front section of the house. In this position they can be easily and quickly filled or adjusted. The house is the 20x20 ft. building (see book *Open-Air Poultry Houses for All Climates*) and accommodates from 100 to 150 layers. Four automatic feeders and two hoppers will feed this flock comfortably.

In our early tests we used four 16 quart feeders for 125 birds and found it necessary to fill up the feeders twice a week. With feeders, 32 quart size, the filling usually comes once a week. Sometimes a house will have a special run on one sort of grain and will require filling that particular feeder between regular feeding days but this does not hap-

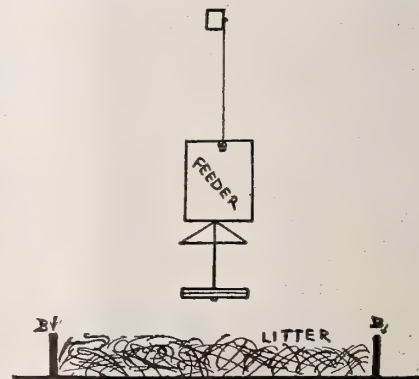

Fig. 2. Method of using litter beneath an automatic feeder. "B. B." are boards extending width of coop about five or six feet apart and used to keep most of the litter where it is wanted beneath the feeders and leave balance of house practically free.

Fig. 7. Part of a flock of 5,000 winter chickens destined to become famous "South Shore soft roasters" on the plant of Fessenden & Allen. These chicks are all fed with automatic feeders and hoppers and about 200 of these modern appliances are used on this plant. (Photo by George K. Gillette.)

pen very often. Filling up the feeders once or twice a week takes very little time and labor as compared with hand feeding and the filling does not have to be done by daylight if you want to get away. The fowls feed continuously as they wish and they feed naturally, a few grains at a time, exercising all day long. The saving in labor will pay for the feeding equipment in a short time.

Referring to Figure 1 it will be noted that there is one feeder for wheat, another for oats, one for corn and another for corn or any variety grain or special variety mixture the proprietor may desire to use. We settled down to two for corn, one for oats and one for wheat. One swinging hopper contains the best beef scrap and the other hopper contains dry mash. We have tried a wide variety of mash mixtures and are still open to conviction as to which is best. In letting the hen do her own selecting we believe that all the dry mash needed for good results is a hopper full of "mixed feed" which is about equal parts bran and middlings. In winter 15 per cent cut clover or alfalfa and 20 per cent gluten feed may be added if desired, but we have not noted that it makes any material change in the

egg yield though the fowls eat the mash a little more readily. Mr. Gillette believed that where all of the mash was always hopper fed dry there was more tendency to soft yellow droppings and that the fowls consumed a much greater quantity of green food and he stated that the trouble ceased on occasionally feeding scalded "mixed feed." We have not been troubled with soft yellow droppings as a result of dry mash feeding, and we want the fowls to eat all the green food we can get for them. They will consume astonishing amounts of fresh raw greens.

Unless there is a running stream or a drip system for watering, of course water must be supplied daily and the usual allowance of grit, crushed oyster shells and charcoal should be furnished. A good way to feed raw vegetable food like cabbages, beets, etc., is to make a large pocket of 2 inch mesh poultry wire on the side of the pen and keep it well filled.

It is essential that whoever collects the eggs shall examine the feeders each night. The modern up-to-date automatic feeder almost never clogs and seldom needs adjustment, but it should be looked at just the same. A glance and a tap

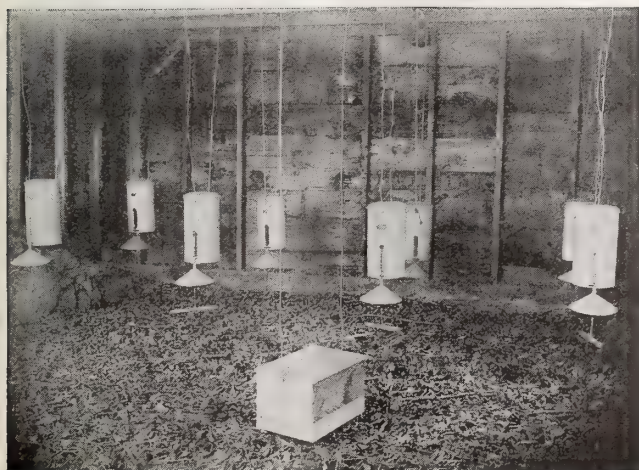

Fig. 3. Battery of automatic feeders and hoppers used for feeding 200 layers on plant of George K. Gillette, Pembroke, Mass. There are eight automatics and two hoppers. The second hopper was too near the camera to get into the picture.

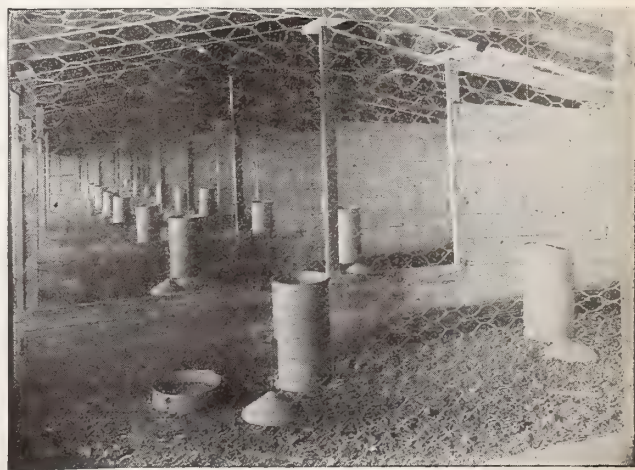

Fig. 5. Interior view of the long growing house on the soft roaster plant of Fessenden & Allen. This plant grows about 5,000 winter chickens or soft roasters annually and all feeding is done with automatic feeders and hoppers.

of the hand will show if it is working all right and the quantity of food contained is quickly observed. Keep feeders and hoppers well filled and do not allow them to get empty. Let the fowls eat the most of the grain they like best and keep the feeders well supplied. Don't compel the

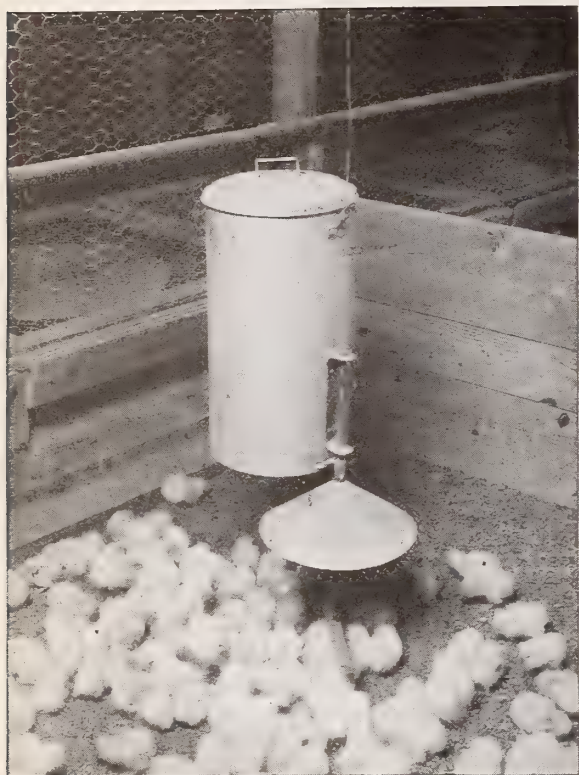

Fig. 4. Baby chicks using an automatic feeder in brooder house of Fessenden & Allen Poultry Farm, Rockland, Mass. All feeding is done with automatics, the chicks grow and thrive and are always well fed.

fowls to eat something they have no appetite for or to go hungry. After a few days' use of feeders the attendant will learn a lot about the preferences of the flock and how they do their own balancing.

We have tried feeders with wire screen bait bars and with bait bars of two strips of soft wood bolted together and we much prefer the wooden bait bar, it is easier for the fowl to use and never injures the beak or wattles. It is surprising how quickly chicks and fowls learn to use automatics. Place a piece of tough meat between the wooden strips of bait bar and tighten up the nut which holds them together. This will get the feeders into action quickly and by the time the meat is gone the lesson is well learned. You can then wedge a kernel of corn in the cleft of the bait bar, at each end if you wish, and it will serve as long as any bait is needed in the bar. Little chicks three days' old quickly learn to get their chick food out of an automatic and will ride around on the bait bar like a youngster taking to the "flying horses."

Figure 2 is a suggestion for the winter use of straw litter with automatics. It is not necessary to have straw litter all over the house. B. B. are retaining boards for litter placed about five or six feet apart, eight or ten inches high and extending the width of the pen both in front and rear of the feeders. This keeps most of the litter confined beneath the feeders where it is wanted. In hanging the feeders for adult fowls we like to have the bait bar about fifteen inches clear of the floor. When deep litter is used get the bar a little higher up to allow for depth of the litter. For small chicks the bait bar should be at about head level of the chicks.

With this article we show illustrations from photographs taken on Mr. Gillette's farm where 200 utility layers are handled with one battery of eight feeders and two swinging hoppers for mash and beef scrap. Illustrations are also

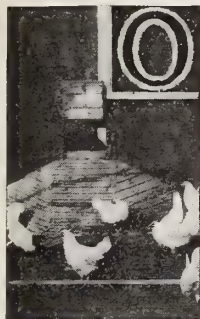

shown of the soft roaster specialty plant of L. E. Fessenden and A. H. Allen, known as the "F. & A." Poultry Farm, Rockland, Mass., where some 200 automatic feeders are used for feeding market chickens from the shell to the killing room. This farm produces first quality, large, soft roasting chickens and the output for the coming season will probably top five thousand soft roasters, mostly Brahmas. Two men do the feeding and caring for these growing winter chickens and the use of automatic feeders permits them to do the work well and have time for other necessary work. The proprietors also make a specialty of caponizing, charging \$4 per hundred chicks for operating and are building up so good a trade in this art that they not only go to other plants to operate but also have customers bring cockerels to the farm to be caponized. They are also finding time to build up a trade in day old chicks. Messrs. Fessenden and Allen are automatic feeder enthusiasts and can't say enough in praise of these labor saving devices. In early fall they use the feeders out of doors and the brooder houses and growing houses are all equipped with them. It certainly is a wonderfully fine sight to see sturdy chicks of all ages busily working away at their feeders, feeding and exercising at the same time and always well fed, and now and then a sturdy little fellow with a running jump lands on the bait bar and has a ride around while his fellows scratch in the litter for the chick food he scatters down by his vigorous act. From the number of farms which we have visited and found automatic feeders in successful and satisfactory use it speaks well for the worth of labor saving equipment and the progress of poultrymen. We hope that they will use more feeders and try giving both hens and chicks a better chance.

# Law of Heredity and Egg Production

It Is to Variation in the Egg-Laying Function That Poultry Breeders Must Look for Increasing Their Egg Supply. *By James B. Morman*

ONE of the most important economic purposes in poultry keeping is the production of eggs. The demand for fresh eggs is constantly increasing as various kinds of meat continue to rise in price; and, with the stricter enforcement of state and national pure-food laws which seems bound to come in the future, this demand for fresh eggs will grow more and more intense, especially during the winter months. There can be no question, therefore, that a great future lies ahead of the poultry industry from the point of view of egg production for food purposes alone, to say nothing of its importance from the standpoints of the production of high-class meat, fancy and pure-bred fowls, and eggs for incubation purposes.

But the phase of poultry keeping which has the most general economic ramifications is that of egg production, since this touches to a greater or less extent every home in the land. Hence, poultry breeding for egg production has become the dominant feature of the work with fowls which has been going on for many years at the experiment stations both in this country and abroad. Of these stations, no work has been more elaborate than that of the Maine Experiment Station. For 10 years investigations were conducted with Barred Plymouth Rocks with a view to increasing egg production. The underlying idea which dominated these earlier experiments was that by breeding consistently year after year from the highest layers, regardless of all other considerations, there must be brought about a definite and steady improvement or increase in the average annual egg production per bird. The practice in breeding was to use on the female side only hens which laid between November 1 of the year in which they were hatched and November 1 of the following year 150 or more eggs, while on the male side the practice was to use in breeding only the sons of mothers whose productions of eggs in the first year was 200 eggs or more. At the same time, the average annual production of the whole flock was about 125 eggs per fowl.

It was expected that the average flock production of eggs would be increased by this stringent method of selection in breeding. But, according to Bulletin 192 of the Maine Station, "the net outcome of the experiment was to show that there was no steady or fixed improvement in average flock production after the long period of selection covering 9 or 10 years. There was no permanently cumulative effect of the eight generations of selected ancestry. So far from there having been an increase, there was actually a decline in mean egg production concurrent with the selection, taking the period as a whole."

The upshot of this matter was that Karl Pearson reached the conclusion that the experiments of the Maine Station in poultry breeding show that fecundity in fowls is not inherited, and, as a consequence, he would relegate the problem of inheritance of egg-laying power in fowls to oblivion.

## Inherited Tendencies to Reversion.

Let us not, however, be too hasty in this matter. To some of us who are trying to learn something of the laws of biology while also being engaged in practical poultry breeding for egg production, this conclusion, if accepted, would ring as a deathknell to all our hopes and aspirations. That the laws governing the development of animals are elusive must plainly be recognized; and that traits of individual characters are not steady and permanently established must also be recognized. Speaking broadly, the dominant factor in biology seems to be that of variation which, in itself, renders more or less haphazard the results of breeding. If this were not the case, how easy it would be in poultry breeding, after fowls had been produced of established color, shape, vigor, and perfection according to some recognized standard,

to keep on producing standard fowls by simply mating those conforming to the standard. But every breeder knows that he mates as best he can and awaits results in uncertainty. This is due to the inherited tendency to reversion which modifies the results of conscious selection.

Probably every breeder has had some instances of reversion come to his notice in his experience. With poultry, reversion to type is quite noticeable with the first laying of pullets. The domestic fowl is the descendant of the wild jungle fowls, the natural egg-laying characteristic of which is simply to continue the species. To this end, only sufficient eggs are produced which the jungle fowl can cover in hatching. If there had been no development of this natural egg-laying tendency by the process of selection, domesticated flocks of fowls would be a poor source of remuneration from egg production, and the poultryman would have to keep as large pens for his broody hens as he would for his laying hens. But selection in the process of domestication developed the natural egg-laying function abnormally with the result that we have egg production in fowls vastly in excess of the ability of any fowl to cover them in hatching.

With pullets, however, I have frequently observed a tendency to revert in laying to the natural number of eggs—say from 15 to 17—for the continuance of the species, when they will get broody and desire to hatch even as birds do. Whether, if this tendency to hatch were early encouraged, there would be no prolonged laying of eggs as now invariably occurs with a good laying strain of fowls, I am not able to say. But the reversion to a normal nest-full of eggs is of frequent occurrence with pullets, and it indicates clearly that the production of any greater number of eggs than a broody hen can normally cover is a superadded functional activity as a result of natural and artificial selection. In connection with egg-laying is the natural inclination to steal a nest, which is so common in the domesticated fowl, and to this could be added without much violation of natural law the very noticeable tendency for young pullets to want to roost in trees or on the highest perches to escape anticipated enemies. These are tendencies which point back to antecedent characters which centuries of life under domestication have had a strong tendency to obliterate, but which, nevertheless, crop out occasionally before the notice of the observant breeder.

There are two other very clearly-defined cases of reversion which have occurred in my own experience. As is well known, the White Plymouth Rock fowl is a sport from the Barred Plymouth Rock. The down of the white chickens when first hatched is frequently barred with darker-colored down giving them a smutty appearance and which persists until the chickens feather out. But as a general rule, the chickens which thus appear off-color will generally feather to the purest white. But I record an instance when a fine specimen of Barred Rock fowl was raised to maturity as an offspring from my White Plymouth Rocks—a clear case of reversion to a type of the ancestral strain of fowls.

But there is a still more striking instance of reversion. The Black Java entered originally into the ancestry of the Dominick and through this breed to the Barred Plymouth Rocks. In two instances in one breeding season, black chickens were hatched and raised from my White Plymouth Rocks which, on reaching maturity, closely resembled the Black Java fowls even if they were not up to standard.

These illustrations are sufficient to show the practical impossibility of obliterating by selection the biological tendencies to reversion, and they also serve to indicate what variations are likely to occur in animal breeding. And while there is no apparent fixity of type in color, strain, or egg production as a result of successive breeding, the very element of variability is the prospective source of improvement. This is especially true with reference to increasing egg production in flocks. For variation indicates a flexibility of function. If low-laying capacity in fowls became fixed,

attempts to increase egg production by selection would be time wasted. It is to variation in egg-laying function, therefore, that poultry breeders must look for increasing their egg supply. As this is a biological characteristic, there

**FIRST PRIZE COCK AND CHAMPIONSHIP MALE**  
CHICAGO DEC. 1912.  
ALDRICH POULTRY FARM COLUMBUS O.

is a prospect for increasing the flock production of eggs per fowl up to the biological limit, whatever that may be. That the individual fowl is capable of high egg production has been shown many times by individual breeders, by the Maine Experiment Station, and by the Ontario Agricultural College in Canada. The Maine Station produced many hens which laid from 200 to 240 eggs each in their pullet year, but the Ontario Agricultural College has recently announced a new high egg record. Between October 1, 1910, and October 1, 1911, the records of 6 Barred Plymouth Rock fowls were 243, 252, 256, 256, 268, and 282 eggs, respectively. These high records, compared with the average egg production per fowl in the United States of 75 or 80 eggs, show the wide range of variation in egg-producing power of individual hens.

#### The Transmission of Functional Tendencies.

Since variation rather than fixity seems to be the dominant characteristic of organisms, efforts to increase egg production should take this into consideration. On the theory of variation, the mating of high egg-producing fowls may result in offsprings the egg-producing power of which may range anywhere from 0 to nearly 300 eggs in a year, and the same would hold true in the mating of low egg-producing fowls. An instance of this nature has recently been reported by T. E. Quisenberry, who was the director in charge of the Missouri National Egg-Laying Contest. In commenting on the fact that the Plymouth Rock pens had not come up to expectations in spite of the fact that "the highest known individual egg record made to date was made by a Barred Plymouth Rock pullet at Guelph, Canada, which made a record of 282 eggs in one year," he makes this significant statement:

"The totals and averages for the Plymouth Rocks have been affected materially because of the fact that there are five deadheads among them—five hens that have not laid

an egg to date." And these fowls were entered in the contest by their owners in expectation of making high egg records because of the egg-laying capacity of their antecedents.

While this has a tendency to prove that there is more in the strain than there is in the breed so far as inheritance is concerned, it also adds another link to the chain of evidence that variation dominates in biology. But, fortunately, variation may sweep upwards or downwards. There is no question that domestication and inheritance have resulted in bringing about improvement in fowls as to many characteristics, so that there must exist to some extent the power of transmitting functional tendencies by inheritance. It passes with the transmission of life, but to what extent is neither determinable nor controllable. At the same time, where variation is a recognized factor in poultry breeding as elsewhere in the organic world, it is to this factor that improvement in egg production by poultry flocks will be brought about.

Improvement by the physical transplantation of ovaries has resulted negatively. Six experiments are reported by C. B. Davenport in removing ovaries of hens and transplanting them to dissimilar hens, but he found no evidence that the engrafted ovaries ever became functionally active. On the other hand, it does appear that the ovaries which had been partly or wholly removed regenerated and produced eggs. Even had these experiments resulted favorably, their value to practical poultry breeders would be of doubtful importance. Such experiments may serve a biological purpose, but they are of little or no economic value. If functional activities are transmissible in fowls, the poultry breeder can hope for success quicker and better along the line of selection. He may fail even here because of the tendency to variation, but it is the easiest and best method at his command.

A test of selection was followed out by the writer with a view of determining whether functional activity in egg pro-

**FIRST PEN R.C.R. RED COCKEREL**  
AT BOSTON, 1912  
BRED, OWNED & EXHIBITED BY  
PAYNE BROS. PORTLAND, CONN.

duction was transmitted by inheritance. The experiment consisted in determining the egg-laying powers of pullets descended from fowls bred for egg production as compared with pullets from hens in which no particular attention had been paid to increased egg production, and was, in reality, a

side issue from an effort to determine the normal period when the Plymouth Rock breed of fowls begins to lay.

If every fowl in a flock possessed the power of early and prolific laying during the most active period of her life, the maximum of egg production would be practically reached. The lowering of either factor means a reduction in egg yield, though the transformation of early laying into prolonged laying in the descendants may result in increased egg production. Few flocks, however, are at all uniform in either early or prolific laying by the individual fowls, so there is always opportunity for testing the effects of some known factor on egg production where careful records are kept from year to year.

The effects of the introduction of new blood had been to bring the second generation of early layers back to the normal period of commencing to lay—that is, to about 7½ months from the time of being hatched. Then arose the question as to the direction the increased vigor would take which is a generally recognized biological result of the introduction of new blood.

But while the direction of increased vitality is at present beyond the breeder's control, it is reasonable to believe that the increased vitality which comes in with the new strain will follow the lines of least resistance, both biologically and physiologically, where fowls have been bred for early laying and this tendency has been checked. As laying relates to the physiological development of the ovaries and their biological functional activities, the lines of least resistance in this case would be with these organs. With decrease in the tendency to early laying, therefore, it would be reasonable to expect an increase in prolific laying as a result of the introduction of new blood. This would account for the transmission of inherited functional tendencies, from which basis the increase in flock production of eggs is to be expected. This theory not only accounts for the high production of eggs by the Maine Station poultry flock, but also explains the exceedingly high records of individual fowls which are occasionally reported.

#### A Practical Test of Inheritance.

During February and March, 1912, comparative egg records of pullets bred for egg production and of pullets not so bred were kept in detail. For several years I had been selecting and breeding with a view to increased flock production, and a pen of 16 such pullets was tested against an equal number of pullets of an entirely unrelated strain in which, to the writer's knowledge, no efforts had been made along this line. The feeding, care, and management of the pullets were alike in every respect, and the two months of February and March were selected because at that time the laying power of early-hatched pullets are usually at their highest.

The number of eggs laid by 16 pullets of my strain was 654, or an average of 40⅞ eggs per pullet in two months; while the number of eggs laid by the unrelated pullets, was 526, or an average of 32⅞ eggs per pullet in two months. This gave a difference of exactly 4 eggs per pullet each month in favor of the descendants of hens bred for egg production.

To what shall we attribute this increase? To the writer no other explanation exists except the principle of inheritance; and, where the average flock production of eggs is low, this explanation furnishes a basis for flock improvement in egg production. The limit of this improvement is established in the laws of biology, and whether or not it is possible for science to modify these laws by constant breeding for egg production generation after generation is a problem of the future. This much seems certain, however, that by seizing upon an advantage like early laying which arises as a result of the principle of variation in animal breeding and is due to natural selection, science may co-operate with nature by artificial selection and thereby increase its functional activity which is manifested in increased egg production. There will always remain, though, the tendency to variation which persists with the transmission of life from parent to offspring. While the inherited tendencies toward improvement may not be large in a single generation, they are at least sufficient to be noticeable and cumulative in individuals. Through the individual fowl, therefore, the increased flock production of eggs has been brought about.

When high flock production has been reached, it may be maintained by regard to the maintenance of vigor in the flock, subject only to the tendency of individual variation which so far has neither been controlled nor eliminated. With a breed of fowls like the Plymouth Rocks, an indication of increased laying power is a diminution in the tendency to become broody. This appears as a side issue in the above test to determine the number of eggs each strain of pullets would lay. Here again the figures plainly indicate the force of inheritance. The length of time between first laying and first becoming broody of the two strains is thus shown:

The first pullet's egg from my own strain was laid on November 16, 1911; the first egg laid by the unrelated strain of pullets was on December 13th. This gave a difference of 27 days in the time of first commencing to lay.

The first pullet to become broody of the unrelated strain was on February 22, 1912; but of my own strain, the first pullet did not become broody until March 26th. This gave an additional difference of 33 days in favor of my strain of pullets, or a total prolonged period of laying of exactly 60

First Rose Comb Red cock, Youngstown; also headed first pen at Cleveland, 1913. Bred and owned by M. C. De Loof, Willoughby, Ohio.

days. Assuming an egg from each pullet every other day, the difference in egg production per pullet as a result of inherited tendencies would be about 30 eggs in a period of about 4 months. This is a factor of no small importance to those who are seeking to increase the egg production of flocks of fowls.

The tendency to prolonged laying is further shown by the ratio of the broody pullets in the two strains. With my strain only two pullets became broody from November 16th to April 3rd—a period of 4 months and 14 days; whereas, with the unrelated strain, 7 became broody from December 13th to April 3rd—a period of 3 months and 21 days. While the record of broodiness was not kept after the first week in April, the ratio of broodiness of more than 3 to 1 was maintained to a greater or less extent up to the end of the season.

Taking all these practical features into consideration with a view of throwing light on the problem of inheritance in poultry breeding for egg production, it seems clear that the process of selection plays an important part. While variation is an uncontrollable factor, it is, nevertheless, as likely, and probably more likely, to operate in favor of the breeder as against him. The functional activity which is thus emphasized in selection becomes cumulative from generation to generation as a rule, and by this means increased egg production by flocks is not only made possible, but it may be maintained at a high standard by careful management for controlling the vigor of the fowls by the introduction of new blood. On this basis there is an undoubted field for an increase in egg production in flocks where the individual biological development of eggs has not been reached.

# H. H. Stoddard's Utility Breeding Chart

Combining Sixteen Unrelated and Carefully Culled Stocks, of the Same Breed and Variety, in One. *By H. H. Stoddard, Riviera, Texas*

I HAVE been asked to give a chart illustrating breeding for laying, on utility principles "with no Mendelian fold-about it."

Well, I have occupied lots of space already in these columns showing how the utility man will get along faster by principally spending his time raising as many vigorous pullets as possible and letting the "high laying" pretty much take care of itself; rather than relying on spending time in tending breeding pens of phenomenal layers

and using their eggs for hatching with the consequence of getting poor hatches and weak chickens. However, the first of the laying of a prolific layer after she has had a rest for moulting and for getting over it, may answer first rate for sitting purposes.

The truth cannot be too often hammered home that our white egg breeds were already "bred to lay" before any fancier, or any modern professional egg farmer, or utility man, ever got hold of them. Furthermore it is a question that is worth considering forty times as much as has been done, during all this pother of "increasing the yield" whether the Italian dunghill fowl or ordinary farm fowl, the Leghorn on its native heath, freshened up a little by taking out the effects of incest and neglect, has not already all the "bred to lay" it will stand.

What I am getting at is, that the breed in Italy has, through mathematical law been unwittingly bred to lay by the historic and prehistoric peoples of the Mediterranean region and nearby countries. By unconsciously setting the most eggs from the hens that laid the most, our involuntary helpers, dead and gone for long ages, gave us a strain "bred for prolificness." In the nature of things there was a limit. Checks appeared. One of these was lack of sufficient nutriment to furnish indefinitely a continual increase in laying. Nations through long periods have by spells been so near a half fed condition themselves that they would naturally feed their fowls grudgingly. Another check would be that when in favorable times prolificness rose to a certain stage, the hatchability of the eggs and the livability of the chickens would be reduced so that not the very highest layers but those of a rank lower down would leave the greater number of descendants. You can't go on forever in increasing a trait. Because horses have been brought in weight from one thousand pounds to two thousand pounds, it by no means follows that they can be bred to three thousand or four thousand pounds.

Undoubtedly the Leghorns in the United States and England, having in the past fifty years, received better tending and feeding than they were used to in the old country, their keepers unwittingly, but there must still be a limit, and now when under the more favorable auspices, the prolificness has been raised; its new limit cannot be passed any easier than the previous limit could.

When new causes have spent their force, equilibrium is reached, and the new limitations become as impassable a wall as existed before it being merely shifted to a new place. Illustration. Ethnologists tell that the Scandinavian people became large and tall by natural selection. In a harsh clime they were forced by the scanty returns from the soil, to battle with the seas to eke out a living, where strength and endurance only would insure success. Also over and over again, for a long period, neighboring clans or tribes fought with each other, or piratical craft contended with foreign ships; and so strength became thoroughbred, implying weight and stature. Well, now what? Because a certain stature was necessary did this mean the taller the better? Obviously not. Too great size would call for too much food to be economical, and would destroy a certain quickness of motion absolutely

necessary in the personal encounters of ancient warfare. In the natural response organization always tends to make to environment, the most advantageous size, shape, and advantageous everything else, is reached in time.

As soon as the imported Leghorns had added to their laying a number of eggs represented by increased food, and care in selection of male birds, which was probably somewhere near two or three dozen, they were about as perfect in laying as they ever will be, everything considered.

The best measure in breeding, not for adoption by the egg farmer as much as for the ordinary small scale operator, to improve the average prolificness of the already ancestrally "bred-to-lay" non-sitting breeds, will turn out to be not sitting eggs from the highest producers but by sedulously avoiding breeding from inferior producers.

Now turn to the matter of a chart for the guidance of the egg-farmer, the party whose slogan is eggs, eggs, and all the time, eggs for the food market, not for sale for breeding purposes. Such a chart is simple, in fact, the method might be made clear by words, without a chart.

The first thing is to consider the ends to be attained in the breeding operations of the egg farmer. Let us picture him in deciding whom to buy of in stocking up at the start.

The "way up" fancier practices line breeding, including considerable very close breeding as likely as not. The second grade fancier does the same. And in addition very likely uses incubator and brooder with his best breeding stock, a practice the "way upper" quietly avoids, says nothing and saws wood. As we go down the ranks, to those who both buy and sell eggs for hatching at lower and lower prices, we reach the ordinary farmers, mechanics, merchants and suburban residents of various occupations, who keep pure breeds but never expect to exhibit, and do not even own a copy of the Standard. As we descend there is of necessity almost continual incest, because every time a setting of eggs is purchased, breeding birds and eggs for hatching are sold far and wide from the descendants of the first setting; and these are always full brother and sister or else there is a half brother or a half sister in the case. And so wherever the utility man, in starting procures his stock, he gets incestuous fowls whether he purchases up or down the line as regards the seller's rank and reputation.

The farther you go toward a frontier or a partially settled country the more common the inbreeding, as a rule, because pure blooded fowls are rarer there, and from one purchase, many descendants are scattered far and wide.

As a general thing, to get utility stock it is best to go to the "higher up exhibitor" and winner at big shows, rather than to the humble exhibitor at small shows, and go to the latter rather than to the party who never exhibits at all. And why, some may ask, since exhibitors breed for fancy points and not for utility. Simply because exhibitors must keep their stock strong to a degree. Though as we have said, the utility man while purchasing may well presume on finding all the stock he runs against more or less full of the results of incest; still when the fanciers find size and strength falling off they hasten to introduce fresh blood, and this is done oftener than is generally suspected; and meanwhile the inevitable careful culling keeps them supplied with vigorous breeders for their own use and so the strength of our breeds is maintained whether the utility man ever gets hold of the selected vigorous birds or not, and generally he does not.

Winning exhibitors must constantly cull and breed from their strongest fowls of both sexes because they must bring out good healthy birds for the exhibition pen if they bring out any.

In spite of all the flub-a-dub of the fancier's doings, some of which is puerile enough to make the doer, it would seem, if a full grown man, ashamed to see his face in the

"RINGLET" FIRST PRIZE 1<sup>st</sup> SWEEPSTAKES CUP EXHIBITION PEN  
MADISON SQUARE GARDEN NEW YORK 1913  
E. B. THOMPSON, AMENIA, NEW YORK, OWNER AND BREEDER.

First Prize and Sweepstakes Cup Exhibition Pen at Madison Square Garden, New York, 1913. E. B. Thompson, Amenia, N. Y., owner and breeder. This last 1913 record won by Mr. Thompson surpasses anything ever accomplished in Barred Plymouth Rocks at Madison Square Garden.

glass, yet taking human nature as we find it, "the fancy" so immense in the number of its votaries, and the capital invested, the expenses incurred, and the time spent in it, is an institution absolutely necessary for two important utility matters, to wit—keeping our poultry breeds pure and preventing an otherwise inevitable mix up and running out. Secondly, fanciers as said above make a continual careful selection of the strongest specimens for breeding wherever it can be done without too much loss of fancy points.

I am sick of the reiteration, parrot-like, of the accusation that "breeding for fancy ruins some of our best breeds." Then follows the old gag about the Black Spanish "spoiled by breeding for a white face." The truth is in the long run, fanciers are the preservers not the destroyers of vigor.

All said, thus far in our story, leads up to the proposition that one of the ideals to be kept in mind in framing the utility man's breeding chart, is crossing to get the inevitable incest taint out of the stock he starts with, and accumulate a great fund of vigor; and when this has been done, another ideal is to further egg production to the highest possible pitch consistent with safety, and with "kindness to animals." And now how are these two ideals to be wrought out?

I would breed by crossing together eight at least, preferably sixteen strains, of completely unrelated stock of the same breed, culled with scrupulous care in selecting the most vigorous and using only young but well matured breeders, fed on what they prefer and not on what is arbitrarily mixed up for them.

This to accumulate a fund of strength. Strong they will be, my word for it. Their shanks will be large, their plumage lustrous, eyes bright and movements active. To combine sixteen stocks in one there must be four breeding seasons, to combine eight stocks three breeding seasons, four stocks two breeding seasons, two stocks one season.

The reader is referred to page 1542, where in pens 1 to 8 inclusive the numbers 1 to 16 represent eight cocks and eight hens to start with, these being of the same breed of non-sitters, preferably S. C. White Leghorns and from sixteen different and unrelated stocks. I said eight hens, but there should be a group of several hens with each male as one alone might die or become incapacitated. Let it be understood then that while "c" represents one cock, "h" in every instance through the whole diagram, means a group of hens. The members of any group of hens in the upper tier of pens may or may not be related to each other, it makes no difference, so long as they are not related to the cock they are with or to any of the fowls of either sex in the other groups. In case not enough non-sitters are with a particular male, in any one of the pens in the upper tier, to make him behave with becoming propriety, a few brown egg hens may be put in his pen. In all pens from 9 on, have as many Leghorn hens as one male can attend to, the pens being more and more roomy each year.

There are 30 different "bloods," beginning with the cock 1 in pen 1 and ending with the group of hens "h 30" in pen 15. The produce of pen 15 will make 31 separate bloods.

Let us explain the diagram a little to make it clear that when pen 16 is reached, fowls of 31 absolutely different bloods have been used. Take pen 1, for illustration, in which "c" and "h" are different, being two of the original sixteen unrelated stocks. Notice that from the produce of pen 1 all the pullets must be taken away and thrown out of the game. They may be used elsewhere on the farm. But a cock of this mating, "c 17" is used the following year in pen 9. From the produce of pen 2 reject in like number all the cocks. Sell 'em, eat 'em, or whatever, but put all the likely pullets, "h 18" in pen 9. Similarly the produce, the first season, of pens 3 and 4 furnishes "c 19," and bunch of hens "h 20," as breeders for pen 10 the second season. The produce of pens 9 and 10 the second season is used to furnish "c 25" and "h 26" for breeding together the third season; and thus through the whole diagram.

Let the keeper be dismayed at the idea of quarters for the eight flocks at the start, his attention may be called to the device of having no yards at all but instead use little low covered pens, built side by side to save material, the partitions to be of one inch mesh. It is a good thing to have the males prancing up and down and making feints so long

as they cannot draw blood. It gives them exercise. These pens are not for the attendant to enter at all. They need not be over three feet high.

Now these economical small pens are admissible for breeding stock in this case, though in most cases emphatically damnable. The fowls are to remain in them but a short time. The moving them to the pens in the upper tier at the start, after probably a trip of considerable length by wagon or rail, stops their laying and gives them a rest, so that the eggs you set are all from beginnings of the laying terms and strong and vigorous, being just what you want exactly. Enforced idleness of the hens for a short time will not injure their eggs, it takes time for that. "Have deep litter for them to scratch in?" Well, if you want to tend a scratch-pile in a low down, covered coop try it. It is the very essence of inconvenience. If litter is shallow, scratching soon stops; if deep—the hens are just be-devilled to lay in it, and the eggs are scratched all over the coop.

Pen 16 represents what should be a large yard, or a number of yards, for now (and in the fourth season also) numbers are the object. As many pullets as possible are to be bred, from now on, for the general laying stock, to produce eggs for the food market instead of for hatching. In the earlier seasons all that was necessary was to breed a few to get the cross, when the pen was at once disbanded. In pen or yard, No. 16, after getting strength into the stock for four years you make a direct attack on their vitality and hit 'em hard. Why? Answer: Eggs. Breed brother and sister for four generations if their appearance and your conscience will let you. This gives time for again combining sixteen breeds in one, to get more stock with strength to stand more hard blows, to get more eggs.

When you strike at the very fountain of strength in plant or animal, nature at once resorts to high fecundity as if the old dame said: "The race is threatened with extinction, let unusual prolificness be resorted to to avert it."

History shows that when there has been a tremendous deadly pestilence, like the "black death" in Europe centuries ago, the deleterious effect on bodies and minds of the survivors, which beforehand it would seem must so paralyze them as to check increase of population, there is just the contrary effect. Children were born in greater numbers proportionate to the population soon after the terrible "black death" than ever before or since.

During colonial times, when there was scarcity of food, weary watching and warfare against the Indian, and depressing influences and hard knocks generally, the families averaged more children than in the prosperous times which followed, and than in the generation preceding their departure from the old country.

There is quite a shock of acclimation to immigrants coming to the Southwest from the North, and all up and down the long tiers of farms that have supplanted immense cattle pastures, new school houses are fast being built, and the large crop of children is so obvious as to become a matter of common remark. There are some parties I know who are too confounded lazy to desire children that I wish would settle here.

But why the paradoxical building up only to pull down? "If injury," some may say, "is desired, why not inflict it in the first place?" Well, you might wipe your stock off the face of the earth pretty nearly if you began that way, don't you see?

Abuse may promote increase. I had, in Nebraska, some tall, extremely vigorous, Siberian crab-apple trees, but they bore very sparingly. The nurseryman I got them of said: "Drive nails thickly together into the trunks all round, just below surface of ground. Bleed them, punish them for bad behavior." I obeyed, and they did not run to wood after that, but to fruit. Have seen a large pear orchard treated same way with same results. Certain plants that thrive in the middle west will start off in the southwest by seeding profusely, and the seeds will not only be very numerous, but what astonished me, unusually large and plump. Then the plant, though a perennial at home, will just up and die.

As new breeds, one after another, have been made, beginning with the various Cochins and Brahmas, manufactured from Shanghai and Chittagong raw material, down through the line of new breeds from Barred Plymouth Rocks on, produced by the fusion of pre-existing breeds, supplemented

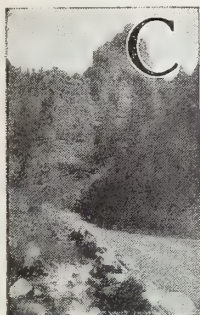

by selection, in every instance the crossing resorted to in the early stages increased prolificness.

There was at first a loud acclaim of wonderful laying feats, and as a matter of fact, not a made up breed has ever been admitted to the standard that did not early show a prolificness greater than the average of the breeds that were compounded to make it. Next there was much close breeding, sometimes designedly "to fix the type" and sometimes incidentally when, the new breed being scarce, the progeny of a few specimens was disseminated over a wide area, as described above, and the fowls have laid finely for awhile and then there has been a third stage of a remarkable falling off.

The noticeable prolificness in the first two stages has been attributed by many persons to the extra feeding, and care in general, arising from the fact that the new breed was so costly. But that the management was not the sole cause is evident from the fact that when earnest keepers sought to bring back the laying, after the third or decadent stage was reached, by the best treatment possible, they could not do it by such means alone.

## Breeding the Cornish for Utility

*By John W. Ward, Jr., Pennington, N. J.*

**C**ORNISH, as bred today by our leading breeders of both England and America, are of the greatest value as a strictly utility bird; that is for meat and for eggs, simply as a "farm chicken," getting away from the fancy side of the question, the show room side altogether, for the moment.

As a strictly market breed for meat, the Cornish fowl stands today without a peer in the domestic poultry world. Cornish have far more meat, of better quality, tenderness and flavor than

any other breed in existence, for food fed to Cornish goes to the making of a carcass, almost rivaling a New England turkey in size, which in other birds goes to the making of feathers and not actual flesh. It is a mighty poor Cornish male, greatly undeveloped and improperly fed, that will not, at the age of one year, weigh ten pounds, and a pretty lean female that will not work up seven pounds on a pair of scales. These are yearling weights, it is true, but I can say truthfully that Cornish are fit to eat from the time they are six weeks old until they have many grandsons and granddaughters running around your yards. You will never have any trouble, with any decent method of feeding, to get a Cornish to weigh two pounds at from eight to ten weeks, —a great deal, of course, depending on the breeder and the method of feeding, in order to get flesh of the best quality on mature birds, Cornish for meat are in a class by themselves.

Cornish will lay, egg for egg, with any of the heavier breeds of poultry, and will in some cases actually outlay some varieties of our feathered friends that are supposed to be producers of a fair number of eggs. You ask right away, "what do you consider a fair number of eggs?" I would reply as follows: On a commercial egg farm, eggs they must have, regardless of the sacrifice of feeding stock, and we hear of the 200 or the 250 egg hen, perhaps, but for a general purpose fowl, you cannot expect to reach these high marks and still have your stock in a healthy condition to breed from; for I believe, and I am not alone in my convictions, that a hen that lays from 125 to 150 eggs per annum is in a far better condition to lay eggs that will produce "hatched to live chicks" than her sister that lays over the 200 mark.

Some may say that because I am a breeder of Cornish I am "set, heart and soul" in my work, and so cannot "see" anything but a Cornish. I will plead guilty of the first charge, for I am interested deeply in the breed I am working on, the Dark Cornish; but in answer to the second charge I just want to give you a few facts gleaned from a recent article which I picked up concerning the first

As a natural sequence of the boom of one new breed, and the accompanying reaping of ducats, some aspirants would have another new breed formed at just about the time that its predecessor was running down in prolificness. Then an amusing thing invariably happened. The champion of the latest variety would challenge comparison in laying powers with its predecessor that had made such a big run. The joke was that he would beat too. This made the poultry world ring again. It was a case of "the King is dead, long live the King."

Sometimes a breed that has been an old standby, falls off steadily year by year as regards numbers of entries in shows, and a concerted effort is proposed to revive its popularity. Let the sixteen in one (not 16 to 1) plan be followed to attain the desired renaissance.

In conclusion it should be mentioned that produce of pen 15 can be used as one of the 16 stocks, when a new start is made, so that when pen 15 is again reached there will be 31 stocks in one. Next, 46 in one, then 61 in one, and so on. The more the better just as in the human family.

"North American" egg laying contest at Storrs, Point, Ct., last year, to show you that Cornish have made egg records in other places besides the "back yards" of Ward's and Ward's friends. During the first 26 weeks of the first competition held at Storrs, a pen of Dark Cornish entered there, composed of hens that, with the exception of one yearling, were two year olds, and averaged 63 eggs per hen, laying during these weeks which composed the winter months of one of the coldest winters we have ever recorded in the East, an average of 126 eggs per hen per annum, and actually outlaying during the period stated, the Silver Wyandottes, the Golden Wyandottes, the S. C. Brown Leg-

horns, an egg laying breed, the S. C. Black Minorca, another so-called egg layer, the Houdans and the much touted Butercups. These are records which we must believe. They are before the whole poultry world, and not simply compiled by a fancier on a soap box in his back yard on Sunday afternoon. Cornish have the body for egg production. Cornish will lay eggs.

Notary Public.

## OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

## The Season's Greetings to You All.

Old Father Time has nearly completed another cycle, there have been dull times, hard times for some, and much unrest, but we believe that the turn in the tide has come and that from this time on we can confidently look for better things, more progress and greater prosperity.

Thanks to your earnest and helpful cooperation, American Poultry Journal can look back upon the year 1913 with satisfaction, for we have enjoyed a good year where many suffered from depression. At the beginning of the year our subscription price was raised to one dollar a year and many of our contemporaries predicted dire disaster. We are glad to be able to say at this time that business in subscriptions has been good throughout the year. We have maintained our fixed schedule of prices and we have not cut the price. October, usually a dull month for subscriptions, has been a source of welcome surprise to us in the number of renewals and increase in new subscriptions received, before we had begun our regular campaign work.

We are deeply grateful for the confidence our readers and advertisers display in American Poultry Journal and for the encouragement they have given us in our work. We have strived earnestly to make this a better magazine, to make it more helpful and more useful and to give the biggest value that can be given in a dollar poultry magazine. We have not been able to do all that we wanted to do in the brief year just past, but we feel that we have made some considerable progress. Many readers have kindly written us complimentary and encouraging letters and this has helped greatly.

We have added to our staff of workers and we have a force of earnest men and women, unequaled by any other publication in the field, who are striving always for better things and

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

greater stability in the field of poultry work. We play no favorites and publish fearlessly what we believe to be right. The advertiser has no advantages over the non-advertiser in our reading columns, both meet on an equal footing.

Our promise for the coming year, 1914, is that every member of our staff of editors, artists, contributors and printers will do his level best to make this a still better poultry magazine and to live up to our motto: "We Lead, Others Follow." There are many good things planned and you will get many times the worth of your dollar in 1914.

1914 promises to be a year of better times, progress and prosperity. The outlook was never better for those who get into the poultry business right, start right and stay right.

Your friendship and cooperation has ever been our greatest pleasure and our greatest asset. We hope and intend to always merit your approval and valued help, and now, as the season of Peace and Good Will approaches, we wish you one and all:

A Very Merry Christmas and A  
MOST PROSPEROUS AND HAPPY  
NEW YEAR.

## Ultra-Intensive Poultry Keeping.

Feathered Life, England's Utility Poultry Journal, under the caption, "A Belgian Poultry Object Lesson," publishes the following letter from Prof. Edward Brown—we want YOU to read it:

"Sir:—During recent years a great poultry industry has grown up in the provinces of East Flanders and Antwerp, Belgium, in the production of high-class fowls for table purposes, and a vast trade has resulted in the export of these birds to Germany. That it has been highly profitable is unquestionable, and in the prosperity a large number of people have shared. It was described at length in my 'Report on the Poultry Indus-

try in Belgium,' published three and a half years ago. Even then, however, I felt convinced that the methods adopted were conducive to disaster, in that these were ultra-intensive and must ultimately result in degeneracy and heavy loss. What was then foreshadowed has, unfortunately, proved to be true. The industry has been stricken, and an epidemic has spread over the entire country of a most serious character, disastrous in the extreme.

"The form which it has assumed is a high rate of mortality in chickens. In some instances the deaths have reached 80 per cent of the birds hatched. In others all have died. Ruin has followed in many cases. So great has been the loss that the Belgian Ministry of Agriculture authorized a scientific investigation by the staff of the Louvain University, and a report just issued states that the immediate cause is bacteria which pass from the hen through the egg to the chickens, which are born but to die.

"My own investigations have been rather in the direction of causation, with a view to prevention, and as a guide to our own people, more especially as the present-day tendencies are for the development on intensive lines of poultry-keeping.

"The conclusions arrived at may be summarized as follows: (1) Loss of constitutional vigor in the breeding stock, as a result of the false systems of breeding adopted; (2) use of yearling cockerels for breeding chickens intended for stock purposes; (3) in-breeding; (4) forced methods of rearing chickens that are grown as breeders; (5) non-hygienic conditions in the houses and runs, and tainted soil due to over-crowding; and (6) conditions favorable to the increase of parasites and bacteria.

"When the facts as stated are realized, and the lesson learnt, I cannot but think that the industry will regain its former prosperity, and that better methods will be adopted. Meanwhile this bitter experience should be an object-lesson to our own people. Yours, etc., Edward Brown."

In America today we are suffering from the effects of over-exploiting and over-doing the ultra-intensive system of poultry keeping. By ultra-intensive poultry keeping we mean the crowding of fowls and chicks in cramped quarters, combined with heavy feeding, no opportunity to range, and the contin-

uous over-cropping of very small land areas with chicks and fowls.

Prof. Brown has called attention to the object lesson and we should profit by it. The ultra-intensive poultry keeping systems are not all bad. They have helped many people to become interested in profitable poultry keeping who might never have been reached in any other way. Sensibly used, intensive methods may be profitably turned to good account and will help some people to have poultry and eggs for the family table at production cost, when they could not do so in any other way.

System promoters, however, have made too much capital of exceptional cases, they have claimed too much and some of them have become rich through extravagant advertising which has done the poultry industry, as a whole, more harm than good.

You can't force fowls continuously in crowded quarters, year after year, and continue to breed from them with good results. You may for a time get unusual production because of the attack that an ultra-intensive method makes upon constitutional vigor. You may for a time get more eggs and possibly more chicks for the same reason that trees fruit heavily after severe pruning. You can't keep it up and get away with it safely.

If ultra-intensive methods are continuously employed, season after season with layers, breeders and growing chicks, trouble is certain to come of it. There is loss of constitutional vigor, loss of resistance to disease; microscopic germs, which may be normally inert in a sound healthy body, become suddenly overwhelmingly destructive and we get diseased egg organs, infected eggs and chicks born only to die, being doomed before birth.

We hope that American poultry keepers will wake up and save themselves before it is too late. Already some of our market chicken raising communities are seriously affected. The past few seasons, chick mortality has increased at an alarming rate. White diarrhoea and kindred ailments, though caused by micro-organisms, are the direct result of lost constitutional vigor, forced-fed growing stock, forced-fed breeding stock, and the continued use of poisoned ground.

With reasonably sanitary precautions, especially paying attention to keeping the soil sweet on which the birds run, you can grow chickens satisfactorily, for home use and the market, by intensive methods. You may even breed fowls for a few seasons kept on the intensive plan and get away with it, but you can't keep it up and one day comes a reckoning.

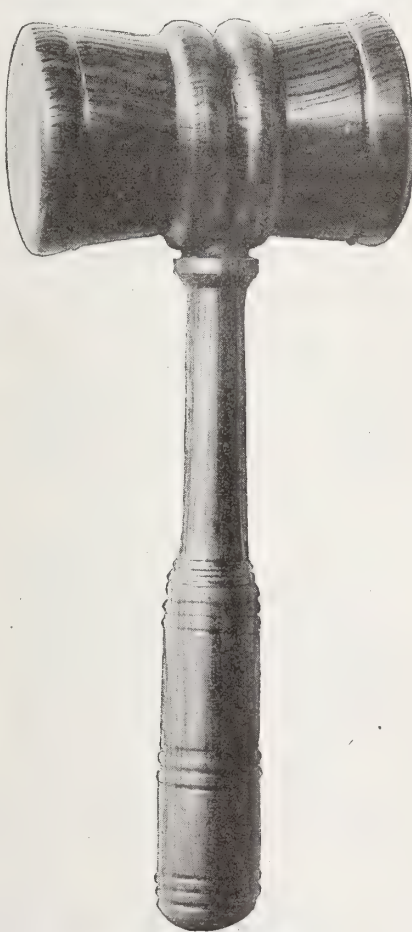

To continue successful with any ultra-intensive system you must have eggs for hatching from range-bred, range-reared and not forced-fed breeding stock, grown on soil that is stirred and cropped sufficiently, and allowed to rest from poultry at intervals, to keep it free from poisoning. Or, you should frequently renew your intensive-system flocks with stock birds grown under wholesome range conditions.

The ultra-intensive system poultry keeper should not sell eggs for hatching. That is practically putting a premium on the dissemination of disease. His intensive-culture flocks should be worked for the production of table meat and eggs and not for

the production of breeding stock. He should go to the range breeder frequently for new stock and a fresh supply of constitutional vigor.

Intensive poultry keeping and its dangers are not limited to the poultryman who uses box coops and tenement house methods. Some big plant market growers are just as deep in the mire. They continue, season after season, to select breeding stock from among their forced for market flocks and keep right on using the same old ground, year after year, without proper cropping and resting of the soil. They get a good season now and then, but many bad seasons, and they continue to rave about "bad luck" when the trouble is largely bad management.

We have in mind a certain grower who last year raised some of the best market chickens we ever saw. The present season he is certain to have

heavy losses. For one thing he failed to get his usual good crop of green food started for his flocks. His chief trouble, however, was failure of his source of hatching eggs. He buys all eggs for hatching. This year the man who supplied him with eggs had many immature breeders and a large number of the stock birds had been selected from forced-for-market stock. It took 9,000 eggs to hatch about 3,000 chickens. That tells a story in itself of lack of constitutional vigor. The chickens do not grow uniformly. They are greatly lacking in constitutional vigor and will not make good frame and body growth in spite of good care. In spite of frequent culling for size and growth, every flock has many sizes, mostly weaklings, wobbly-legged, knock-kneed, rough feathered, thin-shanked chickens that have lack of constitutional

vigor stamped all over them. Their owner must get rid of them as best he can and count this season a loss. He describes the crop as, "a miserable, excrement-eating, go-light, lot of birds."

We urge our readers to heed these lessons. Don't employ ultra-intensive methods continuously, nor at all if avoidable, with your breeding stock. Use range-bred, range-reared, open-air stock birds for breeding purposes. Keep the soil sweet by frequent resting, stirring and cropping. Breed always for strong constitutional vigor.

To stop the alarming increase of mortality from germ diseases among our poultry we must strike deep at the fountain head. Treating disease when it appears is of little value. Disinfecting has only limited scope. Prevention is the main thing.

The best method of prevention is to breed strong disease-resisting qualities into our poultry by consistently breeding for health and strong constitutional vigor. Germ diseases only attack the susceptible individuals—don't forget that. This is true, or the "germs" would be the only things left alive today.

Follow breeding for health, vigor, and disease-resisting qualities by common sense management to preserve these desirable qualities.

#### New Gavel Presented to American Poultry Association.

The following letter explains itself. We received the gavel mentioned and forwarded it to President Thompson. We show herewith a picture of the gavel.

Ancon, C. Z. Panama, October 12, 1913.  
Mr. Jas. W. Bell,

Editor American Poultry Journal,  
Chicago, Ill.

Dear Sir: Noticing your editorial on the need of a gavel for the President of the American Poultry Journal, I take the liberty of sending you one to be presented to the association. I am mailing it to you not knowing the address of the president.

The gavel I believe will last till I become president of the association, as the wood has served many years before being made into the gavel.

The wood is Lignum-Vitea, and was a railroad tie, being one of the original ties of the Panama Railroad, and has been in service for more than fifty years. The aspirants for the presidency of the association need have no alarm as I knew the lasting quality of the gavel when I made the above statement.

Hoping the gavel will be perfectly satisfactory, and will tap much harmony into the association, I beg to remain,  
Respectfully,

E. H. Deer.

#### Madison Square Garden Show.

Charles D. Cleveland, superintendent of the Madison Square Garden Poultry Show, New York City, to be held December 26 to 31, has mailed over 4,000 premium lists, most of them in response to written requests. The unusual amount of interest in this exhibit indicates a heavy entry and it is expected that the pen classes will be particularly strong and of fine quality. Believing that the public is more interested in pens than in any other entries the management has arranged

for the accommodation of 500 exhibition pens.

This will be the 25th annual exhibition of the New York Poultry and Pigeon Association and twenty Specialty Clubs are planning to meet at this show. Large entries from abroad are expected.

On the opening night the management will give an informal reception and supper to exhibitors and friends. There will be absolutely no formality on this occasion, just a good time and a get-together meeting of fanciers.

The attention of exhibitors is called to the fact that the Garden will be open two days before the commencement of the show, and that it will not be necessary to ship birds out of the garden on the closing night, thus ample time is given at both the opening and the closing of the show to coop specimens and to avoid having shipments delayed by being on the road on a holiday.

Premium lists and detailed information may be had of the secretary, Box 69, Eatontown, N. J.

### World's Champion Layers.

A thoroughbred Barred Plymouth Rock and a cross-bred, having White Leghorn and Barred Rock blood, have made new records in the world's championship for egg producers and the standard-bred Barred Plymouth Rock is just one egg ahead for the year.

"Lady Morley," No. 208, a "Go-well Strain" Barred Plymouth Rock pullet, owned by W. D. Crowell, Arcadia, Nova Scotia, from September 29, 1912, to September 28, 1913, inclusive, produced 292 eggs. On September 30 she laid one more egg making a total of 293 eggs in one year and two days. Up to October 27 she had not laid since and was quite bare from moult. We believe that this record of 292 eggs in one year, only eight less than 300, is the world's record laying to date. The owner's affidavit and copy of egg record for the year is published herewith.

A cross-bred hen, (the original cross being Barred Plymouth Rock and White Leghorn, but strain now being developed for egg production having more Leghorn blood than Rock blood) No. c.543, bred by Prof. James Dryden, Oregon Agricultural College, Corvallis,

made a record of 291 eggs in her laying year ending October 15, 1913. Only one egg less in one year than Champion "Lady Morley."

This is wonderful laying and is getting pretty close to the "300 egg hen" that the "bred-to-lay" breeders have been working for. When one considers that 144 eggs in a year is a very good average for a good flock of layers and that these champion layers produce more than double that num-

each last year. Another member of the Oregon flock had produced 280 eggs and had still 30 days in which to complete her laying year. Still another has a record of 268 eggs and a month in which to finish the year. Prof. Dryden says the heavy layers are normal healthy specimens and produce eggs of normal size and that his records show that fecundity is transmitted. He says further: "We are trying to get higher egg yields in two ways:

EXHIBIT A																															TOTAL FOR YEAR	292

A correct transcript of the original day by day egg record of pullet "Lady Morley" known as #208 in record book. H. B. Crowell.

ber of eggs, the performance seems still more remarkable. Though they are unusual specimens, perhaps, they cannot justly be classed as "accidents" for they are the result of intelligent, consistent and persistent striving for an ideal—a "300 egg hen" or better.

The Oregon cross-bred has several generations of heavy layers back of her and is one of a flock of fifty hens which produced more than 200 eggs

First, by selecting good layers from existing breeds, and secondly by crossing the breeds and selecting the best layers. The second method has given the best result, although I believe it is possible to get good results by the first. The object of cross breeding is to improve the vitality, which is injured in many pure bred fowls by inbreeding. No unnatural methods have been resorted to here to break the egg laying records. These results were

## Buff Orpingtons

The trapnested kind—the sort that lays the eggs, produces the birds, wins the prizes at Greater New York, Chicago, Indianapolis, Louisville, Nashville, Memphis; holds the crowd at every important show and points the way to real Orpingtons.

### No Contest Too Keen—No Demand Too Great

We can supply your needs and will give one hundred cents in value for every dollar you care to invest with a plain guarantee, you must be pleased or the birds can be returned and we will refund your money. Thousands of exhibition specimens and selected breeders. Let us help you win and improve your flock. Send for big Orpington Fashion Plate Book—the key-flower of perfection, free.

A. E. Martz & Son Buff Orpington Specialists Box A, Arcadia, Indiana

secured by methods adapted to farm and commercial flocks."

With such earnest workers in the field it would seem that we may get big flocks of 200-eggers in time. More power to those who are working for bred-to-lay strains.

Mr. Crowell's flock of Barred Rocks, it should be noted, contains a number of hens which lay 200 eggs or better. One bird in a pen of nine pullets, which averaged 243 eggs last year, made the world's record for that year by producing 283 eggs. A Ringlet strain pullet in the same yards has a record of 244 eggs in nine months and still laying. Such specimens cannot be fairly classed as produced by accident.

The day-by-day egg record of "Lady Morley," W. B. Crowell's 292 egg champion layer is reproduced in another column. Mr. Crowell's affidavit presenting facts concerning his remarkable layers is quoted below:

"In the Matter of Certain Egg Laying Records of Plymouth Rock Hens (Barred) Kept By W. B. Crowell of Arcadia, in the County of Yarmouth, Province of Nova Scotia, and Dominion of Canada, Clergyman.

"I, W. B. Crowell of Arcadia, in the County of Yarmouth, Province of Nova Scotia, and Dominion of Canada, Clergyman, do solemnly declare—

"1. That in connection with my poultry I use the Maine Experimental Station Trap Nest.

"2. That I mark each egg with the hen's number as the hen is taken from the nest. This number is entered at once upon a book.

"3. That the Plymouth Rock pullet, 'Lady Morley,' laid from September 29th, 1912, to September 28th, 1913, both inclusive, 292 eggs. All of which will more fully appear by reference to the copy of the day by day record of this pullet herewith produced and marked 'Exhibit A.' The mother of this pullet was purchased by me from the Gowell Poultry Farm of Orono, Maine, and their number for her was A204. This hen had a pullet record of 217 eggs. The sire of said 'Lady Morley' was the son of a cock purchased from said Gowell Poultry Farm, whose dam, in turn, was numbered by them No. 1225, said dam having a pullet record of 223 eggs. The dam of this cock, that is the granddam of 'Lady Morley,'

had a record of 178 eggs. Gowell's number for her was 850.

"4. I have a pullet hatched from the famous Ringlet strain, the eggs of which I bought from F. L. Young, East Braintree, Mass. This pullet began to lay January 29th, 1913, and in nine months laid 244 eggs and is still laying.

"5. The average number of laying days this year of a pen of 16 pullets of mine is 283, and the average number of eggs is 205.5.

"6. Last year I had a pen of nine pullets which averaged 243 eggs. The highest number was 283, the next 281. Copies of these records were transmitted by me monthly to the poultry division of the Nova Scotia Agricultural College, Truro, Nova Scotia; the above statement can, therefore, be verified by reference to these returns. The record of this pen for this year was very unsatisfactory, and all were killed, save one, whose record for 1912, was 234 eggs, and has laid this year up to the present time 220 eggs, and has until November 11th, to complete the year.

"7. This declaration is not made for the purpose of selling eggs, as the fertility in my eggs during February and March of this present year was not above 50 per cent, and after April 1st the eggs were not fertile.

"And I make this solemn declaration, conscientiously believing it to be true, and knowing that it is of the same force and effect as if made under oath, and by virtue of the Canada Evidence Act.

"(Signed) W. B. Crowell."

"Declared before me, at Yarmouth, in the County of Yarmouth, N. S., this 27th day of October, A. D. 1913.

"(Seal) C. Curtis McKay.

A Notary Public in and for the Province of Nova Scotia."

### Beef and Poultry.

Gustav Bischoff, president of the American Packers' Association, in an interview given to the Chicago Inter-Ocean, predicts a beef famine by 1923 and he urges American farmers to grow more beef. He says that "our farmers should be taught that they can profitably enter the meat raising business." In course of his remarks he stated:

"Unless the farmers of the United States are educated at once to the necessity of

raising cattle, a period of national decline will set in within the next ten years, porterbouse steak will be sold at \$1 a pound, and the American workingman will begin to lose initiative and take on the characteristics of the rice-eating Chinese.

"Packing houses will be closed up and workmen who now are making good wages and comfortable livings will be thrown out of employment. Much of the country's money will go to foreign countries. We will be a nation of dependents."

Melvin A. Taylor, vice president of the Stock Yards National Bank of East St. Louis, commenting on the same situation said:

"Unless something is done to bring about an increase in live stock production in the United States and throughout the world, the Americans in a comparatively few years will be forced to follow the example of the French and Germans and eat horse flesh.

"There are a number of reasons for the decrease in live stock production. One of the serious causes is our vicious tenant system. Then again our population is increasing at a much greater ratio than our production of live stock. Taking the world at large there has been an increase in population of 25 per cent in the last ten years, while the cattle increase has been only 11½ per cent."

There is doubtless much truth in the statements of these gentlemen, who should be quite familiar with the situation, but they omit telling that the packers, and even the small meat dealers, are largely responsible for present conditions in the production of meat in this country.

Many farmers would be glad to grow beef, if they could do so at a fair profit. One great trouble is that when the farmer has beef to sell he has to take whatever price the packers choose to pay for it. When the farmer wants to buy beef he must pay the price demanded by the packers and dealers. Often when he sells beef and other produce he doesn't get a new dollar for an old one. There is much that is rotten in the marketing of the food produced in this country and the packers, railroads, middlemen and dealers are all getting fat on their profits while the farmers, as a class, still find

## Broke All Records at Boston

Boston has always been conceded to be America's greatest White Wyandotte Show, but it remained for **Martin's Regals** in January last to break all previous records by a good big margin. In a Class of 215 of the best White Wyandottes ever gotten together and shown by twenty-two exhibitors, they won as follows:

**Cocks—First and Sixth**

**Hens—First, Fourth and Fifth**

**Cockerels—First, Third and Fourth**

**Pullets—First, Third and Fourth**

**Pens—Second, Third and Fourth**

**First Display with a score of 72 points, which was 12 more than my 21 competitors combined.**

**\$100 Challenge Cup and practically all the other specials.**

Such winnings as these place the Regals far in advance of all competitors, and the type I have always advocated is the best suited for heavy egg production and general usefulness.

### 2000 - Cocks, Hens, Cockerels and Pullets for Sale - 2000

**SPECIAL**—100 Exhibition Cockerels and 200 beautiful Pullets ready to win the blue ribbon for you.

100 well matured Cockerels from my heavy-laying Dorcas line, \$10, \$15, \$20 and \$25 each. Dorcas Pullets, \$5, \$8 and \$10 each. Stay-white utility Ckls., \$3 and \$5 ea.

Send four cents for the Regal White Wyandotte Book. Free illustrated Catalogue and Sale List.

Crusader III, a Boston Winner

it hard work to get a decent living.

We won't have to eat much horse flesh for some time yet. Fortunately poultry and poultry produce are not so easily gobbled and controlled by the sharks of the market. Poultry is affected and often the cost of grain and supplies is boosted by market juggling beyond all reasonable limits, but a very large portion of the poultry produced cannot be easily rounded up and swallowed by the big fish. Every man in this country, who has the use of a back lot, can keep a few fowls for eggs and raise chickens for the home table and he can produce such food for home use at fairly reasonable cost even with grain at famine prices. If he uses a reasonable amount of common sense and does not carry the ultra-intensive poultry keeping too far, he can in some measure be independent of the "meat trust."

Poultry and eggs are good food, much better food than too much beef. We know a thrifty German family that produces most of the meat they consume. They have a small suburban place and raise a goodly number of chickens each year, many to eat and some to sell. They keep a sufficient number of hens to supply eggs for the family table and often have eggs to sell to neighbors. They also raise Belgian hares and grow them for family food purposes. It is seldom that they buy meat at the market and generally when they do so it is out of the proceeds of the sale of poultry or eggs.

We would be glad to see American farmers growing more beef and selling it at a profit. It would be better for the farms and the farmers. Feeding hay, grain and straw to cattle on the home place helps to put fertility back into the soil as well as making meat. It ought to prove better than spending so much money for commercial fertilizers. What we want most to see, however, is more families helping themselves toward greater independence and a better living by producing poultry and eggs at home for the family table, and perhaps a surplus to sell to less fortunate neighbors. There is no need to have a meat famine by 1923, or even many many years later, if we will all make the most of our resources. Try home raised poultry and eggs once and you won't do without them afterward.

### "The High Cost of Living."

The Boston Post (Mass.) published the following editorial on October 18, 1913:

#### "FOOD ROTTING ON THE GROUND."

"Reports from Minnesota declare that thousands of bushels of fine apples and other foodstuffs lie rotting on the ground.

"The farmer would gladly sell them at a reasonable profit; but it's too big a gamble for him to undertake the marketing under present conditions. The farmer has had some bitter experiences the past few years. He has sent lettuce and celery from the South and received back sums less than the actual cost of gathering the crop. He has sent fruit and melons from the West, and has seen whole carloads permitted to stand and rot on side tracks while prices were kept up in the cities by the maintaining of an unnatural shortage.

"It might not seem quite so bad if there were any benefit to the consumer in the way of low prices; but the only one to benefit at all seems to have been the man who is neither producer nor consumer, the middleman.

"The middleman is necessary, under present marketing conditions. Attempts to deliver food produce direct from the farm to the consumer's kitchen have never been successful on a very large scale, or without considerable capital. But there is something terribly wrong with marketing conditions when good food lies rotting on the ground in one section while people are paying famine prices because of 'scarcity of supply' in another section."

Dr. Dearborn, in a lecture on eugenics at the Tufts Medical School, (Mass.) on the evening of October 21, 1913, said:

"Three children is an ideal family, biologically and rationally. Large families are a luxury. As long as every couple has two or three children I cannot see possibly why any government should ask any more than that.

"Our food supply is at present inadequate. It is lessening families with perfect sanction for so doing. The birth rate is continually diminishing and this is the only reason—the inadequate food supply."

At a meeting of the Mansfield (Mass.) Poultry, Pigeon and Pet Stock Association, held on the evening of October 17, 1913, President William S. Harris, addressing the association, said:

"It is high time that the poultrymen of this country should act and demand of the officials at Washington, why some action is not taken against that blood-sucking Grain Trust, which is sapping the life blood from our people for the sake of adding a few

more millions to their already ill-gotten gain.

"Grain elevators are placed at the base of supply all over the great grain belts, for the express purpose of regulating the supply, that high prices may be maintained, thus controlling the grain crops of our country and placing the farmers under their thumb.

"This is in restraint of trade and a direct violation of the law. With this trust 'busted,' grain prices would be governed by supply and demand. Practically all the necessities of life depend on grain, such as meat, bread, butter, wool, hides for shoes and many other things too numerous to mention. Why, then, do not the proper officials strike at the root of this nationwide song—"The High Cost of Living:""

The members of the Mansfield Association enthusiastically endorsed President Harris' speech and drew up a set of resolutions which were sent to President Woodrow Wilson, quoting Mr. Harris' remarks and praying that some immediate action be taken to relieve the great poultry industry of this country from the prevailing inflated grain prices.

Within the month Eastern farmers have been urged by the press to grow beef at home and housekeepers everywhere have been urged to stop eating veal and encourage production of beef in the east.

These things all tend to show that the public is beginning to sit up and take notice of "how the wind is blowing" that causes the high cost of living. They are not going to be content with being told that the trouble is due to "the cost of high living" and not to "high cost of living."

We believe that Dr. Dearborn is wrong in his statement that: "Our food supply is at present inadequate. It is undeveloped." The Boston Post editorial contains a truth that you can well afford to ponder over. What is to be done about it?

There is an abundance of food produced in this country to feed everybody and feed everybody well and at lower cost than it is done at present. Much of this food now goes to waste. Every year fruit, grain, and other foods are deliberately allowed to go to waste, because the producers are not permitted to get them into the market except at a loss.

We have a friend who is at the head of a farmer's cooperative association. This association made several attempts to get their produce into mar-

# Keeler's Wh. Wyandottes

## "THE WORLD'S GREATEST STRAIN"

FASHION PLATE II

**For twenty years I have been producing White Wyandottes that win**

—Winning in mine and my customer's hands in the hottest kind of competition: New York, Chicago, St. Louis, Pittsburgh, New Orleans, Indianapolis, Washington, D. C., Kansas City, Dallas, Texas, Los Angeles, Portland World's Fair, etc. My customers win. Stock hatched from my eggs and shipped from my yards has won in every section of this country as well as foreign lands including England, South Africa, New Zealand and Australia. The coming show season will be no exception, so let me sell you the birds that will land you among the winners. Get in line with the strain that produces a larger percent of SHOW BIRDS than any other.

### The World's Greatest Strain

In producing this grand show quality I have not lost sight of the Utility points and my birds are large, mature quick and lay from 200 to 265 eggs a year. I have succeeded in raising more good birds than ever and have for sale something like 150 cocks, 500 hens, 900 cockerels and 1,200 pullets. **Selected Breeders \$25, \$35 and \$50 a pen of 4 females and 1 male. CHOICE SHOW BIRDS \$50, \$75, \$100 and \$150 a pen.** Get in touch with me now for your November, December and January Show Birds. Stock conditioned, washed and fitted for your show without extra charge. Sixty-Page Art Catalogue of America's Finest White Wyandottes free for the asking. (5 red stamps for postage appreciated.) Please state your wants clearly and address

**Keelersville, Chas. V. Keeler, Prop. and Mgr., R. F. D. No. 11, Winamac, Ind.**

kets where there was scarcity. Railroad delays made one train shipment an entire loss. Another shipment was so manipulated that the producers did not get the cost of packing and lost the cost of the produce and the freight. You can't expect producers to get enthusiastic about marketing their crops under such conditions of loss.

Market manipulators and the railroads are responsible in a large measure for the high cost of living. There is something wickedly and radically wrong with the getting of foodstuffs from the producer to the consumer. In many cases the producer don't get a new dollar for an old one. Unless there is a change, and a big change, for the better in these conditions we expect to see something more than talk about "government ownership" in this country. If Uncle Sam owned the railroads and would take charge of marketing the real abundance of food that our fertile country produces, instead of letting big corporations do the work for the private gain of a few, the cost of living could be reasonable enough.

Eastern farmers have tried to grow veal calves into beef and they know that market conditions are such that they are forced to sell their beef at a loss. Cost of production considered they can't and don't get a fair price for their poultry and eggs except in few and rare cases.

Last winter when eggs were selling at 50 cents a dozen for new laid eggs and when the demand was fairly good in lower Plymouth County, the trade deliberately shut down on the supply of new laid eggs from a nearby farm and cancelled their orders. They bought a couple of car lots of cheap western refrigerator eggs and sold them to their trade at a price equal to "new laid" eggs prices and made a fatter profit. These eggs were displayed as the new laid eggs had been but were not labeled. In an out of the way place on the wall of the store hung the legend, "Cold Storage Goods Sold Here," but the customers didn't get the new laid eggs they paid for. Who's to blame?

In most places the producer has to take what he can get, unless he markets direct to the consumer. When the producer has to take a low price,

or have difficulty in marketing his product, and the customer has to pay a big price—what's the remedy? On most produce, including poultry and eggs, the collector and shipper has to make a profit, the jobber or commission man makes a profit, the wholesaler makes a profit, the retailer makes a profit and the railroads make their profits hauling the produce from place to place. With such an organization where do the poor producer and consumer come in?

Eggs and poultry produced on a Maine farm are shipped to a Boston, Mass., dealer and bring the fresh eastern goods prices. The railroad gets freight and the dealer his commission. Another dealer gets the goods and ships them back again to a Maine hotel, within a hundred miles of the farm that produced the eggs. Fine system, isn't it? How would you remedy it?

A Massachusetts poultry farm in an endeavor to get better prices on grain, (the price being excessive at local dealers) went to an elevator for supplies. The elevator could not get a better freight rate to the farm's railroad station than seven cents a hundred pounds in five ton to carload lots. The farm's station is only twelve miles from the grain elevator. Another station on the same railroad, twenty miles from the elevator and ten miles from the farm, has a special "milling privilege" on freight so that the elevator can ship there in like quantities for two cents a hundred pounds.

In certain sections grain on the South Shore costs from ten to thirty cents more per hundred pounds than the same quality of grain in certain sections of the North Shore, (both sections equally distant from Boston). Railroad rates and transfer charges make it impossible to get the cheaper North Shore supplies into the South Shore at any saving in cost of the grain. The South Shore man has to pay double the price of the North Shore man for shipments of eggs into Boston. On the North the railroad has to compete with independent local express companies, but on the South, in the locality we refer to, there is no such competition and the producer has

to put up with the high cost as best he can.

Isn't it about time that our Uncle Sam took a hand in this market game and made an effort to give both producer and consumer a chance? Isn't the food supply of the people a sufficiently important matter to be worth his careful consideration? The high cost of living keeps right on going up and when a small cut is made in the price of one item; a dozen others are boosted skyward and the cut in price don't stay cut for long.

Think it over and let your lawmakers know what you think about it. This is said to be a rich and prosperous country. It is for the few but not for the majority. Seventy-five percent of our wage earners in this country are getting wages that are not sufficient, under present day conditions, to enable an average family to live comfortable. Well, what are YOU going to do about it?

#### Dr. Woods' Notes and Comments.

Merry Christmas All!

Our readers are showing a great deal of interest in the day-old chick business. It is more than ever apparent that it would have been suicidal policy on the part of the American Poultry Association to adopt resolutions against the sale of baby chicks. The day-old chick business is here to stay.

One of our contemporaries, evidently "on the fence" in regard to the day-old-baby chick business and commenting on the tabling of the anti-day-old chick resolution at Atlantic City says: "During the discussion that followed it was plainly evident that notwithstanding the large amount of dissatisfaction that the day-old chick business has produced, it has strong advocates. During the past two seasons there has been a feeling among poultrymen that the day-old chick business was having a detrimental effect on the Standard-bred poultry business owing to the dissatisfaction resulting from long distance shipments and inferior quality of stock furnished by many who are engaged in the business on a large scale."

## WM. COOK & SONS

### ORIGINATORS OF ALL THE ORPINGTON FOWLS & DUCKS

Plants in America, England and South Africa Established 1873

: Box A, Scotch Plains, New Jersey

Eventually, if after the best Orpingtons any variety you will buy from their originators, why not now? And avoid loss and disappointment. We guarantee safe delivery and satisfaction, backed up by a reputation of 40 years' standing, this means something to you.

Now is the time to purchase your exhibition Orpingtons from their recognized headquarters. We always have a large stock on hand of imported birds from our English plant, being from stock mated up by our Mr. P. A. Cook especially for American requirements. We can ship the same day your order is received.

We have thousands of Orpingtons to choose from in S. C. Black, White and Buff, Diamond Jubilee, Spangle and Blue Orpingtons, all of which we originated.

It is natural the best can be procured from their originators.

Send 10c for illustrated catalogue, containing history of the origination of all the Orpingtons and hints on poultry keeping. Eggs from our winners and the finest Orpingtons in the world, \$20 a setting; from fine stock, \$10 a setting. Advice free. Inspection invited. Trains met. Over fourteen thousand first prizes won by us. We are by many times the largest poultry breeders in the world. Ornamental land and water fowl for sale.

Except in very rare instances this alleged "dissatisfaction" was not experienced by buyers of day-old chicks, and if any man made a fizzle of the day-old chick business because he failed to supply well hatched chicks or sold "inferior quality" stock, it will be a good thing for the industry for him to get dissatisfied and get out of the business. We don't want to see anybody hatching and selling day-old chicks, or selling eggs for hatching, unless they know their business and deliver good goods. We have not noted any "dissatisfaction" concerning day-old chicks and singularly enough we get hundreds of letters complaining about other branches of the poultry business. The only dissatisfaction we have observed has been on the part of those whose business has not been quite up to the mark the past few seasons and who are looking for something to blame it on instead of attributing it to their own shortsightedness. The

laggard is always growling at the march of progress. Why not brace up and try to keep up with the band?

That "anti" resolution was fathered in Indiana and had some support from the Pacific Coast, where some individuals, who didn't know the business, did not do well with it. If we judged all branches of business by the failures of the incompetents, what would happen? Think that over.

Harry K. Forbes, R. C. R. I. Red breeder, of Terre Haute, Indiana, writes: "I think the stand that A. P. J. is making on the day-old chick business is absolutely correct."

J. W. Parks, the bred-to-lay Barred Rock man, of Altoona, Pa., sent us a bunch of day-old chick testimonials of which the following from a Cleveland, Ohio, customer is too good to keep and should be read by the "dissatis-

fied" bunch: "You will remember that I purchased 25 day-old chicks from you last June. I have 19 of the 26 you sent me and they are doing remarkably well—in fact they all are good husky youngsters, well-marked and making rapid growth and I thank you for sending me more than my money's worth."

Late in October we called on Philip R. Park, of the Park and Pollard Co., Boston, Mass. This firm handles from 125,000 to 200,000 day-old-baby chicks annually. Most of these chicks are shipped into the Boston store from hatcheries and then out again to customers. Mr. Park said to us: "The day-old chick business is here to stay. It would be suicide for the A. P. A. to take a stand against it. Most customers are pleased with results and come back for more chicks season after season. Losses are small and unimportant. Complaints are very few, very much less than we used to experience in the eggs-for-hatching business."

Joseph Tolman, the Fresh-Air White Rock breeder, Rockland, Mass., writes: "I have been much interested in your article and editorial on the day-old chick question. You are right in every point. The men who argue against this most important branch of the poultry industry of today are very much mistaken. My seven years in shipping day-old chicks has proved to me beyond a doubt that this is the safest and best method for a poultryman to get a start in the business. My best satisfied customers are those who purchase day-old chicks and now, each year, nearly 90% of all my eggs go into my mammoth incubators and the sturdy little chicks are shipped to all parts of the eastern states. I do not advise shipping more than two days journey from the shipper's express office, although under some conditions you can ship farther with good success. Over 80% of my last season's day-old chick orders came from old customers. Can those who oppose this business say as much of their specialty?"

Looks like a "large amount of dissatisfaction" doesn't it when eighty percent of a big season's business comes from satisfied customers who send in repeat orders? There are a good many people who will tell you that the poultry business is a peculiar business and that many go in and few stay and most go out of the business after a very brief experience. Now, we don't believe that sort of thing for one minute. When the "hen-fever bug" once bites a man he is generally inoculated for life and he stays in the business if he has a chance, and we have known men to go back and win success after discouragement, failure and disappointment, that would seem enough to knock all notion of the business out of anybody. In all enterprises there are some men who do business on the assumption that "there is a new sucker born every minute" and they believe in "getting theirs when the getting is good." That is a shortsighted policy and when you find people doing a big business, but every year doing it mostly with new customers and very seldom with old ones, you cannot help wondering that they do not get the scales from their eyes and wake up to the fact that it pays

## Links of Success

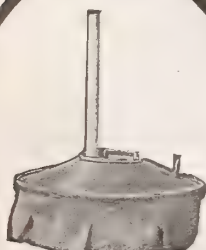

### HATCHING

60-Egg Hatchalot Incubator

Most successful poultrymen began hatching with small incubators, recognizing experience as the most profitable teacher. This 60-Egg Hatchalot incubator will start you right. It is not only an excellent hatcher but the best constructed incubator for the price on the market today. It is made of No. 1 Cypress. The boiler is large and is so constructed that it will heat the incubator under all ordinary climatic conditions. Its mild heat prevents evaporation of the moisture, so that all eggs with chicks in them will hatch, and every chick will be as large as the eggshell will allow.

### RAISING

International Sanitary Hover

Since the inception of the International Sanitary Hover, chick raising has become a pleasure to poultrymen. Many of our customers tell us they have raised 90, 95, 98 and some even 100% of the baby chicks put under the hovers. There is nothing complicated about the hover. It is warmest at the curtain—usable anywhere. No crowding or smothering of chicks—no kneeling in dust or mud to get at the lamp—no cutting of holes or building of platforms. To set it up, you simply light the lamp and set it down and it is ready for use.

### FEEDING

Exerciser and Feeder

This Exerciser-Feeder is just what its name implies. It is a large hopper supported on four strong iron legs and devised to hold all the food necessary for poultry. In addition to the grain exerciser, it contains six other compartments for dry mash, beef scrap, charcoal, grit, oyster shell, etc. All are easily accessible to the fowls, and the feeder is so constructed that none of the food can be wasted. It eliminates all other feeding devices.

Sold by dealers everywhere. Send for complete catalog.

**HOVER-INCUBATOR MFG. CO.**

Box 511, Browns Mills, N. J.

to satisfy customers and keep them coming back for more. Some firms, we know of, that do a big business and borrow heavily from banks in order to keep their business going, might have made greater and more substantial success had they endeavored to satisfy and hold custom instead of always reaching out for new buyers and forgetting their customer's interests once they got his money. It doesn't pay to forget that honesty is the best policy, that it is best to deliver honest goods and honest values, and that a satisfied customer is the best advertising asset that any business man can have. For a long time the poultry business has been pretty well "up in the air," it is just beginning to settle solidly as a legitimate modern business on a substantial foundation. It will pay well if you get in right, go right, and stay right.

\* \* \*

We have noted a tendency on the part of some poultrymen, and others, to speak slightly of the "back-lotter" in the poultry business. It might be well to remember that some of our foremost fanciers have been "back-lotters." The men and women who keep a few fowls on a town or village lot are a great multitude and are worthy of much consideration. The "back-lotter" can usually keep poultry at the lowest cost for maintenance. Labor counts for little with him as he attends to his flock in odd hours for relaxation and pleasure. Back lot poultry keeping helps to develop the fancier and breeder instinct and many a man, who began with a few fowls on the home lot, to supply eggs for the family table, has developed into a breeder of "good ones" and a consistent winner in the show room. The "back-lotter" can produce eggs and poultry for his table at minimum cost. He is one of the biggest assets in the support of the many poultry supply houses all over the country. He is the prospective customer of the fancier and breeder who has eggs for hatching, breeding stock, or day-old chicks to sell. His name is legion among the subscribers to poultry magazines and he is certainly entitled to all honor and respect. We can't all be large plant owners and if poultry keeping were confined to large plants there would be a great falling off in public interest. The large plant is a commercial enterprise, whether it is conducted for fancy or utility purposes, and it don't do much toward creating fanciers and breeders, except as it helps as an incentive to those who aspire to some day become large plant proprietors. Encourage the "back-lotter" and help him all you can to become a successful poultryman. May the tribe of "back-lotters" continue to increase, the more we have of them the better. Back lot poultry keeping is one great help toward lowering the high cost of living.

\* \* \*

We have received a copy of a new book entitled: "Margaret Mahaney Talks About Turkeys," published by the Park & Pollard Co., Boston, Mass., at one dollar per copy. It contains the interesting personal experience of a skillful New England woman who has been very successful rearing good sized flocks of turkeys in a section where turkey raising seemed to be becoming a lost art. It is well printed and illustrated. Old friends among sub-

scribers may recall that we published an account of Miss Margaret Mahaney's turkey raising in A. P. J. for May, 1911.

\* \* \*

Congratulations to Editors W. B. Atherton and J. H. Drevenstedt on the change of name of the old American Stock Keeper. With the issue of November 1, 1913, this well known weekly journal becomes, and will be hereafter known as AMERICAN FANCIER and Stock Keeper. It takes this distinctive and most appropriate name from the original and once so well known weekly publication of which J. H. Drevenstedt was editor for many years and we are sure it has been a sore point with "Drev." for some time to have the name of the old American Fancier dropped from among poultry publications. We know that "Drev." is pleased to have the American Fancier once more in the field.

The policy of this weekly publication is well expressed in the following quotation from one of their November editorials: "This paper has always been a fancier's paper and will be run on fancier lines in the future, giving reports of shows fearlessly and publishing full lists of awards whether the winners are advertisers or no. We trust that the fanciers of America appreciate this fact and that they will aid the American Fancier and Stock Keeper in its efforts to make the American Fancier stronger and better as the years roll by." We note that the American Fancier and Stock Keeper is to celebrate its twenty-fifth birthday on January 1, 1914. May the "Fancier" and its able editors live long and prosper.

bandry. In September it issued a free bulletin for farmers and poultrymen of the state on "Poultry Hygiene" by Prof. J. C. Graham, covering description and treatment of colds and roup. Timely and practical bulletins of this sort are much needed and we cannot have too many of them. The way to get rid of poultry diseases is to educate the poultry keepers and help them to stamp out disease in their flocks. There has been some agitation for legislation on poultry diseases but we do not believe the time is ripe for it. Nowadays there seems to be a craze for legislation and still more legislation, though, as everybody should know, the shelves of our state libraries are groaning under the weight of tons of leather bound laws that are inoperative or ineffective. The less legislation we have concerning poultry diseases the better and the more simple the law is when it comes, the better. You can't legislate diseases out of existence but you can educate the public so that disease will be prevented and stamped out. More power to "Mass. Aggie." and may the good work continue. We would like to see the American Poultry Association issuing helpful practical free bulletins, or bulletins at publication cost, instead of "riding a free horse to death" on the backs of its members with so much committee work intended for use in copyrighted books for sale for profit. If we all really want "better poultry and more of it," we can get it more quickly by turning more attention to the dissemination of practical free instruction in poultry husbandry. Encourage the making of poultrymen, fanciers, breeders and strictly utility men. Make it easier to get helpful and unbiased information on poultry subjects. Help men and women to get into the poultry business and, after they are in, help them to STAY IN and MAKE A SUCCESS OF IT.

Be sure to read Lester L. Sargent's department on "Recent Inventions for Poultrymen." The patents granted in October were unusually interesting. A surprisingly large number of patents are granted each month on devices for use of poultry keepers and these represent work for progress on the part of earnest poultry workers all over the country. This department began in September A. P. J. Review this department and note the many inventions. It will help you to a better understanding of the great interest that is taken in poultry husbandry in this country. Only the most important and interesting inventions are given space.

Charles L. Burr of Springfield, Mass.,

sends us the following interesting account of experience with hatching eggs imported from England: "On January 28 I sent an order to England for White Leghorn eggs for hatching. The eggs arrived on March 5. There were 40 eggs in a box packed with marsh hay. Each egg was carefully wrapped in hay and there was padding of hay on top, bottom and sides of the box. None of the eggs were broken but there was one that had a little crack in it and I did not set that one. On the 6th of March I set the first hen on part of the eggs. On the 8th I set another hen, but it was twelve days before I could get another hen to cover the last sitting of eggs. The weather was so cold that I set the hens in my house cellar. Out of the 39 eggs I hatched 16 chickens and all of them lived to grow up. There are 12 cockerels and 4 pullets. One of the pullets began laying September 21 and laid five eggs in September and twenty-four eggs in October. Another of the pullets began to lay October 13 and laid ten eggs that month. The other two were not laying November 1. Their food for October was cracked corn mostly. The cockerels have been out of doors night and day, rain or shine and are strong and full of vigor. The express charges on the hatching eggs was \$4.45 and with the cost of eggs would make the sixteen birds cost me \$16 besides the cost of their food. The cost of such birds to import would be \$25 each and I think they would be cheap at the price. I sold two of the cockerels for \$25 each and am very well pleased with my venture in importing eggs for hatching."

We extend thanks and acknowledgment to all who have so kindly sent in answers to our "Fancier's Symposium." The courtesy and the evident friendly effort to furnish accurate information is much appreciated. We hope to have this matter in shape for publication soon. In the meantime there are still quite a few fanciers who have failed to fill out and send in the answers. We would like to have your answers soon. Won't you please send them NOW.

As an example of how the express companies gouge the public our recent experience is interesting. There are two Silver Lakes in Massachusetts, about sixty miles apart. Only one has a post office, that is our Silver Lake and our railroad station is Plympton, in Plymouth County, Mass. The other Silver Lake is only a railroad station and express office in Middlesex County. We ordered a book from New York City and same was sent express pre-

paid, costing 40 cents. Through error in shipping and confusion of addresses the book was sent to "Silver Lake, Mass." It took three weeks of tracing to get delivery of the book at our station and we had to pay 55 cents express charges, collect, from Silver Lake, Mass., to our station Plympton, or more than the original prepaid charges from New York City. If that isn't robbery what do you call it? It is a pity Uncle Sam does not carry books by parcel post.

Elbert Hubbard, in the American Sunday Monthly Magazine, cussing and discussing the man who rubber stamps on his letters the words: "Dictated but Not Read," says:

"If you dictate a letter it is your duty to re-read it, and correct any possible errors before the letter is mailed."

"Dictated but not read" is one degree worse than that ancient epistolary wheeze, "Thanking you in advance."

"The man who writes, 'Thanking you in advance,' will probably enclose a two-cent stamp, which he thinks forces on you the necessity of answering his letter. He is the individual who wants something for nothing."

"Imagine a fond lover, of the Nineteen Hundred Thirteen model, making a proposition of marriage, putting the proposition thus: 'I love you dearly and await your kind reply to the proposal herein contained. Thanking you in advance, I remain, etc.'"

"Then he takes his trusty stamp and in red ink places on the sheet. 'Dictated but not read.'"

All coons like chickens. A newspaper dispatch from New Jersey tells of a farmer who lost sixty chickens in thirty days by raccoons. The raccoons were tracked home and killed and four young raccoons were captured alive.

It is possible to, for one or more seasons, increase productiveness in poultry by what amounts to abuse or an attack on constitutional vigor. It is practically an analogous process to that employed by the orchardist who severely prunes or partially girdles an obstinate tree to make it fruit. But, does it pay with poultry? Would it not be better to strive continually for the best in constitutional vigor and be content with a slightly lower egg yield. A sound, healthy, vigorous hen will usually be a good layer. Under favorable conditions she may be an exceptional layer. Some vigorous hens are naturally so prolific that they will lay themselves out of condition unless especially well cared for. Others seem to have the ability to check their egg laying at will or on any slackening of the food supply. We believe that the man who continuously strives for the best in constitutional vigor will have the best average production in the long run.

The Massachusetts State Board of Health has been doing commendable

We are booking orders for eggs now. Prices \$3.00 to \$15.00 per Setting. Stock a matter of correspondence.

W. J. BRINKLEY, Owner Box A, IUKA, MISS: J. H. SLEDD, Superintendent

work all over the state prosecuting dealers who are violating the new law concerning sale of storage eggs. Inspectors are visiting every store where eggs are sold in every city and town in the state. During the week ending November 8, thirteen dealers were convicted and fined for fraudulently selling cold storage eggs as fresh eggs at the fresh egg price. Sixteen more dealers were summoned to court to answer charges of violating the law. This is good work. Last winter, when the price of eggs went up, a good many carloads of cold storage eggs were foisted upon the public as fresh eggs at fresh egg prices.

Our pure food laws and the application of them still leave much to be desired. Foods are still abundantly doped with poisons to preserve or color them and are otherwise adulterated. Buyers will do well to inspect labels carefully and to be sure to read the fine type or partially hidden portions of the label. The words "Guaranteed by the John Doe Co., under the food and drugs act, June 30, 1906, serial number 0000" don't mean that Uncle Sam in any way guarantees the purity or quality. This guaranty deceives a good many people. It means only that the manufacturer has filed with the Government at Washington a statement to the effect that his goods are as represented by his labels and that he has received a serial number of registration for his product. It does not mean anything more. Any man who will dope and adulterate food stuff is sufficiently mean and dishonorable to lie about it. Don't forget that. He will take a good many chances of being caught and convicted, because he knows that the chances of conviction are remote and that the laws are so loosely drawn that a clever lawyer can find a lot of loopholes for him to crawl out of.

At the present time it is almost impossible to buy meats in city markets, and particularly in small town markets, that are not doped with poisonous chemical preservatives. To buy Hamburg steak, store prepared, is an almost certain way to poison yourself and family and make a bad job for the family doctor. There's a good remedy. Eat less beef and less pork. Eat more poultry and eggs. Grow more foodstuffs at home and when you must buy food, buy carefully and insist on good, sweet, fresh, reliable goods. Produce more eggs and poultry at home for your family table or buy of some neighbor you know can supply the best. If ordinary care is observed, home grown food is the best and safest food and there is nothing better than home raised poultry and eggs. Make yourself as independent of the food dopers as you can.

On closing the copy for this issue we complete our third year as editorial writer and managing editor of American Poultry Journal. These have been three short and very pleasant years. At the close of the first year we expressed our enjoyment of the privilege of working on A. P. J. staff and commented on the absence of petty jealousy and bickering. At that time we said: "American Poultry Journal workers pull together, work one with the others, one for all, and all for the A. P. J. It is the efficient coopera-

tion, team work, of the staff of A. P. J. that makes this magazine lead where others follow." That was true then, has been true throughout our entire term with A. P. J. and it is true today. We have all had to work hard and we've had a mighty good time doing it. It is a great pleasure to us to look back upon the harmony and many pleasant happenings of the past three years and it is a still greater pleasure to look forward to continued work with our fellow members of the American Poultry Journal Staff. Our work, the efficient team work of the entire staff, and the kindly helpful cooperation of our big A. P. J. Family of Readers has been a never failing source of inspiration and happiness. To all our friends we extend our sincere best wishes for the Christmas season, now at hand, and may you all live long and prosper.

### The Big Boston Show.

Secretary W. B. Atherton believes that the Mechanics Building, Boston, Mass., will house the greatest poultry show ever held in America January 13 to 17, 1914. The premium list and details can be had by writing him at 30 Broad Street, Boston, Mass.

Big entries are expected from the West and South and the North and East will be well represented, as al-

ways. Canadian birds made a big hit at the last show and will undoubtedly be out in force this season.

It will be a quality show all through and all specimens will be displayed in a manner to show them off to best advantage. There will positively be no double tiering of exhibition cages. All specimens will be shown in good light and on level where easily viewed by all visitors.

Utility exhibits are expected to be a most interesting feature of this show and it is hoped that agricultural colleges will make an effort to present interesting educational exhibits. Five hundred dollars in cash is offered in prizes in dressed poultry and egg classes. Special classes will be provided for live fowls bred especially for market purposes.

As the Boston Show is always a quality show, and particularly a fancier's show, the opportunity for contrasting bred-to-Standard and bred-for-utility birds will be an unusual one.

"Billy" Atherton is one of the most popular big show managers in this country and you should not miss the opportunity to visit the "Hub" this week and make his acquaintance. There will be the usual annual banquet to exhibitors and friends and the regular yearly meeting of veteran fanciers. Don't miss this show.

## THE WORLD'S BEST WYANDOTTES

SILVER, GOLDEN AND WHITES. We have the finest lot of both old and young birds that we have ever offered, at bargain prices, 2,000 head to select from, many grand show cocks. Let me know your wants in anything from utility to the finest show birds. My Wyandottes have won more than 300 premiums at Madison Square Garden, New York, and have been winners at all the large shows of America. I have line bred them for 30 years and you get the benefit of this fine blood when you buy a Keller Wyandotte. Also the very finest narrow laced GOLDEN SEBRIGHT BANTAMS. Large circular free.

Brookside Farms, Ira C. Keller, Box 75, Prospect, Ohio

## Rose Comb Rhode Island Reds of Highest Quality

Our young birds this season are the best we ever raised

We have several hundred to pick from and can suit you in either exhibition or choice breeding stock. Many of them raised from our CHICAGO, INDIANAPOLIS, LOUISVILLE and STATE FAIR WINNERS. On approval always. Write us your wants.

Longfield Poultry Farm, Box 321, Bluffton, Indiana

## S. C. WHITE ORPINGTONS

Won at Illinois State Show, Springfield, Illinois January, 1913

Won at Decatur, Illinois, January, 1913 1500 Birds in Show

1st Cockerel; 1st Pullet; 2nd Cock

1st, 3rd Cockerel; 1st Pen; 3rd Cock

The only White Orpington exhibitor winning two blue ribbons in either of these great shows. Some high class stuff for sale at reasonable prices, and on an absolute guarantee. Mention American Poultry Journal.

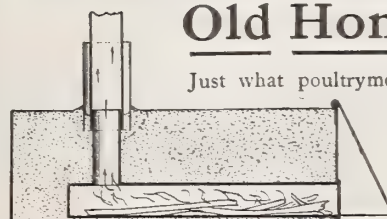

T. A. SCOTT, BETHANY, ILLINOIS

## Old Honesty Hatchery

OUR ELEVENTH SEASON - Day-old chicks for sale. Sixteen leading market and egg laying varieties, also strictly utility and show birds. Catalogue free. Prompt replies. Prompt shipment. Mention American Poultry Journal when writing.

G. H. Kichline, Prop., Dept. A, New Washington, O.

## Old Honesty Heater Co.

Just what poultrymen were looking for this long time. A new invention to get Winter eggs and raise chicks successfully. Patent granted March 26, 1913. Write for circular (free). Tells you all about it.

OLD HONESTY HEATER CO. Y. Dept. A New Washington, Ohio

### Why English Stock Has a Special Value.

**T**HAT English stock in almost every breed is valued by breeders all over the world is an undisputed fact, and one of England's greatest export trades is centered around the yards throughout the country where the best cattle, sheep, horses, ponies, poultry and dogs are produced.

In a large range of animals and birds, if inquiries are made, it will be found that some of the greatest studs in existence throughout the world today owe their position at the front in part to foundation stock brought over from England; and in the exhibition world many a breeder imports winners year after year from that country. England produces the size and bone which makes an additional value at the moment of judging.

One of the main factors in the success of the English breeders lies in the climate. Few parts of America enjoy such favorable conditions in this respect. In many parts of England snow is almost unknown, chickens are hatched very largely in January, and run about free in the open from the first, seldom having to be confined for snow for more than three to ten days during the entire winter, and never having to be reared in confinement owing to cold, and as a result the chickens are well grown when spring comes, and just as the frame and bone are developing from the chicken stage to form to mature cockerel or pullet, the cool, fresh, sunshiny days are all that is needed plus good food and management to produce the fine exhibition stock. By the time the hot weather sets in the birds are over the critical stage without a check in growth, and the whole art of growing a perfect show specimen lies in the ability to keep the

animal and bird growing from start to finish without a single stop. How frequently one hears a breeder deplore the fact that his young stock is at a standstill, does not seem to grow or condition properly, and seldom where you hear that do you find a winner in young stock classes.

The same facts apply very largely to the rearing of all animals, and although many farmers arrange that the young stock does not arrive until the coldest weather is over, yet the brood stock has had to face the intense conditions of severe winter and has not the same vitality, and consequently is unable to give its young such a good start in life as brood stock kept under more favorable conditions. Again, before the young are fully established, and just at the period when pleasant days and luxuriant grass is one of the greatest factors to proper growth and development, intense heat sets in, grass dries and loses a large per cent of its nourishment, so much needed at that age, so that again conditions are all against success, and frequently the best results of breeding are never attained until the animal or bird has passed the yearling stage or is well past maturity.

In countries where heat and cold are excessive, it is often noticed that size decreases and although when stock is thoroughly acclimated, the health and vigor and reproductiveness may be all that is desired for a time, a lower standard of size and weight becomes the average for that country's stock and in time the reproductive organs do not give the same returns as those ani-

mals and birds bred under more temperate conditions.

Take for example the White Leghorn and the White Wyandotte, breeds that have been bred in America for many years with very little importation from abroad. To the English eye the American White Leghorn, as found on these enormous egg laying plants, appears almost a bantam compared with the average Leghorn in England, while recent egg laying competitions have proved the English bird ahead of the American in egg production, and in order to pull up size and productiveness large quantities of stock birds are being imported this year.

Here and there we meet the breeder who is able to produce breeding stock to beat England's best, but they are few and far between and as a rule even they admit the use of frequent importations.

With all grass eating animals, no doubt the English luxuriant herbage plays a big part, since all the year around our grass is green. Few indeed are the summers when drought affects us to any considerable extent, and I shall never forget on my first trip to America how greatly I was struck by the brown color of the country, looking in vain for the refreshing green fields I was accustomed to from birth.

Another factor in the reason why the average English stock seems in advance is that English breeders as a rule do not go in for breeding on the immense scale of breeders abroad. On a poultry farm in America you will find thousands, where in England you will scarcely find hundreds. This gives the operator more time for individual attention, greater care is bestowed on continually keeping the stock free from all insect pests. Animals and birds can be divided up and grown under better conditions, giving to each more room and a larger

## Foxhurst Farm Champion Black Orpingtons

Our birds have been the largest New York Madison Square Garden winners for the past five years, a record never equaled by any other breeder or importer. Our customers have just as remarkable records in other shows. Get in line for some stock from a consistent winning and line bred strain.

The best in America.

Show birds, cockerels and pullets ready to win at fairs, Fall and Winter shows, bred exclusively from our New York champions, also yearling cocks and hens shipped on approval, satisfaction guaranteed, at prices from \$15 to \$50. Write for catalogue. Mention American Poultry Journal.

**Foxhurst Farm      Lime Rock, Connecticut**

share of the best foods, and in poultry especially, better housing conditions with more air, and even a plant if grown under the proper conditions of air, light and individual attention will excel the plant grown in stuffy, confined quarters, and so exactly it will prove with bird or beast.

But the last factor, and the one that to my mind has most effect on the general class of stock bred in any country is the system of judging. This is a subject very difficult, nay, almost impossible to deal with as a whole, when covering all classes of stock, and yet the same principle can frequently be seen running from end to end of the judging bench of a country.

From time immemorial the best English judges have stood first and always for the type while the American judge pays a great deal more attention to detail. Type after all is the fundamental thing that determines a breed. To take for example: an Orpington is not an Orpington because it has a single evenly serrated comb free from side sprigs, many other breeds having this point in common; it is the shape of the body, i. e., the type, that designates the breed, yet the American judge will disqualify an Orpington for a sprig on comb, or stub on leg and give the blue ribbon to a bird far from the true Orpington ideal that has perfect color and detail. An English judge gets to work from the opposite basis. He starts down his pens crossing out every bird that fails in type, and from those with good type he selects the best of these with good all around color and detail, but always giving preference to type.

We find the same demand for type ahead of detail and color in the kennel world, instance after instance being forthcoming of magnificent typed winning dogs being set back on landing in American for defects in detail or color. The English theory has always been, first establish the type. A country must aim for and insist on it, and when that is established detail can be added; first build the frame and then put in the furniture. The American breeder, however, puts his furniture in place first and builds his framework around it after. Worried with the knowledge that certain faults in detail will disqualify, he sacrifices the type. The English breeder realizing that type only will secure him the blue, must have type in his breeding stock whatever other faults he has to accept at the price and so establishes the sound practical basis to work from that today gives England her lead.

To the man then, who would breed the best, plenty of individual attention must be given to each item along lines of proper development of his flock, the best food conditions and the most temperate climate he can select will help him most on the road to success, and if circumstances ordain that his work must be carried out under less favorable conditions, then he can assist nature largely by importing breeding stock, reared and matured under the best conditions, and which carry accentuated, the points he finds most difficult to produce, and thus keep moving forward.

The cost and trouble of importation has now been reduced to a minimum, many large firms making it their business to handle only the importing and exporting of live stock and the best results are frequently obtained by deal-

ing with those who have an intimate knowledge of the condition just quoted in the judging rings of both countries. An International Standard, alas, is an ideal not likely to be realized or take definite shape in our lifetime for not only have we the varying characteristics of different nationalities to contend with but also the widely different demand made on stock by the different conditions and climates, and so it falls to

each importer to seek out those that know his special needs and requirements. Under such auspices and providing a well known reliable firm is chosen, he is hardly likely to be disappointed since such firms have names and reputations to keep up and cannot afford to risk adverse criticism justly deserved, and should the stock not fulfill all that was expected will usually promptly arrange an exchange.

**THIS IS THE ALUMINUM "CONVENIENT" LEG BAND**  
Note the strong, secure fastener, so simple and complete—the number is not stamped in, but raised OUT—plain, readable—can't get full of dirt. Reaches you already bent in shape ready to put on—12 bands 20c; 30 for 45c; 60 for 75c; 100 for \$1.00. Sample Free—

## USES OF COLORS.

**I**N rearing chickens under hens, the latter to occupy separate coops with their broods, it has been realized at this experimental ranch more than ever, as rows of coops grow longer, that it is a great saving of travel to have the coops as close together as is feasible.

Dire results follow from small chicks getting into the wrong pen. It work well to take off quite a number of hens at the same time so as to have a lot of chicks of the same age near each other. If fifteen, or whatever number you prefer, are put in each brood you want to find them all in their appropriate coops when you come to shut them in at night. The strays are sometimes scalped remorselessly by a cross hen. Having the chicks all colored absolutely alike when given to the hens prevents a vicious mother from depredations, but there may be another trouble. During the first few days of the chick's lives, before they get the "hang of the new school house," they are sometimes confused and attracted by the hen which, as often happens, clucks the

loudest and most constantly. If one hen gets too many they may be brooded badly of a chilly night, and this means disaster dire.

While attempting to save steps in attendance, to locate the coops as closely together as proper, but not too closely, calls for careful experiment. Two to a rod is generally safe and sane, but by having the mother hens colored unlike, and the doors of the coops painted divers colors, they may be put still nearer. Our policy has changed on this breed and color question as concerns the stock for sitting, just as it is being constantly modified in many other details. There seems to be no end of learning new wrinkles if large numbers of birds are to be dealt with, though poultry keeping on a small scale is so exceedingly simple that the endless, meaningless and contradictory gab about it in farm papers is superlatively ridiculous.

We thought for awhile that a solid colored breed, Wyandottes or White Plymouth Rocks perhaps, would be the best for sitting purposes. Supposedly there should be about one hundred of

some sitting breed for every one thousand White Leghorns. The advantage of a uniform color in this breed is that when superfluous cockerels or old hens are ready to turn off they look so much better in the shipping crate if they are of uniform plumage, combs and color of legs. Appearance has important value in marketing anything and everything.

But we have undergone a change of heart and are now crossing to secure a variety of colors especially black, white and yellowish red; those three being the strongly contrasted colors easiest to produce.

Now the ability of the mother hens to detect a chick of even a slightly different color from her own is matched by the ability of a chick a few days old to notice that a differently colored hen is not its own mother, and on seeing such a strange personage looming up before its timid infantile vision it will commonly hie back to its proper home unless sadly confused, which will be seldom, the coop doors severally of red, white, blue, etc., assisting its per-

## We Lead—Others Follow

Summer and forced sales out of season are as common as the summer sun, but a

**DECEMBER SALE** of pure bred, line bred foundation stock at **BARGAIN PRICES** is something that should appeal to all lovers of pure bred stock. We are going to offer some

**Rare Breeding Stock from our famous prize winning**

## "World's Best Strain" of White Wyandottes

right at the season all breeders need them, either to build up their flocks or to start a new flock. The choicest blood line known, and at prices unheard of at the beginning of the breeding season, is our offering.

### NOTE OUR DECEMBER BARGAINS

**100 Cockerels**, all around good breeders, intended to sell at \$10, must go at \$5 each.

**200 utility Cockerels**, worth twice the money asked, will close them out at \$3 each.

**100 laying hens**, lay when eggs are worth the most, sale price \$2 each.

**50 Cockerels**, pure bred white birds, extra good in shape. In fact, fit to trot out in the best shows. Will sell at \$10 ea.

**50 Pullets**, intended to sell at \$4, will take \$2 each.

**25 Yearling Cock birds**, ones we carried over as extra males last breeding season, great bargains, \$3 to \$10 each.

**50 Pullets**, line bred, extra fine, some top notchers. Will let them go at \$5 ea.

**50 Pullets**, fine in shape and color, good breeders. Now selling at only \$4 each.

**25 Utility Pens**, one male and four females, heavy layers, good breeders \$17.50

If you have a weak place in your string of show birds and need a cock, cockerel, hen or pullet, write us. We are ready and able to fit you out with stock that will win in any competition and at prices very reasonable, quality considered.

Send us twenty-five cents, stamps or coin, for our elaborate catalog, the most valuable book ever issued, covering all phases of the poultry business.

**J. C. FISHEL & SON, Box J, HOPE, INDIANA**

ceptions, wonderfully acute for so small a creature.

Colors also play a prominent part in the duplicate method of natural hatching—but that is another story. The ready recognition of color which various species of animals have is not appreciated by most persons. The bees do not mix matters. If they are gathering pollen or honey from yellow flowers they stick to yellow, thus facilitating fertilization and providing sustenance by means of vegetation unsworn, for bees of generations ungrown. If they begin on a pink flowered plant they stick to pink. The flowers needing the visits of insects for fertilization are of brilliant hue to attract the saviors of their race, while those fertilized by the wind and those self fertilized are commonly inconspicuous. It is in the bird family, however, that the most notable examples of color appreciation are found. The gorgeous plumage tints on the males of certain species at the breeding season, to attract the females, and disappearing after the next moult, tell a wonderful story. To add to the marvel of the colors themselves, the habit of ruffling or otherwise displaying the particularly brilliant parts of the plumage at the breeding season, shows how sedulously nature strives to maintain the race. "So careful of the type she seems; so careless of the single life," while at the same time proving that birds as well as ourselves distinguish color.

And, by the way when through the wiles of man some breeds descended from wild Gallus Bankiva have been deprived of the elegant ancestral red of the male, no feature is more readily reinstated in a breed, no matter how completely destitute of it now. Cross Barred Plymouth Rock hens with White Wyandotte cock, and presto! Back comes pure gold on hackles of pullet progeny. Nature reserves that favorite badge, in a latent or "recessional" form, for many generations and will not let it die out, as if remembering the long ages in which it did important service in preserving the race.

#### Skinner System.

Not some new alleged "system" of rearing fowls. None of that for the already oversuffering poultry public. Hope ahead. The Skinner system refers to a mode of irrigation. It is capable of helping in furnishing green stuff at the north, middle and farthest south of the Republic. The inventor made a sprinkler to deliver a fine spray of water through minute orifices under a good head of pressure to same effect as the familiar lawn sprinkler; only instead of rotating arms there are straight rotating pipes with a great plenty of the smallest holes a drill could make. (These pipes are rods in length and placed horizontally at, say 30 or 40 feet apart and overhead at a height sufficient for a topped carriage, or a tall man or a tall horse, to pass under. Warm water can be used, if desired, in cold weather to make the grass grow faster, and cold water in warm weather to make it fresh, cool and crisp before being cut.

A decoction of liquid fertilizer, settled and strained, can be added to the water if desired. It goes without saying that the pressure must be quite strong so that the delivery may be such that some pipes of the series may not rob the others.

It is the most efficient manner of ir-

rigation known to date for lawn grass, however, serviceable underground irrigation by porous tile or the usual surface irrigation by trenches may be for fruits and vegetables.

The saving of labor by this method is its chief advantage. Just touch the button. I prophesy a great run for this invention in supplying fowls with lawn clippings. There is this about it. In an arid or semi-arid region and even where usually there is plenty of rain by averages, still there are sometimes dry spells. You see, if you are relying on clippings and if rain fails, as will surely be the case sometimes, and the grass grows very slowly or not at all, this Skinner System will insure you green stuff. You can secure it during five or six months at the north and eight or nine months and sometimes twelve months in the Southwest.

The great drawback to rape, curly mustard, kale, beets and all that sort of truck, is that the stuff must not only be cut and hauled but must be chopped into short lengths, an engine and special chopping machine being used. Now note the labor saving. Your rape or whatever must be sown in drills and perseveringly cultivated in the first place. Your lawn needs no plowing, sowing and harrowing every season, and no cultivating or hoeing, and if you cut often enough, this point being very important, the grass will be so short as to need no chopping afterward. Go ahead with your horse lawn mower, or better yet with your auto lawn mower, with catcher attached, and there you are. The stuff all minced ready for feeding, this to be done three or four times a day, so as to have no wilted food.

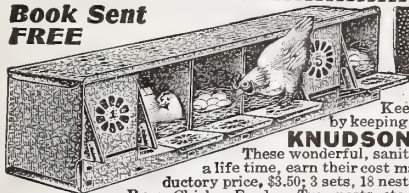

Water melons and root crops, beets for instance, can be given either whole or simply cut in halves and there is very little trouble. But beet tops, rape and all the more "branchy" things cannot be economically fed except by being first minced to a proper fineness. True the wire basket suspended between heaven and earth like

Mahomet's coffin is better than nothing for cabbage, apples, potatoes and some other vegetables, to prevent waste, but there will be some dragging in the dirt of broken-off pieces, and it is not agreeable to the birds to peck at things so hard as raw beets and potatoes. Am satisfied that they will not eat all they ought to have for two reasons. They are not only in some cases tired by the hard work but it is not generally feasible to put out enough beets or such like if of considerable size, at one time so that all can have a chance. The strongest of the flock get the most.

One method of feeding leafy things like rape is simply to throw them on the ground and let the fowls take the thin parts and leave the stems. But this is not good at all. Too much waste after all the labor of raising rape, beet tops, curly mustard and such like, and harvesting and carrying same. The best part of the great, fresh succulent rape leaves, namely the stems of ribs, is ten or fifteen times as much by weight as the light, thin web part and the ribs they will not eat to amount to much unless they are chopped.

To get rid of chopping, and still enable the fowls to pick leafy green stuff to pieces without waste, I have fussed considerably over devices to hold it in place that would be improvements over the wire basket. A sort of clamp made by a board, set on edge on the ground, on which the leaves and stalks were put, and then another heavily weighted board arranged to drop down edgewise upon the mass directly over the edge of the first board, does pretty good service, but there are two objections. One is that to arrange the stuff so evenly that the clamp will "bite" and hold all the mass and the fowls not pull it out, and then adjust the upper board, and later take away the uneaten fag ends takes too much time. The winner in commercial poultry as I have said ten thousand times or less, is the one who, other things being equal, saves time. The other

Steel Brood Coops with Runs, Chicken Feeders, Trap nests, etc. Knudson Manufacturing Co., Box 570 St. Joseph, Mo.

## Millions of Chickens and Pigeons

### Thousands of Pet Animals and Birds

die each year because their owners do not notice first symptoms. I can show anyone in five minutes how to tell at a glance, when feeding or tending the flock, whether there is anything wrong and just what to do to remedy it right at the start when cures are easy.

The watery eye, dirty beak, discolored comb, condition of the droppings, tell the story at a glance before the chicken really acts sick. A penny spent then is worth a dollar spent later. You can easily tell whether a chicken is being run down by lice or mites; whether roup, canker or bronchitis is starting and just what to do to effect a cure.

I have made a special study for twenty-five years of poultry and pet stock troubles—how to diagnose quickly and how to apply the easiest and surest remedy. I want to show each reader of this how to raise more and better chickens, keeping them healthy, active and productive. Every additional thousand chickens in the country helps the sale of Lee's Lice Killer, Lee's Insect Powder, Lee's Egg Maker and Germozone, which are sold at more than 10,000 towns in the United States and Canada. I will send free our Poultry Book and our pamphlets, "Pointers for the Amateur" and "Diagnosis of Diseases of Poultry and Pet Stock" and also answer any special inquiries free of charge.

Lee's Lice Killer is the wonderful insecticide that you have only to paint or spray on the perches or roosting places of chickens, pigeons or any birds to get rid of insect pests. No dusting, dipping, greasing or handling of individual birds.

Germozone is Antiseptic, Germicide, Fungicide; the most widely popular remedy for Poultry, Pigeons, Dogs, Pet Animals and Singing Birds. Its use is indicated in a large majority of affections of the eyes, nostrils, mouth, throat, skin, crop and bowels.

Get posted now before troubles set in. Address your letter to

# MOE'S Useful Poultry Supplies

## MOE'S SELF LOCKING LEG BAND

MOE'S SELF LOCKING BAND READY TO BE USED

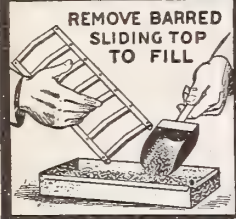

You simply push it together to lock it and it can only be removed by destroying the band. Every band has its own raised or embossed number.

12 Bands, any size 15c  
Liberal Discount on Quantities

EASILY ADJUSTED WITH THE FINGERS AND IT IS THEN ON TO STAY

## MOE'S SANITARY FEEDING TROUGH

Can be used for feed, wet mash or water.

Made in three sizes:

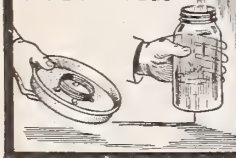

No. 21, 12 inches long 25c  
No. 22, 18 inches long 50c  
No. 23, 24 inches long 75c

WHEN REPLACED CHICKENS CAN NOT WASTE THE FEED

## MOE'S FOUNTAIN OR FEEDER TO FIT MASON JARS

UNSCREW JAR TO FILL WITH WATER OR FEED

It will fit pint, quart or half-gallon Mason jars. Convenient, cheap and sanitary.

Manufactured in one size only, 6 inches in diameter

No. 17, plain metal, - 15c  
No. 18, blue enameled 15c

REPLACE BOTTOM, TURN OVER, THEN READY FOR USE

## MOE'S ROUND FEED SAVING HOPPER

LIFT COVER TO FILL RAT PROOF WHEN CLOSED

Made round, so that it will accommodate more birds at one time than any other hopper on the market.

Manufactured in two sizes:

No. 7, 1 bu. capacity \$1.50  
No. 8, ½ bu. capacity \$1.00

WHEN FILLED WILL ACCOMMODATE 10 TO 12 BIRDS AT ONE TIME

## MOE'S TRIPLE COMPARTMENT GRIT AND SHELL BOX

LIFT COVER TO FILL

Can also be used as a feed hopper for little chicks.

Manufactured in two sizes:

No. 9, 3 compartments 50c  
No. 90, 4 compartments 75c

WHEN FILLED FOWLS CAN NOT HOOK GRIT SHELL OR CHARCOAL OUT

These are a few of the good things in Moe's line. Write for complete catalogue. If not at your dealer's, write us mentioning dealer's name and we will see that your wants are filled at above prices, your city.

**Otis & Moe Manufacturing Co.**

2011 Otis Bldg., Chicago, U. S. A.

objection to the clamp business is that the uneaten remainder left between the edges of the boards makes considerable waste.

I can see a great advantage in lawn clippings on account of no necessity for chopping, but do not like the idea of the drouths lawns will face if not watered, neither do I fancy the usual lawn sprinkler. The lawn—not the usual lawn beside your dwelling for ornament but one specially set aside for utility, and watered by the Skinner System appears to me to be "just the lilly tange."

The overhead system can never be adopted to as good advantage at the North as at the Southwest, of course, since it cannot be used at the North the whole year. The sort of grass to be grown in the respective localities is an important consideration. Kentucky blue grass is the kind usually sown in the Northern states. It is especially adapted to withstand close cutting every few days and makes as thick and close a carpet as one could wish if well fertilized and water is abundant. But it is not a rich grass, although cows and fowls eat it greedily when they can get nothing better. Give white clover and blue grass at the same time and they will quickly inform you which is best. The white clover is better than red clover, alfalfa, or, I think, every other fresh vegetable except lush, quickly grown tender rape, which leads. But white clover will not do well everywhere. It succeeds best on rather heavy land or that inclined to be clayey, and rather moist. At the South in most parts, and particularly at the Southwest, Bermuda grass is the main reliance for lawn clippings. A piece of sod may be cut in small bits and these set out a foot apart each way, or the bits, either with roots or as slips, may be dropped at the upper edge of a furrow to be partly covered by the next furrow, or the seed from the seed store may be sown as in case of any other grass. It will catch hold and grow very readily. The furrow method is good enough for horse or cow pasture but do not attempt it for a plot where a lawn mower is to be used. Rake and smooth the ground very carefully to an even surface and either use seed or transplant by hand, tufts a foot or so apart each way and you will have a good job. Keep in mind that your lawn is to be laid down, not for a few years, but that it will not need to be renewed for a lifetime, and as it is to be cut very often it will pay to make the ground perfectly smooth at the start.

### Treatment of Dumb Brutes.

Dumb in the sense that they cannot fully express their complaints, although they may utter vociferous cries. The amount of discomfort or downright pain that is allowable to be inflicted on wild or domestic animals is not easy to determine. We can easily bestow a great deal of positive happiness upon our live stock by breeding to promote vigor and by giving care in a hundred ways, yet at the same time in one way and another we must cause more or less pain on occasions.

A curious case has been tried in England in relation to the alleged cruelty involved in trimming the combs and wattles of game fowls.

Undoubtedly if Games are to fight it would be better for them to enter into

the arena without combs or wattles, for they would without doubt suffer more if hampered by these appendages. The question of dubbing Leghorns and other breeds with large combs and wattles for the purpose of protection against freezing is a different one. We must consider that the operation is quickly over with and that the inferior animals do not labor under the disadvantage of imagination as persons do; that is they do not know what is coming and do not suffer through anticipation. It is a perfectly legitimate thing for the owner to balance, as in a pair of scales, the temporary suffering occasioned by trimming against the possible or probable prolonged pain in freezing, or rather the results of freezing which last for days and weeks. In judging concerning such operations as trimming combs, punching the feet of chickens for the purpose of marking, plucking the feathers of live geese, etc., it is frequently not considered that the animal, if kept tame and properly managed, suffers nothing up to the instant when the operation begins. This is different with the human race, when a surgical operation is to be performed. How great the dread of an amputation must be when the patient knows it is inevitable. Who cannot recall instances of friends suffering more from looking forward to having teeth pulled than from the actual operation itself?

This matter of the prevention of cruelty to animals is a very important one. We believe in the work of the society which is devoted to this humane purpose and consider that it accomplishes a great amount of good, especially in relation to the treatment of horses. The old notions of the middle ages respecting the inferior animals are happily becoming extinct. They linger still in such countries as Spain and Mexico where bull fighting is still practiced. The truth is an ounce of pain or a pound of pain if you could weigh pain, is just as important in view of the moralist, whether it is experienced by a brute or a man. The lacerated flesh, the quivering nerves are a matter of as much importance in the experience of the hapless brute as in the experience of the poet, or statesman, or the most lofty members of the human race. The old doctrine was that man's rights were especially important because he possessed an immortal soul; but in the matter of mere physical pain, this distinction is of no importance; pain is pain and whether suffered by yourself, by your dog, your horse or your fowls, it should be brought to the minimum in all cases, so far as reasonable care and endeavor can do it.

The subject, however, should be viewed in a sensible manner. It is inevitable that our domestic animals will be made to suffer in some form or other.

Suffering and inconvenience are inseparable from human life; for instance, we cannot fulfill all our duties without sometimes meeting tasks that are irksome, difficult to perform, and in some sense painful. In bringing up children we cannot clear their paths entirely from thorns and briars, and how then can we shield our domestic animals from all ills? It will not do to be hasty in deciding concerning trimming combs, caponizing or any other method of "mutilating" our domestic animals. The subject must be viewed rationally.

## MOE'S Useful Poultry Supplies

### MOE'S SANITARY POULTRY DRINKING FOUNTAIN

**The most popular fountain on the market. Fills from the top.**

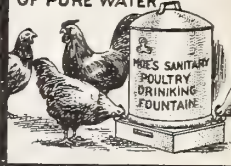

Dead air space keeps water cool in summer and from freezing in winter. Drinking pen now made square, which does away with spilling when hung up. Can be used for two pens at the same time. Prevents chickens from getting their wattles wet in cold weather.

Manufactured in three sizes:

- No. 1, 1 gallon capacity - \$1.25
- No. 2, 2 gallon capacity - \$1.75
- No. 4, 3 gallon capacity - \$2.25

Also specially constructed for ducks and pigeons.

**REPLACE COVER AND YOU HAVE A CONTINUOUS SUPPLY OF PURE WATER.**

### MOE'S SANITARY BROODER FOUNTAIN

**TURN OVER AND REMOVE BOTTOM TO FILL**

**Little chicks can't get wet. Sets in corner of brooder. Takes up little room. Can't be upset.**

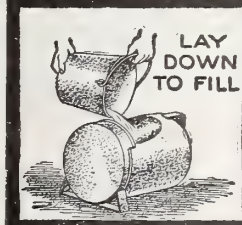

Manufactured in two sizes:

- No. 0, 1 quart capacity 25c
- No. 5, 1 gallon capacity 50c

**REPLACE BOTTOM TURN UPRIGHT. READY FOR USE**

### MOE'S WALL FOUNTAIN

**LAY DOWN TO FILL**

**Can be hung up out of the litter. Very easy to fill. A strong, substantial fountain at a low price.**

Made in three sizes:

- No. 25, Of about 1/2 gallon capacity 35c
- No. 26, Of about 1 gallon capacity 50c
- No. 27, Of about 2 gallon capacity 75c

**WHEN FILLED, HANG UP, THEN READY FOR USE**

### MOE'S SANITARY BOTTOM FILL FOUNTAIN

**REMOVE CONE TO FILL**

**Made in two pieces. Easily cleaned and will not burst from freezing.**

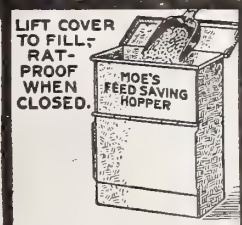

Made in three sizes:

- No. 19, Of about 1 quart capacity 20c
- No. 20, Of about 1/2 gallon capacity 25c
- No. 24, Of about 1 gallon capacity 35c

**REPLACE DRINKING PAN. TURN OVER READY FOR USE**

### MOE'S FEED SAVING HOPPER

**LIFT COVER TO FILL. RAT-PROOF WHEN CLOSED.**

**Cuts down your feed bill and improves the quality of your birds. Feed can't clog on account of simplicity of construction.**

Manufactured in one size only:

- No. 6, Capacity 4 1/2 bu. \$1.50

**WHEN FILLED, FOWLS CAN NOT HOOK FEED OUT AND WASTE IT.**

These are a few of the good things in Moe's line. Write for complete catalogue. If not at your dealer's, write us mentioning dealer's name and we will see that your wants are filled at above prices, your city.

**Otis & Moe Manufacturing Co.**  
2011 Otis Bldg., Chicago, U. S. A.

Christmas Month. Be of Good-Cheer.

We wish all "Our-Folks" a Merry Christmas, full stockings and the best chickens in the class.

Hang up your socks men, and beside them a new resolution to breed more and better poultry. Now is the time.

November 6 eggs are selling for 75 cents per dozen in New York and at from 40 to 50 cents from Chicago east with meat still soaring.

The old and reliable American Stock-Keeper under new dress and name of American Fancier and Stock-Keeper looks good and is full of good things from the pens of Drevenstedt and W. B. Atherton.

Don't forget about the A. P. J. Year Book. Volume two will be issued February 1, 1914, and will be larger and better than ever.

You missed a treat if you did not see and read all of the November A.

P. J. The color plate of Jungle Fowls is one of the best pieces of work we have seen and Louis A. Stahmer deserves great credit.

Mrs. Punderford—What is your husband's income?

Mrs. Harcombe—Abovght four A. M.

We like to recommend good things as they come to our notice.

When a duck lays an egg she just waddles off as if nothing happened.

When a hen lays an egg there's a whale of a noise.

The hen advertises, hence the demand for hens' eggs instead of ducks.

Everyone can master a grief but he that has it.

The "Order of the Flea" will hold their annual convention in connection with the Chicago Show. Special meetings will be held at several other shows with information given later. Mr. H. D. Riley, Strafford, Pa., is the secretary, send him \$1 for membership and help the worthy.

California doctors are puzzling over the case of a girl who clucks like a hen when asleep. Simple enough. She's past the chicken stage.

The school of experience has no commencements. It's a perpetual course.

Mr. Haldie Nicholson, Leominster, Mass., informs us that he has sold his entire flock of Blue Wyandottes to Mr. Murray D. Kennedy, Elk Lake, Ont., this includes his First Prize Cockerels at the Dairy and Crystal Palace shows and many other winners of note.

Mr. Nicholson is meeting with success in perfecting his line of Barred Orpingtons and reports great demand for this new variety. Well, if he can combine the Barred Rock quality with that of the Orpington he sure has something worth while and we are getting deeply interested.

English breeders have won thousands upon thousands of good hard American dollars by exhibiting at our shows and it is high time that our American breeders returned the compliment exhibiting

## BARRED PLYMOUTH ROCKS

The Pullet Breeding Line

FIRST HEN & SHAPE SPECIAL MADISON SQ. GARDEN, NEW YORK  
Jan. 1913. FIRST & SPECIAL BEST HEN IN SHOW PHILADELPHIA, Dec. 1912  
Bred and Owned by C. N. MYERS, Hanover, Pa.

My show record has been made with birds of MY BREEDING. I have mated and bred them for years and have pardonable pride in my success and the BREEDING QUALITY of this line which is of utmost value. They breed true and a quality to please you.

### 500 Cockerels and Pullets for Sale

These birds represent my best breeding quality stock. They are bred from my best lines and I can recommend them to every breeder who wishes to improve his flock and breed choice exhibition and quality birds. They are the kind to bank upon for success. I will sell in lots and quantity to suit, and assure absolute satisfaction.

Selected Breeding Cockerels, \$5, \$7.50, \$10, \$15  
Selected Breeding Pullets - \$3, \$4, \$5 to \$10  
Trio - - - \$10 up. Pens - - - \$15 up.  
A Special Pen of Male and 4 Females for - \$25

Remember I select and mate all birds sold. Write me your wants.

### Eggs for Hatching

Catalogue now on press. Let me send this to you—it tells the story of this line in breedings, winnings, matings, etc. It also describes the birds, with prices and general information. Write today.

C. N. MYERS, Box A, Hanover, Pa.

in England. Mr. Nicholson is now showing Barred Rocks at the Crystal Palace show where classes for American bred birds was made. Other breeders should follow in this line, the field there is ripe and most unlimited and the English breeders game and with the price.

Look up and not down; look forward and not back; look out and not in, and lend a hand.

\* \* \*

We are pleased to report that Charlie Welles, Stratford, Conn., has given up

the political position he held for 17 years and will in future devote all his time to breeding his famous line of "Fluffy-Ruffles", Barred Plymouth Rock females. The demand for this line increases year by year and they are more popular and better today than ever.

\* \* \*

In producing "Fluffy-Ruffles" a three time M. S. Garden New York winner, and twice winning the championship special for best female and several shape and color specials as well. Mr. Welles benefited the entire poul-

try world for the blood of this line is winning the whole world over, and now with his entire time and attention given to his birds we can safely look for future results. Mr. Welles has a very large and fine flock of stock this year to supply the wants of his customers.

\* \* \*

Emmeline is on the ocean.

We have just had a visit from Frank S. Barr, owner of the Mountain Orchard Poultry Farm, Narvon, Pa. One of the largest and grandest plants

# E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

Are the Greatest Achievement in Modern Poultry Breeding  
THEY ARE THE PRODUCT OF OVER THIRTY YEARS OF SKILL

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

**They Mean Something—They Sweep Away at One Stroke All Doubts and Settle the Question of the World's Leadership.** Furthermore, these 29 first prizes do not include the firsts won at New York by my customers on birds I sold—remember that.

My "Ringlets" have won first prize on exhibition pens at Madison Square Garden 8 times, no competitor has ever won first but 4 times. I have won both first and second prizes on pens 6 times and no competitor but 3 times.

My "Ringlets" have won at New York 11 first prizes on single cockerels and cocks—including first prize and champion cockerel and first cock at the 1910-11 show, first prize cockerel and champion male at the 1913 show—almost as many first prizes on males alone as any other Barred breeder has ever won on anything. I am the only living Barred Rock breeder who has ever won all the regular

These winnings tell more of the sterling qualities of the Imperial Ringlets than volumes I might write—They tell what the New York Show says.

The "Ringlet" record for 1913 at the Madison Square Garden, New York Show, is the most wonderful ever made by any Barred Rock breeder since the New York Show was founded. (See ad on back page for this remarkable record.)

Elegant breeding cockerels, trios and pens of this greatest New York prize blood for sale, and mated to produce winners if desired. Richly illustrated 70 page catalogue upon application; it is full of pictures of New York winners from life. Address

## Early Winning Show Birds

I now offer the finest very early hatched exhibition birds that I have ever produced—grand size and shape, fine heads, even clear blue color, and narrow clean-cut vivid barring to the skin. They are matchless and ready to win prizes for you in any competition in the world. The prices are very reasonable. You can enjoy the great pleasure of winning silver cups and prizes if you have my birds.

**My Imperial "Ringlet" Barred Rocks Have Demonstrated to All the World a Distinctive Superiority**

THEY STAND WITHOUT A RIVAL AS THE LEADING  
1st PRIZE WINNERS AT AMERICA'S IMPERIAL SHOW,  
MADISON SQUARE GARDEN, NEW YORK

## A Great Light on the Subject of New York Records

The "Ringlets" exhibited by me personally, have won at New York a grand total of 29 first prizes—this is more than double the number ever won by any competitor—no other Barred Rock breeder in the world has ever won more than 13 first prizes in the entire history of the New York show—mark the difference—these figures are as remarkable as they are conclusive—they inform the public who have hitherto been confused by conflicting claims.

prizes on pullets at a single New York show, viz: 1st, 2d, 3d, 4th, 5th and the only breeder who has ever won 1st prize cockerel and champion male and 1st prize pullet and champion female at one and the same show at Madison Square Garden.

My "Ringlets" have won every Silver Cup and Trophy that has ever been offered at Madison Square Garden to be won three times. In short every trophy on Barred Rocks that has ever been offered and won three times has been finally won by me and is now my absolute property. Among them are the \$100 Challenge Trophy and the \$100 Association Cups.

The best is none too good for my customers and if you want to show you will find that judges appreciate the wondrous beauty and sharp "Ringlet" barring of my Barred Rocks. Prices are reasonable and thousands of birds to select from.

E. B. Thompson

Lock Box 510  
Amenia, New York

we know of where Buff Orpingtons and Houdans are the specialty. They are now selling all their Anconas and Lakenvellers, both are beauty and quality lines, write them.

Within the boundary of Jersey City we found two chicks of a staple variety, but of rare type known as "Snow-Crest and Black-Cloud." They are perfectly tame when fed on Guinea-fowl, like music and song of the low-bridge variety, and when properly hitched are companionable to the sterner sex. The General of the Eastern division will please note.

Die when I may; I want it said of me by those who knew me best that I always plucked a thistle and planted a flower when I thought a flower would grow.—Lincoln.

These are indeed bright times for the breeders and those who have the quality will surely harvest results. The demand for choice birds is in advance to the supply and with all prices are moderate.

The egg business is also coming back and eggs for hatching will be in greater demand next spring than ever before.

To our mind this is as it should be, for there is no better or quicker way to get the best of stock than by buying choice eggs and properly raising the chicks.

Show your birds. If you have the quality exhibit them and let the people all see what you have. Don't be one of the kind that leaves his birds at home and goes to the shows and tells he has better at home. That tale has been overworked for several years. Show them and let them do your talking. That kind takes and is convincing.

Zeek Haskell says: No matter how well a feller is doin' his wife is allus figurin' how much more he could save if he'd quit smokin'. A grocer often goes to the theater jist t' see if th' folks that owes him are still in town.

A Russian scientist proclaims the possibility of the artificial egg. The synthetic beefsteak seems long delayed.

When in Syracuse, N. Y., we visited the Poultry Advocate and editor C. C. DePuy kindly escorted us through his entire plant. They are nicely located and have a complete outfit all their

own. For 21 years the Poultry Advocate has been a staple and reliable poultry journal.

Columbian Rocks are sure to become more popular judging by the beautiful classes shown this season by the Wilburtha Farms. F. G. Bean and L. Paul Graham the winners at Hagerstown were certainly wonders.

Maj.-General J. Douglas Harcombe is now a full fledged Barred Rock breeder and likes them. We soon hope to see him in the show room.

We have a pressing invitation to visit the Webster Farms, Girard, Pa., and as we are very fond of White Rocks we hope to make this soon. This line has done well at New York, Cleveland, Philadelphia, Williamsport, and other leading shows. They report a larger and better stock than ever. The same is also true of E. H. Lichtenwalters Buff Rocks.

Be sure you're right and then keep it to yourself.

President E. B. Thompson is showing his back-bone and is proving his worth to the A. P. A. We will have more to say of this later.

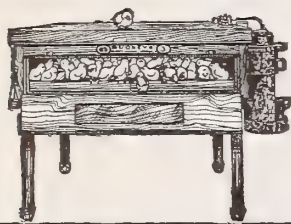

The Old Forge Poultry Yards, Spring Grove, Pa., have made a splendid record with their Buff Orpingtons this year winning at Hanover, York, Allentown and Hagerstown. Note, mention elsewhere.

That grand old breed the Dark Cornish, have come into their own and for the past two or three seasons have proven their popularity by the big classes seen at the shows several of these running well over 100 entries each. They are a practical general purpose fowl, quick growers and the best of meat. The breeders are to be congratulated for the progress they are making to popularize this worthy breed.

The poultryman's quartet, Messrs. Rankin, Punderford, Graham, Atherton and Howell were in evidence at Hagerstown and rendered several dittys in an artistic manner. They promise to entertain at several shows this winter, and at all banquets. Rankin's voice is of a shiftily-brindle tone and comes to the rescue of any that should fail.

The Philadelphia Association will provide a large booth where subscriptions to any and all poultry journals will be taken at their coming show under their own direction. We heartily approve of this plan for it seems to be the solution of a very perplexing question. The public attend the shows to view the poultry and it is annoying to them to be held up at every corner and between isles by the sub-solicitors. Those wishing to subscribe can do so and I am sure that every poultryman on the floor will direct the public to the booth for that purpose. We wish to see this plan tried out well and hope other associations will follow in this line.

Again we urge the breeders to join the Poultry Specialty Clubs. A strong club means greater popularity and more business for all. Do this now.

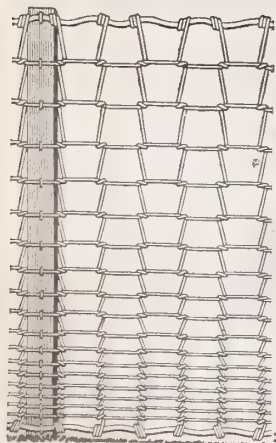

## More Than 1000 Dealers Sell "The BUCKEYE" Because They Know

That it is the most reliable incubator made. They know when they sell you a "BUCKEYE" that it is going to do exactly as claimed; that you are sure to have success with it no matter what incubator you may have used in the past or even if you have never used any at all. It is

### Guaranteed to Hatch Every Hatchable Egg

Let us give you the name of the "BUCKEYE" dealer in your town who will be glad to show it and prove to you that it will hatch more and better chicks than you can get with any other machine. Made in 5 sizes—60 eggs to 350 eggs—and sold as low as \$10. Write us today and let us send you the dealer's name and also our complete catalog. We shall also be glad to answer any questions and help you any way we can. Address,  
THE BUCKEYE INCUBATOR CO., 501 Euclid Ave., SPRINGFIELD, OHIO.

## POULTRY FENCE

DIRECT TO YOU AND  
YOUR NEIGHBORS, TOO

**22 1/2** Cents a rod for 48 in. high.  
**22 2/2** 25 1/2 Cents a rod for 60 in. high.

Not a flimsy netting but a fence requiring fewer posts and no baseboard or top rail. Spacing between the line wires graduated from 1 1/4 inches at bottom to 4 1/4 inches at top. Stay wires 4 1/2 inches apart. Positively the greatest Poultry Fence Bargain ever offered. Our 48-inch combination **POULTRY AND STOCK FENCE 27 1/2 CENTS PER ROD.** This is a heavier fence having the same construction as the above fence and while close enough for small chicks yet strong enough to turn stock.

**Direct to You at Factory Prices.**

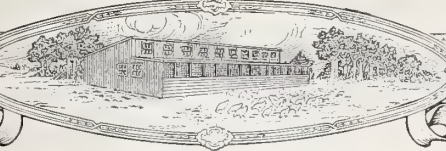

Write for our large illustrated Catalog showing 100 styles of Farm, Poultry and Lawn Fence. It's free.

**Kitselman Bros. Box 295 Muncie, Ind.**

# Pacific Coast Department

Conducted by H. H. Collier, Tacoma, Washington,

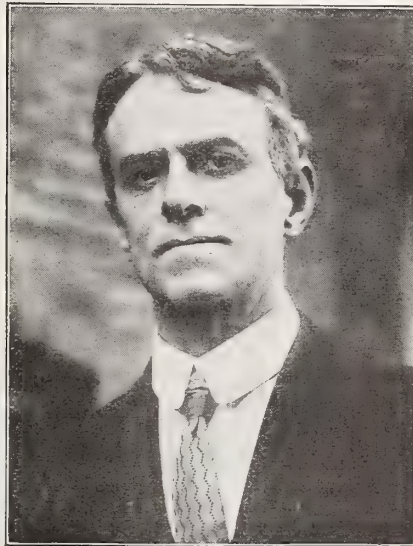

**T**HE man that plants his poultry advertising early will be the one that will get the egg orders when he has hatching eggs for sale. People are prone to shop in the poultry business the same as they do in any other walk in life. They do not as a rule buy the first thing they see but write around to the different ones where they see fowls for sale and buy from the man that makes them think they are getting the best bargain. An advertisement can not always make ones sales—he has a duty to perform himself. If you get a letter about your fowls you should in the first place have good stationery on which to answer such letters. You should have a nicely printed circular that will answer such questions as how your birds are mated. The strain of birds you carry. The winnings of your fowls at the poultry shows. The judges who have passed on your birds. A few cuts of winning birds should be in this circular. All of this information to a prospective buyer will help to make the sale. When you get the letter answer all of the questions asked of you. Be honest. If you haven't the kind of bird that the prospective buyer wants, tell him so and describe just what kind of fowl that you can offer for sale.

Another thing when you get a letter from a prospective buyer. Answer it at once. Do not delay. Possibly he has written to several others and he will buy as soon as he can find what he wants. If you delay in answering you help the other fellow to make a sale that you could have if you would attend to business.

Do not try and over advertise your

plant. Make it a business proposition. You can easily figure just what your plant can do. You know from your flock just how many eggs that your plant will furnish during the breeding season. Keeping customers waiting for their eggs is poor advertising. Advertise just what you can furnish, no

CHARLES G. HINDS  
Pacific Coast Poultry Judge

more no less. If you get an order for a fowl, ship as soon as it comes in. Do not delay in such matters. The average man when he orders anything is anxious to see what he will get for

his money. If you will be prompt in shipping you are more than apt to please the customer than you would if you would wait and get him impatient. Some men will order a fowl and tell everyone in the neighborhood about his buy. When such a bird comes in he will be ready to show it to all of his friends. If he lives in a small town every one will know that he has bought and many will ask about his purchase every time they see him. If he gets his shipment promptly and everything comes as represented he has given the shipper a better lot of advertising than he could have gotten in any other way.

When shipping birds, use a good substantial coop. See that your name is either stenciled or painted on that coop. When convenient make the coop a source of advertising by painting the names of the fowls that you carry. Have prices of your eggs and tell the man or woman who reads your sign that you will send them a circular if they will write. You pay big money for small spaces in the poultry papers yet you let a source of advertising go to waste that would be a powerful help to you when you send out a shipment without putting forth a card.

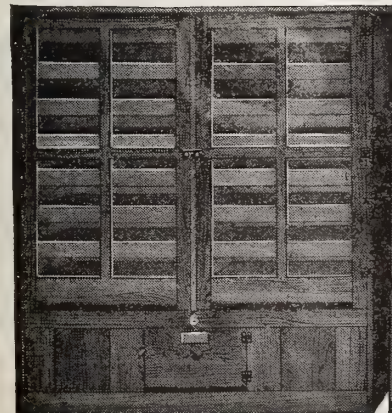

When shipping eggs be careful that you pack each and every egg so that they will not break. I am a little old fashioned about shipping eggs. I do not believe there was a package ever made that will carry eggs as safely as a split basket. I have used baskets for years and have had very few complaints. In packing your eggs wrap each egg in newspaper. Take excelsior and curl it around each egg so as to

## DOUBLE QUICK GRAIN SPROUTER

**THE PERPETUAL POULTRY SILO--Grows Green Feed While You Wait**

**The First, the Original, the Pioneer of All Grain Sprouters.** Built in six sizes, from  $\frac{1}{4}$  bu. to 8 bu.; for a few hens to 1,000

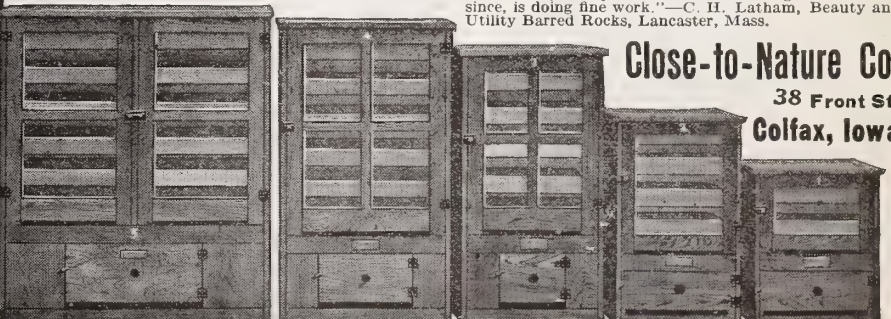

The Double Quick originates and initiates—others imitate and appropriate. Fully 100 Double Quicks to every half dozen of all other kinds combined. Now in its fourth year—in use in every state and territory in the U. S.; in Canada and Mexico; in eight foreign countries; thousands have tested its value; many large poultry plants use from one to five.

"On Sept. 16, I ordered your No. 5, Double Quick Sprouter shipped to Maude L. Kaler, Columbia City, Ind. and this one is proving so satisfactory that she wants another one of the same size and therefore you will find draft in payment of this second sprouter."—Milo R. Meredith, Indianapolis, Ind.

"I ordered and received from you last fall one of your 5-tray Grain Sprouters. This works very satisfactory. I want one for 1,500 hens. I enclosed my check for your No. 6 Grain Sprouter."—E. A. Palmer, Providence, R. I.

"I am enclosing my check for two more of your No. 5, Double Quick Sprouters. The one I bought some weeks since, is doing fine work."—C. H. Latham, Beauty and Utility Barred Rocks, Lancaster, Mass.

**Close-to-Nature Co.**

38 Front St.  
Colfax, Iowa

make it impossible for eggs to touch each other. Put a good layer of excelsior in the bottom of your basket and lay each egg in its place, having enough excelsior at the sides of the basket so that the package could stand a small crush without breaking the eggs. I find it best to use a number four split basket. Fill the bottom full of excelsior, wrap each egg and lay on its side, placing each egg on its side, run three eggs to the row. The ordinary split number four basket will easily carry 15 eggs packed in this way and give plenty of room without crushing. Put enough excelsior between each egg so that they can not possibly crush.

To fill in the top after the eggs are in the basket, take your excelsior and pull it apart so as to have a mass of loose fiber. Now work this excelsior down well to sides and top of each egg. Put in an extra quantity so as to have a heaping basket full. Take

words "Eggs For Hatching," your name, address and the kind of birds you breed. Have a place for the name of the party to whom you are shipping these eggs and print his name so plainly that any child can read it as he runs. The day before you ship notify the party that his eggs will be shipped at such and such an hour, giving the train and express company over which the package is shipped. The parcel post may be a good way to ship. Packages that are not fragile but until Uncle Sam makes better provision to care for eggs, we will still be old fashioned and ship by express. Uncle Sam will not take packages with handles on them and until he will make better provision for the egg business, we had better stay by the express companies.

Now is the time to plant that advertising. Get the copy in to the papers well ahead of the time that advertisements are called in. The aver-

Charles G. Hinds, of Oakland, California, has been judging poultry since 1900, when he placed his first ribbons at Fresno, California. Charlie might be called an old time breeder of poultry. Thirty-seven years ago he commenced the breeding of Brown Leghorns and for years took quite an interest in the breed. When White Plymouth Rocks became popular, Mr. Hinds took them up and he says that he liked that breed better than any variety he ever handled. At one time Charlie was known the country over as a White Rock breeder, as he was for one year president of the American White Rock Club. During the time that he was president he had many cases to act on where the breeders were trying to "do" each other, and he soon had a reputation as a great diplomat.

Judging poultry is one of the arts of today. Many men know the breeds. Many men have temperament for judging, but we find few men who can combine the two arts. There is as much in having diplomacy, to be able to make the other fellow realize you know birds, as it is to know them yourself. There is as much in being able to get away with one's judgment in the shows as it is to satisfy oneself that he has placed the ribbons on the right fowl. The man that goes into a poultry show exhibiting a lack of confidence in himself will soon lose the respect of the exhibitors. One must carry with him in the show room an assurance of knowledge in all varieties of fowls if he hopes to make good. Speciality judging is easy as compared to all-around placing of ribbons. To do good work requires a quick eye, quick decisions and a general knowledge of all breeds. The man that can not place the ribbons in a score card show as a rule is not competent to make awards as a comparison judge. Score cards have become obsolete in many of the big shows and as a time killer the score card is a success, but after all, the man that can not score a fowl does not know how to value the different sections of the birds and therefore he is not competent to judge a variety unless he can give the value of each and every section of the birds he is judging.

Charles G. Hinds was born in Nevada, California, in 1864, and has lived in the Golden state ever since. He has judged poultry throughout the Pacific slope and has made good. For awhile Mr. Hinds dropped out of the poultry shows and did little work, but a year ago he applied for an American Poultry Association license, which was granted him. Being a member of the judges' committee at the Nashville meeting, the writer had a chance to look over Mr. Hinds' endorsements, and we found them good all the way through. Having judged with Charlie at Seattle years ago and watched his work in several shows we were able to speak a good word for him and also endorse him for a license.

Mr. Hinds is married and has four husky boys. Speaking of one of them he says that he has a baseball player in his family that will make a Ty Cobb name before he is through. Charlie, like all fond fathers, claims all the credit for the good work of his son on the diamond and makes the claim that if it had not been for judging poultry that he would now be one of the best players in the big leagues.

Some of the notable shows where Charlie placed awards are as follows: Oakland, California; Seattle, Washington; Victoria, British Columbia; Eugene, Oregon, and a host of others. He has

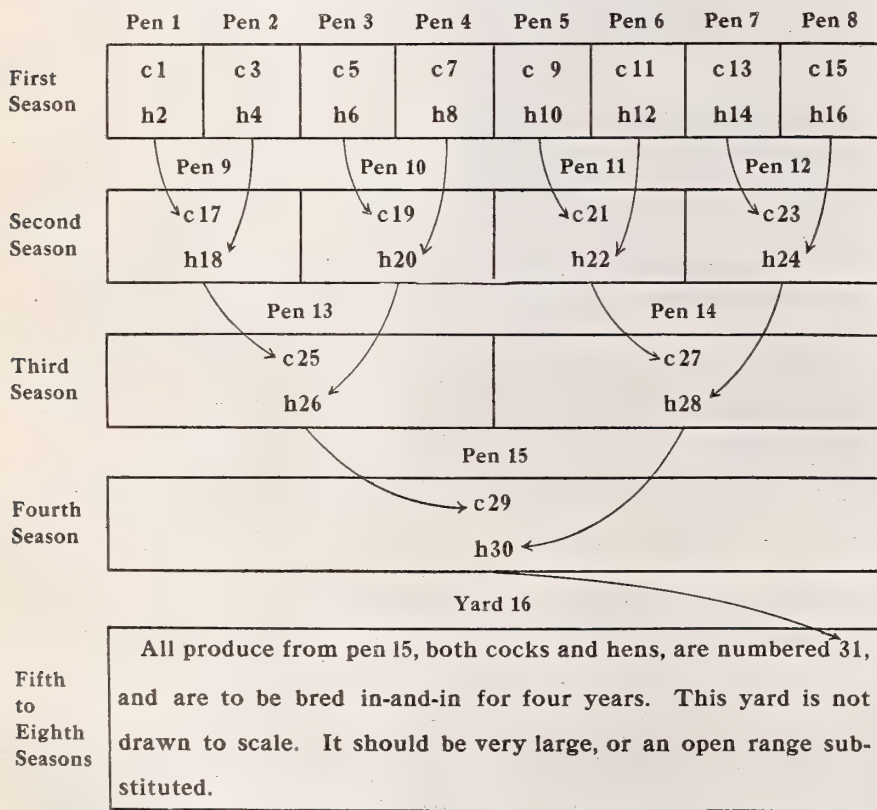

Fig. 1. See Stoddard's Utility Breeding Chart in this issue. By "pen" is meant a breeding pen. Each pen contains a cock "c" and a group of hens "h". The upper tier contains unrelated birds from sixteen outside sources. After the first season all fowls used are bred on the premises, their descent being shown by the arrows. There are 31 distinct strains, in the last of which there is a mixture of sixteen bloods.

a piece of paste-board the size of the inside top of the basket and lay this over the excelsior. Take a piece of cloth and stretch it over the whole top and sew it to the sides of the basket firmly. You have a package in this way that will stand a little crush and a fall that will not break the eggs as each and every egg sets on a cushion. It matters not whether a package of this kind rides bottom or top side up, it will go through in fine shape. I have shipped eggs to many points in Alaska, even where the eggs were packed in by both men and horses and they went over the rough trails without any bad results. I have shipped eggs in such packages that went three to four thousand miles that brought the best of reports from the man who bought them.

Have a nice card printed giving the

age poultry paper will give a breeder a better display if his advertising comes in time to give the printers plenty of time to handle it. In printing offices where poultry papers are issued there is always time when the office is not being run at a high rate of speed. This copy is better handled and there is less liability of mistakes if the printer and proofreader has plenty of time. Send your copy in at the last minute and it will get in the space that is left over. The printer will have to rush the job and the proofreader will have his hands so full of other work that he will not have the time to give your advertisement that he would have had earlier in the month.

Do your part to help the editor who gets the paper together each month and you will find that you will be well paid for your forethought.

## FANCIERS IDEALS NO. 1

### Plymouth Rock Shape as Leading Fanciers and Judges See It.

By LOUIS A. STAHMER

FROM Gallus Bankiva to the Black Breasted Red Game is but a very short step, but when it comes to absolute different shaped and colored breeds there must be some reason for their existence. It can be summed up in one sentence: It is the desire on the part of the poultry breeder to produce an ideal and his greatest help is the law of heredity. Heredity is merely a transmission of tendencies and character, and selective breeding and the law of demand has made the different breeds and varieties possible. The main requisite and the distinct character of any breed of fowl is the shape. The shape by which a breed is recognized is prescribed by the American Poultry Association. It is an absolute fact, however, that not any two breeders and judges seem to have exactly the same opinion of what this correct shape really is as specified by the American Standard of Perfection, and the interpretation of the requirements vary greatly in accordance with their opinions. While this difference of opinion is not as great in some of the more popular breeds and varieties, yet it is true that very few breeders have the same identical idea of Standard requirements.

There seems to be less difference of opinion regarding the shape of Plymouth Rocks than in some of the newer varieties, and to really see how much this difference amounted to among our breeders and judges this article and the accompanying illustration is the result. Fowls degenerate quickly both individually and as a flock if they are not looked after in proper manner. By proper selection we can fix any character, any color, any shape, and the prize winners at the leading shows in the hands of well-known breeders are the reason for the demand for certain types of fowls and generally accepted as ideal.

The illustrations accompanying this article were made of composite photographs of some of the leading winners at some of the largest shows in the country. From this draw-

ing blue prints were made and sent to one hundred breeders and judges of the different varieties of Plymouth Rocks. The breeders and judges selected were men of national reputation and whose judgment is generally considered regarding the requirements of their respective variety. They were also selected according to geographical distribution, so the criticisms received were nation wide. The reason we sent blue prints is that the pencil line correction would stand out from the color of the print and enable the breeder or judge to see the changes he made. Previous attempts in this line in which pen and ink drawings were sent out were too confusing and the results not what expected, as the ink line

conflicted with the pencil corrections made. Our new method worked out to perfection and the criticism which we received showed up plainly and distinctly from the blue background and enabled us to make an ideal drawing, which appears in colors on the following page. If we follow the progress of the breeds it is interesting to note the rapid or gradual improvement either in the color or in the shape, but inasmuch as shape makes the breed and color the variety, and as this article deals with shape alone, we will take up the study of this part. Plymouth Rocks have been popular for too many years and the type has become, so to say, fixed, and when we

The above illustration shows how the picture appeared on the blue print which was sent out. While we did not receive as many back as we sent yet a great number responded to our invitation and made such corrections with a pencil directly on the copy how the birds differed from their accepted ideal. Our intention of making changes whenever ten per cent desired a change in a section could not be followed in detail, as we did not receive this number of criticisms and the lower percentage was substituted, thus making the prints sent out as being very nearly ideal, in fact dozens of them were returned without any criticisms.

compare some of the old prize winners of ten years ago, the difference is not as great as some people expect. In looking over the winners of 1902 of such men as F. G. Bean, Buff Rock heading first pen at Hagerstown; Chas. Latham, cock Vulcan first at Boston; Theo. Hewes, "Expansion Queen" first at Chicago, and U. R. Fishel's numerous winners, and Halbach, Welles, Gardner, Graves, and other well-known breeders of prize-winning birds, we are of the opinion that these same birds could win on shape today as well as they did then. In summarizing the various criticisms received on the blue prints we made out a regular score card, and it was our intention that whenever 10 per cent of the number returned would make the same criticism we would make the corre-

sponding change in the drawing; but inasmuch as the percentage did not run up as high we had to go down in some sections as low as five, so the completed illustration should in accordance therefore be as nearly ideal as the majority of fanciers and judges interpret the Standard of the breed. It was interesting to note that out of the great number that were returned only four extremes were noted. These differed entirely from all the rest that they would seem out of place. The criticisms that were received were divided up as follows according to our score card:

Criticisms on the male: Beak too flat 3, beak smaller 1, neck larger 4, back longer 2, tail too large 3, tail too small 4, tail carried higher 3, tail carried lower 1, show main tail feathers 2, sickles and lesser sickles to hang straighter 2, tail too full 1, make fluff larger 2, keel larger 3, breast smaller 7, thigh larger 6, make spikes on comb smaller and rounder 6, comb smaller 3, wattles smaller 2, ear lobes larger 1, tuck up wings 1, and three criticisms bordering on the extreme.

Criticisms on the female make head larger 3, head smaller 3, beak too flat 3, beak smaller 2, neck larger 5, neck smaller 2, back longer 2, back shorter 1, tail larger 3, tail smaller 1, tail carried higher 1, tail carried lower 1, fluff larger 3, fluff smaller 6, keel larger 3, breast smaller 6, thighs larger 5, thighs smaller 1, legs too rough 3, comb spikes smaller and rounder 2, comb spikes larger 1, size of comb larger 5, comb smaller 2, tuck up wings 1, and one criticism bordering on the extreme.

We have tried to follow these criticisms as near as we could, with the exception of the fluff on the female, which we thought could be a little bit larger, and the carriage of the tail, which we have

changed according to our own idea. We have noted for years that the majority of prize winners have been generally over weight, and we believe it is a step in the right direction, as the breed can easily stand a little heavier weight clause. We thought it would be a good idea, perhaps, to show the size of the birds, and for that reason photographed a rule which was laid right in the place occupied by the center of the body of the birds. In photographing some of the models we set our camera at exactly the same focus. Some of the models were a trifle overweight, but it will not affect the rule measurements very much. The completed illustration should prove valuable to the beginner in breeding Plymouth Rocks, as it will give him an idea of what correct Plymouth Rock shape should be according to the opinion of America's foremost breeders and judges. We invite criticisms on the drawing and trust that it meets with the general approval of the breeders to whom the prints were submitted.

There are six varieties of this breed recognized by the Amer-

ican Poultry Association. The Standard for shape is alike and the following description will fit all of them.

The Plymouth Rock is a large, compact-appearing, deep-bodied fowl. A long, straight and broad back is desired in the ideal specimen. The breast in such a bird should be fairly prominent and nicely rounded. The head should not be too large, but broad, taking the length into consideration. A Standard Plymouth Rock head should be distinctly different from a Minorea, Orpington, Leghorn, or Langshan. The smaller, stout comb, the stout, moderately short beak, the full, alert eye, the well-rounded wattles, medium in size, will show the difference at once when compared with ideal specimens of the other breeds mentioned. The legs of a full-grown Plymouth Rock should be well set apart, stout and firm, with thighs and shanks of moderate length. The tail should not be so large or so full as to take away from the compact appearance of the

bird. This is about the only section where Plymouth Rocks differ in shape with those bred 10 years ago. Although the Standard requires a tail carriage of 45 degrees in the male and 35 in the female, yet it is very seldom seen on exhibition specimens. A lower tail carriage seems to be a fad among breeders of nearly all varieties excepting those who breed fowls where high tail carriage is required. That "Rainy weather" tails, as some judges call them, will soon have had their day is the general prediction. Summing up the general appearance of Plymouth Rocks gives us a large, compact, well-developed and proportioned fowl with good, strong bone and frame, closely feathered, weighing from 8 to 12 pounds in males and 7 to 10 in females.

Plymouth Rocks owe much of their popularity to their vigorous constitu-

tion and stamina, thriving well in all climates and under all conditions. They are making friends the world over. They are quick grovers and combine utility with beauty to a high degree of perfection. They are excellent winter layers of good size brown eggs. They make ideal sitters and as mothers are gentle and will nearly always raise the entire number of their brood. In point of popularity the Barred and White varieties lead the procession. Buff, Silver Penciled, Partridge, and Columbians have also a great hold on the fanciers and their popularity is steadily increasing. The great undeniable merits of the breed is the reason for the great number exported every year to all parts of the world. We would suggest that our fanciers try and improve the breed so that the design "made in America" appears on every specimen in Red, White and Blue. This would be about the only improvement we could suggest and would be a well fitting trademark for this popular breed.

Unretouched picture of Guy Daily's, Jeffersonville, Ind., first prize hen at the last Chicago Coliseum show.

The above illustration painted by Louis A. Stahmer according to the criticisms received from the foremost breeders and judges of this country, shows as nearly as it is possible the ideal Plymouth Rock shape and can be accepted as a reliable guide by the amateur as well as the established poultry breeder.

Unretouched photo of first pullet, Illinois State Fair, 1913. Bred and owned by Maple Farm, Tinley Park, Ill.

quite a list for this season among them being Spokane, where the American-Poultry Association will hold their branch meeting this season.

## SECOND INTERNATIONAL EGG LAYING CONTEST.

Wm. F. Kirkpatrick.

THE second International Egg Laying Contest opened November 1, 1912, and closed October 31, 1913. This competition, like its predecessor, was conducted on the grounds of the Connecticut Agricultural College under the joint auspices of the Storrs Agricultural Experiment Station and the "Philadelphia North American" and under the immediate supervision of the Experiment Station Poultry Department. This paper is only a preliminary report and is issued to meet the demand for the final score of the respective pens and requests for the feeding formulas used in connection with the enterprise. The Experiment Station undertook to keep full records of individual egg production as well as total pen production, food consumption per pen, duration of broody periods, weight of eggs, and to collect throughout the year such other data as was deemed of interest and importance. Not all of this, however, can be presented at this time. The facts will, nevertheless, be given to the public as soon as they can be compiled and incorporated in an Experiment Station bulletin.

Each pen consisted of five females, but each contestant was privileged to send one supernumerary bird which was placed in the competing pen in the event of losses accidental or otherwise. No further substitution was permitted. The total number of eggs laid by the various pens is indicated below in a table arranged by breeds and according to the number of eggs produced. For the benefit of those who desire to make their own comparisons between this contest and the first one, the writer desires to point out the fact that 500 birds competed in this contest as against 490 in the first event; and further, only marketable eggs have been credited to the birds in this contest, whereas all eggs were credited in the initial competition.

------------------------------------	-----

Total yield for all pens 77,916.

\*Not a full complement of five birds at close of contest.

All pens were fed and handled in the same general way; that is to say, the same feeding formulas were used for all pens and all varieties. The management felt at liberty, however, to feed more or less according to the needs of the individual pens. A well known automatic feeder was used for the grain and an earthenware dry mash receptacle was used for the ground

feeds. Mash, grit, shell, and charcoal were given to the birds ad libitum but it was necessary to close the grain feeder a part of the time especially during the long days of summer. This daily attention to the hoppers would probably be unnecessary in larger flocks. Succulent food consisted principally of dried beet pulp for about six months. After this time sufficient natural greens were furnished by the barley and clover in the yards in which the hens were running so that none was added from other sources until along in the summer when some of the yards became more or less depleted. For about the last three months of the contest period green cut corn was used. The beet pulp, and other greens for that matter, were fed separately; that is to say, they were not incorporated in the dry mash. The formulas for the mash and grain rations were not changed in the second year, it being deemed advisable to continue their use on account of the highly satisfactory egg yield obtained in the first competition. It will be noted from the formulas below that beef scrap appears in both the mash and the grain. It should perhaps be explained that all beef scrap was sifted, the coarse particles being mixed with the scratch grain and the remainder being used for the mash.

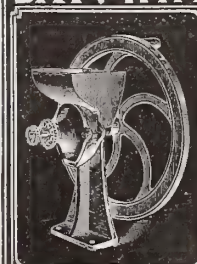

### DRY MASH.

Coarse wheat bran 200 pounds.  
Corn meal 100 pounds.  
Gluten feed 100 pounds.  
Ground oats 100 pounds.  
Standard middlings 75 pounds.  
Fish scrap 30 pounds.  
Beef scrap 30 pounds.  
Low grade flour 25 pounds.

### SCRATCH GRAIN.

Cracked corn 60 pounds.  
Wheat 60 pounds.  
Heavy white oats 40 pounds.  
Barley 20 pounds.  
Kafir corn 10 pounds.  
Buckwheat 10 pounds.  
Coarse beef scrap 10 pounds.

## SAY! WHY DON'T YOU

grind your own oats, corn, peas, dry bone, oyster shells, nut shells, dry stale bread, etc., for poultry feed on a GREAT BIG HAND GRINDER THAT NOW COSTS ONLY \$4.00. You need a grinder if you raise poultry. Thousands are used all over the world. Capacity 1 to 2 bu. per hr. Shipping weight 40 lbs. A child can operate it.

We also build SAMSON windmills and power feed mills. Send for free catalogs, stating what interests you.

Stover Mfg. Co., 318 Plymouth St., Freeport, Ill.

**The Extra Eggs**

will soon pay for one of these

**Automatic Self-Heating Poultry Fountains and Heaters**

Keeps water at the right temperature day and night in the coldest weather and requires less than a quart of oil a week. Made of Galvanized Steel. A long felt want supplied. Every Hen-house needs one. Price of 1 Heater and 2 gallon Automatic Fountain complete \$1.15. Write for Circular G and testimonial. Agents wanted.

**C. A. S. FORGE WORKS, SARANAC, MICHIGAN**

**HENS ON HOME STRETCH.**

The National Laying Contest Hens Have Only Fifteen Days More in Which to Complete Their Year's Record.

**F**IFTEEN DAYS yet remain to complete the year's record in the National Egg Laying Contest at Mountain Grove, Missouri. The droppings, boards and floor of each house has a liberal supply of feathers covering them each morning as the hens are in full moult. Half of the hens are half naked and many have nothing protecting their bodies except pin feathers. We had nearly a foot of snow covering the ground the last week in October, and the temperature dropped 20 to 23 degrees. The hens delayed putting on their winter cloaks until too late in the season, due chiefly we think, to the very hot summer.

The English pen of S. C. White Leghorns will win the prize for the year

by a safe margin. Two pens, one of Silver Wyandottes from Iowa, and a pen of Buff Wyandottes from Missouri, have tied for second place at the end of eleven and one half months. One of these two pens will be safely in second place and the other certain of third. It will take the remaining days to decide the tie. Fourth place will be in doubt until the last.

There were 4,652 eggs laid in October, which makes the grand total 98,840 eggs. Pen No. 26, Buff Wyandottes from Missouri, won the silver cup for the best record in October. This is the third month this pen has made the best monthly record. One strange thing this month is the fact that Leghorns, Anconas, and Minorcas have laid but very few eggs, and the ten highest pens for the month were all Wyandottes, Rhode Island Reds, and Plymouth Rocks, all being American breeds.

The hens have averaged over 141 eggs each thus far. The leading pen has averaged 207 eggs per hen. The

average made by each breed thus far is as follows:

	Eggs Per Hen.
All Black Langshans average.....	159
All Black Minorcas average.....	158
All Anconas average.....	149
All Wyandottes average.....	148
All Leghorns average.....	147
All Rhode Island Reds average.....	137
All Orpingtons average.....	133
All Plymouth Rocks average.....	131

This is a very creditable record for the breeds considering the fact that the average farm hen lays only about 80 eggs per year.

Each variety has made the following average per hen:

	Eggs Per Hen.
All S. C. White Leghorns average....	173
All Silver Wyandottes average.....	168
All Buff Wyandottes average.....	165
All Black Langshans average.....	159
All Black Minorcas average.....	158
All White Wyandottes average.....	149
All Anconas average.....	149
All Barred Plymouth Rocks average....	146
All R. C. White Leghorns average....	145
All Brown Leghorns average.....	143
All R. C. Rhode Island Reds average..	141
All White Orpingtons average.....	139
All Buff Plymouth Rocks average.....	138

## Single and Rose Comb Rhode Island Reds

IDLEWOOD FARMS

"THE COMING CHAMPIONS"

Better than ever, with type and color galore is the least we can say of the hundreds of youngsters developing on our ninety-acre range. Grand exhibition and breeding stock for sale, both young and old. Your money's worth or your money back and you to be the judge. Send for cat.

**Russell Cave Poultry Yards. Add.: Louis Lee Haggin, Prop., Route 3, Box 1025, Lexington, Ky.**

All S. C. Reds average.....	134
All Buff Orpingtons average.....	133
All White Plymouth Rocks average.....	129
All Black Orpingtons average.....	127
All Buff Leghorns average.....	125
All Partridge Wyandottes average.....	111
All Partridge Plymouth Rocks average.....	109

The ten highest pen records thus far are as follows:

Pen.	Eggs.
2 S. C. White Leghorns, England.....	2070
19 Silver Wyandottes, Iowa.....	1843
26 Buff Wyandottes, Missouri.....	1843
20 White Wyandottes, Arkansas.....	1736
8 S. C. White Leghorns, California.....	1717
1 Anconas, Missouri.....	1710
10 R. C. White Leghorns, Missouri.....	1697
11 Black Minorcas, Iowa.....	1685
23 Silver Wyandottes, Illinois.....	1658
30 Buff Wyandottes, Vermont.....	1652

Fifty-six hens have laid more than 200 eggs each. The number of 200-egg hens will exceed those of last year, but none of the individuals will approach the high record of "Lady Showyou." The ten highest individuals thus far are as follows:

Hen.	Eggs.
62 S. C. White Leghorn, England.....	258
860 Buff Wyandotte, Vermont.....	255
600 Buff Wyandotte, Missouri.....	253
55 R. C. White Leghorn, Missouri.....	252
61 S. C. White Leghorn, England.....	246
66 S. C. White Leghorn, England.....	243
77 Ancona, Missouri.....	236
3810 Silver Wyandotte, Iowa.....	229
2028 R. C. Red, Missouri.....	227
64 S. C. White Leghorn, England.....	226

In the feeding test or experiment, ten different rations and methods of feeding have been tried out. The rank of the various rations are given below; Each pen consisted of five S. C. White Leghorns and five Buff Orpingtons. The result is as follows:

	Eggs.
Maine method.....	1588
New York method.....	1510
Norwich Feeder.....	1495
Canadian method.....	1467
Confined to house.....	1462
Feed of all kinds.....	1397
Saylor method.....	1394
Farmer's method.....	1377
Egg farm method.....	1280
Connecticut method.....	1226

### The Three Hundred Egg Hen in Sight.

Is the three hundred egg hen a possibility? We believe that she is. The day is not far distant when this record will possibly be reached by some experiment station or some reliable egg laying contest. Some were inclined to question the record of "Lady Showyou," the 281-egg hen which was developed at this place in our last year's contest. But we are now told that Canada has a 282 Barred Plymouth Rock hen at the Guelph, Ont. Experiment Station. The contest at the Storrs, Conn. Experiment Station has just announced a 282-egg S. C. White Leghorn hen, and the Oregon Agricultural College reports a 291-egg hen. With such records as these coming from such reliable institutions, are we not rapidly approaching the day when some one is going to develop a 300-egg hen? In fact, they may become quite common if the present practice of careful selection and systematic breeding is to continue. Only a few years ago we looked upon the 200-egg hen with suspicion, but today there are thousands of them.

Our aim should not be especially for 300-egg hens, but our efforts should be along the line of obtaining a high average production from our flocks. By breeding from birds selected for constitutional vigor, breeding from high average producing females, and by mating these to bred-to-lay males, we are certain to see a marked increase in the number of eggs laid by the average farm hen. Egg laying

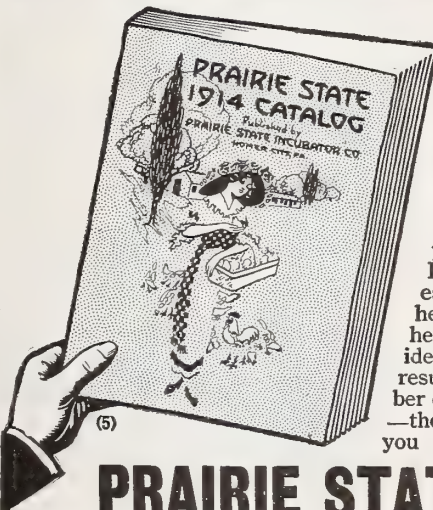

contests and poultry experimental departments are doing wonders to increase the production and the profits from the average flock. May the click of the trap nest continue, may hens continue to break records, and may we

continue to study the problems of feeding, breeding, housing, care and management, until we may see the day when the average hen will be sufficiently productive to insure her owner a reasonable profit.

## Making Money Out of Chickens

The climate of Virginia and North Carolina is ideal for poultry farming and many people are getting rich out of small fruit and poultry farms. There is little snow and chicken houses don't need to be heated in winter. Nearby markets pay good prices. Write today for list of small and large farms suitable for poultry, fruit, stock raising, dairying or general farming. Good, well-watered lands from \$10 an acre up. Abundant rainfall—average 4 inches monthly in 1913.

F. H. LaBaume, Agricultural and Industrial Agent, NORFOLK & WESTERN RAILWAY  
Room 253, N. & W. Railway Bldg., ROANOKE, VA.

## NOW READY NEW 1914 PRAIRIE STATE CATALOG

One of the world's foremost experts on artificial incubation and the rearing of poultry, wrote this big 112 page book. His advice is worth hundreds of dollars, especially to the beginner. For example—he tells you how, by studying the ways of hens that stole their nests, he hit upon the idea of the moistened Sand Tray and how it resulted in a wonderful increase in the number of strong, vigorous "chicks that live"—the profit producing kind—the only ones you can afford to raise.

## PRAIRIE STATE INCUBATORS and BROODERS

are used and endorsed by leading Agricultural Colleges and Poultry Experts, the world over. For over 30 years they have maintained the lead and with the many new 1914 features, they are simply incomparable. Beginners will be particularly interested in the new Keystone Model which maintains Prairie State quality with all the new improvements and yet sells for only \$9 and up.

### Send Your Name on a Postal for FREE Book

Do it today. A delightful surprise will await you for this is more than an ordinary catalog. It contains in addition to full descriptions of Prairie State machines and their exclusive features, about 60 pages of other valuable information on poultry raising. For example—How to Feed, Rear and Breed for Best Results; How to Grow Green Feed in Winter; How to Build Poultry Houses; How to Treat Diseases; How to Preserve Eggs, etc., etc.

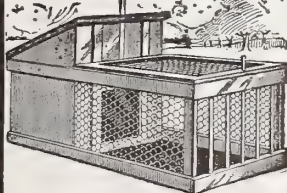

This big, new 112 page book is FREE if you send now. Write—

PRAIRIE STATE INCUBATOR CO., Box 201, Homer City, Penna.

## Hodgson Portable Poultry Houses

### WIGWARM Setting and Brood Coop

For a hen and her chicks and while she is sitting. Gives protection from rats, skunks, hawks and other enemies. Insures larger hatches—has proved its success for 22 years. Shipped knocked down size, 2x4 ft., 2 ft. high.

\$3.00

### No. 0 Colony Laying House— for 12 Hens

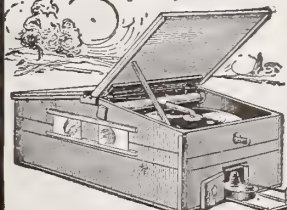

Fitted complete with nests, fountain and feed trough. Sanitary—easily cleaned. One man can easily care for several hundred birds. Nicely painted—set up in 15 minutes. A comfortable year-round house. In stormy weather the run may be covered, giving a protected scratching room. Size, 10x1 ft., 5 ft. high.

\$20.00

### WIGWARM Brooder

Hot-water and hot-air heating combined gives perfect ventilation—no danger of overheating—maintains even temperature regardless of cold outside. Used and endorsed by poultry experts and by experiment stations and such men as Dr. A. A. Brigham, Dr. N. W. Sanborn, Dr. P. T. Woods and Mr. A. F. Hunter. Size, 3x5 feet.

\$15.00

Catalog Free

### Five-Section Poultry House— 10x50 ft.

Sanitary, durable, up-to-date—made of red cedar, clapboarded outside, interior sheathed. Made in 10 ft. sections, each fitted with roosts, nests and fountain. Open fronts, with canvas-covered frames. You can add sections at any time. Easily erected. First section, \$75.00; additional sections, \$80.00 each.

E. F. HODGSON CO., Room 332, 116 Washington St., Boston, Mass.

# Recent Inventions for Poultrymen

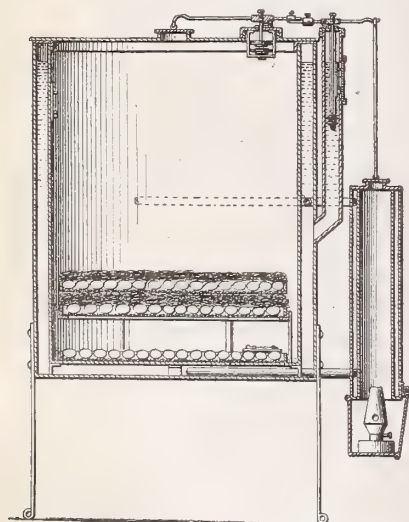

By Lester B. Sargent, Patent Attorney, Washington, D.C.

THE new poultry inventions for which United States letters patent were granted September 30 to October 28, inclusive, present a varied but interesting and instructive display of inventive ingenuity applied to the poultry industry.

A Semifireless Incubator is the invention of Cyrus W. Zimmer, of New York City. This incubator is water-jacketed. The heater which is arranged at one side of the incubator, also is provided with a water-jacketed flue. Water which is heated by the action of the lamp in the water jacket of the flue passes into the water space of the body of the incubator and the cooler water from the latter returns back through a return pipe in to the heating flue, thus keeping up a constant circulation of heated water to maintain the incubating chamber at a substantially uniform temperature. A thermostatic wafer, at the top of the

incubation has progressed most is utilized to maintain the required temperature in the incubating chamber and to continue the hatching of all the eggs. When the day for hatching arrives the lowest layer is relieved of the weight of the other layers, which are first removed and then replaced on a support in the same order as before. "The feather mats which I employ in my incubator," says the inventor, "to cover the layers or eggs serve to retain

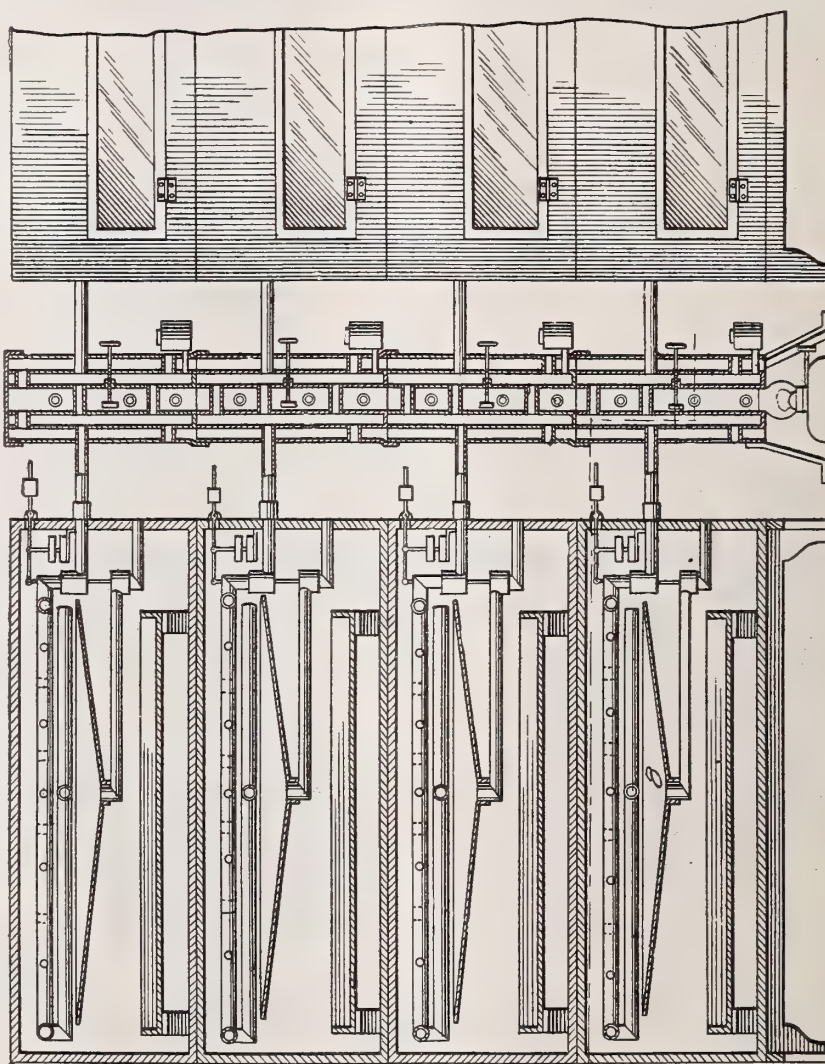

Montana. Sections are arranged one on top of another and provided with a common heating system, connected with hot air distributing pipes in each incubator section or unit, in combination with a cold fresh air supplying means which is opened when the temperature operating on a thermostat cuts off a supply of hot air. In the illustration, F indicates the thermostat; D the hot air pipes; E the funnel for supplying cold air; G a unit of the cen-

Semifireless Incubator, patented October 14, 1913, by Cyrus W. Zimmer, New York City. No. 1,075,747.

incubator, in connection with a damper directly controls the draft from the lamp to regulate the temperature. The temperature of the incubator is also regulated through the instrumentality in an auxiliary regulator of a pin, thermostatic wafer and weighted lever, which latter operates the damper of the water jacketed heating flue.

A novel process of hatching is followed by this inventor, a new layer of eggs being introduced each day, for ten consecutive days. Each layer is separated by and covered with a feather mat. After the twelfth day the lamp is extinguished, or the heating partially discontinued, and when the incubator has partially cooled the egg trays are taken out, and the eggs replaced in the incubator chamber, the oldest eggs in point of incubation being placed at the bottom on feather mats. Thus the animal heat in eggs in which

Heating System for Sectionalized Brooders and Incubators, patented October 21, 1913, by Henry Hohoff, Deer Lodge, Mont. No. 1,076,576.

heat and also to ventilate the eggs and closely approach natural conditions. The operator can vary the number of cover mats over the eggs as may be required to retain the necessary heat and moisture in the incubating chamber." Patent No. 1,075,747.

A Heating System for Sectionalized Brooders and Incubators has been invented by Henry Hohoff, of Deer Lodge,

Mont. Each unit consists of a central flue, having a fresh air flue arranged concentric around it, and communicating with this flue are inlet pipes of the incubator and brooder sections. The central heating flue of the sections G communicate to form a single passage through which the fire gases or heating medium passes, a lamp H being located

at the base of the central flue. The bottom of each fresh air flue is closed to form a pan to hold water to supply the needed moisture to the air for the incubators. This arrangement of incubator and brooder sections one on top of another economizes floor space, lamps, etc. Patent No. 1,076,576.

A way has been found, also, to water the poultry, automatically, regularly, and with no one on duty but the Poultry Automatic Water-Feeder invented by John H. Crowell, of Vineyard Haven, Massachusetts. The invention comprises a water reservoir or receptacle, having an inlet which may be connected with a pipe or hose from a water supply source. Positioned lower down in the reservoir is an outlet valve for conducting water to the various drinking fountains. The automatic regulation of the water supply is effected by a float which floats on the water in the reservoir, and is rockably suspended from the connecting member of two rods which form a toggle joint, one of the members of the toggle joint being attached to a piston in the housing covering the reservoir, and the other member of the toggle joint being attached to a piston-like valve the conical end of which is adapted to close the inlet pipe conduit, and control the admission of water from that pipe. A coiled spring between the piston-valve and a similar coiled spring operating upon the companion piston member insure the effectual operation of the valve. Unrestricted rotary and reciprocating movements of the valve and piston in their housings insure effectual action and prevent any liability of binding or cramping of the toggle joint. As the water falls the float falls with it and opens the valve 2 to admit to the reservoir. As the water again

dinarily a tube of cheesecloth or other suitable fabric—for suspending the eggs one within a cell. The partitions which divide the crate into cells serve also to support the egg-containing tube. These partitions are fitted into the corrugations of the lining of the crate

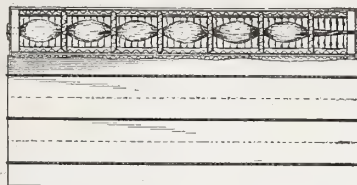

Fig. 2.

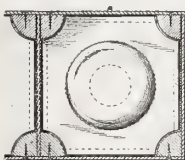

Fig. 3.

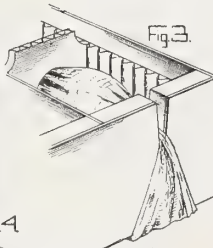

Fig. 4.

Parcel Post Egg Carrier, patented September 30, 1913, by Edward A. Dieterich, New York City. No. 1,074,415.

which is of corrugated paper board. The cloth tube is secured in slots at the end of the crate. The box is strengthened by stiffening rods on the bottom and sides of the box, these rods fitting into cut-out portions of the corners of the partitions. Similar stiffening rods in the cover fit into top cut-out corners of the partitions, thus

the hopper at the hour set and distribute grain which falls on a conical spreader located under the hopper and is thus scattered about. The hopper is mounted on spaced legs which are secured to the conical spreader. For convenience in carrying the feeder

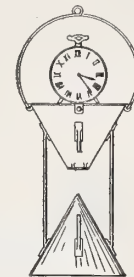

Fig. 1.

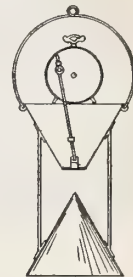

Fig. 3.

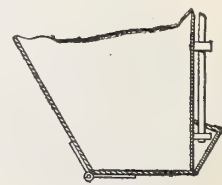

Fig. 4.

Time-controlled stock feeder, patented October 21, 1913, by Charles Daminaitis, Cleveland, O. No. 1,076,193.

about a bail is attached to the hopper. Patent No. 1,076,193.

An aged egg becomes the herald of his own decrepitude when placed in the Hydrometric Egg Detector invented by W. H. Hutchinson, of Rochester, New York. Not only does it tell "good" from "bad" but it indicates a wide range of changes between the state of strict freshness and lax rottenness. The method is by determining its specific gravity, which the inventor has found is a sure indication of condition, irrespective of age, since the condition is influenced mainly by the quality of

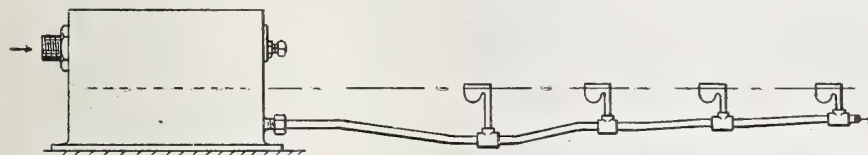

Fig. 1.

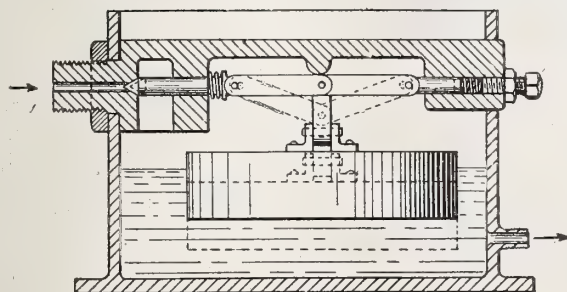

Fig. 2.

Poultry Automatic Water Feeder, patented October 21, 1913, by John H. Crowell, Vineyard Haven, Mass. No. 1,076,351.

raises, the float rises with it and actuates the toggle-joint to close the valve and stop the inflow of water. Thus a uniform water level is maintained in the reservoir and in drinking fountains supplied from it. Patent 1,076,351.

"How to send eggs by Parcel Post" is a problem solved by the invention of Edward A. Dieterich, of New York City, patent 1,074,415. Use is made of a box or crate provided with individual cells and flexible means—or-

providing a durable box of light weight.

The problem of how everybody may go off for a picnic and still have the hens and chickens get their dinner at the proper time is solved by the invention of Charles Daminaitis of Cleveland, Ohio. His Time-controlled Stock Feeder is particularly intended for feeding poultry. He provides a hopper having a hinged valve at the bottom, and a rod attached to the valve and connected with an alarm clock, to open

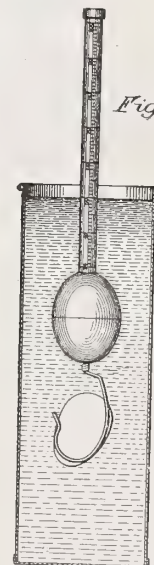

Fig. 1.

Fig. 2.

Hydrometric Egg Detector, patented October 14, 1913, by W. H. Hutchinson, Rochester, N. Y. No. 1,075,477.

the contents and the temperature at which the eggs have been maintained. The device consists of a hollow body formed of cup-shaped metal sections held together by a separate ring, and having a holder of wire attached to

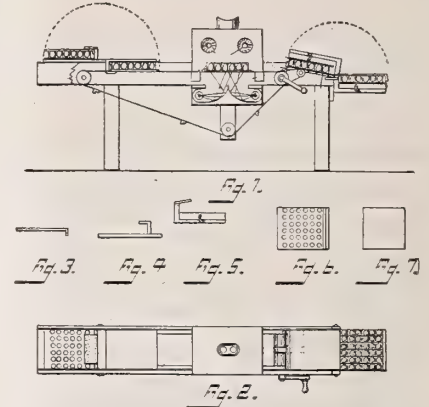

one section to hold the egg, while the upper section has a neck to which a tubular scale is secured. A removable cover is provided at the top of the tubular scale, so that shot may be in-

serted in the tubular scale to weight the device, or to standardize different instruments. The egg in the holder is submerged in a liquid, the surface of which registers the grade of egg on

the tubular scale. Patent 1,075,477.

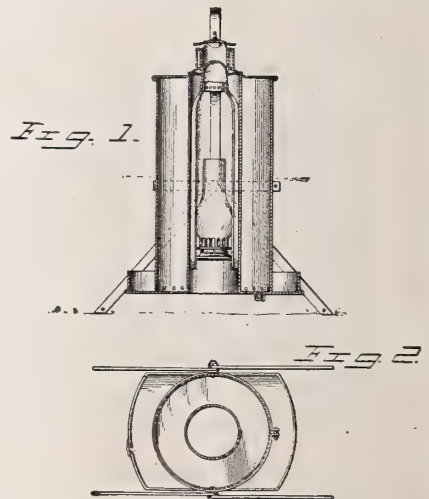

William W. Foster, of San Diego, California, has invented an Egg-Candler for testing eggs in large quantities with minimum handling and breakage. The machine is designed to employ three operators, one placing the fillers upon the initial platen, another being at the dark box, and the third removing and replacing eggs in the case. The invention comprises a frame, a conveyor belt mounted to travel longitudinally in the frame, a dark box mounted on the frame over the conveyor belt, provided with armholes and light excluding sleeves. The belt is adapted to carry a filler of eggs in the filler into the dark box. An eye shield is mounted on the top of the dark box and a reflector is mounted under the dark box and lamps are mounted at the side of the reflector, the lamps and reflector being adapted to radiate light through the eggs in the filler conveyed into the dark box. Receptacles are provided for fresh eggs and rots. Patent 1,075,640.

Egg Candler, patented October 14, 1913, by William W. Foster, San Diego, Calif. No. 1,075,640.

Finally in the frame, a dark box mounted on the frame over the conveyor belt, provided with armholes and light excluding sleeves. The belt is adapted to carry a filler of eggs in the filler into the dark box. An eye shield is mounted on the top of the dark box and a reflector is mounted under the dark box and lamps are mounted at the side of the reflector, the lamps and reflector being adapted to radiate light through the eggs in the filler conveyed into the dark box. Receptacles are provided for fresh eggs and rots. Patent 1,075,640.

A Poultry-Fountain in which water will not freeze in winter has been designed by Daniel L. McCuningham and Earl M. Wilson, of Sedan, Kansas. It is provided with a central annular chamber in which a lamp or other heat-

Non-freezing Poultry Fountain, patented October 28, 1913, by Daniel L. McCuningham and Earl M. Wilson, Sedan, Kansas. No. 1,076,777.

ing means may be retained. A shield or wind guard secured to the lamp by metallic straps, covers the top of the chamber and prevents the wind from extinguishing the flame. Patent No. 1,076,777.

## Monmouth Leghorns Win At Hagerstown

At the recent big, Hagerstown Poultry Show, we won on S. C. White Leghorns, 1st Pen, 4th Cock, 4th Hen, 4th and 5th Cockerel, 4th and 5th Pullet. The 1st Pen was awarded the Best Pen of the Show—all varieties competing. Our Buff Leghorns won 1st Pen, 4th Cock, 2nd and 3rd Hen, 1st Cockerel and 1st and 3rd Pullet. Our 1st Cockerel and 1st Pullet also won all special awards.

## MONMOUTH FARMS S. C. White and Buff Leghorns

are as successful in egg production as winning the "ribbons" in the show room. That's why they are called **The Twentieth Century Dual Purpose Fowls**. We have a large number of vigorous, well developed pullets and cockerels of fine type and breeding for sale at remarkably low prices—quality considered. We also have a number of choice exhibition birds all ready to show—the best stock we have ever bred and bound to win for you in stiffest competition. Send for particulars. Write for our catalogue and color-plate illustration. See our birds at the big shows. Mention American Poultry Journal when writing.

MONMOUTH FARMS, J. C. Punderford, Owner, Box 23, Freneau, N. J.

## A Natural Poultry Land

Poultry do best in an open winter country. It is artificial to house birds 4 to 5 months in the year.

In the open air, with ample green feeds the year around, they lay better, grow faster and are more vigorous.

The Southeast is a natural poultry region. A growing season of 200 to 300 days annually (varying with locality) allows for a wide range of green foods the year round and reduces the cost of maintenance to a minimum.

If you intend starting in the poultry business and have but limited means, no section can offer you more certain success than the Southeast.

## Land at \$15 an Acre up

prices varying with improvements and location, can be purchased in many sections near to good local markets. A Northern Florida poultryman sells his eggs the year around to a local hotel for 40 cents per dozen. Thus profitable home markets are assured. Small fruit growing in connection with the poultry business makes a profitable combination.

Send at once for the "Southern Field" magazine, lists of farms for sale and other information you may desire.

## Twice As Many Eggs! This Book Tells How

## "The Golden Egg"—Free to You

**POULTRYMEN!** Get in line for more egg profits. We can put you on the right road. That's why we are printing **"The Golden Egg"**—the greatest egg-making book ever published. Explains **The Humphrey Way** and tells how

- To feed your hens right.
- To get eggs all winter.
- To get the finest egg-making food for almost nothing.
- To start lazy hens laying.
- To get fertile eggs.
- To get eggs for early setting.
- To shorten the moulting period.
- To feed fresh cut bone.
- To get twice as many eggs.

You must feed your hens right—that's the secret of making them lay. This 48-page book, **"The Golden Egg,"** tells just what and how to feed your hens. No hen

will lay while moulting. Proper feeding will shorten the moulting period—that means *more eggs*.

**"The Golden Egg"** shows why and how fresh cut bone prepared in a Humphrey Bone Cutter makes bone, muscle, feathers and eggs. Thousands of farmers are making their hens pay big profits by feeding them **The Humphrey Way**. Be one of the successful progressive poultrymen who are profiting by our experience!

Write us *today*—a post card will do. We'll send **"The Golden Egg,"** with its dollar-laden message, to you. Don't delay!

**THE HUMPHREY**

**GREEN BONE and VEGETABLE CUTTER**

will save half your feed bills and double egg yield. Guaranteed to cut more bone, in less time, with less labor, than any other. Send for Special Trial Offer and handsome catalogue.

**HUMPHREY,**  
White St. Factory, Joliet, Ills.

# Home and the Table

## Good Things for Everybody

Helen F. Woods  
Editor

The earth has grown old with its burden of care,  
But at Christmas it always is young.  
The heart of the jewel burns lustrous and fair,  
And its soul full of music breaks forth on the air  
When the song of the angels is sung. —Phillips Brooks.

SOME ONE HAS said that Christmas isn't a season but a feeling, and that there are too many of us that haven't it. True it is, that each day as this time of Peace and Good-Will draws near, we hear people express the wish that it were over, and that they dread the hurry and rush, the obligation to friends, the "nuisance" of trying to make it pleasant for the children.

These people have lost heart in what should more than all other times be made a home or heart festival. The heart quality is the fountain head of Christmas; without it Christmas becomes a dead failure. It is essentially a festival that grips the heart, in its appeal of Peace on Earth, Good-Will to man. At no other time does the mind recall the scenes and pleasures of childhood and home, with such love and tenderness as at the Christmas season.

Last year the editor of this department received numerous letters from readers commenting on a reference to this fact. One writes as follows:

"I am so glad to read your plea for a Christmas from the heart. It went straight to my heart. So many of us cannot send out the gifts we would like to. We have not the money to buy them nor the time to make them, but if Christmas is really in the heart, those we love and those with whom we are associated will know the joy of this beautiful season.

"I have enjoyed your stories. Will you allow me to tell you one?

"I left home a bride fifteen years ago. The world looked rosy and good to me and I was filled with the joy of living. One after another disappointment came. My husband failed in business and other trials harder to bear were my lot, but I will not retail my woes. It is happiness I want to talk about. Each year as the Christmas season came around I wanted to send some 'big' thing to the dear Mother at home, something that would show my thought and love for her. But there always seemed to be some reason why I could not send the things which appealed to me as 'big' things and when this fifteenth year away from her came around, I could only write her a letter in which I recalled some of the precious Christmas memories that were so vital a part of my childhood. The reply came written in the familiar shaky hand and enclosed with it was a Christmas card, the sentiment of which read 'Nothing half so sweet at Yule as thoughts of Auld Lang Syne.' You will understand, I am sure, what this card meant to me. It was the dearest appreciation of any Christmas gift I ever sent."

Another reader writes:

"The heart has memories that can never die; the rough usage of the world cannot obliterate them. Feeble age, trembling on the brink of the grave, has them when everything else has fled away and been forgotten.

"They are memories of home; early home—the house where we were born—the garden, with its roses, where the robins made their nests, spring after spring, paying their rent in songs such as we dream of; where the children used to play, while the mother sat by the window, her face beaming out occasionally through the folds of the muslin curtain; the same old house,

ever blot from the heart the memories of the springtime of life. These memories will reproduce, on the verge of eternity, the freshness of emotion, of life and desire, with which existence on earth began."

And so it goes. The best things in the world are not for sale. They lie within the individual to bring about. The Christmas feeling is not a commonplace thing. It creates one of the most wonderful times of the whole year. If you do not believe it, take a walk through the business section of any of our large cities a day or two before this intensely human festival. Everywhere people are hurrying and scurrying, all bent on the same glad purpose, in an effort to show their love or appreciation of each other's

"There are memories of Home."

with its pointed gables, quaint cornices and antique windows; the wainscoted chamber where we used to dream of all the great glad world had in store for us. Dear old home, with its gay dreams, its sunny hours, and cloudless skies, its Christmas seasons with visions of bliss, and glorious happiness gone—all gone, but the memories remain.

"The traveler, climbing the mountains of land not his own, amid all his toil and changes, reverts ever and anon to the time when, a youth or a school boy, he roamed the fields and hills of his native home.

"The mariner, rocked by the storms of the sea, or resting at some foreign port, will run through the long lapse of years back to the house where, with brother and sister, he frolicked the joyous hours of youth away.

"Neither change nor time—neither age nor youth—neither distance nor disease—neither guilt nor passion—can

worth. Every other interest becomes of minor importance in the face of the one big thing, that of thought for others. Business men will tell you that they cannot successfully put through a big deal at such a time except as it applies to Christmas, teachers will tell you that the schoolroom becomes rife with anticipation of the approaching glad time of the year, mothers will tell you it is the one subject of conversation in their households. The very air is Christmassy. The throngs on the streets, the crowds in the shops, all weary, perhaps, with the rush and bustle, yet showing that they have forgotten for a time, at least, the matters of moment that oppressed them yesterday, and that may confront them the day after. Is it not then a most wonderful thing that for a day or two we can lay aside all the big problems, all the petty annoyances and break up the routine of business or purely selfish interests, bringing

about a season of thought for others?

All humans have their troubles, but here is a time that we can laugh in the face of trouble. Weeping over trivial happenings is out of style, and the rehearsing of one's woes has never bettered matters. Real happiness seldom if ever just happens, nor is it manufactured and placed on sale. It is invariably a home made article and does not easily wear threadbare. Poverty cannot sicken, nor age wither it. Like Christmas it is a "feeling" and we have it each within ourselves. On Christmas morning it should be everywhere. You and I can make it be felt in more ways than one, but principally by calling into action the deep and abiding heart forces, with a fresh consignment of love and good cheer. We want to be a little less envious of the good things those about us are possessed of, a little less spiteful and vindictive in our dealings with others, less suspicious of the motives of our associates. We want to be right at heart; to put more heart into our work, into our play, and into our lives, and to perpetuate this spirit of kindness and Good-Will throughout the year.

A Merrie Christmas to you all.  
"Prepare the song, the feast, the ball,  
To welcome Merrie Christmas."

#### Virginia Baked Ham.

Select a well rounded ham and scrub thoroughly in warm water. Put to soak over night in a kettle of warm water in which a half cup molasses has been added. In the morning cover with cold water and bring slowly to a boil. Remove to the back of the stove and allow to simmer for four hours. Remove to a baking pan, pour one-half

cup molasses over the ham, insert a dozen or more whole cloves in the fatty parts, and cover with a crust of flour and cold water made just stiff enough to mould over the ham. Place in a slow oven in a baking pan and allow to bake for four or more hours, according to the size of the ham. When done remove the crust, garnish with whole cloves and "pepper spots" and serve hot or cold with current jelly.

#### Four-Egg Angel Cake.

By Miss L.

For a tin, 7½ inches over top, 2½ deep, scalloped edge, with center tunnel. Beat the whites of 4 eggs very stiff, add ½ cup of sugar, 1½ cups pastry flour, sifted several times to make it lighter, little salt, teaspoon vanilla, ½ teaspoon cream of tartar. Don't grease the tin, but when cake is done, stand tin on two dishes upside down, until it falls out. Put a towel or soft cloth under it to drop on and turn it right side up at once.

#### Christmas Plum Loaf.

Beat to a cream one and one-half cups butter with three cups light brown sugar. Add a tablespoonful cinnamon, a teaspoonful each of ground cloves and mace and one-half nutmeg grated. Dissolve one-half level teaspoon of soda in a half cupful of sour cream and add to the other mixture, together with half cupful best molasses and beat thoroughly. Add six eggs, one by one, beating well between each addition. Then a wine glass of brandy or fruit juice. Sift in four cups of flour, stirring well with a heavy spoon or ladle. Have prepared one pound each seeded raisins and well cleaned

currants, a quarter of a pound of chopped citron and an eighth of a pound each candied orange and lemon peel, chopped fine, and one-quarter pound English walnut meats, flouring all well before adding to the cake. When thoroughly mixed pour into brick shaped tins lined with buttered paper and bake in a moderate oven for from two to three hours. Cover the top with paper if it browns too quickly on top, and watch carefully that the oven does not get too hot. When baked, spread with a thick boiled frosting to which finely chopped almonds have been added. When this frosting dries, cover with a plain white frosting. This cake improves with age, but should not be frosted until the day before using.

#### How to Make Bayberry Candles.

By Miss L.

Set the berries on the stove and boil them hard for four hours, then put them back where they will simmer for a while but not boil. Leave them over night to cool. In the morning there will be a cake of clear green wax. With this add 1 ounce of paraffine; melt both and run the liquid through brown paper moulds; these had been shaped over wax candles held upright in sand. The wicks can be put in straws and placed in the center of the candle; when cooled they are handsome light green bayberry candles.

#### Cheese Delicious.

By Miss L.

Ten cent package cream cheese.  
Ten cents worth Roquefort.  
1 tablespoonful butter.  
2 green peppers.  
1 large Bermuda onion.  
1 half stalk celery.  
Rub the two kinds of cheese and butter to a smooth paste, add the finely chopped onions, peppers and celery. Mix well and season with salt and pepper and place on ice to harden. Serve with hot toasted crackers.

#### Chicken a la King.

Cut the white meat of a boiled chicken into discs and place in a sauce pan on the back of the range. Add just enough cream to the chicken meat to cover it, together with a sweet red pepper cut into discs. Season with salt and pepper and allow to simmer gently for about fifteen minutes. Remove the saucepan to a basin of hot water and add the beaten yolk of an egg, not allowing it to boil. Add lump of butter the size of a walnut and serve on squares of fresh made toast or in patty cases. This is very delicious made in chafing dish.

#### Fruit Sauce for Plum Pudding.

Boil two cups sugar and one of water for ten minutes. Moisten two teaspoonfuls cornstarch with a little cold water and add to the sugar and water syrup. Stir until it thickens. Remove to the back of the stove and add half a cupful candied cherries cut in halves and a few pistache nuts chopped fine. Flavor with vanilla.

# Questions and Answers

Conducted by  
Prince F. Woods, M. D.

## Egg Production Month by Month.

Q. (1) Please give the normal rate of egg production for this climate, that is, the average number of eggs per day a flock of 100 hens should lay each month in the year.

A. (1) We don't know the normal egg yield. Would expect it to vary according to circumstances and location. The following figures are based on the actual performance of a flock of 1,000 layers (White Rocks and R. I. Reds) on a New England egg farm from the records of one full year. The average yield per hundred hens per day, month by month, was as follows:

Month—	Av. daily egg yield.
November .....	20 eggs
December .....	20 eggs
January .....	30 eggs
February .....	40 eggs
March .....	55 eggs
April .....	65 eggs
May .....	60 eggs
June .....	55 eggs
July .....	45 eggs
August .....	30 eggs
September .....	30 eggs

October ..... 20 eggs

Q. (2) What does it cost to produce eggs, cost per dozen on average, month by month?

Danvers, Mass.

W. D. J.

A. (2) A good deal depends upon circumstances and local conditions. This is a matter every poultryman will have to figure out for himself. See article "What is the cost of producing eggs?" in November A. P. J. In figuring cost of production there are many items of expense to consider besides the mere cost of food for the fowls. Labor, interest, upkeep, maintenance, etc., are considerable items of expense and must be considered.

As to food cost, you can figure it for yourself. It costs very nearly six-tenths of a cent a day to feed a laying hen, a trifle less in spring and summer and a little more in the cold weather of fall and winter. In New England the total cost for food alone for one layer for one year was approximately \$2.10. This estimate was based on average price of grain at \$1.75 per hundred pounds and mill stuff at \$1.60 per hundred pounds. Where grain has

gone to \$2 and \$2.25 a bag, as it has in some sections, the cost of food for one layer would be proportionately more. An old farmer friend of ours used to always contend that the retail price of two bushels of good wheat indicated, as a rule, the cost of feeding a laying hen a year. He used to say: "Dollar a bushel for wheat makes two dollars a year to keep a laying hen."

## Wants Large Sized Light Brahmas.

Q. I am a poultry fancier in a small way, as I live in the city, and my favorites are Light Brahmas. I want to introduce new blood in my stock, by procuring good young cockerels, but up to the present time I have been unable to get what I want. If you can help me out will be very grateful.

My birds are very large. My pullets that are laying weigh 9½ pounds each and my 15 months old cocks tip the scales at from 11 to 12 pounds. I have written to several advertisers and cannot get anything better offered than 18 months old cocks that do not weigh more than 7 to 7½ pounds each.

I do not care to use that kind. I want good healthy, vigorous thoroughbred stock that is bred as heavy as my own.  
V. A. Scheffel.

Box 763, Pensacola, Fla.

A. Would suggest that you try to buy a few good heavy females as well as a male for new blood. If any of our readers can supply good standard-bred Light Brahmas of weights desired, in good condition but not fat and possessing strong constitutional vigor, we hope they will write to Mr. Scheffel.

#### Feather Eating Lice.

Q. Enclosed find a feather tip from a White Orpington. The bird is in full molt and the feather is a new one. There are a great many of the saddle feathers that look just like this one. It looks as if eaten by some sort of

parasite. Can you suggest a remedy for the evil?

Aurora, Ills.

A. The feather does not look like a new one, although as only tip was sent we are not sure about that. It is evidently the feather of a very lousy bird. Certain varieties of lice eat the feathers in such fashion. Would dust the bird thoroughly with pure fresh ground Persian pyrethrum powder, working the powder into the plumage on all parts of body well down to the skin. Or you can give the bird a good bath in warm soap suds, rinse and dry thoroughly in a warm room. All birds in your flock will need a thorough dusting for lice.

#### Influenza.

Q. Every fall, when there is a sudden change in temperature, a number

of birds take influenza. I can generally cure it with a one grain quinine pill, but where there are many ailing birds it is quite a bother. Isn't there something that could be put in the drinking water to prevent and cure this?

F. C.

Sellersville, Pa.

A. If the quinine pill works well, better stick to it. Prevent the trouble by breeding only vigorous healthy stock, avoiding crowding of sleeping quarters and by using open-air coops and houses. Dipping the fowls' heads in solution of one teaspoonful of creolin in a quart of water is usually effective for colds and sneezing of this sort. Also mixing half a teaspoonful of spirits of camphor with a heaping teaspoonful of sugar and dissolving the whole in half a gallon of drinking water makes an effective remedy.

#### Forcing the Molt.

Q. Please instruct how to force the moult.

E. S.

Rockton, Ills.

A. We don't advise forcing the moult, believe it does more harm than good. Usual procedure is to put fowls on grass range for two or three weeks and allow only a small feeding of hard grain once a day. Then coop the birds and feed heavily on laying ration rich in protein. Better feed the birds well and provide liberal range and allow them to moult naturally.

#### Early Roosting vs. Crooked Breast-bones.

Q. I have some Leghorn chicks eight weeks old and at night they huddle close together. Do you think it would be better to let them roost as young as this? If they do roost will it make them have a crooked keel bone?

Lawrence, Mass.

R. J. T.

A. If a chicken possesses good sound constitutional vigor and is well fed and cared for, early roosting will not cause crooked keel or breast bones. The crooked breast bone is usually an indication of lack of constitutional vigor or poor feeding and malnutrition.

We would let the chickens roost as early as they want to and would supply an abundance of wholesome food and fresh raw greens. We had the privilege, recently, of looking over a large flock of fine healthy Rhode Island Reds that began perching on any convenient roost very early in life and had regularly gone to roost in the trees from the time that they were well feathered out. We didn't find a crooked keel in the whole flock and they were all full bodied strong specimens. One, which we saw dressed, had the best developed lungs we ever saw in a chicken and the chicken, as a whole, was as nearly perfect physically as we ever saw one. Another flock of chickens on a small lot had never roosted and had not had anything to roost on, being bedded with litter. At four months old every one had a crooked keel.

Roosting early may result in crooked

Dept. 18

breast bone in some cases, but usually it will be found that the real cause of this trouble is malnutrition and lack of constitutional vigor. Chicks that sleep in open-air, slat-bottomed coops from the time they are a week old and go into the trees to roost as soon as they are well feathered, or at about ten weeks old, if bred from stock possessing strong constitutional vigor and if kept well fed, will have firm straight keels with never a sign of crookedness.

#### Color of Rhode Island Red Eyes.

Q. Should all S. C. Rhode Island Reds have red eyes? G.

New Haven, Conn.

A. Color of eyes should be red.

#### Mating Rhode Island Reds.

Q. I am a beginner and want to know how to mate Rhode Island Reds for best results. W. C. W.

New Haven, Conn.

A. Here are the opinions of some of our representative breeders on this subject:

S. R. Howe, Lakeview Poultry Farm, Deerfield, Ill., says: "To produce best exhibition males I would select a male well developed rather high on legs; tail carried almost horizontally; small comb; surface color on the whole extra dark. Hackle darker than the back but no ticking. Undercolor absolutely clear. To such a male I would mate females chosen as follows: Select well developed bird, tail carried at angle of 45 degrees; long back; small comb. Hackle slightly darker than back but no ticking. Good black tail. I prefer a clear wing on female and in producing an exhibition male I leave the markings of the wing entirely to the male side.

"To produce exhibition females I select a male bird with long horizontal back, very strong tail and wing, slight ticking on surface of hackle. Always depend on the male to throw the black. Keep the females free from black in hackle. With such a male would use following females: Select real dark birds, a little smut in the undercolor will do no harm. Strong a wing as possible, also strong tail. Hackle absolutely free from ticking. Horizontal back is essential. Rely on male bird for important sections."

Simmons & Crittenden, Geneva, Ohio, advise the following: "To produce exhibition males we want a cock that will weigh 7½ pounds or more. Should be medium dark brilliant red color with rich red undercolor. Small low comb. Red eyes. Strong in black markings, tail having a greenish tint. Want bird of good type with good breeding behind him. To this bird mate females that are large and strong in type, good eyes and comb. Strong clean undercolor and rich red surface color. Good black tail and wing markings and a slightly ticked hackle. In this mating have plenty of black in order to get dark brilliant colored males.

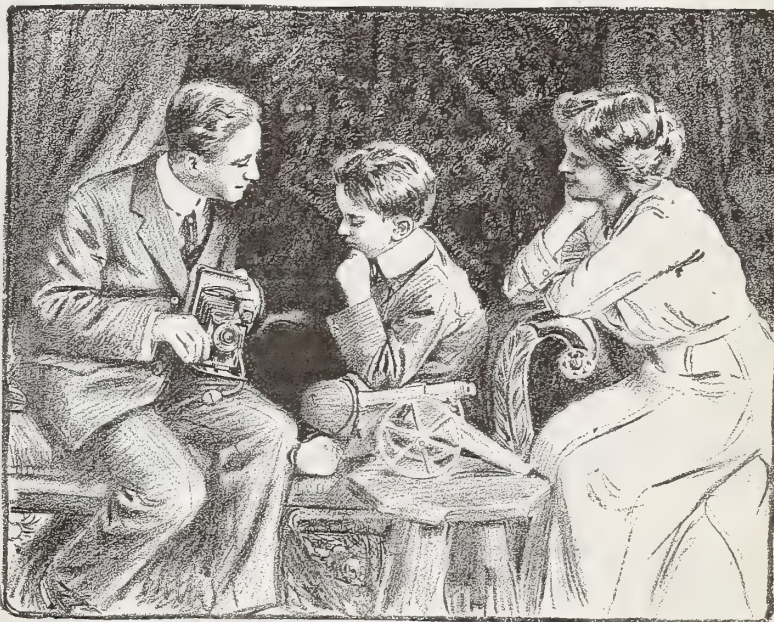

"To get exhibition pullets use a male similar to one used in cockerel mating,

but be sure that he has good clean undercolor. It will not hurt him to have a little ticking in hackle. With such male use same female as described in cockerel mating, although it will do no harm if the females show a little black on wing bows. You have to use black to keep the red, but do not go to extremes."

Phil M. Ferry, Idlewood Poultry Farm, Swanville, Pa., says: "To produce good Rhode Island Reds use a male with deep dark consistent red surface with an extremely rich red un-

dercolor, strong in shape, head points and markings. Mate him with females that have deep, long bodies; very rich even surface color and rich red undercolor, good markings and head points. Surface should be a rich medium red rather than extremely dark."

A. A. Carver, Seville, Ohio, says: "To produce exhibition males: Select a dark rich velvet red cock bird, long in back, with good black markings and head points. A typical Tompkins shape, type and style is my kind of a bird. One showing strong vigor and a

**CONKEY SAYS**—Don't be "Too Late!" You have seen your fine birds moping, sneezing, coughing, with heads swollen and eyes watering. You have seen them fight for breath and die. That's **R.O.U.P.** It's humane to relieve them—it's dollars saved to cure them. Conkey's Roup Remedy does the work. 25c, 50c and \$1.00 sizes. Sent anywhere prepaid if your dealer does not have it in stock. Easily given in the drinking water, so that the fowls take their own medicine. A fine preventive also. Always treat colds and roup promptly, or you may lose your whole flock. Don't wait; don't be "Too Late."

Send dealer's name and 4 cents and we will send you a copy of Conkey's 80 page Poultry Book.

**TOO LATE**

male that I know positively has breeding for several generations back. No bird of uncertain parentage should get into the breeding pens. Mate with this male females strong in type, with color corresponding to breast of male. Pay strict attention to blood lines for two or three generations back, and longer if possible. Had much rather have good blood lines back of female than a strong marked female of uncertain ancestry.

"To produce exhibition females: Choose a male very strong in color and strong blood lines. Mate him with females of strong color and good blood lines. Take yearling or older hens that can go through the moult and hold their color."

W. S. Harris, Mansfield, Mass., advises single matings and says: "Breed a Red male with a brilliant uniform red surface color, a deep red undercolor (the deeper red the better), wings and tail strong in black, to females that are equally as strong in markings as the male, shanks of both sexes yellow or reddish horn color preferred, as this denotes stamina. Eyes red and the shape of both male and female to

be well rounded, deep and long bodied. Vigor should not be lost sight of, for health comes first and health is the foundation to breed upon."

R. I. Armstrong, Columbus, Ohio, says: "To produce show males, use a male with dark even surface color, no shafting on breast and with or without smut in undercolor, mated to clear females, also free from shafting. To produce show pullets, use strong even colored male with clear red undercolor and mate with females having plenty of black in wings and tail."

F. L. Ober, Verona, Pa., recommends a single mating and would use male that is good size and shape, deep red, even shade all through surface and undercolor and strong in Standard points. Mate with him large sized females with long backs and a good even red color (as near like breast of male as possible).

#### Mating Barred Plymouth Rocks.

Q. I have a few Barred Plymouth Rocks that are fine and I want to keep them so. I am an amateur breeder and want to know how to mate my birds properly. Please advise me.

Gates Mills, O.

F. S.

A. Here are the opinions of several representative successful breeders and fanciers:

#### When Mating to Produce Exhibition Males.

H. D. Riley, Strafford, Pa., advises: "Use a male of as strong color as possible and of even shade, narrow barring and good undercolor. Mate him with a dark female having bars that show a good contrast in black and white, good wings if possible, bay eyes and snappy narrow barring."

Fred P. Erdman, Normal, Ill., says: "The male bird should be as near the typical Rock shape as possible, with good points, barring close as you can get it, color clean on surface and strong under. The black bar to be a little wider than the white. The female to mate to above bird should also have the desired Standard qualities in shape and points. This bird must be bred in line to the male for best results. In barring she must be very dark, the black bar to be about three times as wide as the white and the white as narrow as possible. The surface color must not be smoky."

O. F. Mittendorf, Lincoln, Ill., wants a cock "of sturdy build, medium low comb, broad across back, wide between legs, exhibition color, clear and deeply barred and of even color in all sections. To such a male mate standard size females clearly barred with light bar about one-third the width of the dark bar; neat comb, tail carried low, and a particularly full deep breast."

W. D. Holterman, Fort Wayne, Ind., says: "I would use an exhibition male in type. Insist on strong contrast in black and white bars, with bars narrow down to the skin and in a straight line across the feather, especially on the surface. Mate with this male females of large full type, with broad rather long body and low well-spread tail. Body carried on a horizontal keel. Barring very snappy, showing sharp, clean and distinctly white and black on surface. Black bar twice as heavy as light bar. Barring strong and clean down to skin."

Charles A. Gifford, Rusk, Texas, recommends a male that will meet: "Standard description color eyes, beak and legs, with large comb and wattles; body long and deep; legs rather long; color one or two shades darker than Standard calls for, deep barring and clean. Mate with females that are all above Standard weight, deep long bodies, fluff full, legs long and well apart. Barring to skin, clean and free from smut or brownish cast. Black bar twice as wide as white."

W. W. Dods, Woodview Poultry Yards, London, Ont., Canada, says: "We would use a male of Standard size, not over. As near Standard type as possible. He must be even in color all over and free from brass or brown. Clean and distinctly barred in all sections, the dark bar to be black and running straight across the feather. A strong contrast between color and bars is desirable. With this male mate a female of Standard weight and type, with clean black and white barring

#### DIRK'S RED MITE KILLER

One application kills all mites and prevents their reappearance during the season. Cleans scaly legs. Keeps fowls free from body lice.

During the balance of 1913 I will ship one trial quart for 35c. Trial gallon \$1.00. Write for information and testimonials.

## My Single Comb White Leghorns

Won more prizes at the Green County Show, Whitehall, Illinois, December 16-21, 1912, than all competitors combined, also winning Championship male and best cock, hen, cockerel, and pullet. 200 grand exhibition and breeders for sale. Mention American Poultry Journal.

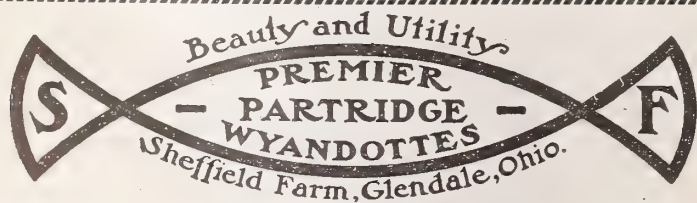

CHAS. MYERS Route 6 Carrollton, Illinois

## SMITH'S Single Comb Buff Leghorns

The largest exclusive breeder of Buffs in the world. I have no other breeds and had the grandest winter layers and winners at thirteen of the big shows.

If you want GRAND LAYERS or SHOW BIRDS, write me your wants

F. S. SMITH, Box C and D, Hamilton, Ohio

## As Usual---Make a Clean Sweep

And again demonstrate their superiority

At the National Conservation Exposition, Knoxville, Tenn., in strong competition we won 5 Firsts, 5 Seconds, 5 Thirds, 5 Fourths, 3 Fifths; at the Tennessee State Fair, Nashville, we won every prize; at the Great Hagerstown Fair we won 6 Firsts, 6 Seconds, 4 Thirds—a total of 64 prizes at these three shows. For the past several years "Premier" Partridge Wyandottes have made practically a clean sweep at New York, Chicago, Boston and the greatest shows in America.

To be successful in Poultry Raising you must have "Premier" Partridge Wyandottes, bred for Utility and Beauty. Write for circular.

Sheffield Farm H. B. Hark, Mgr., Poultry Dept. Glendale, Ohio

A yard of Barred Plymouth Rock Pullets of the famous "Lady Beautiful" line, bred and owned by Mr. C. N. Myers, Hanover, Pa. Evenness of quality is seen in this picture. They are a typical, grand lot, and we wish all our readers could see this line as we have seen them.—H. P. Schwab.

that is very narrow. She must be barred distinctly to the skin in all sections, and be absolutely free from brown in any part of her plumage. It is not necessary to have the legs and beak a very bright yellow, providing the male is strong in these points."

E. L. Miles, Sag Harbor, N. Y., says: "Mate males that conform to Standard requirements in every respect to females much darker than Standard."

Elmer S. West, Ewing, Ky., advises: "Blood lines and vigor first. Then I would consider shape next. I prefer a male with a deep full breast, broad back with a gradual rise to a nice spread tail, well arched neck and broad head. Yellow beak and legs preferred. Legs should be set well apart and have good length. Narrow even barring extending well down to skin. I would be careful to have the female for breeding exhibition males of known blood lines, active and vigorous; short beak and head; low comb with four to six points; red eye; neck medium long with abundant hackle for the

breed. Deep full breast, with breast bone well to the front; broad back and medium height to tail; if possible clean yellow legs and beak. Plumage should be barred to the skin; the black bar should be much wider than the white on the surface, giving the hen a dark appearance."

C. H. Welles, Strafford, Conn., says: "I like a male a little darker than exhibition color and more especially so if the females are not strong in color. Females should be dark barred with sharp and strong contrast of color and with clean surface color."

**When Mating to Produce Exhibition Females.**

Henry D. Riley recommends the use of a "male of even surface color, not too light, don't want too much undercolor, but not cottony. Must have good wings. Narrow barring is not as important as on cockerel mating side. Females for this male should be not too light in color or the mating will yield washed out birds with bad hackles and breasts. Get a good sharp contrast in black and white bar and

good undercolor and barring narrow."

Fred P. Erdman requires a male of good Standard shape and type. "In barring to have narrow black bar with the white bar from 3 to 4 times as wide, the bird to have as good undercolor as you can get on light males. Mate with this male females that show barring a little wider in the dark bar than in the white. It should be made a point to keep them as clean in beak and legs as possible. All birds should have the bar as straight across the feather as possible."

W. D. Holterman recommends: "Practically an exhibition male in type. In barring very light, the dark bar being half as wide as the light bar on surface, with decided bluish tinge in the dark bar, this dark bar being lighter in color than on exhibition male. Distinct barring entire length of feather, however. With him use an exhibition female with strong barring the entire length of feather. The more bars (straight, even, regular, sharp) I can find the better I like it. I want

Having bought the Miami Poultry Yards of Mr. Jas. C. Cummins, we will now combine with the Warren Hatchery Co., and the plant will be known in future as

## THE MIAMI POULTRY YARDS CO.

JOSEPH L. HESTON, Prop. TRENTON, OHIO

We will make a specialty of day-old chicks, and will have an annual capacity of 150,000 chicks. We will hatch the following varieties: Black, White and Buff Orpingtons; Buff, Brown and White Leghorns; Partridge, Barred and White Plymouth Rocks; S. C. Rhode Island Reds, S. C. Black Minorcas, Anconas, White Wyandottes, Buff Cochins and Cornish Indian Games.

The catalogue will be ready January 1st, 1914. For a copy please address

JOSEPH L. HESTON, MANAGER,

TRENTON, OHIO

them ringy on surface and more narrow in barring than any birds shown to date."

O. F. Mittendorf says: "A male of sturdy build, medium low comb, broad across back and wide between legs. In barring the light bar should be three times as wide as the dark bar, clear and sharp barring throughout. Under barring not necessarily of same intensity as surface. Females should be standard size. Barring should be clean and sharp throughout and bars of equal width, feather ending in black tip. Use a strictly high class exhibition female with deep full breast and with legs set well apart."

C. A. Gifford wants a male "two shades lighter than exhibition color,

bluish cast barring, smooth and even shade except neck, which should be lighter. Legs long, well set and orange yellow. Beak yellow and short. Comb and wattles medium. Eyes red. Barring deep in every section. Females should be large, bodies deep and full, back broad and flat, fluff full, legs medium yellow, eyes red, beak short and yellow, tail well spread. Barring to skin, open white predominating. Wing barring very open. Comb and wattles medium."

W. A. Dods says: "In selecting a pullet breeding male we look for a male that is strong in color. By this we mean there must be a striking contrast between the light and dark bars, in other words the light bar must be

white and the dark bar must be black. We never use a bird with brown or gray in wing feathers, the darker the bar is here the better we like it. It is not necessary that the pullet breeding male have exceptionally strong undercolor. For females the ordinary exhibition female that is winning in the large shows is about what we want. If anything we prefer a female a shade or two darker than Standard. In all cases we steer clear of the eight and nine pound females. We find in nine cases out of ten that the best and finest color is found on medium sized birds, both male and female."

C. M. Myers, Hanover, Pa., breeds pullet matings exclusively and says: "For a male use bird of good Rock type, long body, broad shoulders, full breast, medium low spread tail, yellow beak and legs, red eye, low comb. Straight and narrow barring. White bars about twice as wide as black bars. White bar to be clean white and not smoky. With such male use the exhibition female of today with equal black and white bars or a trifle more black than white."

E. L. Miles says use a male "much lighter than Standard" with females possessing "all Standard requirements in shape, barring and color—if anyone knows what the color is—I think it is what the judge likes."

Elmer S. West says: "In selecting a male to breed the best exhibition females I would observe the same rule as to breeding blood lines and stamina as for an exhibition male. The plumage should be clear and silvery, free from any brassiness and an even shade of color from head to tail. The pullet bred female should conform in shape to the female of the cockerel line, with as prominent a breast. As to color the surface should be clean, barring should be narrow and sharp, giving a snappy appearance. The light and dark bars should be of nearly equal width on surface. Black and white should not mix. Beak and legs should be rich yellow."

C. H. Welles advises for males "one with fine sharp snappy barring and fair undercolor and black tipping on end of feather. Mate with females having fine sharp barring, good undercolor, good wing barring and good shape. Barring clean cut and straight across the feather."

### ILLINOIS RED FARM

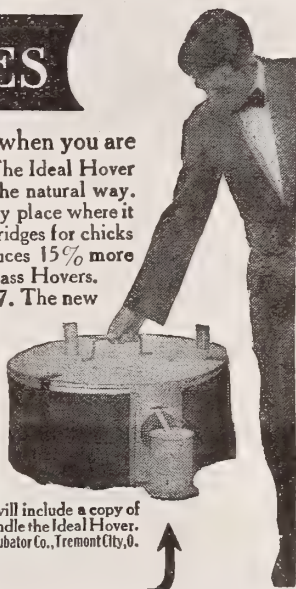

F. E. GAPEN, Prop. LOSTANT, ILLINOIS

## 10 IMPORTANT FEATURES

These 10 Important Features should be considered when you are at a loss to know just which Hover to select.

1. The Ideal Hover may be carried with lamp burning.
2. It broods the chicks the natural way.
3. Can be used in a Brooder, Colony House, Henhouse, or any place where it is suitable to brood chicks.
4. It sets on level floor with no bridges for chicks to climb.
5. Has a Hot Air Double Drum Heater that produces 15% more heat than the Single Drum Heater used in most of the better class Hovers.
6. It is the best Hover made for winter and early spring use.
7. The new Automatic Lamp is perfection in itself, oil fount is outside of the lamp box feeding cool oil to the wick and will never cause trouble by smoking.
8. Lamp flame is always in plain view.
9. It is 24 inches in diameter and will brood 100 chicks.
10. While the quality ranks with the best it sells at a lower price.

Before selecting your Hover for 1914 we want you to write us for Circular showing how the Ideal Hover is constructed, also showing it in actual use on the State Farm at Dayton, Ohio, where seventeen were used last June with excellent results. We will also send you Circular of the Queen Incubator which we sell. It tells all about our Special Combination Offer of the Queen and the Ideal Hover, and you will mention this paper when you write us we will include a copy of "How to Raise 90% of Your Chicks." Write us today. Dealers wanted to handle the Ideal Hover. NEW CARLISLE MFG. CO., New Carlisle, O., Successors The Duplex Incubator Co., Tremont City, O.

Dune-Alpin Poultry Farm, Geo. J. Kerr, Manager, Box 561-J, East Hampton, New York

WINNERS OF FIRST COCK, HEN, COCKEREL, & PULLET, BOSTON 1913 BREED, OWNED BY JOHN S. MARTIN, PORT DORER, CANADA.

At no other show on earth is the White Wyandotte seen to better advantage than at Boston's big mid-winter event, in whose records, for more than twenty years, White Wyandotte progress has been read. John S. Martin, Box 51, Port Dorer, Canada, made his first great winning at Boston in 1904, when his old "Regal" won first place in the cock class and attracted the admiration of the Japanese Government poultry experts then visiting America's leading shows. They placed on "Regal" their special award of a bronze vase for being the "best bird in the show." Mr. Martin's young birds in 1909 won special first prizes, an achievement we do not remember ever having been equaled by any other exhibitor in this class at the Boston Show. The symmetrical proportions of the pullet are typical of the "Regal" strain, and also well express the practical type Mr. Martin has persisted in retaining on account of its true value as egg producers and table poultry. Credit is due Mr. Martin and the excellence of his White Wyandottes for helping to secure to the Wyandotte Standard the more desirable description of "Moderately short."—F. L. Sewell.

## THE VALUE AND USE OF OXYGEN.

By Eugene W. Harrington.

DAVID Harum says, "thinking is good for a man on the same theory that fleas are good for a dog; they keep him from reflecting on the fact he's a dog."

Every great invention that has been presented to the world, during all the ages was the result of careful and intelligently directed thought.

Thought is the material of which ideas are made.

Harness the electric current of action to an idea, and we do things.

When the editor of this journal requested the preparation of an article on the subject of oxygen as applied to artificial incubation I was pleased to comply, and have written with a well defined purpose in mind.

That "purpose" was simply to set the poultrymen and women of this country to thinking, and on one of the most important subjects towards which the attention of the poultry world has been directed in the past twenty years.

That "subject" is oxygen; what it is; how it is applied to artificial incubation, and how it may be utilized as a preventive of the "dead in the shell" chicks and white diarrhea.

What I shall here say upon this subject is not theory, but is the result of careful investigation so conducted as to satisfy myself of the soundness of the conclusion which I have formed.

That we may have a clear, and well defined conception of the subject and

how it applies to existing conditions, I wish to first present for your careful reading an extract from a bulletin of the Oregon State Experimental Station. Please read it twice.

"Artificial incubation in recent years has assumed large proportions. Large numbers of incubators and brooders are purchased in every community, entailing in the aggregate large investments of capital. It is admitted that there are great losses in the artificial hatching of eggs and the brooding of the chicks, and many explanations are given as to the cause. The complaint is that the chicks fail to hatch, or hatching fail to live. Why the embryo should live through the incubation period and die before hatching is a problem that has bothered the incubator operator more than any other. It is a keen disappointment to anyone using an incubator to find after the eggs have progressed satisfactorily up to the time of hatching that 25 to 40 per cent of them, more or less, 'die in the shell.' This means a great loss to the poultryman, and if there was no other problem involved in artificial incubation than these 'dead in the shell' chicks, this in itself would warrant the most careful and extended investigation."

The world in general seems disposed to "stand pat" on the proposition that Man can't improve on Nature.

This is certainly so with regard to the hatching of chicks, and every man who has ever operated an incubator knows from experience that when it comes to getting results Nature is in a class by herself.

While it is true that Man can't im-

prove on nature, it is equally true that the Ingenuity of Man has made it possible to do things with a magnitude that would be impossible were we to follow strictly nature's ways.

For instance, if it were not for the incubator, the value of the poultry product of this country would, in all probability be not more than one half of the \$800,000,000 as reported by the Hon. Commissioner of Agriculture for the year of 1911.

In fact, I think it may be truthfully said that it is the incubator that has made the poultry industry what it is today.

I make this statement notwithstanding the acknowledged shortcomings of the incubator, when its results as a hatching machine are compared with those obtained when we adhere strictly to nature's way in hatching eggs under the hen.

Nature intended that every egg, when properly fertilized and properly subjected to the process of incubation, would produce a strong, healthy chick.

When placed under a hen they do. Placed in an incubator and (as stated by the Oregon State Experimental Station) from 25 to 40 per cent of them die in the shell.

It is this fact that causes, or should cause, our poultrymen and women the very greatest concern; for it is in the losses that this condition occasions that we find one of the very greatest stumbling blocks to success in the poultry business.

Naturally, then, the inquiry at once suggests itself to the inquiring mind, why will these eggs hatch and produce a chick when placed under a hen in

# Keep Your Birds Healthy— Save Money on Feed

There are two big profit making features for you in Kentuco Poultry Ware. One is that you have the best possible protection for keeping poultry feed and water pure—the other is that the birds cannot waste their feed. It is the truest economy to equip your entire poultry yard with

## KENTUCO Poultry Ware

The water fountains are galvanized after they are made. There's no possible chance for rust. Every piece is easy to clean and keep clean. For instance, take the **Kentuco Sanitary Wall Fountain** illustrated here. It's made with two pieces. You can get into the reservoir with a brush to clean it. There's plenty of room all around the pan for many birds to drink at the same time. No other wall fountain is built like this. No other can be cleaned so easily. Equally valuable points of construction can be found in every piece of Kentuco Ware—yet Kentuco Ware does not cost more than the less worthy stuff now on the market.

nature's way, and why do from 25 to 40 per cent of them die in the shell when placed in an incubator in the unnatural way?

Surely there is a "cause." Now let us do some thinking.

If you will refer to any of the more recent bulletins that have from time to time been issued by the State Experimental Stations, where there is at all times going on an earnest search for the truth, you will note that they all tell you that "during the last week of incubation the eggs throw off quantities of carbon dioxide."

For instance we will take the bulletin of the New York State College of Agriculture, issued in December, 1911, wherein Professor Finch says:

"During the last two or three days of incubation the eggs give off large quantities of carbon dioxide, the amount increasing as the embryo grows. Oxygen is essential, the amount required increasing with the growth of the embryo."

Have you ever read these bulletins? If so, has it ever occurred to you to make inquiry as to what this "carbon dioxide" was? If you have not, let us now proceed to do so, because possibly there is some connection between this "carbon dioxide" and the losses that have come to all of you from the "dead in the shell" chicks and white diarrhea.

In seeking for this information, let us take for our authority the International Encyclopedia, for surely there is no better authority that we can suggest. It says in part:

"Carbon dioxide is but another name for carbonic acid gas. It is one and one-third times heavier than air, is poisonous in character, and when inhaled in sufficient quantities produces death. It is sometimes evolved from fissures in the earth's surface, and in Java so great is the volume of carbon dioxide in the air that birds flying at a great height fall to the ground dead."

From the above definition we may

safely plant our feet on one fact, and that is that carbon dioxide is a poisonous gas, which, if inhaled in sufficient quantities, produces death.

Surely here is food for reflection. Surely, here is something that should set us to thinking.

Let us, therefore, delve a little deeper into this subject, and let us have all the light thrown upon it that can possibly be obtained.

That eminent authority, Professor Witthaus, in his great work on Toxicology, says of carbon dioxide, and what it does in part as follows:

"Respiration, meaning to breathe, has two great objects. First, to supply that amount of oxygen to the body that is essential—mark, this is the same word as is used in the bulletin of the New York State College of Agriculture—to its economy, and second, to remove the carbon dioxide that has been produced as a waste product. This result is secured by the acts of inhalation and exhalation. By inhalation oxygen is taken into the lungs and by exhalation carbon dioxide is thrown off. Hence, unless there is free ventilation the air in any compartment containing men or animals must soon become vitiated, by containing an excess of carbon dioxide, and an insufficient supply of oxygen.

"Respiration, or breathing, becomes suspended—mark well this word 'suspended'—when for any reason the muscles concerned in breathing lose their normal or usual powers by a poisoning of the nerves which control them. This may take place as a result of asphyxiation or poisoning by coal or other gases. Gas poisoning takes place, and is brought about in oxygen breathing animals whenever anything prevents the entrance of pure air—oxygen—into the pulmonary vesicles, as a result of which death or unconsciousness occurs.

"The most efficient and powerful remedial agent with which to combat the effects of carbon dioxide poisoning is oxygen."

There is much more that might be

written that would no doubt be very interesting, but we have enough, it would seem, to give us a well defined idea as to what carbon dioxide is, what it does and what oxygen will do as a power to overcome the baneful effects of carbon dioxide poisoning.

If so, let us now set our reasoning at work and see what logical and rea-

Main breeding house on Roseland Poultry Farm, South Euclid, Ohio, 220 ft. long; contains 20 pens 10x15. Feed room down stairs. Conditioning room upstairs for show birds.

## Colony Brooding

**I**F you are tired of the back-breaking work, the heart-breaking losses and the never-ceasing disappointments of the old-fashioned, death-trap hover brooders, write for our free booklet, "Colony Brooding." This book not only tells how to turn work into pleasure, losses into profits, and disappointments into realized anticipations, but it also tells how Duplex Colony Brooding Devices positively **save you ninety per cent of the labor, seventy-five per cent of operating expense, besides bringing to maturity every healthy chick placed in their care.** The key to colony brooding is the

### Duplex Combined Brooder Stove & Ventilator

Has double heating surface, which saves fuel. Brooder house is perfectly ventilated **through the stove.** There are no openings in the walls or ceilings to let pure and warm air escape and make dangerous draughts. The "DUPLEX" takes the foul air **off the floor** with the carbon dioxide from the breath and droppings of the chicks, which is a prime cause of White Diarrhea so terribly fatal in small chicks. The above two features are not found in any other stove which makes the "DUPLEX" the most **efficient and economical** brooding device on the market.

DUPLEX BROODER STOVES ARE MADE IN THREE SIZES and will care for colonies of 50 to 300; 100 to 800 and from 500 to 1500 and do it with less expense and labor than any other system ever offered.

**FREE!** Write for our book, "Colony Brooding." It will show you how to make money (not lose it) in the poultry business. Write today and get your copy.

Duplex Colony Brooder Co., 476 N. Avon St., Rockford, Ill.

sonable conclusion may be deduced from what we have learned.

We know that chicks do die in the shell. The best authorities tell us that "during the last week of incubation the eggs in the incubator throw off large quantities of carbon dioxide." We are told that this carbon dioxide is a poisonous gas and that if inhaled in sufficient quantities, produces death.

come vitiated by reason of its containing an excess of carbon dioxide, and an insufficient supply of oxygen. We know that it is impossible to confine from 120 to 240 little embryo chicks in an egg chamber two feet square and nine inches deep without that air becoming charged with carbon dioxide, a poisonous gas, and that these chicks must inhale this gas.

direct result of carbon dioxide poisoning?

If not, and you have made up your mind that there is a relation existing between those "dead in the shell" chicks and the existence of this carbon dioxide in the egg chamber, let us go further and turn our attention to this subject of oxygen and its application as a remedial agent in overcoming the "cause."

The same authority as heretofore quoted says of oxygen:

"Oxygen is a colorless gas to which the noted French scientist, Condorcet, gave the name 'vital air.' By weight it constitutes 21 per cent of the air we breathe and 23 per cent by volume. It is the life giving principle in the air, and without it life cannot exist. In the latter stages of pneumonia, when there is danger of life from deficient aeration or purification of the blood; also, for the resuscitation of victims suffering from coal or other gas poisoning, it is of great value. When for any reason the heart fails in the performance of its normal functions, resort to oxygen often results in the saving of life."

At this point I wish to again call your attention to the latter part of the quotation taken from the work of Professor Witthaus, wherein he says:

"The most efficient and powerful remedial agent with which to combat the effects of carbon dioxide poisoning is oxygen."

And to the bulletin of the New York State College of Agriculture:

"Oxygen is essential, the amount increasing with the growth of the embryo."

In order that there may come sharply to our minds a clear conception of what oxygen is I make reference to that oft-repeated truism, to-wit: "Man can live for days and even weeks without food or water. Without air, however, he dies in a few short moments."

Now carrying in mind what oxygen is and what it does, is it not an easy matter to conclude why the New York State College of Agriculture says it is essential?

My dear reader, oxygen is "essential" to overcome the effects of the

ROSE COMB BLACK MINORCA.

Perfection III, the cock that won first at Madison Square Garden, New York, last winter. Bred and owned by G. A. Clark, Seymour, Ind.

We are told that gas poisoning takes place when for any reason pure air—oxygen—is not taken into the pulmonary vesicles—meaning the lungs." We are told that the air in any compartment containing men or animals, unless there is free ventilation, must be

Does it need any further argument to satisfy your mind as to the cause of those "dead in the shell chicks?" As you carefully weigh these facts, can the reasoning mind come to any other conclusion, except that these "dead in the shell" chicks are the

carbon dioxide poisoning that is taking place in the egg chamber of your incubator during the last few days of incubation.

Oxygen is "essential" to supply the requisite amount of pure air necessary to sustain life in those baby chicks.

I believe that the incubator of today is as near to a "perfect incubator as it is possible to provide in one and the same machine and that this great big poultry industry owes its greatness in a very large degree to the incubator.

Just as firmly do I believe that it is impossible for any incubator to be so constructed that it will at all times, and particularly during the last few days of incubation, furnish to those embryo chicks a sufficient amount of oxygen to overcome the effects of the carbon dioxide poisoning, sustain life and at the same time conserve the requisite amount of moisture in the egg chamber. Hence the "dead in the shell" chicks.

"Gas poisoning takes place in oxygen breathing animals whenever anything prevents the entrance of pure air—oxygen—into the pulmonary vesicles, as a result of which death or unconsciousness occurs."

Yes; carbon dioxide is a poisonous gas. Carbon dioxide is found in the egg chamber of all incubators during the last week of incubation.

Chicks do die in the shell. The cause is carbon dioxide poisoning.

The one and only thing that is known to science that will overcome the effects of this carbon dioxide poisoning is oxygen.

Have I made clear to you what oxygen is and how it may be applied in artificial incubation?

Has this brief statement of well known and established medical and scientific facts set you thinking? If so my purpose in writing upon the subject will have been subserved, and I trust that it may be beneficial to you in your poultry work.

So far, however, we have dealt with but one of the applications of oxygen

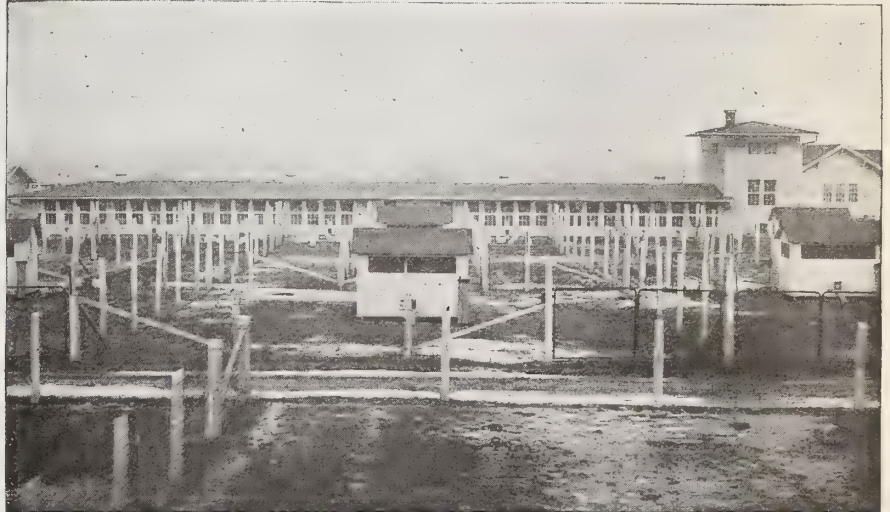

to artificial incubation, and that as a means for putting an end to the "dead in the shell" chicks.

There is yet another poultryman's curse, so to speak, which has been the "cemetery" of many a poultryman's fondest hopes, and that is that dreaded disease known as white diarrhea.

I have come to the conclusion that as carbon dioxide poisoning is the direct cause of the "dead in the shell"

is productive of more destruction in a short time than any of us care to cope with.

In this connection I am but stating a well known scientific truth, when I say that all "germs" are either active or inactive. It is an equally true statement that nature is at all times able to successfully cope with disease germs if given but half a chance to do so.

Poultry scene on Maple Farm of Midlothian, Tinley Park, Ill., where White Plymouth Rocks are bred exclusively. They are producing and showing winners from their farm this year, as is evidenced by their sensational winning at the Illinois State Fair, where they showed one pen, two hens, three pullets, three cocks and three cockerels, carrying off first pen, first and second hen, first, second and fourth pullet, first, second and third both in cocks and cockerels.

chicks, so also is white diarrhea simply the indirect result of the same cause.

Scientific research, insofar as it has established anything, shows that white diarrhea in chicks is a "germ" disease. There are many differences of opinion as to how the germ is carried into the chick anatomy, but there is one thing upon which we may all agree, that when it has secured a good foothold it

Pneumonia, said to be a germ disease, usually comes as the result of exposure or a weakened condition of the system. So also with the typhoid fever germ. It does not become "active" unless the physical condition of the individual afflicted has become weakened through some cause, and thereby rendered unable to withstand the attack.

Ask your family physician what the

# American Poultry Association

The poultry industry of this country amounts in the aggregate to one billion dollars per annum. These figures paralyze the imagination.

The American Poultry Association is the largest live stock organization in the world and its membership is increasing with tremendous rapidity. On its roll are the leading breeders and representative poultrymen of Canada and every state in the union.

**Every breeder, fancier, man and woman in the United States and Canada who is interested in poultry of any kind should join this great organization.**

## The American Standard of Perfection

**The Standard of Perfection** is the official guide for the breeding, mating and judging of all poultry. It gives a close and detailed description of every breed and variety of chickens, ducks, geese and turkeys, with illustrations from living models. This book is published by the American Poultry Association at an enormous expense and is the American authority. You can not raise poultry successfully without this American Standard of Perfection. Prices postpaid from the publishers of this paper. Cloth binding, \$2; leather binding, \$2.50. Send all orders to American Poultry Journal, 542 So. Dearborn St., Chicago, Ill.

**On its shoulders rest this gigantic Billion-Dollar Industry.**

Your interests will be promoted and safeguarded. You may compete for the association diplomas and gold and silver medals at the shows, and be entitled to all the help that honest organized effort can give you.

You will have a voice in shaping the course and policy of the association. Making it recognized by nations and governments. Your name should be one of the thousands of the honored members of this association.

We urge you to write immediately for information and application blank. Address

E. B. THOMPSON, President, Amenia, New York  
S. T. CAMPBELL, Secretary

**American Poultry Association, Mansfield, Ohio**

condition of a patient would be after he had suffered from the effects of gas poisoning and had been near to death's door. Take his answer or your own good judgment and ask yourself what the physical condition of those baby chicks must be when they have been subjected to the fumes of a poisonous gas for several days.

Do you imagine that they are in any condition to withstand the attacks of the white diarrhea germ?

On the other hand, it stands to reason, with the knowledge we have of oxygen and its powers as a remedial agent in overcoming the effects of gas poisoning, that, if the blood of those embryo chicks is made strong in vitality by oxygen, white diarrhea will, under those conditions, be as infrequently found as when chicks are hatched under the hen in Nature's way.

In this connection and at this time I wish to briefly call your attention to one phase of this question about which much has been written, and to point out to you its falsity as applied.

Thousands of columns of the poultry press have been devoted from time to time in a presentation of the theory that "vitality in the breeding stock" was the all important thing to secure, in order to avoid the losses from the dead in the shell chicks and white diarrhea.

I will agree that "vitality" is something that it is well at all times to make sure of, because nature thinks well of "vitality."

Vitality, however, in its broadest significance, means but the "power of resistance," or strength.

Let us assume for a moment that a man of the very greatest "vitality" were to be plunged into the Niagara river fifty feet from the brink of the falls. Do you imagine that his "vitality" would save him from being swept to his death?

Take the same man of exceeding "vitality" and place him in a room, say, nine by twelve feet in dimensions.

Close every window and door, thereby making the room nearly air tight. Turn on for thirty minutes an illuminating gas jet and compel him to breathe over and over for even the shortest space of time. Do you imagine that his "vitality" would stand up for long against the death dealing influence of this poisonous gas?

Place in your incubator 150 eggs, from stock of the very greatest "vitality." Let those eggs develop perfectly up to the time when the lungs begin to perform their functions. Do you imagine that "vitality" will be of any avail when the poisonous fumes of carbon dioxide begin to get in their deadly work?

Now, let us put aside all these unsupported theories. It's time to think. Let your good judgment solve this problem that has cost the poultry world millions of dollars and solve it in the light of the things that you know to be true.

Let us take the actual conditions that surround artificial incubation, and applying thereto the knowledge we have, proceed in a common sense way to overcome the conditions that we know exist during the last few days of incubation, and thereby put an end to these "dead in the shell" chicks and white diarrhea.

Science has thrown its "spot light" into the darkness, and it points to better things.

Already has genius been at work on the things which science has revealed, and already do we hear of the use of the oxygen treatment as a means of putting an end to these frightful losses.

When our poultrymen and women come to a full realization of what this will mean to the poultry industry the sun will rise on an era in poultry raising that will make the results in the past look small in comparison.

Oxygen, when applied to artificial incubation, will mean no more "dead in the shell" chicks. It will mean, in my judgment, that the chicks so

hatched will be free from the ravages of white diarrhea. It will mean an increased productivity for every poultryman and woman and a consequent increased value to our poultry product.

It will mean that science has supplied what nature demands shall be supplied, hence nature's results will be closely approximated.

If what I have written appeals to your sound judgment as the logical solution of the problem which you well know has confronted the poultrymen of this continent for many years, give expression thereto by a most careful investigation. This much you owe to yourself.

As I said in the beginning, "thought" gives rise to "ideas," and where the current of "action" is hitched to ideas it results in doing things.

# Current News of the Poultry World

by J. F. Shureman

Oscar O. Koepell, bond broker and banker of Portland, Ore., has purchased a tract of land near Los Angeles, Cal., and will establish a poultry farm thereon.

Andrew R. Muir, William P. Litts and Frank Sherwood, of Scranton, Pa., have made application to the state authorities for a charter for the Black Walnut Poultry and Stock Farm to be established near Black Walnut, Wyoming county, Pennsylvania. The incorporators are already conducting an extensive poultry farm near Scranton.

One of the pleasing features of the big Hagerstown (Md.) fair in October was the dedication of a handsome monument erected to the memory of the late John L. Cost, the first superintendent of the poultry department and who for years held that position. The annual exhibitions in the poultry department at the Hagerstown fair now rank among the largest shows of the kind in the country. The fund for the purchase and erection of the monument was made up of small contributions from poultrymen from all parts of the country.

Statistics recently made public by the Federal Government show that ten years ago the average production of the hens of the United States was 41 eggs, while today it is 61, an increase of 50 per cent in a decade.

Felix Veran, a Frenchman who came

to this country as chef for a Russian ambassador, and who has had wide experience in raising chickens in France, has purchased a tract of land near Arcadia, Wash., and will engage in the poultry business on an extensive scale. He will raise "French White Leghorns" exclusively, having already imported his foundation stock from France. Mr. Veran and his wife expect to raise from 8,000 to 10,000 birds annually.

A report from San Francisco says that Arthur R. Coulson, the well-known poultryman and poultry supply dealer of that city, has been held for trial in the superior court on a charge of murder. He is accused of shooting to death one George Kovacs on the night of September 19. Besides Kovacs there was shot to death William Acher, a chauffeur. Mrs. Catherine Gallagher, who lived with Coulson as his wife, was wounded by a bullet which grazed her neck. Coulson was denied bail.

A hen at the Agricultural College at Corvallis, Ore., has broken the world's record by laying 291 eggs in 365 days. This is an increase of nine eggs over the previous record. Next!

A general poultry association to include all the poultry associations of southern Colorado will be organized at a meeting of poultrymen in Pueblo the last week in December. One of the first acts of the new organization will be an attempt to secure a model poultry

demonstration and experimental farm for southern Colorado. The state will be asked to establish and help to maintain this farm.

Receipts of live poultry at New York from September 15 to October 15, inclusive, totaled 680 cars. These receipts set a new quantity record for the New York market. The total value of the 680 cars was \$2,658,400.

The poultry department of the Ohio State University, in an effort to interest the farmers of the state in purebred poultry, is offering healthy, well-bred, vigorous cockerels to farmers at 50 cents each, the purchaser to pay the express charges.

Paul Giraudet, a French civil engineer, and unable to talk English, is about to establish an extensive poultry plant in the vicinity of Atlanta, Ga. He has traveled over the country looking for a location and the climate of Georgia is so similar to that of southern France that he decided to locate in that state.

For the purpose of securing for Nashville, Tenn., a field station of the Federal Bureau of Animal Industry steps have been taken by the Southern Egg and Poultry Shippers' Association, and an effort will be made to have the government establish a station at that place. With that in view A. M. Cochran, secretary of the association, has sent a letter to the United States Sec-

## Halbach's Strain White Ply. Rocks

Hold the world's record by winning best display at Chicago four times. At Milwaukee, Detroit, Springfield and Chicago they won more than 68 other breeders put together. This evidence should be convincing as to where you should get the show bird or birds you need or the blood lines you are after. Write your wants fully and state just what you want or tell me how much you desire to invest into the stock and you will get biggest value possible for your money. Catalogue, 10 cents.

H. W. Halbach, Route 1, Waterford, Wisconsin

retary of Agriculture, explaining the need of such a station and the advantages of Nashville as a location for the same.

After January 1, 1914, all live poultry must be shipped in coops that are at least thirteen inches in height and that are covered at the top by wire or screening containing meshes not to exceed one inch in size.

Plans are under way for the installation of the new poultry department at the Georgia Industrial College at Savannah, Ga., Loring Brown, of Smyrna, having charge of the plans and the installation of the plant. A colored poultry expert has been engaged to take charge of the department.

Poultry in the vicinity of Corning, Cal., is moulting for the second time this fall. The owners are at a loss to account for it unless the long dry season is the cause. Many of the large egg producers in that locality are seriously handicapped because of this second moult.

B. E. McLean, of Waterloo, Iowa, secretary of the Waterloo and Cedar Falls Poultry Association, has purchased a tract of land near Waterloo upon which he will establish one of the largest poultry hatcheries in the Middle West. The construction of the buildings has been commenced.

After considerable discussion among English, French and Belgian poultry fanciers, the first step toward the establishment of an international standard for all pure-bred poultry was taken recently at Ghent, when at a meeting of La Federation Internationale d'Aviculture, which is acting as sponsor for the proposition, the following resolution was adopted: "That the stand-

ards of each country be submitted for the approbation of the international federation, and that their ratification render them obligatory for all other countries." The proposition has begun to interest American poultrymen and it has been suggested that the matter be thrashed out at the Panama-Pacific Exposition in 1915, with delegates present from the several countries.

Figures just made public by the Department of Commerce at Washington, D. C., show that during the fiscal year 1913 the United States exported over 21,000,000 dozens of eggs, against 1,500,000 dozens ten years ago and 143,000 dozens twenty years ago. The 1913 exports included 20,409,390 dozens of whole eggs, valued at \$4,391,653, and

of \$67,854 worth of yolks and canned eggs, making a total of over a quarter of a billion eggs exported during the year. We imported during the same year 1,271,765 dozens whole eggs, 227,457 pounds of yolks and 20,284 pounds of dried eggs. In 1892 we imported 4,000,000 dozens eggs.

Walter Johnson, the Washington Baseball Club's great pitcher, has become a poultryman and will breed White Orpingtons.

E. J. Jackson, of Patchogue, L. I., New York, secretary of the Long Island Poultry Association, is reported mysteriously missing, and his wife is seeking the assistance of the newspapers in trying to find him.

## BIG RECORDS AND TRAP NEST.

**Oregon Claims the Champion Layer**  
—Washington Has Some Record Hens.

By Harry H. Collier.

A FEW years ago a certain Washington White Leghorn breeder came out in the poultry press and announced that a pullet of his had made the unheard of record of 295 eggs in twelve months. I knew this man and I knew his wife. I had visited at his house and I had seen the way he trapped his birds. I saw the way he kept his records yet I went away feeling there must be some mistake. At the time this man made the record he claimed, the two hundred egg hen was mostly in the fancy of the poultryman's imagination. Along about this time the Maine Experiment station came out with a claim that trap nested pullet on their farm had laid 251 eggs in twelve consecutive months. This record made in Maine did not last long when we heard from Australia where a pen of Langshans had made a big record for five hens. These records did not last long before Missouri got busy and when Missouri does get busy there is always things doing.

Down in Missouri, Tom Quisenberry brought forth a pullet that laid 281 eggs and as Canada likes to beat the United States whenever it comes handy, their experiment station came forth with a hen that laid 282 eggs. This later hen held the record for big laying where an official record was kept, but the east and middle west did not consider that here on the coast the hens would make all of their cousins and their aunts lower their laying flag. A hen at Corvallis, Oregon, has just laid 291 eggs and she comes from a blood line of layers.

Oregon is not Missouri but there are a lot of Missourians that live in Oregon and one need not be surprised at anything the Oregon hen does. Professor James Dryden who has made a lot of good experiments along poultry lines made up his mind a few years ago that Oregon should be in the lime light. The professor got busy and he started to breeding as well as feeding for eggs. Down in the Willamite Valley they can grow most anything. There we have a climate that is as fine as the best. We have a soil that will produce most everything that a man or woman can use. Professor, as we said, got busy, and he has built up a pile of laying hens that will not doff their bonnets to any hens on earth

and "Miss No. C. 520" of Oregon goes Missouri 10 eggs better and takes the whole baker shop by being the champion layer in the world when authorized egg records are considered.

Now, to get back to that Washington breeder. This man was a steamship purser. He was as used to figures as a dog is fleas, but when it came to poultry, his experience was very limited. He had a fad for keeping records. On board a steamship a purser has records of all kinds to keep. He is the whole thing when it comes to a census of what a ship contains. This man had a wife who, like all good women, wanted her husband at home, in spite of the fact that her husband was making a good living and providing well, but she was not satisfied with that kind of living as she was not able to see her husband oftener than once or twice a month, and a very short time on these occasions. This lady took it into her head that she could start a poultry business that would make it possible for her husband to live at home. To get a start in poultry she bought some White Leghorns and on a small place she began what is now one of the largest poultry ranches in the state, the only difference being that the small place has now grown in a large farm and where the

## AT NEW YORK STATE FAIR, SEPTEMBER, 1913 FAIRVIEW WHITE ROCKS

Make sensational win as follows, after traveling three days without feed or water and being judged in less than 2 hours after arriving at the fair: **First old pen, 3d young pen, first and fourth cocks, second and third hens, third cockerel and first and fifth pullets.** Just think of this! In all I exhibited twenty birds and seventeen of them were in the winnings. I won more firsts than any of my competitors and as many firsts as all my competitors combined. I have 1,000 young birds with the blood lines of these and other winners and as I will not exhibit any more this year, I can furnish winners for any show, anywhere. Write your wants and mention American Poultry Journal.

GUY DAILY, BOX A, JEFFERSONVILLE, IND.

The home of "King Ringy 5," one of the narrowest barred Plymouth Rock males in existence. As many as 83 bars have been counted on the saddle feather of this wonderful bird, who is the sire of many others of Mr. Holterman's flock.

small place wintered a hundred hens and pullets it now winters a thousand hens and as high as sixteen hundred pullets.

From the beginning of the farm a watch was kept on the best layers in the flock and about nine years ago trap nest was put in. These trap nest were new so far as Washington breeders were concerned. Some people had used them but no one had made much effort to carry out the scheme as it should be. Our pursuer after a while was ordered by his doctor to quit the sea and stay on land. From that time on we find the man with the figures busy. He commenced a system of feeding. He worked out a problem where he could tell just how much a hen would eat every twenty-four hours. By feeding he soon learned what the hens liked the best and what they relished most. He found out what feeds produced the most eggs and what months eggs brought the best prices and what months hens would pay the greatest profit. All the above records were kept daily, not spasmodically. He worked out a set of charts for his houses. These charts contained a place for leg bands with a place where a

record could be kept of each hen and when she laid. He attended to his hens the first few years himself, with the assistance of his wife. He handled these hens so often when taking them from the trap nest that he soon knew each one without looking at her leg band. He soon began to notice the breeding of his birds, their shape and their color; he watched their combs, earlobes and general health. He watched their feet and their legs to see how they held their yellow color. In fact, he watched everything, and what is better, he kept track of everything. He had one hen that he called "twenty-two." This hen was a remarkable bird. She began to lay in her pullet year, not so early as some of her sisters in the flock, but when she did start she kept it up, rain or shine. Weather seemed to "cut no ice" with this hen. She just persisted in laying. This "22" soon outdistanced all of the other hens on the place and when her eggs were set they persisted in hatching and once out of the shell they persisted in living. "Twenty-two" went on and on and one day he found that she had been laying twelve months to the day and on that day he discovered that she had laid 295 eggs.

From this flock my friend bred many good layers. He had several that laid over 200 eggs, but not a one that ever reached the record of "22."

One day this pursuer came to my office and he told me that he wanted me to go to his farm and help him pick out his birds for standard requirements. I went. He had said little about the remarkable laying of this hen. His local paper had published a little story about it, but outside of this little publicity had been given to "22's" performance. I went up and he told me about this hen. What is better, he showed her to me and, in fact, I scored her. Then he took me to his houses and he showed me how he trap nested his hens. How he kept the records in each house and how the records were computed at the end of each month.

He showed me how he kept his records of each hen when it came to hatching the eggs and how each chick was marked in the web. He showed how he had bred up his flock and what he was trying to do to better his shape in his fowls. All of these things were convincing, but the remarkable number of 295 eggs in twelve short months did not look good to me, but when I see a Missouri White Rock laying 281 eggs

## THE BEST IN POULTRY

Rather a broad statement I will admit, but nevertheless it is a fact that there is no fowl that will produce more eggs or is a better fowl for the table or market than

### U. R. FISHEL'S WHITE PLYMOUTH ROCKS

Other breeds and varieties boom and the boom is of short duration, because they have no qualities to make them worth while. The Fishel White Plymouth Rocks grow in favor and demand everywhere and all the time. *S. C. WHITE ORPINGTONS, WINNERS AT MADISON SQUARE GARDEN N. Y. 1911.  
BRED AND OWNED BY  
OWEN FARMS VINEYARD HAVEN MASS.*

The Owen Farms have been persistent winners for years at all the leading shows under the management of Maurice F. Delano, who is now sole proprietor of this great farm. The above pen of White Wandotters won at Chicago 5 years ago, and the winnings of this farm at Chicago last winter is still fresh in the public mind.

and an Oregon Leghorn producing 291 eggs, I begin to see that it is possible for a hen to lay that many eggs even if it did not look possible when old "22" laid her large number of eggs. Since that time, six years ago, I have made a yearly visit to this same farm. I have gone there the later part of September and I have scored as high as 200 cockerels, birds that I picked out of several hundred that were fit for a score. Later in the fall I have gone back and picked out as high as 200 pullets and later on in winter I have scored all of the cocks as well as the best part of the hens on this farm. In other words I have literally handled every bird on that place and have found birds remarkable for their good color, neat combs, wattles and ear lobes and shape that would look well in any show room. I have found that it was often the case that the hens that showed the best shape and color were among those that had records that led the flock in the egg basket. I have always insisted that it was possible to make a hen beautiful as well as useful.

In the early stages of handling these hens I have had a number of arguments with their owner. He has sometimes shown me a hen that was a remarkable layer that he would want in his best pen. I would always say: "We will keep her until we cannot find that we can fill the best pen without her; then we will put her in." We would handle this big flock of hens for their exhibition points while he held his book

and kept track of the laying records.

In the best pen we never put more than ten hens in the yard. We wanted them to be great layers first, and second we wanted them to be able to score the highest of any ten hens among those layers. By picking and scoring and retaining those with high scoring qualities, at the same time great egg laying records behind them, we would find just what we wanted, and I had the satisfaction last fall of mating up a pen of ten hens that did not score less than 92 points and not one in that pen that laid less than 265 eggs in her pullet year. These hens proved themselves remarkable second-year layers and from that flock I hope to find hens this year that beat their mothers in the egg basket as well as in exhibition qualities.

In scoring the cockerels on this place, one of the essential things have been scales. Our friend made it a habit to watch the growth of those cockerels from the time that they would weigh a pound. He had a hobby. This hobby was that a Leghorn cockerel that did not weigh four pounds when we got ready to score them was unfit for a breeder. We weighed those birds and if they were not the right weight or showed disqualifications, coarse combs, poor wattles and the like, they were not scored but were set aside for either the market or to be sold to farmers for cross-bred purposes. If they showed permanent disqualifications like side sprigs, stubs in legs, then they were

sent immediately to the market. This season when these birds were scored we found cockerel after cockerel that had reached as high as five pounds and four and one-half pounds weight was very common in the flock. Where these birds were of good sized bone yet they were not coarse in either shape of combs or wattles and ear lobes. They were built on good lines and their good weight would hardly be noticed except when they were put on the scales.

This farm has proved many things for me. Hens with great egg laying records do not of necessity always prove to be mothers of great layers, but that a cockerel from a great layer invariably proves the sire of extra good layers.

That the best time to sell broilers for this market is in March. That the best and most profitable time to sell hens is in September.

The best time to make money from eggs is in August. Hens lay well that month and January pullets are helping out the egg yield.

That hens bring their best prices in April, but it does not pay to sell them for the reason that they will nearly pay for themselves in eggs by the time September rolls around.

That it is just as easy to make a nice, typical hen lay eggs as one that is all angles of the compass. That color has little to do with a hen's laying, but the hen with the life in feathers as a rule is shelling out the most eggs in the early spring.

# BUFF ORPINGTONS

**Win Ten Firsts at the Indiana and Tennessee State Fairs** Indianapolis, Sept. 1913—1-2-3 cock, 1-2-3 hen, 1-2-3 cockerel, 1-2-3 pullet, 1-2-3 pen. Nashville, Sept. 1913—1-2-3-4 cock, 1-2-3 hen, 1-4-5 cockerel, 1-2-4-5 pullet, 1-2-3 pen. This is the most wonderful record ever made by a Buff Orpington breeder. If you want to win you will find that our type and color appeals to all judges. We have elegant cocks, cockerels, trios and pens for sale mated to produce winners and the best of all they have the laying qualities. Write today.

## A MAN AND A FACTORY.

Being the Story of The Cyphers Incubator Co.—Its New Plant—Its Old. Time-Tried Principles and the Man and Men Behind It.

By D. Herbert Moore,  
Editor Agricultural Advertising.

"The biggest thing in the poultry business!"

That is the unanimous opinion of those who visit the new plant of Cyphers Incubator Co. in Buffalo, N. Y.

No "long distance" conception of the size and scope—the modernized perfection of this plant can be given without resorting to figures.

The new Cyphers Company plant occupies eight and one-third acres of land near the center of the city, within 600 feet of Main Street, Buffalo's leading thoroughfare, and is considered to be the largest establishment of its kind in the world. It is built of reinforced concrete, with Fenestra steel window construction that admits the softened daylight—in short, it is practically indestructible by fire. It is said that "not wood enough to make a box of matches" was used in these buildings.

For seventeen years the name "Cyphers Company" has been recognized as standing for highest quality in incubators and brooders, as well as in the one hundred other articles they manufacture for the use of poultry breeders.

In tracing the success so apparent in the Cyphers Company's new home, one naturally is inclined to look for the personality that has brought about these things.

That personality is Grant M. Curtis, president of the company.

Talk about live wires! Here is a man who is a regular dynamo of mental strength, of initiative and of organization ability.

At his office every day and often far into the night, carrying the heavy responsibility of a business whose sales, for a period of years, have exceeded a million dollars every year, he finds recreation and relaxation in the editorship of two of the leading poultry papers and in serving in many different ways the best interests of the poultry industry in general.

Mr. Curtis has been engaged exclusively in the poultry business twenty consecutive years. In the early days he developed the largest, standard-bred poultry plant in the central west and made a success of it. He became interested in the manufacture of incubators, brooders and poultry supplies in 1894. That same year he founded the Reliable Poultry Journal of Quincy, Ill., one of the most influential and authoritative poultry papers in the field, of which he is still editor and principal owner. He is

also president of the American Poultry Publishing Co., Buffalo, N. Y., and editor of the American Poultry World.

In 1899 he became associated with the Cyphers Incubator Co. He visited the leading countries of Europe to investigate the poultry business of the different nations. Mr. Curtis has compiled several books dealing with practical and standard-bred poultry subjects and he edited the 1905 edition of the American Standard of Perfection.

In brief, Mr. Curtis unquestionably has been a leading factor in the development of the poultry business of America, and it is apparent that he occupies that position today.

Nor has his work been theoretical. Under his direction Cyphers Incubator Co. con-

has kept himself surrounded by a group of as able and loyal lieutenants as ever rallied to the support of a fighting captain.

Every head of a department of the Cyphers Incubator Co., every manager of a Cyphers Company branch house has worked himself up through a term of years and won his place by sheer merit.

It is not "outside" talent that has made Cyphers Incubator Company what it is today. It is the development of the Cyphers Company spirit throughout the working force, under Mr. Curtis' forceful, appreciative leadership.

It is small wonder that such an institution as this has grown to the point where 500 working people are employed!

In the factory, as in the sales organization, employees have stuck because they liked their jobs—liked the way they are treated. Every factory foreman employed by them—ten in number—has been with the company for a period of eight to sixteen years.

"Scientific arrangement and management" is the reason Cyphers incubators, hovers, brooders, etc., can be made in such immense quantities and at the same time every machine be given the most minute care in construction and the most careful final inspection.

At the present time Cyphers Company has in its large fireproof warehouses goods of every kind sufficient to last till after the first of the year and manufacturing in the new factory is now—November 1st—going on apace.

The great size and capacity of the home plant give an incomplete idea of the real greatness of the Cyphers Company industry. For instance, a "Cyphers Company" Poultry Mill for the manufacture of chick and developing foods and the grinding of alfalfa is in operation in Chicago, representing an investment of \$140,000. Here Cyphers Correctly-Balanced Poultry Foods are produced under ideal conditions, their factory turning out hundreds of carloads each year.

Not only does this company have large, completely stocked branch houses in New York, Chicago, Boston, Kansas City, Oakland, Calif., and London, England, but it has distributing agents and selling representatives in practically every well-known city and trading center of this country. Cyphers Company also has selling houses and agencies in the principal cities of Europe, Australia, South Africa, Hawaii, Cuba and Central and South America.

Reverting to the cause of the success of this wonderful modern enterprise which has been enthusiastically and truly termed "The biggest thing in the Poultry Business," we come back to the man whose power, whose force, whose courage, whose knowledge of the right way and how to accomplish it, have made possible a business which represents true leadership in its line.

The Poultry Industry in America certainly owes a lot to Grant M. Curtis.

GRANT M. CURTIS

President of Cyphers Incubator Company

ducts a \$75,000 Experiment and Demonstration Farm on the outskirts of Buffalo, where actual, scientific facts regarding poultry raising are developed and proved. These facts are later given to poultry raisers, whether or not they are Cyphers customers, in the form of free books, such as "Poultry Foods and Feeding" and "Best Methods of Brooding"; also in a series of Free Bulletins which go into careful detail regarding the latest and most successful methods of poultry and egg production and of breeding and developing Standard-bred and special purpose fowls.

Cyphers Incubator Co., however, is by no means a one-man institution. Mr. Curtis has surrounded himself (and, what is more,

FACTORY AND HOME OFFICES OF CYPHERS INCUBATOR COMPANY.

View of new manufacturing plant, erected by Cyphers Incubator Company at Buffalo, N. Y., during the summer of 1913. Occupies eight and one-third acres of land near center of city and is devoted exclusively to the manufacture of incubators, brooders and general poultry appliances and supplies. Is considered to be the largest establishment of its kind in the world. Built throughout of reinforced concrete and is indestructible by fire.

## THE GREAT HAGERSTOWN SHOW.

**Greater and Larger Than Ever—Nearly 7,000 Entries—Complete in Every Department—More Poultry History Made.—By H. P. Schwab, Eastern Representative, A. P. J.**

For twenty or more years there has been linked with the name of Hagerstown success. Yes, success in all that the word implies. In entry, in quality and in management Hagerstown has surpassed all its former greatness and has added to the value of the poultry industry. The show again this year was featured by large classes in popular varieties and a quality that insures the greatest possible worth to Hagerstown awards. Mr. W. Frank Spahr and Mr. H. E. Baker, the officers in charge, deserve every credit for the beauty display. The breeders have confidence in these men. They are the worthy and respected successors of the great John L. Cort and their work and success is of a character of which we are justly proud. They well deserve the support of all the breeders in the land and we hope they may always have it to perpetuate Hagerstown's greatness.

The poultrymen's banquet, attended by about 300 breeders, was an event of special interest. The donation of flowers to Judge Geo. O. Brown and Mr. Nevions, two of our oldest breeders, was a feature full of sweet sentiment, an appreciation and expression of worth to the living who we all love so well. The speakers were President Paffenberger, Messrs. Baker, Spahr, G. O. Brown, Loring Brown, Atherton, Riley, Howell, De Lancy, Schwab, Ewald, Dr. Dixon and Scotty Bowers.

In the afternoon a beautiful granite shaft, erected by the poultrymen of the United States and Canada to the memory of John L. Cort, was duly dedicated. Mr. Frank De Lancy was the leading worker in this and his work and the results received worthy commendation.

The judges were Geo. O. Brown, Wm. B. Atherton, W. G. Minich, Chas. McClave, Richard Oke, Geo. H. Burgott, J. C. Kriner, H. P. Schwab, Loring Brown, Hugh A. Rose, A. J. Braun, H. Hoke, C. E. Twombly, Geo. Ewald, J. Harry Wolsieffer and G. B. Hart.

Special prize for best bird in the show was won by Dune-Alpin Poultry Farms with their first prize S. C. White Leghorn cock. Best hen by Louis Haggins, S. C. White Orpington hen. Best cockerel by John H. Ward for Dark Cornish cockerel, and best pullet by Hugh A. Rose, Buff Orpington pullet.

### Plymouth Rocks.

Barred Rocks were the largest and finest class we have ever seen at this season of the year, the winners all strong quality birds, the class of pullets a feature show all by themselves. There were 25 to 30 birds in the class worthy of mention at any show.

Mr. R. J. Walden, Middleburg, Md., won first and fifth pullets, fourth hen, second pen and first cockerel-bred female; first pullet winning special for best colored female, and for best female.

Mr. C. N. Myers, Hanover, Pa., won first, third and fifth hens, second and fourth pullets, third cockerel, third and fourth pullet-bred cockerel. First hen won special for shaped female, third cockerel for color male.

Mr. H. D. Riley, Strafford, Pa., won cockerels first and second, hen second, pullet third, pen first. Special for best shaped male on first cockerel, also for best Barred

Rock male and for best Plymouth Rock shown.

Mr. C. Guy Myers won first cock and Mr. L. S. Birely first pullet-bred cockerel. Other well-known breeders and winners were H. L. Fike, C. E. Boileau, Jas. T. Thurston, Chas. McClave, etc.

**White Rocks.** A very fair sized class, quality very fine. First cock a beauty in shape. First hen far above usual quality.

First prize White Rock cockerel exhibited by Geo. S. Moore, Clintonville, O., a fine specimen, stands well, although not fully filled out, he has the shape and style and gives promise of the future. Three other very nice birds but a little green in finish.

**Buff Rocks.** One of the finest classes we have ever seen outside of the great winter shows. An extra large and strong class. All cocks of superb quality. First hen perfectly sound in color and ideal form; others close up. Cockerels the first three very close, others ran fine ones. Pullets: First, sound and of fine form, a beauty; 10 strong pullets here. The winners were R. S. Wolf, J. G. Ashe, W. B. Miller, J. H. Vincent, G. B. Schellenbarger, T. E. McConnell, B. H. Kuepper, G. W. Wege, etc.

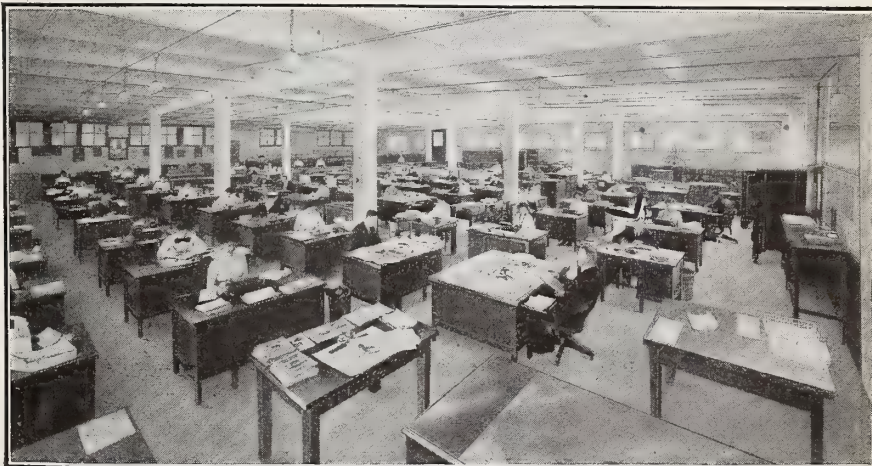

**Columbian Rocks.** Colonel L. Paul Graham, here like at Allentown, swept the deck

satisfied with their Allentown winnings and won cockerels 2-3, pullet 1. This pullet in type and condition most fair and attractive to see. We thought the cockerels past their best, being full grown and champions in form.

Mr. F. M. Eakin, Bucyrus, O., made his first showing here, but three or four birds entered, and won cockerel first, pullet fourth. His line of White Wyandottes has much to commend him. The winning cockerel was seriously considered for the special for best cockerel in the show. He is a bird of refinement and finish, the best of type and a beauty head. This was but a sample of Mr. Eakin's birds and we would like to see more of them. That class of stock is worthy of our great Eastern shows and hope ere long to see them down East.

Other prominent breeders and winners were E. R. A. Litzau, with cock 1, hen 2-3, cockerel 5, pullet 3. Mr. J. L. Schultz, cock 3, hen 1.

**Silver Wyandottes.** A good size class with winners of a quality to win any show. Golden up close. First cock a beauty, owned by Chas. McClave, New London, O. He also won hen 3, pen 1. Blocks a small class. S. Penciled very nice and fair numbers.

INTERIOR VIEW OF HOME OFFICES OF CYPHERS INCUBATOR COMPANY.

Photographic view of General Office, including stenographic help, of Cyphers Incubator Company, Buffalo, N. Y. Additional to the work of attending to correspondence connected with the receiving and filling of retail and wholesale orders, amounting to over one million dollars annually, the Cyphers Company conducts a Personal-Letter Service Department that is free and open to all poultrymen everywhere, regardless of whether they are customers of the company.

(excepting on pullet), winning all the leading prizes with a line of strong, classy birds. First cockerel being the finest male of this variety we have seen to date, all considered.

First prize Columbian Rock pullet was won by the Wilburtha Farms, Trenton Jct., N. J. She was in a class by herself with the best of type and the best possible hackle, tail and wing. These farms also breed Columbian Wyandottes, Reds and White and Buff Leghorns which we mention later.

Partridge and Silver Rocks formed good classes with several birds of exceptional value. First Silver hen a charmer.

### Wyandottes.

White Wyandottes formed a class of superior merit. We have seen larger classes, but none better. Old birds in good condition and young well matured and in full feather. Onlya Farm, Florham Park, N. J., made but a small entry here, being well

Buff Wyandottes. A large class with the best of color evident. The leading winners: L. W. Winner, Williamsport, Pa.; W. F. Schultz, C. A. Baughman.

**Partridge Wyandottes.** One of the best classes we have seen. No doubt the best at this season. The Sheffield Farms, Glendale, O., making a monster record by winning cock 1-2-3, hen 1-2-3, cockerel 1-2-3, pullet 1-2-3, old pen 1-2, young pen 1-3, and all specials. We have seen this line at the leading shows for years, but have never before seen them as good as now. First cock was without question one of the show features, beautiful in form, sound and handsome in color, with ideal Wyandotte head; such quality speaks for future and the success of the variety. They are pretty when bred to this high standard.

Columbian Wyandottes proved one of the big classes and here were competing several well known breeders in keenest competition. The Wilburtha Farms, Trenton Jct., N. J., made one of the best records by winning

**U. R. FISHEL'S AD in this issue will interest you. Read it.**

First Prize Partridge Rock Cockerel  
Madison Sq. Garden, N. Y., 1911.

## BIRD'S PARTRIDGE ROCKS

**Won All Firsts and Specials at Madison Square Garden, January 1913—This remarkable record, with their decisive victories at New York, 1910-11, and Hagerstown, 1911-12, gives them a grand total of 21 of the 23 firsts competed for, and stamps them as America's undisputed champions.** Their utility is equal to their beauty. The greatest prize winners and best breeders for you. Write your wants. Catalog and mating list for stamp. Eggs in season.

**BRONZE TURKEYS** Won All Firsts at Hagerstown, 1912, and Madison Square Garden, N. Y., 1913—Making a grand total of 21 of the 24 firsts at six great shows in 1910-11-12-13. If interested in the **World's Best Bronze**, write your wants. We will please you at right prices with the best exhibition and breeding birds ever offered. **Madison Square Garden, N. Y., 1913—Our seventh consecutive year of winnings at this great show again surpasses all former records by taking all four first prizes and three second prizes, display prize and all specials.** Write your wants. Catalog and mating list for stamp. Eggs in season.

**Bird Bros., Box C, Meyersdale, Penna.**

First Prize Bronze Turkey Cockerel  
Madison Sq. Garden, N. Y., 1911.

cock 1, hen 4, cockerel 1, pullet 3. This line has made several fine records this season and we consider this one of the best. We have seen this line at their home and admired them for their type and excellent markings. Other winners were Dr. J. S. Rittenhouse, hen 1, cockerel 3, pullet 1; Chas. McClave, hen 2; P. Francis Sutor, Robincrest Farms, George R. Bliss, H. L. and O. Bennett.

#### Rhode Island Reds.

In the Single Combs the entry was of usual size with grand quality evident. The leading winners here were Ira M. Crowther, G. W. White, Robert Seaman, Quality Hill Poultry Farm, L. W. Maxson, F. Harbaugh and Mrs. P. T. Callaway.

In Rose Combs the entry was one of the best we have seen in both numbers and quality. It was a royal class, well shown,

Major Hugh A. Rose, Welland, Ont., won on Buff Orpingtons cock 1, hen 1, cockerel 1, pullet 1. In Black cocks, cock 2-4, hen 2-4, cockerel 1-2, pullet 1-2. This line is famous for the records it has made.

The Buff Orpingtons exhibited by the Old Forge Poultry Farm, Spring Grove, Pa., was a feature display and also one of their first exhibits, making a splendid record in this strong class by winning cock 2, hen 3, pullet 4 and young pen 2. We visited these yards after the show and make mention elsewhere in this issue.

#### Leghorns.

Leghorns in all varieties were seen to advantage here in beauty classes. In the S. C. Whites competition was of the very strongest and each class was filled to overflowing with quality. The Dune-Alpin Farms, East Hampton, N. Y., have reason

cockerel 1, pullet 3 and young pen 1. We thought this class one of the best in the show. These farms have a national reputation and for winning pen prizes at New York, etc., are unbeatable.

The Wilburtha farms won in S. C. Buff Leghorns cock 2, hen 1, pullet 4, and in White Leghorns, cock 5. They are coming fast.

In both Single and Rose Comb Browns the entry was large and very fine, with males and females of equal value.

#### Minorcas.

In the S. C. Blacks an unusual class with heavy males and females and extra shape and carriage. The Hildorfer Black Minorca Farm, Saxenburg, Pa., were the great winners here, taking cock 1-2, hen 1-4, cockerel 1-2, pullet 1-5. The size, condition and general quality of this line was most charming.

In R. C. Blacks and both varieties of Whites good classes were shown.

#### Dark Cornish.

We expected to see a great class here, and did see one of exceptional size and value. The Dark Cornish are a leader today, a variety of worth and popular favorites. To Mr. John W. Ward, Jr., Pennington, N. J., much praise is due for the present condition of this variety. He is a booster and a boomer and has brought out the best in this variety. His winnings here were cock 1-2, hen 2, cockerel 1-2-3, pullet 1-3-4, young pen 1, old pen 1. His first prize cockerel winning special for best cockerel in the show, an honor well deserved. Both winning cocks in choice condition and best of station. The first cockerel in full trim and best style.

First hen was shown by Mr. C. W. Smith and is claimed to be the best one in this country.

#### Other Varieties.

Silver Campines, a large class full of merit. The Schenley Heights P. F., Pittsburg, Pa., winning cock 1, hen 1-2. In Goldens, cockerel 1-2, pullet 1-2.

Dr. J. H. Prudhomme, winning in Silvers, cock 3, hen 4, cockerel 1-4, pullet 3-4, young pen 1, old pen 1. In Goldens, cockerel 3, pullet 3.

There were good sized classes in both Light and Dark Brahams. The males in the Lights being of extra worth.

Cochins in fair classes were shown in all varieties. Partridge extra.

Black Langshans, a very large and fine class.

Dorkings in White, Silver Gray and colored made fine displays.

Black Javas in rare quality. They are a good old variety.

Anconas, a beauty class, the winners of extra quality finely shown.

Polish in all varieties and in good numbers were seen here.

The W. C. Blacks a very strong class. We thought this a feature display.

Hamburgs a splendid exhibit with all varieties seen to advantage. The Silver and Golden Spangled, Silver Pencilled and the Blacks were the largest and best classes.

Houdans were out in good numbers and quality.

A grand display of Blue Andalusians. Games in all varieties were seen, their rich colorings and markings making them very attractive.

As no catalogue was issued we can't give the total entry either Bantams or Pigeons. The entry was very large in both and we doubt if ever a larger or better class was seen at this season of the year. Every variety was shown and in most all classes competition was of the very best.

In Bantams the chubby Cochins vied with the trim Games for favor. Seabrights were beauty classes and the Rose Combs in black and white were not to be outdone. The little Japs and last but not least the Barred

A view on Wm. Cook & Sons poultry plant, originators of all the Orpingtons, Scotch Plains, N. J. Giving an idea of poultry runs and trees.

with the awards won by the following: Fred Stillwagon, B. W. Harding, Ira M. Crowther (who here won cock 1, cockerel 1-4), Ed. C. Baker, M. C. Richardson, Wm. L. Hundertmark, Frank Harbaugh, H. V. Sheets, Bryer & M. and W. A. Shafer.

#### Orpingtons.

Orpingtons are popular favorites at Hagerstown and yearly the birds of several of our best known breeders are seen here. In Whites the class and quality was exquisite. Here Mr. Louis L. Haggin, Lexington, Ky., exhibited a few of his best and won honors enough to last him some years, and then some, with hens 1-3, cockerels 1-2, pullet 1-3, pen 1. The first hen also winning special for best hen at the show. This was a popular award and one most worthy. She reminds one of the great and famous females of the past.

to feel proud of the record made, viz., cock 1-2-3, hen 1-2-3, cockerels 1-2-3, pullet 1-2-3, old pen 1, young pen 2-3, and several specials, including specials for best bird in the entire show and special for best cock in show. Both were won by their first prize cock. This bird was a feature in full feather with the best of size and carriage. Their three winning cockerels were much alike and delightful to see. First hen a charmer. It was a rare collection with all, with all credit due these farms and Manager Kerr.

The Monmouth Farms, Freneau, N. J., were close competitors for all honors and exhibited in each class birds of exceptional merit, winning cock 4, hen 5, cockerel 4-5, pullet 4-5, young pen 1. This pen was awarded special for best pen in the show. With every bird finished and matching perfectly it was a wonderful pen. In S. C. Buff Leghorns this farm won cock 5, hen 2-3,

## BLACK ORPINGTONS

Again in the lead, winning four firsts and five seconds at Greater New York. We have won in all sections of the United States and found New York no harder than some of the other great national shows. The breeder that wins in different sections against nearly all the big breeders is the fellow that has the goods. **Look up the records.**

#### GREAT CUT IN PRICES

We have reduced expenses and can afford to sell cheaper than ever before. First find out who has the quality and make your purchase a business proposition. As specialists we not only offer better quality, but at cheaper prices. Our over-head expenses are not half what other breeders have that handle no more birds. One price to all. Exhibition males, \$5 to \$50. Exhibition females and breeders, \$5 to \$25. **Yes, these are the best to be had at any price.** Order early and secure the pick of 1,000 birds. Catalogue free.

**Blue Ribbon Poultry Farm :- Box A :- Columbus, Indiana**

Rock Bantams of which there was a very large display, all were worthy of consideration.

With the dedication of the John L. Cost memorial, the largest entry ever, the best quality, the best management and superb weather, this show will go down into history's pages as a feature display in which all can take pride and rest assured there is glory enough for all.

Now for the next great Hagerstown show. Let every one do his duty. We owe it to the fancy and we owe it to the memory of John L. Cost and to Messrs. Spahr and Baker, his respected successors.

### Why the Aldrich Farm Took Up the S. C. White Orpington.

When the writer last visited the Aldrich White Orpington Farm he asked why did you select the White Orpington and E. S. Aldrich said:

"When a new variety of fruit, vegetable, grain, animal or fowl comes on the market, the question always arises—is this variety as good or better than those already popular? If not, or if widespread advertising makes it popular, it will not last. In order to become a standard or established variety it must equal or excel its competitor in such matters as would be required by the masses; it must not only appeal to the fancier, but must be a general purpose fowl; this is especially true, and there are already varieties which have merits and fairly deserved popularity.

"In applying this test to any breed of chickens it is well to consider briefly what are the requisites to make a general purpose fowl; the first thing to be considered is its utility qualities; we need poultry for meat and eggs, and we need breeds that will produce these with the minimum of cost. If we can add other desirable traits such as hardiness, beauty of form and color, adaptability to varying conditions, etc., we have a bird that cannot fail to gain not only a temporary success, but one that must of necessity become standard, and take the place to which its merits entitle it.

"When we apply these tests to the White Orpington, we firmly believe that no variety which has ever been found has a greater claim to the regard of the people either for a utility fowl, or one for the fancier.

"Do we want a good layer? There are very few varieties that will produce as many eggs, or as great a weight of eggs in a year as this, and still fewer that will furnish these eggs in winter, when the price is high, and those few varieties are inferior in many qualities which are desired in poultry; they generally are inferior in weight, and in the present state of the meat market we must depend very largely upon poultry to make up the deficiency in the beef, pork and mutton supply. If then, we have a variety of poultry that produces the same weight in eggs, with from 50 to 80 per cent more meat, this of itself makes one of the strongest inducements to grow it: the quality of the meat also counts. While the lesser kinds may equal the White Orpington in fineness of grain there is none superior and but few equal in flavor and sweetness, and no person who has tasted the meat of a White Orpington will have much use for the coarse-grained Asiatic varieties. The White Orpingtons are quick growers and fairly quick in maturing.

"On our farm we have raised the young to broiler size—1½ lbs.—in from five to six weeks, less than half the time that the largest Leghorn farm in the world claims that the Leghorns are fit to use as broilers, and at 6 months old we have laying pullets weighing 7 lbs. and cockerels 9½ lbs. this year. No other fowl can excel the Orpington as broilers, as there is a greater fullness of breast in them than in any other variety known to us.

"They can be successfully grown and kept as wide as any other fowl; they will thrive in the moist and cool climate of England, their native home, and in the hot and dry climate of Southern California, of Australia and New Zealand, and also in the cold climates of Newfoundland and British Columbia. We make a good percentage of our sales in Canada and Newfoundland, with a large proportion in Manitoba and British Columbia, and we have sold birds and eggs in every one of the United States, and we have yet to hear from any locality that the White Orpington does not do as well as any other class.

"The hens are docile and quiet, and a 5-foot fence will keep them without roofing over your farm with wire netting to keep from paying damages to your neighbor's garden. They are good foragers, and active for so large a bird, good sitters, and the best of mothers, but are not hard to break up when broody.

"Thus we see that they are possessed by every quality needed by the people at large, and one has only to see a flock on the lawn

or in the breeding pen to say that there is no fault for the amateur or fancier. White in plumage, red in comb, lobes and eye, beautiful in shape, and unexcelled by any other, they are the pride of their owner, and the delight of the beholder. Besides this, they are very susceptible to improvement at any point where they were originally lacking, when properly bred and mated. When first sent out in England many of them had white in lobes and wattles, were

pale in eye, and with blue tints in their legs, which resulted in taking in the composite breed features of the Leghorn and the Hamburg. In England these things were not considered as disqualifications, and but little care was taken to correct them, although to the American breeder they are decided blemishes, and at first greatly detracted from the success in interesting the breed to the masses, but our experience shows, that with proper care, in mating,

## Ferris Leghorns for Winter Eggs

If you aren't getting a good egg yield now when eggs are high, it is time to change your methods, or your stock. In most cases where winter eggs are hard to get, the stock is to blame. No amount of care will make hens produce winter eggs when they have never been bred for eggs. If you have the wrong stock, change now before it is too late. **Ferris' Improved White Leghorns** have been scientifically bred for eggs for thirteen years, and the **laying instinct is bred in the bone**. We trapnest all our breeding pens and breed from no hens that lay less than 160 eggs a year. We select for size, health, vigor, and can furnish you the right kind of stock for egg production—and at low prices, too.

### 25 First Prizes at 8 Big Shows

Iowa State Fair, Des Moines, Iowa  
August, 1913

First and second cock, first cockerel, first and third hen, silver cup for best cockerel in Mediterranean class.

Maryland State Fair, Baltimore, Md.  
September, 1913

First and second cock, first and second hen, first pullet.

West Michigan State Fair, Grand Rapids, Mich., September, 1913

First and second cock, first and second hen, first and second cockerel, first and second pullet, first pen.

West Virginia State Fair, Wheeling, W. Va., September, 1913

First and second cock, second hen, first cockerel, second pullet.

Kansas State Fair, Hutchinson, Kansas, September, 1913

First cockerel, first pullet, second pen, second sweepstakes.

Alabama State Fair, Birmingham, Ala., October, 1913

First and second cock, first and second hen, first and third cockerel, first pen.

Georgia State Fair, Macon, Ga., October, 1913

First, second and third cock; first, third and fourth hen, first and second cockerel, first and second pullet.

Mississippi State Fair, Jackson, Miss., October, 1913

First cock, first cockerel, best cockerel in show.

We will show at several more big shows during December and January. Write for complete list of winning, and let us prove to you that Ferris Leghorns will win for you in strongest competition.

**Prices are reasonable, too.** We have thousands of birds to select from, and are in better shape than ever before to furnish exhibition and breeding stock. Hundreds of exhibition cocks, hens, cockerels and pullets direct from our winners, at \$15 and up for males, \$7 and up for females. You will be surprised at the values we are giving at these prices—big, long-bodied birds with beautiful Leghorn shape, good heads, extra low tails and perfect color. Remember that we can furnish winners for any show in the country and will guarantee them to win first prize.

If you want laying and breeding stock, we have fine yearling hens and pullets at \$2.50, \$3.50 and \$5 each; cocks and cockerels at \$5, \$7 and \$10 each. These birds are all bred from our trapnested layers with records of 160 or more eggs a year, and will make foundation stock that cannot be excelled for egg production. They will lay at least two dozen eggs a year more than ordinary stock, and whether you raise few or many, they will make the foundation stock you need for greatest success.

All stock is sold on a positive guarantee to please you or money refunded. Keep them three days, compare them with others, and if they don't suit you in every way, send them back at our expense. We also ship C. O. D. if desired, in which case you only need send enough to pay express one way. All stock is insured for 30 days—we stand the loss if any die.

### Eggs and Day-Old Chicks

We are now booking orders for spring delivery. Thousands of fine hens in our bred-to-lay matings and 15 of the best exhibition matings that have ever been mated. Prices are remarkably reasonable and we replace all infertile eggs free and guarantee safe arrival of chicks any distance. Our capacity of 5,000 chicks a week enables us to ship large or small orders promptly and to quote low prices. Write us for particulars.

### GET THIS CATALOG TODAY

Read the complete story of Ferris White Leghorns in the 132 page free catalog, which we will be glad to send you. Learn how we developed the laying qualities so that records of 160 to 200 per year are common, how we improved exhibition qualities until today Ferris Leghorns sweep everything wherever they are shown; how we feed, house and manage our stock. Fully describes all grades of stock, eggs and chicks, and will enable you to get started right at small cost.

Mail a postal today. The catalog will reach you by return mail.

**GEORGE B. FERRIS, FERRIS LEGHORN FARM**  
905 No. Union Avenue, Grand Rapids, Michigan

these defects can be bred out, and the bird can be bred as true to the desires of the American fancier as any other variety known.

"At first the plumage of the male, like that of all other white varieties when first introduced, was liable in our hot and dry climate to take on a creamy or brassy tint when exposed to the weather, and at this point we wish to say that when imported birds, raised in the cool and moist climate of England have been brought over, a few months will show that if possible their color becomes worse than that of birds hatched and grown in this country. Of course, looking upon this as a defect, breeders desiring to improve the variety, have for the last three or four years been breeding to secure a bird that would stay white, and not require even the slightest bleaching for the show-room. Those who have followed the show-room for the last three or four years all know, what perhaps the general public do not know, so will say that but very few white males of even the leading varieties, Wyandottes, White Rocks and Leghorns but that have had something added to the water when they were washed, and our experience now is, and we have demonstrated it within the past two years, that the White Orpington can be bred to as pure a white as any of the above named varieties.

"Another thing should be considered in the breeding of this variety, in England meat is more valued than eggs or beauty, and there is a tendency there to breed the White to the shape of the Black, to increase size almost to that of the Cochins or Brahmas, and not by the infusion of Asiatic blood to get fluffiness of feather and cushion. In following this method of breeding we foresee the past danger to the White Orpington in the discussion at the last convention of the American Poultry Association opinions show that this last method of breeding the Blacks had resulted in a great loss in their egg producing capacity; excessive size makes clumsiness, loss of activity and decrease of fertility as well as loss in egg production, and we say to American breeders of White Orpingtons: Do not accept birds of the Cochins or Brahmas type for White Orpingtons, but demand them with the fairly close plumage, their present weight, and their present egg productiveness, with their fine grained, tender, and sweet flesh, and you can rest assured that you will be satisfied with them, and that they have come to stay. We are glad to see that the committee upon the revision of the standard, in making changes in the White Orpington variety have made changes which recognize the fact that there has been a tendency to breed the bird too low down, and with too short a body, and have provided for a little longer shank and a longer body than in the present variety."—H. H. Coburn.

### Regal White Wyandottes.

Ever since the late New York State Fair we have had in mind the wish to pay Mr. John S. Martin, Port Dover, Ont., our compliments and all unbeknown to him and gladly accepting this opportunity to do so. Behind all of this is also a duty to perform, a duty we owe to our readers to tell them of what the Regal quality is today in the hands of Mr. Martin.

All "Regal" news is good news, for it is one of our oldest and most successful lines of White Wyandottes, known from coast to coast for both its breeding and winning quality, and to Mr. Martin, the owner and breeder, all this is due, for it is his quality and skill alone that has made all this possible, and has placed this line soundly in the confidence of the breeders in general wherever standard-bred poultry is bred.

It has been Mr. Martin's custom to exhibit at the New York State Fair for several years past where his winnings have always been very large and from memory we dare say that he has won easily nine-tenths of all first prizes and of all others during the past six or seven years. We believe this estimate as near correct as can be figured. Also let us consider that during these years the entries have numbered from 3,500 to 6,000 birds each year with all the great classes like White Wyandottes, etc., among the largest, strongest and best at the exhibit.

The winning made by Mr. Martin this September we believe to be the best he has ever made for the reason that his birds shown were the best he has ever placed in a show pen and they so far outclassed all competition in quality and condition alike. His winnings were: Cocks, 1-2-3-4-5. Hens, 1-2-3-4. Cockerels, 1-2-3-4-5. Pullets, 1-2-4-5. Old pens, 1-2-3-4-5. Young pens, 1-2-3-4-5. With display and collection specials, etc., and there was not a question over one of the awards. There could be none.

The winning cock bird in quality and condition was the best cock we have seen shown at an early show, a magnificent specimen don't just tell all for he had every quality and seemed to have them superior to even standard demands, no word picture can do him justice, his grand head, fine comb, broad back beautifully carried, deep, broad and full breast, spread and carriage of tail and deep body all combined to finish him into a true and ideal Wyandotte. His fifth cock as well as the first deserve description and so do each of his other winners, for they were all moulded from the same cast as the champion with but two of them not as near ready. In heads and general characteristics they were the same and birds of extraordinary merit.

In cockerels he also won all prizes offered and these winners, sons of champions, are the real champions themselves at less than eight months old. Remember, every one of

these would have been a champion had the preceding one been away, and every one of them was well qualified for the honor.

The striking feature in the cockerels was the similarity of type, heads, finish, etc. The first three in particular resembled one another in general characteristics to a marked degree. The first cockerel, a large, strong fellow, well carried and of the same quality as the winning cock, with depth and fullness a marked feature. We dare say that it is our opinion he will make a wonder cock, superior to the first cock, if that is possible. Second cockerel, up close, and third a most precious one.

In females Mr. Martin has been able to produce the same desired quality that he has in his males. Small combs, well set, the richest of red eyes and the whitest of white plumage, with form and a fullness insuring the best of breed characteristics.

First hen finished to the minute, in the best possible feather and condition, head and comb with shape of back, spread of tail and full breast and body worthy of special comment. Second her equal in most ways, and third a strong favorite. The four hens seen were of a class of special favor and merit. Pullets up to size and weight and in full feather and laying like sixty, is what Mr. Martin showed in this class. We do not know what his egg records are, but can well imagine from those seen here where we get our daily supply of fresh eggs. First pullet a gem in the class with the others following closely, in type and general character they were like the hens, with no holes in them.

In both old and young pens Mr. Martin won all prizes offered. Here were cocks and cockerels as strong as those in the single classes and females matched and mated to simple perfection, all of a rare quality, and all in the finest possible condition.

Taken all in all, it was a most beautiful display of "Regal" quality birds, one long to be remembered, and if ever unlimited success was due a breeder, it is due to Mr. Martin. His life work is in his strain and for all these years he has shown us continued improvement and a desire for better things.

At Boston's great show last winter Mr. Martin made a similar win, taking all but one first prize and many others. It was a record of greatness, but it was no greater than the man or his line of Wyandottes.

At the fair Mr. Martin invited us to call and told us of the very large flock of birds he had this year and he wanted us to see for ourselves, so we will expect to call on him early in December and will then tell our readers of the sights on the "Regal" home plant. Mr. Martin has a very large plant. We have been through before and know his capacity and ability to raise early and late birds and to mature them. Write him for his catalogue and other information and always mention the A. P. J.—H. P. Schwab.

## FLANDERS' SINGLE COMB WHITE LEGHORN FARM

(PARMENTER STRAIN) — We can now spare some fine quality cocks and hens. Some grand youngsters coming on. Get ready to win this Fall by writing us today. Mention American Poultry Journal.

**18 out of a possible 25 FIRSTS in the HOTTEST CLASSES in the SHOW.**  
**1st CKL. and 1st PEN on EACH VARIETY, the MOST IMPORTANT FIRSTS.**  
In 1912 we sold for New York and exhibited in only one variety.

YOU WANT soft, even, sound BUFF ORPINGTON males and females, with typical type and big bone to WIN your show and breed you winners. Birds that have been line bred for years from the best individuals ever produced in England or America. You can get them of me at the lowest prices similar birds were ever sold for.

YOU WANT deep, wide, heavy boned WHITE ORPINGTON males and females that are over standard weight, have grand head points and are whiter than those you have or those your opponent will show. You can get them of me and WIN. The best cocks, hens, cockerels and pullets ever bred from the flock that has WON its LEADERSHIP in the HOTTEST company.

YOU WANT snowy white, typical shaped WHITE ROCK males and females that have fine combs, red eyes, broad backs, wide spread tails and that are over standard weight. Birds that will CRUSH your competitor in the show room and help your matings. You can get them of me and have the honor of your winning and the benefit to your flock.

YOU WANT broad, cobby WHITE WYANDOTTES with sufficient length of body and back to meet the requirements of the new Standard and make productive breeders. Males and females with neat rocker combs, fiery red eyes, pearly white color, and that are standard weight or over. The BEST WHITE WYANDOTTES ever produced. You can get these birds of me and WIN in any company. Line bred for fifteen years and will breed you winning chicks.

YOU WANT rich colored males and females in S. C. Reds that have plenty of size and bone, fine long bodies, low tails, good black markings, and that have good combs, red eyes and good legs. You can get them of me and have the absolute certainty that your money could not bring you birds quite as good elsewhere.

If you do not want exhibition birds but BREEDING BIRDS of the HIGHEST CLASS, I have a superb lot from which to choose and will sell these birds at the lowest prices I have ever known birds of a like quality to be sold for. Grand utility matings and superb matings of a better quality.

### SPECIAL FOR DECEMBER

**75 GRAND YEARLING COCKS IN ALL VARIETIES** to Head your Matings, \$10 to \$15.00 each. Extra good at the price.

**SATISFACTION** with every bird shipped or I want you to return at my expense and receive your money back.

Do not order elsewhere until you have read my new Illustrated CATALOGUE. Write me and receive it by return mail.

## Simmons and Crittenden.

During September I made my annual visit to the Simmons & Crittenden Rose Comb Red Farms, Geneva, Ohio. These two gentlemen make a great team, their interests fitting in smoothly. Mr. Simmons lives in town, where there are buildings sufficient to keep a goodly number and where the egg trade is handled. Mr. Crittenden lives on the farm, which is about one mile east of Geneva and only a few minutes' walk from the Cleveland, Painesville and Ashtabula electric line. Here we found young stock growing and maturing under the most ideal conditions. These gentlemen are among the advanced advocates of very dark rich red and their birds are extremely even in brilliant surface color, in fact an up-to-date red and have a shine on them. The males run wonderfully strong in sound undercolor, absolutely free from any smut or white, and are exceedingly strong in tails and wings and we did not see a straw or russet tail among them. The females are clean in undercolor, good in wings and tails and typical in shape.

This firm positively taboo high tails and consequently their Reds have low tail carriage. When it comes to head points, to take them as a whole, there is no flock that can surpass them in this direction. On this farm a large percentage of the hatching is done artificially, but good mother hens are very much in evidence and nothing can beat them for making hustlers out of chicks, as she induces them to step lively for bugs, and this partly accounts for the luster and finish of the Simmons & Crittenden Rose Comb Reds. They have some nifty show cockerels sired by their first cock and grand

champion at Pittsburg, 1913, also winner of both shape and color special. This bird is absolutely sound in all sections and weighs 10½ pounds. Many of the cockerels sired by this male are the exact counterpart of him. Another grand sire of the young stock is their first prize cockerel Pittsburg, 1913, first in a class of 35 cockerels. Their second Chicago cockerel, 1911, has proven himself a grand producer of type and color. Another great sire is their third Pittsburg cock that won third cockerel at Chicago and headed fourth Boston pen, 1912. Among the many fine females I took special notice of were two of the finest hens I ever saw. There are over 700 birds to select from and you make no mistake in ordering your show birds from Simmons & Crittenden, Geneva, Ohio.—H. H. Coburn.

## Get Your Sample Copy.

We want to send every reader of American Poultry Journal a sample copy of Poultry Post, one of the best poultry journals published for the beginner, chucked full of interesting and helpful articles on how to make money with poultry.

Never was our outlook more encouraging than at the present moment. Beef as a meat diet for the American people will soon be a thing of the past and the demand for poultry and eggs will keep increasing which will have a tendency to keep the price soaring higher and higher until it will only be a question of a few years when a good living can be made on an acre of ground with poultry.

Good breeding stock will command top notch prices. The higher the market price the more demand it will create for standard

breeders. Let us tell you all about these facts in Poultry Post. Trial four months' subscription, 10 cents. Sample copy free. Poultry Post, D. 30, Goshen, Ind.

## How to Get More Eggs.

Many poultry raisers have an idea that the number of eggs produced depends entirely on the quantity of food given the birds. They stuff their hens full of food without causing them to work for it or furnishing them grit to help digest it. As a result, the hens become drowsy, lazy and too fat to lay. In many cases the birds become crop-bound and die simply for lack of grit to help them digest the food in their crops.

Chickens have to grind their food in their gizzards before they get the benefit of it. The grit they get serves as teeth. Denying a bird grit is just as sensible as expecting a person to grind his food in his mouth without teeth. During the winter months when eggs are so valuable, and the cold and snow on the ground makes it necessary to shut up the birds, the necessity for feeding a good grit is imperative. If this need is not met the owner is bound to suffer in loss of eggs if not in the loss of the birds themselves.

While grit plays such an important part in the digestion of food, a good grit, such as the Ohio Marble Company's "Pearl Grit," also provides other necessities absolutely essential to increased egg production. This includes calcium carbonate (lime) for egg shells; vitreous (glass) matter for the composition of feathers; also sulphur and carbonates which help to make the egg itself.

## CHAMPION

## BUFF WYANDOTTES

America's Great General Purpose Fowl

Just made a Clean Sweep at the Big Illinois State Fair

Competing against birds that had been winning the blue ribbons at many of the best shows. Champion Buff Wyandottes won every First and Second Prize.

First, Second, Third Cock  
First, Second, Fourth, Fifth Hen  
First, Second, Third, Fourth Cockerel  
First, Second, Third, Fourth Pullet  
First, Second, Third Pen

At the Greater New York Show 1913

won twice as many prizes as all competitors combined, Silver Cup, Best Display, Gold Special, Best Display all varieties competing.

The above recent winnings prove that we have the Real Champion Buff Wyandottes, supreme in color and type. The most wonderful winter laying strain on earth.

Some grand Cocks and Hens and hundreds of youngsters that can win at any show on earth

**BESUDEN BROS., R. W. Sturtevant, Mgr., Box 359B, CINCINNATI, OHIO**

## PURITAN

## PARTRIDGE ROCKS

"The Quality Flock of America"

Another Clean Sweep at the Big Illinois State Fair

In the strongest class shown this year, Puritan Partridge Rocks won

First, Second, Third, Fifth Cock  
First, Second, Third, Fourth Hen  
First, Fifth Cockerel  
First, Second, Fourth Pullet  
First, Second, Fourth Pen

At the Greater New York Show 1913

won Three Firsts, Four Seconds, Four Thirds, Three Fourths, Silver Cup Best Display.

Puritan Partridge Rocks are a revelation in color and type. They mature early, are extremely hardy, and are great layers.

A hen must have all these substances to make herself of greater value to you.

"Pearl Grit" has a hard, sharp grinding surface, but is readily susceptible to the process of assimilation. It is clean, white and nutritious. It not only imparts those egg-making qualities so necessary to laying hens, but also provides strength and feather-making materials enabling a speedy molt. "Pearl Grit" is also made in finer sizes for growing birds and chicks. It gives them exactly what they need for rapid development, and to make them good steady layers.

We would suggest that any reader interested in increasing the egg production and health of his flock will do well to write the Ohio Marble Company, of Piqua, Ohio, for their beautiful, instructive booklet telling why "Pearl Grit" is such a practical, profitable food. See their adv. on another page of this issue.

#### "Fishelton."

When but a mere boy of ten years of age U. R. Fishel began dabbling in fancy poultry and being a possessor of keen business ability and having a determination to make a success of anything he undertook, and a firm believer in advertising, he made good. Each year increasing his advertising and by so doing increasing his business. In the year 1882 he formed a partnership with his brother, J. C. Fishel, and as is invariably the way with beginners, they tried to breed every variety under the sun. Finding this was not practical they discarded all but the Black Langshans and continued to breed this variety for several years. Right here is where the Fishels began to show their individuality and be leaders in this variety, proving the great possibilities of the specialist.

U. R. Fishel being some years younger than J. C. and having arrived at the age when his home town had become too small for him, and had visions of pastures new, he accepted a position to manage a poultry farm in Alabama. In the meantime he sold the entire flock of Langshans.

U. R. Fishel returned home from the South and engaged in the mercantile business and while ninety per cent of those who enter the mercantile business make a failure, he with his old time tenacity and close attention to details made a success of it. While riding across the country one day he observed White chickens dotting a farm yard, and being enchanted with their great beauty, a severe attack of chicken fever developed immediately and he stopped and made inquiries regarding them. They, of course, were White Plymouth Rocks and U. R. purchased the germ of his great strain. Fifteen hens and an ancient cock for the fabulous sum of \$15.00, and out of these birds he made "The Best in the World Strain." He devoted all his spare time to these 16 birds, hardly taking time to properly masticate his food, and as stated before he was a firm believer in the use of printer's ink and so invested \$3.50 in a breeder's card in a leading journal and received orders for eggs and birds amounting to \$150.00. This large return for his small investment set him to figuring it out like this. If a little side issue poultry business was making more clear money than the mercantile business, why not spend more money advertising and raise more White Rocks, so acting on this plan he continued to advertise and in a short time had raised one thousand White Rocks on a piece of ground about eight rods square, the same tract containing residence, stable and other buildings, and as he had realized more clear money on his Rocks than from his mercantile business, he and Mrs. Fishel decided to sell the mercantile business and buy a farm. They bought a farm of 120 acres for \$6,500, paying \$1,000 down and the remainder in yearly payments. To this they have added 70 acres and have various other investments, all paid for with White Plymouth Rocks.

Fishelton now comprises 190 acres and is worth a lot more money than when purchased. The poultry yards proper contain 33 acres, 15 of which are used for breeding yards, all set out to fruit trees. Mr. Fishel is a strong advocate of the colony house plan, although it takes more labor to care for the stock. There are over 200 buildings on the farm. The office is in the residence and is beautifully furnished and equipped with three typewriters, dictaphone and all necessary furnishings.

The shipping house is 16x100 feet, part of which is two stories, the upper floor being used as conditioning rooms for exhibition birds. On the lower floor is one large room for cooping. There are seven rooms with a capacity of about 450 birds. The north wall, entire length of the building, is covered with exhibition coops for the male birds to be shipped out to every nook and corner of the globe. Very frequently the shipments consist of three to four hundred birds a day. The capacity of

## 85 Eggs is the average yearly yield per hen

So say the government statistics

The government knows and so should you know. Do you know that in many states, and in all probabilities in your own state, there are poultry experiment stations conducted by the state governments? The nature of their work is to increase egg production both by breeding and scientific feeding. It has been ascertained that both are essential. Breeding is 75 per cent and feeding 25 per cent. No progress can be made if a haphazard method of breeding is adopted.

### Absolutely no progress can be made unless the individual records of the breeding stock are known

The method of breeding from the best layers year after year is the only method that will bear fruit. This means the continual use of the trapnest. The fact that there are so many failures in the poultry business, even though market eggs have doubled in price within the last ten years, is due to the unreliable laying stock. There is no doubt, but what there are good layers in every flock, probably 30 per cent are profitable, 70 are not profitable. These are the proportions your purchase will represent if you are buying from the breeder who does not trapnest.

Would you not rather pay a little more, or not buy so many, knowing that your purchase is stock from profitable layers only? This deserves your serious consideration. You cannot succeed with stock others are making failures with, and upon careful investigation you will find that 99 per cent of the breeders of this country are not breeding for eggs. They are breeding for show purposes and are offering the inferior specimens to you as egg producers.

See ad. on opposite page, also photographs of my White Rock and Barred Rock layers. My catalogue is free, write for it.

John G. Poorman:

Midlothian Farms and Hatchery

the shipping house is about one thousand birds. Another conditioning house is 16x48 feet with an "L" 16x20 feet. This house has eight pens and single coops enough to accommodate 84 birds. There are ten breeding yard houses 8x12 feet, six scratching sheds 8x24 feet, two Tolman plan houses 12x20 feet, 108 colony houses 5x10 feet, made from piano boxes. These are scattered all over the farm in and about corn fields and alfalfa fields.

The incubator cellar is 58x18 feet, in which is one ten thousand Mammoth incubator and 20 smaller machines. Above the incubator cellar is the egg room and brooder room, which contains six Paradise Brooders. The brooder house is a continuation of the incubator cellar and is 140 feet long and 16 feet wide. At the east is the furnace room, with wash room above. The main building of the brooder house is 123 feet long and is divided into pens 8 feet wide, with a three foot passage-way. The remaining 13 feet of floor space is divided, 8 feet of wooden floor on which is set brooders and hovers, 5 foot of soil is utilized for raising green food for chicks. The partitions are so arranged to admit of the chicks from one apartment to another without handling.

The two story storage and private stable is 40-50 feet, the feed storage and stock barn is 60x90 feet with a 16x32 silo. Another barn is 20x60 with pigeon loft. Scale shed, two tenement houses and other buildings too numerous to mention, round out the two hundred.

The water is supplied by a private system pumped by an electric motor and piped to all buildings. When the writer made his annual visit to Fishelton he found White Rocks by the thousands and as usual the young stock on the gain in quality. Mr. Fishel will soon have reached his limit in improvement unless he can make them more than perfect.

Mrs. Fishel was as usual unable to supply the demand for her White Indian Runner Ducks. Space forbids further detail, but a visit to Fishelton will be an eye-opener to most any one who has thought he has seen a poultry farm. Those unable to visit Fishelton will get a good idea from the beautiful book, entitled "Poultry for Pleasure and Profit." For full particulars address U. R. Fishel, Hope, Ind.—H. H. Coburn.

### Here Is the Address.

Last month we published a small one-half inch advertisement for one of our patrons offering a four months' trial subscription for 10 cents but inadvertently left off the name of the publication giving only the name of the post office where this journal is published. The full address should have been Poultry Post, D. 30, Goshen, Ind. We are glad to call the attention of our readers to the same advertisement properly inserted in this issue. Their offer of four months' trial subscription still holds good and we hope everyone of our readers will take advantage of it. They will also gladly send you a sample copy free upon request. Remember, address them, Poultry Post, D. 30, Goshen, Ind.

### How to Ship Eggs and Other Products by Parcel Post.

Many of us do not yet seem to fully realize the advantages of shipping much of our lighter produce by parcel post.

We have been in the habit of using other means so long that it seems hard to change our usual methods, even though the new way is much better, more convenient and economical.

The new 20-pound limit for parcels lately put in operation by the post office department has greatly increased the opportunities for shipping dressed poultry, fruit, butter, eggs and all kinds of garden and dairy products direct to the consumer at a small cost for transportation. Twenty pounds will allow for quite a quantity of farm products and, when fully taken advantage of, this new ruling will revolutionize, to quite an extent, modern retail methods of selling farm products.

The first thing to consider in preparing to ship your eggs, dressed poultry, fruit, butter or vegetables, is the package. You need something that is neat and compact, strong, yet light and attractive. Nothing creates so favorable an influence on the customer as the appearance of the package in which the goods arrive. Every successful concern appreciates this—it is one of the laws of selling.

Especially in shipping eggs and day-old chicks is a strong but light, compact package absolutely essential to success. There are many different kinds of such packages on the market, but we have found one better than the "H. & D." Eggs and Chick Boxes. They are made of double faced,

corrugated, jute board, and are waterproof, non-absorbent, sanitary, light but strong and firm. They are built to stand the rough handling of long express shipments and protect their contents from heat and cold. The "H. & D." Egg Boxes have two thicknesses of elastic board, which give perfect protection—there's a separate cell for each egg. The "H. & D." Chick Box has separate compartments which prevent crowding and trampling. A patent ventilating device assures plenty of fresh air at all times. The chicks will not smother nor sweat. Chicks "H. & D." boxes are made by the Hinde & Dauch Paper Company of Sandusky, Ohio. They will mail free to anyone interested a very useful little booklet entitled, "How to Pack for Express or Parcel Post" and also a descriptive booklet on "H. & D." Chick and Egg Boxes and Fireless Brooders. are shipped only by express of course.

### Do You Want More Eggs?

Thousands of people are following the plan of feeding their hens ground up green bone, raw meats or vegetables to keep them laying during their usually idle season. The plan has proven unusually successful.

This year promises to be an exceedingly good year for the man or woman who has eggs to sell. Meat and other products now demand high prices and, in fact, the entire market indicates a tendency toward higher prices.

If you are raising poultry it is worth your while to look up the proposition of the F. W. Mann Co., at Milford, Mass. They have a machine that does excellent work grinding bone, meats and vegetables. It has 15 years of experience behind it, and is known as the original bone cutter.

The particular advantage of the Mann machine is that it cuts all of the stuff you put in it. It is not necessary to throw away a tendon or gristle. There are no big slices or splinters that get through the machine. It does its work easily and quickly. The operator does not have to dig out particles of bone, meat or gristle from the machine.

We suggest that you write the Mann Company for their proposition. A few dollars invested in their machine, returns quickly in profits earned. You can make every hen a paying hen this year and for many years to come. An interesting catalogue is published by the above concern which can be had by writing them at Milford, Mass.

### New X-Ray Factory.

Largest of all exclusive incubator plants in the world—a marvel of modern equipment—the new factory of the X-Ray Incubator factory at Des Moines, Ia., is attracting poultry raisers in all parts of the country. The factory, recently completed, is now open to visitors. Multitudes have already availed themselves of the opportunity to view the plant and to acquire the valuable information which a trip through the big institution affords. The visit is in fact a chapter of real education on poultry culture, which no one interested in the business should miss, when in Des Moines.

The prime object in locating this plant at the Iowa capital is the betterment of shipping facilities. The constant and rapid growth of the X-Ray Company's business, some time occasioned unavoidable delay in shipping. It will be welcome news to poultry people everywhere that all such delay has been effectually overcome by the new location. In a few hours the X-Ray Company now reaches any point in the corn belt with an incubator shipment. This means that any customer can now count on receiving his incubator at once, where formerly he had to wait some days.

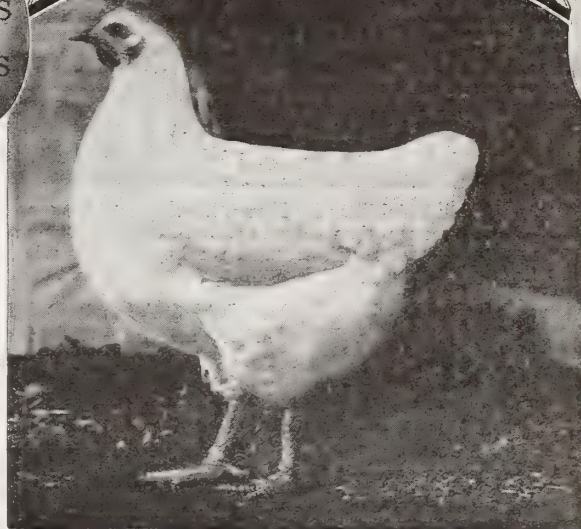

The growth of the X-Ray business making necessary this immense plant is conceded to be the most remarkable in the industry. The manufacture of X-Ray incubators began only half a dozen years ago in a little carpenter shop. It is a great commentary on the state of the poultry industry—how it is increasing by leaps and bounds—how modern methods have come into universal practice—are most eloquently and convincingly proved by the new X-Ray factory.

A visit to the X-Ray factory at Des Moines discloses not only this but other important advances in incubator building. To those who can not come, however, the X-Ray Incubator Company will gladly send illustrations and full description of the machine to those who write.

Geo. H. Rudy, Mattoon, Ill., the well known breeder of the Perfection strain of White Wyandottes, will have his usual display of male birds at the Coliseum show this month. This display will consist of some of the finest White Wyandottes in this country. Don't fail to see this exhibit.

## Why I Breed for Eggs

EGGS are the logical source of income for those who wish to succeed in the poultry business. I breed for eggs because there is a demand for them that has never been supplied, and at prices that yield a good profit. The more eggs I produce per hen means that much additional profit. By trap-nesting and breeding from my best layers, and by the judicious introduction of new blood, my fowls are capable of producing good profits.

I breed for eggs because I can see more real money for my products. Ninety million people demand eggs. They constitute the market—the best market in the world. No one ever made a failure because he could not sell eggs, but thousands have made failures because their hens would not produce enough eggs to make success possible. The average hen is not a success. Your stock will have to be above the average if you are to be successful. I have made a success because I breed for eggs from stock that is very productive and has been so for many years.

You are assured of a market. Your success, therefore, depends upon your judgment in selecting the right kind of layers. Do you expect to find these layers on a farm where eggs are of secondary importance, or on a farm where eggs are given every consideration every day of the year?

#### MY PRICES:

### Business Expanding.

The Wendell Incubator Co., Holly, Michigan, began in a small way to manufacture poultry supplies in 1896 under the name of the Automatic Hatching Co., but changed the name to Wendell Incubator Co. in 1908. During this time the superior quality, low prices and honest treatment have gradually increased the sales from a few hundred articles a year to thousands, and from starting with just two things this firm has worked its way up to its present capacity and they are now making 32 articles in all, including incubators, hovers and poultry supplies of all kinds. This firm sells direct to the consumer, thus saving the middle man's profit. They have only one price to everyone, therefore your neighbor cannot get goods any cheaper than you can. In the latest and by far the largest and finest catalogue yet issued, each and every article is described and the prices are in plain figures.

You will find listed in this catalogue practically everything a poultryman wants and you are dealing direct with the manufacturer. If you want any information you ask the man who made the article. The Wendell Incubator Co. orders in large quantities and pays cash and sells for cash, the purchaser getting the manufacturing price on all articles.

The Wendell Incubators are used in every state in the Union and are giving entire satisfaction. They are made in 200, 150, 100, 50 egg sizes and full description of this incubator is given in their catalogue. One of the latest incubators is the poor man's friend, an incubator gotten up for the man of limited means, but a machine that will hatch eggs and hatch every egg that has a germ strong enough to come out of the shell. The poor man's friend will do all of this and is no cheaply constructed machine either. It is built as, some call, a triple walled machine; first there is a wooden case, this covered with real asbestos and then covered with No. 30 galvanized iron. This machine has the same lamp, thermometer, regulator and hot water heating system as the standard makes. If anything goes wrong with the heating system within five years it will be replaced or repaired free of charge. The catalogue gives a list of testimonials of users of the Wendell. If goods at factory prices interest you, send for catalogue.—H. H. Coburn.

### "Stay White" White Plymouth Rocks.

While the writer of these lines was a mere novice in the poultry business we remember reading of H. W. Halbach, Waterford, Wis., and his "stay white strain" of White Plymouth Rocks, since that time we have had a lingering desire to at some time visit the farm where this wonderful prize winning strain of Rocks are produced. On Tuesday, November 4, our ambition was realized and we arrived at the home of the "stay white Rocks" unexpectedly, and was given a royal welcome. As time was limited we at once proceeded on our voyage of exploration under the guidance of William H., the junior member of the firm and the poultryman in chief. We do not feel equal to the task of properly describing to the readers of A. P. J. the many splendid qualities of this grand strain of Rocks, suffice it to say that we have never seen in any flock, large or small, such uniformity of type and color and such outstanding quality. There were hundreds of cockerels and pullets that any breeder in the land would be proud to call his own, and cock birds, challengers of the world. They stand undefeated in such shows as Chicago, Detroit, Illinois State Show, and many others. These things we noted especially in this grand flock of birds, uniformity of type, large size, though not to the extent of coarseness, snow white plumage, orange yellow legs, and the reddest of red eyes. What more is needed to make the record complete?

Birds worthy of special mention are the cock, winner of 1st and grand champion at Detroit, 1911; 1st cockerel at Chicago, 1912, this cock has wonderful length and depth, with great breadth of back. In fact, he is a revelation in "Rock type." Mr. Halbach considers him the best he ever produced. The pride of the farm is the grand champion cockerel of the Illinois State show, 1913, now a yearling cock. This cock is marvelous in type in all sections, with snow white plumage and fiery red eye. He has proven himself a wonderful breeder, as his type is stamped on all his progeny. If we should close the page on cock birds without mentioning the first pen cockerel at the Illinois State show, 1913, we should feel our duty only half completed. This cock, while not finished at this time, is so nearly perfection itself that he needs no further comment, every curve and line of his entire make-up seems to have been

chiseled by a master hand. Taking the three cocks collectively, if they have any superiors, we would go many miles to see them. Time and space will not permit us to mention all the excellent cockerels and pullets seen and handled while there, however we can not refrain from mentioning some of them. One cockerel, in particular, sired by the grand champion of Detroit, 1911, is all that could be desired in a cockerel; fine in type, great in size, graceful in every curve of his body; he is far ahead of the champion of the Illinois State show, 1913. Another grand specimen and fit companion for the other is a cockerel from pen eleven, sired by the Illinois State show champion. This cockerel might easily be placed in the same class with the former. Two others that show great promise were also from pen eleven; these birds, though not yet finished, have a great future before them and will be heard from later in some of the leading shows. The best pullet, we think, seen to date was one from pen eleven, also sired by the Illinois State show champion; this pullet is perfection itself, beautiful in type and finish with graceful lines in every section, and white as the Wisconsin snow. Another fit companion for her was a pullet from pen eight, sired by the first pen cockerel at the Illinois State show, 1913. She is a worthy daughter of a noble sire.

The winnings of this famous strain of White Rocks are familiar to all and yet we can not but think their career has just begun.

Mr. Halbach has just added to his equipments a new conditioning house with wash-room on the ground floor and conditioning room fitted with empire coops, on the second floor. The entire building is steam heated and is strictly modern in every respect. The stock on the farm, 2,000 in number, is in fine, healthy, growing condition. We take special pride in recommending H. W. Halbach, whose character is beyond reproach, and his "Stay White Strain" of White Rocks to the readers of American Poultry Journal.—J. C. Johnston.

#### Big Pipe Covering Contract.

Among the many large contracts placed for building material in connection with the new German Hospital, Cincinnati, O., was one for 50,000 feet of J-M Pipe Covering for the heating system of that huge structure. This contract was awarded to the Cincinnati branch of the H. W. Johns-Manville Co. The many types of pipe covering manufactured by this firm are fully described in their new booklet, a copy of which may be obtained by writing their Cleveland branch.

#### Endorse Prairie State Machines.

The new 1914 edition of the Prairie State Incubator Catalogue contains a number of strong letters of endorsement from men who are recognized as authorities in matters of incubation and poultry keeping. We find, among others, letters from Prof. F. H. Stoneburn, poultry husbandman at Storrs' Agricultural Experiment station, Storrs, Conn.; Prof. Philips of Kansas Agricultural College, Prof. Schoppe of Montana Agricultural College, Mr. O. C. Frantz of the Rocky Ford Poultry Farm, Rocky Ford, Colo.; Mr. Edgar Briggs, Pleasant Valley, N. Y.; Mr. A. A. Brigham, of South Dakota School of Agriculture; Mr. U. R. Fishel, Hope, Ind.; Prof. J. S. Jeffery of North Carolina College of Agriculture; Mr. M. F. Delano, Mgr. of The Owen Farms, Vineyard Haven, Mass., and many others.

From the widely scattered sections represented in the above list it would seem that Prairie State machines are adopted to all climates and atmospheric conditions and indeed they are. No other machine stands higher in the esteem of the American public and in Canada, where extreme climatic conditions put a machine to the severest test, Prairie States are particularly favored. The Prairie State Incubator Co. operates one of the largest manufacturing plants of its kind in the world and their new steel and concrete building is provided with every equipment looking to the economical production of machines of the highest type.

One of the exclusive features of Prairie State machines which has brought them into such general favor during the past few years is the sand tray. A hen that stole her nest really suggested to the mind of the inventor this improvement in methods of incubation. By means of a tray of moistened sand placed in the incubator the atmosphere is kept at the proper humidity and the result is a marked improvement in the vigor and health of the baby chicks. In fact, this improvement has won for Prairie State machines the reputation of hatching the most "chicks that live" and probably accounts in a large measure for

## WILBURTHA S. C. WHITE AND BUFF LEGHORNS, S. C. REDS, COL. WYANDOTTES

Stock for sale. Eggs for hatching. Baby chicks. The Wilburtha Strain of Leghorns was well placed in all classes at the great Allentown Show. Our first prize S. C. White Leghorn cock was pronounced a "masterpiece." We aim to breed our varieties all up to the highest state of perfection and practical worth and assure the trade of absolute satisfaction. Write us your wants. Mention A. P. J.

WILBURTHA FARMS, C. J. Fiske, Owner, Wm. D. Campbell, Supt., Box A, Trenton Junction, New Jersey

## LLENROC REDS

Formerly Alt's Reds—Make great winnings at New York State Fair, September, 1913, and at Toronto National Exhibition, 1913. At New York State Fair they won under Judge Card 1st and 3d cockerel, 1st pullet, 1st young pen, 4th cock, 5th hen, \$25 in gold for best display. At Toronto they won under Judge Drevenstedt 1st and 2d cock, 1st hen, 2d and 3d cockerel, 2d pullet. At these two great shows the judges and breeders agreed that never before had there been so large a class of Reds and competition so keen. We furnish cockerels and pullets for any show. Address

Henry W. Alt, 87 Fuller Street, Buffalo, New York -- John E. Houck, Black Creek, Canada

## Buff Orpingtons

At Beardstown, Illinois, only show made in 1912, my Orpingtons won in strong competition, 2nd cockerel, 1st, 2nd, 3rd hen, 1st, 2nd pullet, 1st pen. Exhibition and breeding stock for sale. Satisfaction guaranteed.

Victor Adelmann, R. F. D. 1, Beardstown, Ill.

## ORPINGTONS OF THE SUPERB KIND

White, Buff, and Black. Imported and choicest of domestic stock, show birds, excellent breeding trios and pens, and young birds for sale at small prices. Catalogue Free. Correspondence solicited. Mention American Poultry Journal when writing. Lynbrook, L. I. N. Y.

J. W. Parks' Strain

## BRED-TO-LAY BARRED PLYMOUTH ROCKS

I Have Produced Some of the WORLD'S GREATEST LAYERS Choice breeders, \$2.00 and \$3.00 each; Pedigreed cock'ls, \$5.00 each, 1,000 breeders to select from. Descriptive circular free.

O. F. Mittendorf : : Lincoln, Illinois

## Rose Comb Reds

The finest lot of REDS ever offered for sale. All have that dark rich, brilliant color. A fine exhibition male from \$10.00 to \$25.00, a beautiful dark red female \$5.00 to \$20.00, all sired by our Pittsburgh, Chicago and Boston winners. If you are looking for a show bird and want one that will win don't be afraid to write us. A few breeding females at \$2.50 each. Everything sold on approval.

Simmons & Crittenden

Geneva, Ohio

## SPRING WATER FARM SINGLE COMB WHITE LEGHORNS

All of our this season's breeders, including our prize matings, must be sold to make room for our oncoming young stock. These will be disposed of during July and August at tempting prices. Write us before placing your order and request one of our free booklets, describing our stock and plant. Mention American Poultry Journal when writing.

Spring Water Poultry Farm, R. F. D. 1, Stockton, New Jersey

## Andrews' White Wyandottes

Win at Boston, First Pen Six times in past 7 years.

1st Cockerel 1910, 1911, 1912  
2nd Cockerel 1910, 1911, 1912, 1913

Let me quote you prices on a winning show bird or fine breeder. Send stamp for catalog.

J. W. Andrews, Box A, Dighton, Mass.

its general endorsement by eminent authorities.

The Prairie State Incubator Co. have just finished printing their 112 page 1914 catalog, and offer to send it free and postpaid to any reader of this paper who will write for it. Among other things this valuable book contains about 60 pages of general information for poultry keepers, such as Which Breed is Best? How to Preserve Eggs; How to Feed, Rear and Breed; How to Treat Diseases; How to Grow Green Feed for Winter, etc., etc.

We suggest that any reader considering this purchase of incubators, brooders, hovers, colony houses, etc., should write at once for a copy of this free book. Address: Prairie State Incubator Co., 468 Main St., Homer City, Penna.

### Barred Plymouth Rocks.

On our return from Hagerstown we spent part of a day visiting the new poultry plant of Mr. C. N. Myers, Hanover, Pa. When

Hanover, 1912, 1st and 2nd pen. Hagerstown, 1912, 1st and 4th pullet-bred cockerel, 2nd hen, 3rd and 4th pullet and 3rd pen.

Philadelphia, 1912, 1st, 2nd and 8th hen, 1st, 3rd and 4th pullet-bred cockerel, 3rd, 5th, 6th and 8th pullets, special for best hen in entire show, cup for best display of Barred Rocks, cup for second best display in show, and specials for best shaped and colored females.

Madison Square Garden, New York, 1912-1913, 1st hen, 2nd pullet and special for best shaped female.

Hagerstown, 1913, 1st, 3rd and 5th hens, 2nd and 4th pullets, 3rd cockerel, 3rd and 4th pullet-bred cockerels, 3rd pen and shape special female.

This is a grand, clean-cut record that speaks for itself and plainly tells the rare quality of this line, and particularly of their worth as a breeding line. His winning hen at the late New York show was a sensational class bird, and as we saw her here in her new home all ragged in moult she still

found them of superior color and barring, very even and strong fellows.

At this time Mr. Myers is offering cockerels at special prices and he guarantees to absolutely please every customer or to refund his money. To this we can but add that if the buyers want the quality to breed and to reproduce, they will find it in this line. We heartily recommend both breeder and birds.

We greatly enjoyed our visit to this plant, particularly so for Mr. Myers is an ideal fancier and breeder. He knows every bird on the place, its record and breeding. The breeding question has been a deep study with him and his success is self-attained and his full due.

Mr. Myers now has a new catalogue now in press and this will be mailed free for the asking. This next spring he will also sell eggs for hatching, having refused to sell them in the past, so no doubt many of our readers will also be interested in his mating list.—H. P. Schwab.

### Poultry Show Visitors.

Poultry show visitors seeking real pleasure and amusement while in Chicago can find it at the Columbia Theater, Clark and Madison streets, the home of refined, up-to-date, snappy burlesque. This is Chicago's real novelty, comedy and musical house. Big shows and good music. Forget your troubles and spend a few enjoyable hours at this first-class show house. A sure cure for the blues. Two performances daily. Prices reasonable. See advertisement elsewhere in this issue.

### Avoid the Dangers of Stall Feeding.

This is the timely warning we have noticed in all the agricultural papers of late—a warning issued by Dr. Gilbert Hess, one of the foremost veterinarians in the United States.

Dr. Hess backs up his warning with sound facts. He states that an animal taken off pasture and put on dry feed is very liable to get out of fix because corn, oats and hay do not contain the laxatives and tonics so abundantly supplied in grass.

The doctor describes some of the many ailments that farm stock often suffer from during the winter months while on dry feed and closely confined. Some of your animals, he says, are sure to become constipated, others off feed, rough in the hair, with paleness of the eyes, lips and nostrils, or the legs may stock, or dropsical swellings of the abdomen appear, or the urine may become yellow or thick, but the most common ailment of all, especially among hogs, is worms—worms. Our readers know full well that these ailments are often prevalent.

Dr. Hess advises the use of Dr. Hess Stock Tonic while stock are on dry feed. He states positively that his scientific preparation (which by the way has been on the market 21 years) will make stock healthy, expel worms and keep your animals fit and well. He gives a remarkable guarantee to the effect that his dealer in your town will supply you with enough Dr.

View on Ernst Birkholz S. C. Red Farm, Willoughby, Ohio

fully completed this will be one of the largest specialty plants; the farm comprises 150 acres in a beautiful section, most of it set to fruit and shade trees. The buildings are all new, built on modern plans and insure comfort for the fowls.

Mr. Myers breeds the pullet line of Barred Plymouth Rocks exclusively and has within the past few years made several records of note. Step by step he has climbed the ladder of fame and has achieved the distinction of winning highest honors at the M. S. Garden, New York, show.

We here give a few of his most prominent winnings as we have them: At Philadelphia, December, 1910, 1st, 2nd and 6th pullets, specials for best colored female and silver cup for best three birds in any one of the five classes.

Hanover, 1911, 1st hen, 1st and 4th pullet, 1st and 3rd pen.

Philadelphia, December, 1911, 2nd and 5th hen, 4th pullet, 2nd pullet-bred cockerel.

had that bearing of quality that only great birds can attain.

In going over the youngsters here we were struck by their uniform and even quality. The birds were all housed for our inspection and in going from pen to pen it was the one same story of merit in all alike. This line of females has several particular qualities to recommend it and size is not the least of these. The birds are of good bone, fine long backs and carried well up, showing strength and vigor; this with color of the proper and popular shade and straight across, narrow barring makes this line what it is—one of the very best we know of.

In pullet-bred cockerels Mr. Myers has upwards of 300 and a grand collection they are; bred from his best females and matings they carry with them a breeding worth that must not be underestimated. They have the line breeding back of them, the quality that has won for years and is bound to win in the future. We handled many of these and

## Rose's Orpingtons

**BUFF Canadian Bred BLACK**

### The Leading Winning Strain

Will be exhibited only at two shows this winter once in the west and once in the east viz:—The Great Chicago Coliseum Show, Dec. 12-17, 1913, and at Madison Square Garden, New York, Dec. 26-31, 1913. We invite all lovers of Buffs and Blacks to inspect these wonderful Displays. Mr. Conway, will be in charge of our exhibit at these two shows, who will be pleased to meet you and conduct you over these classes. We have hundreds of Orpingtons to select from and can supply birds capable of winning any show. Our consistent winnings for years at Madison Square Garden, Boston, Baltimore, Toronto, New York State Fair, Allentown, and Hagerstown have stamped our Orpingtons as **Champions of America**. Mention Am. Poultry Journal.

**HUGH A. ROSE**

**Frank F. Conway, Mgr. Fonthill, Ontario, Can.**

19 miles from Buffalo, N. Y. Stock shipped on approval. Duty paid to U. S.

Hess Stock Tonic for all your stock, and if it does not do as he claims, he has authorized his dealer to return your money. No man, in our judgment, could offer more.

Dr. Hess is a fully qualified veterinary scientist as well as a doctor of human medicine and it is perfectly natural to assume that he knows the needs of farm stock and is fully capable of compounding tonics and correctives to meet those needs. In view of his liberal money-back guarantee, we urge our readers to put Dr. Hess Stock Tonic to the test.

### Thoroughbred Fowls Free.

Elsewhere in this issue you will find an offer made by the Poultry Post, Goshen, Ind., of giving thoroughbred fowls in any number securing subscriptions for their publication. They have one of the best 25 cent poultry journals published and securing subscriptions for them is easy work. Write them today for sample copy and full particulars. Address them Poultry Post, Dept. 30, Goshen, Ind.

### A Successful Plant.

The Co-operative Breeding and Hatching Company, Tiro, Ohio, has grown up with its business and is a plant where brains is the motive power. It is generally known now that hatching chicks on a large scale dates back to 1,500 years before Christ, but the methods are somewhat improved in our country, but the Egyptians are still heating under ground rooms with no ventilation. Hatching chicks on a large scale is not only a fine art in itself but can only be successfully accomplished by operators with a natural talent for the work and this talent must be cultivated and perfected by long experience.

Having personally met the members of the Co-Operative Breeding and Hatching Company, the owners and employees of the company, we can truthfully say that they are men of the caliber described above. The machines and eggs are handled by men with a thorough knowledge and love for the art and understand about humidity, temperature, carbon dioxide and ventilation. One of the secrets of this firm's phenomenal success lies in the fact of its designing and building their own buildings and equipments. Efficiency is the watch-word from the office to the shipping room; system is the predominating feature in each and every department—not a nail is driven without a definite purpose. As before stated this firm grew up with its business, starting with a few thousand eggs and increasing each season until now they incubate over a half million eggs a year. There are 66,000 eggs constantly under incubation in season. Ten thousand chicks boxed and shipped at one time is certainly an unusual sight, and yet this is often done during the busy season. The magnitude of this plant

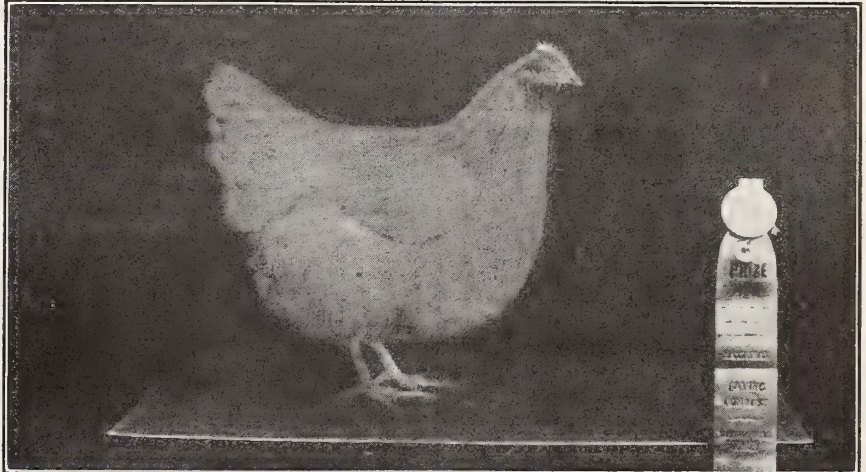

can be better understood if we can conceive a row of incubators 800 feet in length, each machine holding 240 eggs, or more strictly speaking the machines are connected on the mammoth plan and divided into compartments, each with a capacity of 240 eggs; heated with hot water pipes; 6,435 feet of pipe is required to do the heating. Natural gas is employed to heat the boilers. An automatic regulator keeps the temperature at a normal degree all the time without a variation. The hatching rooms are all above ground with no open doors or windows to cause drafts, but are ventilated perfectly by their system of ventilation which consists of numerous flues built in the walls, which are built of hollow brick, thus preventing sudden changes of

its experimental stage and all classes are buying in preference to hatching them, and they buy because it means a saving of time, labor and money.

This is the only large hatchery that exhibits any birds, and birds from this plant win annually at Chicago, Cleveland, Mansfield and many other shows. Write for their illustrated catalog, and know when and how many and where to buy your Baby Chicks.—H. H. Coburn.

### S. C. White Leghorns.

Eugene C. Smith, of Aurora, Ill., is, in our opinion, one of the most enthusiastic breeders of Single Comb White Leghorns

LADY SEWARD.

First prize Single Comb Buff Orpington hen at the National Egg Laying Contest, Mountain Grove, Mo. Record 223 eggs in one year. Owned by Richard M. Seward, Cuba, Ill.

temperature within. When the chick first puts its beak through the shell it begins to breathe pure, sweet, wholesome air and not a large per cent of carbon dioxide gas. This is the secret of better hatched chicks; chicks that live and thrive until many grace the show room. It takes 6,000 hens to supply the eggs for the machines. Considerable time and money was expended to establish pure bred stock which was put out among farmers and are on grass range so the eggs are properly fertilized. Vitality of breeders means strong, vigorous chicks.

The buying of day-old chicks has passed

in the United States. We recently had the pleasure of visiting this plant, which is strictly modern in all the word implies. Some new improvements just completed are a new cockerel house of three compartments. This house is built on the open-front plan, with runways leading to yards on both sides, with a wire partition running the entire length of the house. At breeding time, by simply closing a door in the partition in each compartment, he has a house for breeding pens on the one side, and a brooder house on the other. A new conditioning house just finished and fitted with empire coops adds much to the appear-

# 7 Cent Eggs

WINTER EGGS and cleanliness are very closely related, in fact more so than most Producers imagine.

A great many Poultry and Egg Producers spend hundreds of dollars on so-called egg-producing foods; and, at the same time, shamefully neglect the interiors of their Poultry Buildings. This is neglect on the part of some and thoughtlessness on the part of others.

IN ORDER TO GET the most work out of Employees, Employers find it necessary to make the working conditions as attractive as possible. Buildings must be kept clean and sanitary. Walls and ceilings must be white coated so as to improve the light, and artificial lights must be placed in advantageous positions so as to throw the most light on the work-bench.

MANY CONCERNS have spent thousands of dollars to improve the light and sanitary conditions of their work shops.

ECONOMY EXPERTS consider this money wisely spent and true economy. When the interiors are lighted, it makes a longer day for the Employees' usefulness, it makes a more cheerful day and it makes conditions more advantageous to the productive abilities of the Workman.

IN ORDER TO GET THE MOST OUT OF A MAN, IT IS NECESSARY TO MAKE HIS SURROUNDINGS AS PLEASANT AS POSSIBLE.

THIS SAME THING APPLIES TO POULTRY and is more especially true in the Winter Months when the days are short and the nights are long. The interiors of Poultry Buildings should be sanitary. They should be white. They should smell sweet. They should be free from vermin.

WHITEWASH WILL NOT DO THE WORK, neither will Oil Paint. White-wash peels and will not kill vermin, while Oil Paint has no good essential except durability.

PEERLESS POULTRY PROTECTOR, the snow-white disinfectant coating, does kill vermin. It does produce a sanitary interior and a weather-proof coated exterior. It is a permanent coating and the cost is so small that the smallest Producer can well afford to use it.

THIS SNOW-WHITE DISINFECTANT is put up in dry powder form; and, when mixed with water, makes a liquid coating which can be applied to all kinds of surfaces with brush or spraying machine. It is especially manufactured for use in Poultry Buildings.

IT TAKES ABOUT 5 POUNDS OF THIS MATERIAL to make a gallon of liquid and, a pound properly mixed, will cover from 20 square feet on real rough surfaces to 35 square feet on smooth surfaces two coats.

THE SMALLEST PACKAGE is the 25-pound box which sells for \$3.00 but it is also put up in 100-pound Kegs, 200 and 350-pound Barrels. The price in the larger sized packages figure much lower in proportion.

FIGURE THE COST FOR YOURSELF and then you will recall that there is nothing on the market today for double the cost that will do the work which can be accomplished by using the snow-white disinfectant coating.

REMEMBER THAT YOU GET A SNOW-WHITE INTERIOR for only a fraction of a cent per square foot and you can use the same material for outside work provided you use two coats. It makes a weatherproof job which will last two years on the average surface.

WE GUARANTEE SATISFACTION IF PEERLESS POULTRY PROTECTOR IS USED ACCORDING TO OUR PRINTED DIRECTIONS.

THIS IS OUR BUSY SEASON; AND, IN ORDER TO INSURE PROMPT SHIPMENT, YOU SHOULD SEND MONEY ORDER AND SHIPPING INSTRUCTIONS AT ONCE.

**Peerless Poultry Promoter**  
Port Richmond, New York

ance as well as convenience of the place.

Mr. Smith has been breeding Single Comb White Leghorns for a number of years, his foundation stock being selected from the blood of the foremost breeders of that time. By careful selection and scientific mating blood lines have been established that produce a very large percentage of birds of exceptionally high quality, showing excellent head points, and the graceful curves so attractive in Leghorns; with low, well spread tails and snowy white plumage. While in Mr. Smith's yards we handled many specimens that show rare quality, birds fit to win in any competition. One cockerel we remember very distinctly as being the best seen for many moons, this cockerel has extra good five-point comb, bright red eyes, splendid breast, fine, graceful body, beautiful sweep from center of back to tail, and a tail better than standard. The demand for the product of this plant is greater than the supply, receipts for the past year having been fifty per cent greater than any previous year. If you are looking for Single Comb White Leghorns, with quality and blood lines second to none, we take pleasure in recommending to you Eugene C. Smith, 317 Galena Blvd., Aurora, Ill., and his famous prize winning strain.—J. C. Johnston.

R. J. Walden, Middleburg, Md.

There is always something to see at Mr. Walden's place worth writing about and of special interest, for he has bred his pullet line of Barred Rocks up to the highest standard for exhibition and has also retained in them the best of laying qualities, as the records his birds have made for two years at the Storrs laying contest show. In this contest his two pens have been up with the leaders at all times and for several months beat all and won many monthly silver medals for their record. We regret that we haven't his complete records to publish at this time, but they can be had by writing Mr. Walden.

We are a little better acquainted with his exhibition record made at New York, Baltimore, Hagerstown, Williamsport, Pittsburg, etc. These shows for years have featured Barred Rock classes and at each large classes and large breeders have shown for years, making competition of the best and honors won of exceptional value.

At the late Hagerstown show Mr. Walden won 1st and 5th pullet, 4th hen, 2nd young pen, 1st cockerel-bred pullet; special for best female and color, special female. The class of pullets was the largest and best we have ever seen at a fall show, and it took championship quality to win. She was in perfect condition and with all desired quality of a rare and great specimen.

Mr. Walden has a large flock of youngsters this season and a particularly fine lot of pullet-bred cockerels bred from his best to supply to those who may want them. These birds are bred right and have exceptional breeding quality. Write him your wants and always mention the A. P. J.—H. P. Schwab.

Sheffield Farm, Glendale, Ohio.

Progress is the watchword with the Sheffield Farm, breeders of Premier Partridge Wyandottes. Annually Sheffield Farm demonstrates the superiority of the Premier Partridge Wyandottes at our greatest and best fairs and poultry shows. Never satisfied to rest with past laurels, like the traditional war horse who becomes impatient at the smell of powder and smoke, we find the Premiers with their war paint on and ready for the conflict—taking the measure of other strains at our earliest fairs and shows of any marked degree of importance. The records of the Premier stand without parallel and unapproached by any other strain. Much credit for this is due the manager, Mr. Hark, conceded by all the acknowledged authority on mating, rearing and exhibiting Partridge Wyandottes. When we had the pleasure of visiting Sheffield Farm in October we found the quality better than ever before; the color dazzlingly beautiful, penciling the finest we ever saw on any penciled breed; wings strong, tails well spread and type par excellence. The cockerels double discount any we ever saw before, the hackles laced so perfectly, and shapes so sound we pronounced them miraculous; sickles sound green black and wings unequalled. Breasts glossy green black with not a suggestion of ticking; head points as a whole a decided improvement. Fancy points are not the only attribute to the Premiers—they are very toothsome, like all Wyandottes, and the pullets begin laying at a phenomenally early age and keep it up through the severest weather. Mr. Hark keeps a large number already conditioned for the show room, and can always furnish winners. The scheme of giving prizes to their egg customers who win with their birds has

proved very satisfactory. If we attempted to go into detail about the Premier winnings it would take too much space—their beautiful catalog gives it and the October and November issues of American Poultry Journal give the recent winnings. This firm also specializes in Jersey cattle and Berkshire hogs. Write for catalog and keep in touch with the ads in American Poultry Journal.  
H. H. Coburn.

**Mr. S. M. Goucher.**

Early in August we spent part of a day visiting Mr. and Mrs. S. M. Goucher, Moorestown, N. J., and seeing their fine plant and very fine and large flock of our old favorite Barred Plymouth Rocks. Year by year this plant has been enlarged and during this time their line of birds also enlarged and improved until today they have a general quality of rare merit and worth firmly established that bids well for the future.

Many years ago we first saw this line at the Philadelphia show, where it won several awards and from that day on have known it as a line of quality whose record has ever been one of value wherever seen. Yearly it has won at Philadelphia, Camden, Williamsport and other prominent shows and the complete story of their winnings would fill pages.

At the late Atlantic City show they exhibited two pens of rare quality, selling one of them at a record price. These pens were a feature of the display there.

They have also entered pens of their birds at the Storrs laying contest and a hen of theirs made the best individual record made by any female there during the past two years. If memory serves us right her official record was 210 eggs in 245 days. This means value and proves that the only chicken worth keeping is the best standard bred kind.

Here was seen a large flock of youngsters of a quality fit to win, a very promising lot that sure will have to be considered later. They breed both matings and have quality birds of each to sell.—H. P. Schwab.

## Loyd's Partridge Rocks.

The firm heretofore known as Loyd & Son, Partridge Rock specialists, Greensburg, Ind., is now under the management of Frank L. Loyd. C. J. Loyd having turned the business over to him; the strain, however, remains the same, improving from year to year. Mr. Loyd has about 500 yearling birds, after culling closely and severely, and these are without question the finest ever raised. Both cockerels and pullets showing marked improvement in shape and color. The cockerels are rich in color, with finely laced shackles, sound green black breasts and sickles, head points good, large bone and healthy, husky fellows. The pullets are the finest in penciling we have seen anywhere. Mr. Loyd has plenty of room to grow them on range right in Greensburg, but he raises most of them on the farm. It makes it more convenient to keep breeding pens on the home plant; he also conditions them there for the show room. This strain of Partridge Rocks have been steady winners at the large shows, including Chicago, Cleveland, Cincinnati, Indiana, etc. At the Tennessee State Fair, Nashville, Tenn., in competition with five other exhibitors, they won 1st cockerel, 1-2 hen, 1-2 pullet, 1-2 pen; seventeen birds entered and every bird winning a ribbon. Write for prices and be assured you will get the quality and the right treatment. Address Frank Lloyd, Greensburg, Indiana.

H. H. Coburn.

## The Joe-Pye Buff Orpingtons.

Should we live on forever we would always remember with particular pride and interest the wonderful Buff Orpington cock who as a cockerel won fourth prize at America's greatest show, M. S. Garden, New York, and then came back two years in succession and won first cock and several shape and color specials. But his winning records were not confined to New York alone to show him was to win and at Boston and elsewhere he repeated and won all he could compete for.

This is not the only great bird owned by these farms; they have produced others of nearly equal merit and have been winning for some years. At the last Palace New York show they made a new record, and they are not finished yet. We have often seen this line and find their feature to be a combination of exquisite form combined with sound color to a high degree.

The past season has no doubt been their best of all years, for they have a very large flock of handsome youngsters coming fast and ready for the early and late shows alike. At this time (November 5th) they have cockerels and pullets weighing about Standard weight, of big bone, well set legs, nice heads and extra choice color. Head points, that is, combs, eyes, etc., are of rare quality, and when Mr. Hobbs, the manager, told us that they were by far the best lot of birds ever bred on this farm, we were willing to agree with him, for they certainly do show quality in every department.

A great many of these youngsters line directly back to the above mentioned "cham-

JOSEPH STENZ & SON

FOND DU LAC, WISCONSIN

## BARRED PLYMOUTH ROCKS

CHAMPIONS OF THE WEST

At the Illinois State Fair, October, 1913, I won more first and second premiums on single entries than all competitors combined, winning 1st, 3rd, 4th and 5th cockerel, 1st and 4th pullet, 2nd cock and 2nd and 3rd hen. Exhibition and utility stock for sale at right prices.

J. J. KLEIN, MACON, ILLINOIS

## Walker's Barred Rocks

Prove their superiority by winning at the Illinois State Fair, October, 1913, 1st cock, 1st and 2nd pens, 2nd cockerel, 2nd and 3rd pullets. Only showed 16 birds and 14 were in the winning class. At Chicago, December, 1912, won 2nd exhibition pen, 4th exhibition pullet, 2nd and 5th pullet bred cockerels. At Illinois State Shows my birds have all won their share of the ribbons and the State barred rock cup for 1912 and 1913.

I can sell you winners for any show and breeding birds second to none. Tell me what you want and I will quote you prices. 300 birds to select from, the best I ever raised. Reasonable prices and satisfaction guaranteed.

G. A. WALKER

POLO, ILLINOIS

## Mary Elizabeth Poultry Farm White Orpingtons Exclusively

Bred right and priced right. We won 1st pullet and 2nd pen at the Great Illinois State Fair, 1913. We can supply show birds or breeders at prices that are right. Please mention the American Poultry Journal.

G. H. WOOLINGTON, Prop. R. R. No. 5, MONTICELLO, ILL.

## The Rockandotte Farm

were very successful in moving their stock of White Rocks and White Wyandottes to their new location and are now in a position to furnish choice Show, or breeding birds in both breeds. Our records at the very leading shows are proof that

### OUR QUALITY IS THE BEST

## Wheeler's S. C. White Leghorns

America's Quality Strain—Leading Winners at  
Baltimore, Pittsburgh, Boston, Buffalo, etc.

Our stock this season is larger and better than ever (ask Judge Schwab). We have a good lot of hens and cocks, 1 and 2 years old and a few good breeding cockerels. Will sell the hens from \$2.50 to \$5.00 each and males at \$5.00 to \$15.00 each. Ideal head points with proper carriage and positive white plumage, are characteristics of this line. Absolute satisfaction assured in price and birds.

### The Character of this Line is Breeding Quality

The "Wheeler Strain" has been carefully line-bred for fifteen years, breeding true to type and highest standard quality, being dependable breeders and the best of layers. Mated Trios and Pens a specialty. Write us your wants. Catalogue giving prices and particulars now on press, write for a copy and become acquainted.

If you wish to win or to breed winners, write me.

G. L. WHEELER & SON, Box A. Penn Yan, N. Y.

pion." they have his characteristics and are bound to improve, for such quality is bound to tell and should be well considered by those wishing to improve and breed fine stock.

In old birds they have a large flock also, and many of these are now offered for sale, which includes a limited number of yearling cock birds. They can supply selected breeders and choice exhibition birds for all classes.

For special information address The Joe-Pye Orpington Farm, South Norwalk, Conn. H. P. Schwab.

### Owen's Silver Laced Wyandottes.

R. D. Owen, Creston, Ohio, has been some years perfecting his strain of Silver Laced Wyandottes and this year has succeeded in producing the finest bunch of pullets we have seen, having that open lacing so much desired in all sections. The sire of these grand pullets was a hen-laced male that has proven himself invaluable as a sire. Mr. Owen breeds all his own winners in both male and females and the males are grand in breast and hackle and both sexes have those very desirable well spread tails. He has birds that can win in any show room from Madison Square to the Pacific Coast. He is extremely reasonable in his prices. When writing him state just what you want and for what show room. He won first cockerel at Cleveland last winter and will show in Chicago this year. —H. H. Coburn.

### Dark Cornish.

The position held by the Dark Cornish fowl in this country today is, we believe, directly due to Mr. John W. Ward, Jr., Pennington, N. J. He is their real champion, for he believes in them and has been working in a broad-minded way for their success, and when we consider the very large and beautiful classes of this variety seen at New York, Boston, Philadelphia, Baltimore, Hagerstown, Chicago, Allentown, Williamsport, Pittsburgh and dozens of others the past two and three years, we can well see that Mr. Ward's work is proving successful. In several of the classes mentioned the entry totaled over 100 birds, birds of highest merit and bred for practical quality as well.

The Dark Cornish are an old-time favorite and have always had friends, but today, with a club membership of nearly 400, they are coming fast to their own as the standard meat fowl, for in this Mr. Ward claims lies their greatest worth. As broilers and roasters they have no superiors; they grow and mature quickly and are at all times plump and of fine grain flesh, being grown to two-pound weight in from eight to ten weeks.

Our visit to Mr. Ward's home and yards was a real holiday for us; his town being near Trenton, with electric car service. Here we saw at home his many famous winners, all his breeders and all of his great flock of youngsters, and before we left we had the Dark Cornish fever up to 111°.

To mention some of his birds, here was seen his first Hagerstown cockerel, 1913, that won the champion special for best cockerel in the whole show, a beauty of rare form, tight feathered and magnificent color and markings. Also his winning cock birds, pullets, hens, etc., for be it known that Mr. Ward has been doing the clean-up act pretty regular the past three or four years. Here also was seen the dam of his Allentown Futurity winner, a noble specimen.

Of 19 pullets shown at Allentown 7 were imported birds. His two best cock birds, named "Uncle Sam" and "John Bull," are a great pair, as broad as they are long, with legs about 8 inches apart and of extra carriage; both these birds are great winners and are full brothers. "Uncle Sam" won first at Hagerstown, 1913, and second at the London Crystal Palace show. He weighs 11 pounds in condition.

In the pen with the first Allentown cockerel was seen five selected females, in size, station, color and markings they were of the one best grade. The cockerel weighed 8½ pounds at 6 months old.

We most forgot to mention "John Bull's" record, which is first at club show, Chicago, first Hagerstown, 1912, first Allentown, 1913, etc.

This whole line is teeming with quality. The young show their breeding and rare quality to advantage. If any one still imagines that Dark Cornish can't be bred to perfection in this country they best think again and then pay a visit to this flock. We believe them at their best here. They are good layers, rapid growers, strong and vigorous, all of which combine to make a profitable variety.

Mr Ward spent three weeks in England last August and brought back several of

the best birds he could buy for new blood. He has made this variety a study and we owe it to him to say that he has done well, for at his place we saw the grandest line and flock of Dark Cornish ever seen. His young promise to surpass in quality his breeders, and with such a line, and such prospects, we surely want to give credit.

H. P. Schwab.

**Simplicity Kan't Klog Poultry Feeder** is the most appropriate trade name which could be selected for this well-known feeder. The fact that it Kan't Klog places it at the head of the class of poultry feeders. The price being as low as the cheapest feeder on the market and considerably lower than other feeders of reputation should be an important item not to be overlooked by the prospective purchaser of feeders. The mechanical part of the Simplicity Kan't Klog Poultry Feeder is absolutely indestructible; that is why they have been called the Simplicity Kan't Klog Poultry Feeders. Purchasing an article is an easy matter, but the upkeep should be taken into con-

sideration. It is far better to purchase a little more expensive article, which does not need repairing, than a cheap article which is out of order half the time. When you can get an article that will absolutely not get out of order, and which is as cheap as any similar feeder on the market you have what is generally termed a bargain. Simplicity Kan't Klog Poultry Feeders demand no attention whatever; they can be relied upon to work at all times, and can be had at prices ranging from \$1.25 to \$3.50 according to size. Smallest size is Baby Chick size, sells at \$1.25; 10-qt. size, for grown-up fowls, sells at \$2.50, and the 20-qt. size for \$3.50. There are many superior points to this feeder but space does not permit us to go into details. Look for the advertisement in this issue. It will give you more information, or write for catalog. Simplex Supply House, Pontiac Bldg., Chicago, Ill.

#### Dune-Alpin Farm, East Hampton, N. Y.

Extraordinary was the exhibit of the Dune-Alpin S. C. White Leghorns at the late Hagerstown Fair and with their great record made special comment seems to be their due at this time. In a large class of unusual quality they made a sweeping win of five first prizes and many others, as follows: Cocks 1st, 2nd, 3rd, hens 1st, 2nd, 3rd, cockerels 1st, 2nd, 3rd, pullets 1st, 2nd, 3rd, old pen 1st, young pen 2nd, 3rd, special for best cock in the show and sweepstake special for best bird in the entire exhibit.

These winnings like those made by this line at Boston, the Palace, N. Y., show and others, tell just what Dune-Alpin Leghorns and quality are; that they are a line of superior merit cannot be doubted, for they have made just such records year after year and at our best shows and in the hottest of competition.

The winning cock at Hagerstown was in size, condition, style and carriage a prime favorite for the best bird in the show special and received every vote of the seven judges present. There was no question as to his quality and we have never before seen a cock in such superb condition at this time of the year. A great bird and a great winner was the general verdict of all who saw him.

First cockerel, a corking fine one, with wonderful head and the best of quality in every section; 2nd and 3rd also ran quality, either would make a fine winner if the first had been absent.

All their winning females were in a class by themselves and formed a beauty collection. Mr. Geo. J. Kerr, the manager, reports having a large and fine flock of birds and can fill any orders entrusted to him. In writing mention A. P. J.—H. P. Schwab.

The Parkway Farms, Mr. Barton T. Fell, proprietor, Trenton, N. J., R. F. D., offers for sale their entire line of S. Penciled Rocks. This is one of the large and leading lines of this variety and winner at Hagerstown, Allentown, Atlanta, Ga., Trenton, etc.

In this sale birds are offered at special prices and it will be well for those interested to write Mr. Fell for prices and particulars. He will please you.—H. P. Schwab.

The Duplex Colony Brooding System solves the brooding problem. By this system of raising chicks it is not necessary to have hovers for them to run into in order to keep warm, which means that the chicks will always have pure life-giving air to breathe and that means that white diarrhoea positively cannot get a foothold among them. Your losses from this disease will be cut to absolute zero. You can raise chicks in February and March as successfully as you can in May or June. With the Duplex Colony Brooding System the chicks are always in sight. The large room they are in gives them plenty of space for exercise which keeps their muscles hard and their appetites good. This means that the chicks will grow much faster and mature earlier. It positively is no more work to care for 1,000 chicks under the Duplex Colony Brooding System than to care for 100 in any other way. The difference being that you put a quantity of feed and water in one pen under the Duplex Colony Brooding System while with any other system you must put a small quantity in each of fifteen or twenty compartments. You have one stove to attend to which requires practically no attention instead of fifteen or twenty lamps. You have one room to clean out instead of fifteen or twenty, and so on all along the line. Duplex Colony Brooding Devices are made in sizes to accommodate even the smallest breeders. The Duplex Colony Brooding System positively saves nine-tenths the labor, three-quarters of the expense and will bring to maturity from twenty to sixty percent more and better chicks. This wonderful new system of brooding is fully explained in a booklet entitled, "Colony Brooding" issued by the Duplex Colony Brooder Co., 476 N. Avon St., Rockford, Illinois. They will send it to you free if you mention this paper. We consider this system worth looking into and suggest that our readers write for it.

Accurate statements and no misrepresentations of any nature are necessary to an advertisement before we will accept it for our columns. So we therefore feel free to earnestly advise our readers, when interested in any of the articles advertised in our paper, to write direct to the manufacturers for catalogs and full particulars, even though the goods are sold through the local dealer. The manufacturer of a product can naturally answer your questions

much better than his local dealer, and if you do not know the name of the dealer handling the particular article, the manufacturer is, of course, only too glad to direct you to him. It pays best in the long run to thoroughly investigate a product before you buy it, and you should get the catalogs issued by the various manufacturers making the product in which you are interested. A brand new catalog of "Pittsburgh Perfect" Fencing, issued by the Pittsburgh Steel Company, Pittsburgh, Pa., has just come to our desk, and we note it contains much valuable information to all fence users, including some simple wire tests by which you can conclusively prove to yourself the value of any wire before you buy it. The company will send a free copy to anyone writing for it, if they mention this paper.

We hear from Wm. Cook & Son, originator of all the Orpingtons, Scotch Plains, N. J., that they won at Troy, Alabama, five firsts in White Orpingtons, five firsts in Buff Orpingtons and four firsts in Black Orpingtons and first Blue Orpington pen: cups for best bird in the show (which prize has been won by them at every show exhibited at this season), best pen and best display. Competition was good, in two classes alone being 65 entries, 41 White Orpington pullets and 77 Buff Orpington cockerels. Mr. P. A. Cook reports excellent sales from this show and an increasing demand for good Orpingtons, which he is well able to supply as he has the finest and largest selection of Orpingtons he has ever owned. Mr. Cook mentions that more first prizes than ever are being won by his customers this season. Write for catalog and mention American Poultry Journal.

We would again call your attention to the merits of the Old Honesty Heater. We have examined this heater and seen it work and we think it is all that it is claimed to be. It is not meant to heat a building like a dwelling, but to keep the sand warm and dry. It keeps the fowls busy and instead of humping up on roost they are down into the warm sand scratching and singing, and in consequence the egg yield is greatly increased. The real expense is in installing this heater; the fuel costs almost nothing, as it burns any old thing and it never wears out. A postal card addressed to the Old Honesty Heater, New Washington, Ohio, will bring you circulars.—H. H. Coburn.

The great big "Year Book" given away free---see back inside cover now

## Ward's Champion Dark Cornish

Ward repeats at Allentown and Hagerstown. 9 firsts out of 11; 8 seconds out of 9, including all 1st and 2d prizes on males, against nearly 150 birds, the foremost breeders in America competing. In conclusion, blood will tell. Write Ward.

JOHN W. WARD, JR. BOX 7 PENNINGTON, N. J.

## ANOTHER GOVERNMENT CERTIFICATE

will be issued to show that our entry of

### S. C. BUFF ORPINGTONS

are again leaders of their class at the International Egg-Laying contest at Storrs. Improve your flock with cockerels hatched from certified layers. Best authorities say you must use males bred from high producing hens to get an increase in the egg yield. Hatch them yourself and breed them—we furnish the pedigree.

Cherry Lane Farm Company : Box 148, Oak Hill, West Virginia

THE WORLD'S BEST S. C. BLACK MINORCAS AND CANADA'S BEST S. C. REDS

## CLOSING-OUT SALE

of the best flock of Single Comb Black Minorcas on the continent. I exhibited at two shows this season, the National Exhibition at Toronto, and the London show. I won at Toronto, single comb cock, 1st and 5th; cockerel, 1st, 2nd and 3rd; pullet, 1st and 2nd; 100 Single Comb Black Minorcas in class. I won at London (70 in class), single comb cock, 1st and 3rd; hen, 4th and 5th; cockerel, 1st, 2nd and 5th; pullet, 1st, 2nd and 4th; pen, 1st. At the A. B. M. Club show, in 1910-1911 and 1911-1912, I won the Directors' \$50 cup for best collection. I have the best flock of cockerels and pullets I ever owned, and they are going at about half the usual price. Please send for sale list and testimonials; I please my customers.

T. A. Faulds :- London, Ontario, Canada

## YAMA FARMS

S. C. BLACK MINORCAS  
BARRED PLYMOUTH ROCKS

### The Pacemakers of America

An unmatched record at  
America's Greatest Shows  
meeting America's Great-  
est Competition.

### Special December Offerings

Several hundred fine S. C. Black Minorca cockerels at \$5.00 each. Some excellent breeders that would give a good account of themselves at the smaller winter shows at \$10 to \$15 each. We are extra well prepared with very high class exhibition cockerels and pullets. In fact we have the most uniform lot that we have seen together—birds that should satisfy the most exacting.

In Barred Rocks we have a grand lot of large, husky, well-developed, pullet bred cockerels, now standard weigh and over, that we will sell reasonably in the next 30 days. They are all well bred from our famous pullet line and cannot be excelled. Ten of these at \$10. Ten more at \$15 and ten extra choice at \$25.

### Win the Blue Ribbon

If you want to win at your coming show, write us. We can sell you birds to meet any competition at reasonable prices, quality considered. We can fit you out for the show room in cocks, hens, cockerels, pullets and pens. Catalogue free.

### The Popular Weekly for Progressive Poultrymen.

We call your attention to the advertisement of The Country Gentleman in this issue. This popular weekly paper has, through its progressive policy and practically unlimited financial resources, created a new kind of farm and poultry literature that is practical.

While The Country Gentleman is the oldest agricultural journal in the world, it is not yet three years of age in its present form. Good evidence of the wisdom of the plan to furnish the modern business poultryman, farmer and fruit-grower with practical helpful information and reading matter, is shown in the wonderful jumps made in the circulation of this attractive weekly during the past two years.

Everyone who reads one issue of The Country Gentleman becomes from then on its friend. It is especially valuable to the poultryman. The best talent in the world—men and women who are authorities as well as plain, everyday poultry raisers—are glad to contribute their experience to readers of this great paper. Such well known writers on poultry subjects as Michael K. Boyer, T. C. McGrew, Dan T. Lambert, W. H. Card, W. C. Hunter, David Buffum, R. P. Ellis—and many others are frequent contributors of interesting articles from which poultrymen gain much valuable "Don'ts and Dos," and many ideas which they may adapt to advantage on their own poultry farms.

The Country Gentleman tells how to market poultry and eggs most profitably—how both the big and the small business poultryman may pack and ship economically and more satisfactorily—how to advertise and create new and better outlets for poultry products. It describes many new ways and better methods of poultry farming, fruit growing and gardening. Each issue is so full of valuable matter that you'll save it for future reference. There's no theory in this new type of paper—everything is taken right from real experiences in poultry raising and farm life. It describes failures as well as successful ventures and shows the why of the failure.

You receive 52 big, valuable numbers of The Country Gentleman for only \$1.50, less than 3 cents a copy for a year's subscription. Or it may be purchased from any news dealer or "Curtis" boy for 5c a copy. We advise you to send a year's subscription to the Curtis Publishing Company, Philadelphia, Pa., and receive this live publication regularly at your home. We, ourselves, look forward to each week's visit of The Country Gentleman with much anticipation of the pleasure and profit we are going to obtain from reading it.

### A Good Report—Read It.

In order to do justice to a high class article, and for the benefit of our readers we feel that we should publish the following copy of letter, the firm mentioned below has sent us as being received by one of their customers:

St. C., Minn., Nov. 10, 1913.

Des Moines Incubator Co.,  
Des Moines, Ia.

Gentlemen: As soon as I had received your nicely illustrated and well written circular on your Sectional Grain Sprouter I placed an order with you for the No. 3 Sprouter. I received the Sprouter promptly and was well impressed with its almost all steel construction and especially with the galvanized steel trays. I thought, if it would work as good as it looked I should have no reason to complain. Well, I soaked my oats, filled the trays and before I expected it the grain was in full sprouting. That was three weeks ago and I have kept it going ever since. When the sprouts were about 4 inches long I began to feed them to my flock and during the two weeks I have done this I can already notice quite an increase in the daily egg yield. The fowls seem to feel as if new life has been put into them. I sure can recommend the Successful Sprouter as a handy green food provider and a great help in getting more eggs from the fowls when the prices are broke out good.

Wishing you abundant success in your new line, I am,

Yours truly,

FRANK MILLER.

We hope that our interested readers will follow suit to Mr. Miller and investigate this new grain sprouter by writing to the Des Moines Incubator Co., 561 Third Street, Des Moines, Ia., for their descriptive matter.

Captain Max de Bathe, Hartley Court, England, the originator of the Blue Orpingtons, has just been elected vice-president of the English Poultry Club. This breeder

and exhibitor is well known to the American public, having in 1911 and 1912 personally attended the Madison Square Garden Show, New York, with a fine display of exhibits, all bred by himself. Last year at the Garden he judged and is the only Englishman ever sent for to adjudicate at this great show. Captain De Bathe has the distinction of being one of the few Orpington exhibitors in England who breeds his winners and when it is stated that at the Crystal Palace Show, London, 1912, he won no less than seven firsts, three challenge cups, two seconds, three thirds, two reserves, two fourths, the greatest of all English shows, this must convey the extraordinary quality of the birds he breeds. He arrives in New York City December 24th and his address will be Seville Hotel, 29th street and Madison avenue., and he will be pleased to meet any customers there.

The Magic Egg Tester that has been advertised in these columns for the past several years has proved a very satisfactory article for those who have used it, as is evidenced by the fact that the Magic Egg Tester Works of Buffalo, N. Y., have furnished us with a number of unsolicited testimonial letters from jobbers who have been handling the tester for them. The Cugley & Mullen Co., of Philadelphia says:

"Since the introduction of the Magic Egg Tester to the poultry people several seasons ago, we have found a great demand for them. We have sold during this time, many dozens, and it affords me great pleasure to say, that not one of these customers have entered a complaint against the merits of this tester. In my judgment this speaks volumes for the practicability of the tester, and the wonderful work it accomplishes."

Send for circular to Magic Egg Tester Works, Dept. B., Buffalo, N. Y.

### A Day With H. Cecil Sheppard.

Along the latter part of October the writer made his first visit to the world's renowned model Ancona Farm of H. Cecil Sheppard, Berea, Ohio. Having heard so much about it it was only natural that I had a great curiosity to visit it and talk it over with Mr. Sheppard. The whole outlay surpassed my expectations, which were keyed up to no small degree. First, we will endeavor to give the unfamiliar a conception of the man and how he started, like the oak, his plant being like the acorn and now the gigantic oak. He, like many other prominent fanciers, was compelled to give up a business career on account of poor health, and now has a business far exceeding the one he gave up. Mr. Sheppard lived in Cleveland for a number of years and as heretofore mentioned, his health was poor, and with his marked determination he began to fight it out and decided to go to the country. After looking over many locations he decided on Berea as being ideal, as they had ideal schools and all modern conveniences; located as it is on three trunk lines of railroad and electric line, the shipping facilities are excellent. He first leased the property for a period of two years, and being well satisfied with it bought it at the end of the first six months. The enchanting country life, with its fresh air, and as the springtime advanced the fragrance of flowers and the outdoor life was a revelation to him, and so here beginneth the Ancona Farm on a town lot. He had a fine garden plot and started strawberries and raspberries, and in five years the place proved a little paradise. The first season's business in Anconas was \$160, and this increased step by step until it reached \$9,500 the sixth year on a town lot. Mr. Sheppard's book entitled, "\$4,223 in One Year on a Town Lot" will furnish further details. It is some time since Mr. Sheppard outgrew his town lot and is now located two miles outside of Berea on a farm about 10 miles from Cleveland. He recently completed a fine residence with all modern conveniences; in his office is where you find the very essence of system, and which is furnished with all modern equipments. A record is kept of every bird shipped and customers desiring birds of a different strain of same quality as last shipment can be accommodated; the records are kept on file for further reference. The office is on the first floor of the administration building, which is 48 x 68 and four stories high; this building also contains power plant, shipping rooms, conditioning room, 15 laying pens, and "stag quarters," with 66 individual cages for males. The incubator cellar has a capacity of 4,000 chicks a season to supply the tremendous demand for Ancona Baby Chicks. Here is installed a mammoth incubator with a hot water system of hatching strong, healthy chicks, free from vermin. The upper story of this building is used for a laying house and is 14 x 60 feet; another laying house is 322 x 20 feet and contains 37 breeding pens. The brooder house is 118 x 14 feet, with a capacity of 2,600 chicks, or about 10,000 for the season. This is also heated by a hot water system.

It takes thousands of Anconas to supply the demand for Anconas created for the Sheppard strain, and hundreds of fowls have to be mated to furnish the egg and baby chick trade. It would be in keeping to mention here that Mr. Sheppard, in starting with Anconas, imported the best obtainable. The invincible cockerel, King William, won first prize at the World's Greatest Exhibition Dairy Show, London, England. With Mr. Sheppard's practical knowledge and push it was an easy matter to make the Sheppard Anconas the Famous Strain. He has shipped them 8,000 miles to the southern part of Africa and almost every corner of the globe. They have won in every country and state where shown. Mr. Sheppard does an immense business and one day's shipment is a sight. He has scores of costly and handsome cups and many other valuable trophies. They have made a clean sweep at Madison Square Garden and as a rule sweep everything before them. He has hundreds of show birds conditioned and can furnish stock in almost any number. Look up ad and write today.

—H. H. Coburn.

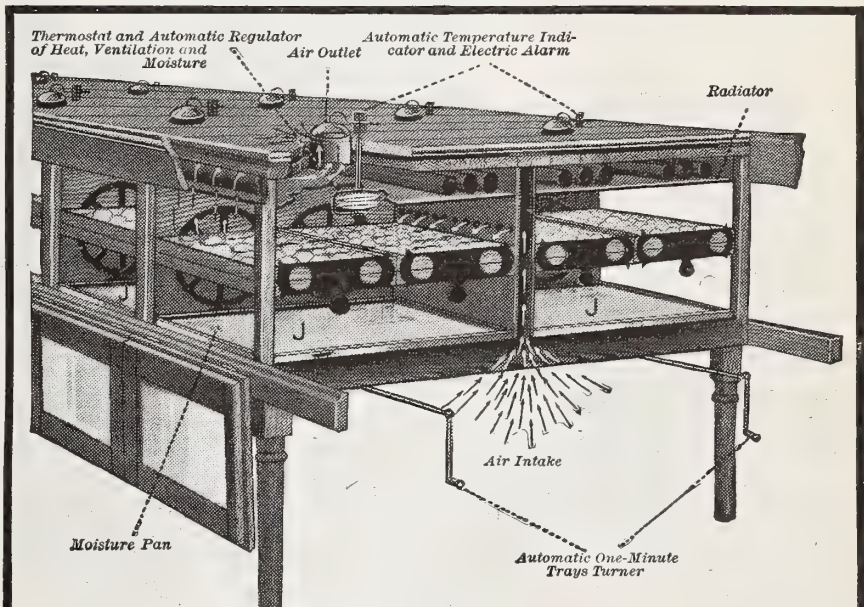

The Green Co. Fair closed the fair season of 1913 in Illinois with one of the largest and best exhibits of poultry seen in the state the past season—1,600 land and water fowls were on exhibition, comprising 125 varieties. The competition was lively and the awards well divided. Barred and White Rocks, Buff Orpingtons, Rhode Island Reds and Single Comb White Leghorns were the leading varieties, and the quality in these classes was good. Mrs. C. H. Husband, of Springfield, Ill., showed a nice exhibit of Buff Orpingtons; her first prize pullet (also

first at Illinois State Fair) being a splendid specimen, showing great length and depth of body with good back and well spread tail, and rich golden buff color throughout. Mr. Chas. Myers was well represented in the Single Comb White Leghorn alley by a good string of birds that showed quality all through; 1st cockerel, although not finished, showed fine type and color. Frank Hays exhibited a nice string of Single Comb Anconas with a good type and nice even color throughout. Space will not permit us to comment at length on all classes, but taking the show as a whole it was far above the average, both in numbers and quality. Much credit is due Mr. Geo. D. Headrick, the superintendent, for the able and business-like way in which he handled the exhibit.—J. C. Johnston.

T. A. Scott, of Bethany, Ill., starts his advertisement of White Orpingtons with

this issue of American Poultry Journal. Mr. Scott has been breeding some remarkably good Orpingtons, as his winnings at some of the leading shows attest. At the Illinois State show, 1913, on eight entries, he won 1st cockerel, 1st pullet and 2d cock. At Decatur, 1913, 1st and 3d cockerel, 3d cock and 1st pen. Winning more first premiums at these shows than any other exhibitor. Mr. Scott informs us that he has 250 head from which to make selection, he guarantees every sale to be satisfactory.—J. C. Johnston.

Charles G. Pape, the well-known S. C. Black Minorca breeder of Fort Wayne, Ind., reports the following winnings at the Michigan State Fair, Detroit: 1-2 cock, 1-2-3 hen, 1-2 cockerel, 1-2-3 pullet and 1st pen. At the Illinois State Fair, with only one entry in each class, 1st cock, 1st hen, 4th cockerel, 1st pullet and 1st pen.

## Regulator at the Heater Regulator at Each Compartment

A Regulator at the heater automatically holds the temperature of the heating system at a fixed degree continually. No changing required.

A Regulator at each compartment automatically holds the temperature in its own particular compartment at the correct degree all the time.

The one acts as a check upon the other and there can never be too high or too low temperature in a Newtown. The safety of your egg investment will always be sure, and your hatches always big and profitable, if you install a

## NEWTOWN GIANT INCUBATOR

1914 Model

There is nothing about the Newtown Automatic Regulator at each compartment to clog and "stick" and refuse to operate. The simple duty of its powerful thermostat is to expand when the chicks generate heat, and elevate a light metal lid over the opening in the top of the compartment. We make provision for conditions produced by the hatching eggs.

This causes the escape of the excess heat and compels a constant, even temperature all through the hatch. And you need not be there to lower the trays when the temperature goes up.

*The Newtown Giant is the only machine that has these automatic time and labor savers and features that insure a big hatch of healthy chicks every time: Automatic One-Minute Trays Turner, Automatic Regulator of Heat, Ventilation and Moisture at each Compartment, Automatic Coal Feeder at Heater, Automatic Temperature Indicator, Automatic Alarm and five Automatic Safeguards.*

It is to your interest to learn all about the improved Newtown. You want to be shown how to keep down your operating expense to the minimum and why the Newtown will make your hatching more profitable. Let us make all this plain to you.

Send now for incubator catalog and Giant circular I and get all the important facts.

New address

**NEWTOWN GIANT INCUBATOR CORPORATION**

Manufacturers of Giant Incubators, Brooding Systems and Colony Brooders.

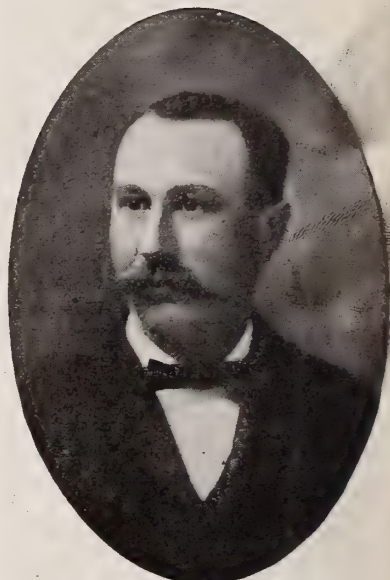

Among the many breeders of Rhode Island Reds whose Reds show a marked improvement from year to year are the Rose Comb Reds of Martin C. De Loof, Willoughby, Ohio. It has been stated before in these columns that for the past ten or eleven years Mr. De Loof has been in close touch with some Rhode Island Red breeders of the advanced school and being

an apt scholar and a close observer of detail, as well as a man of sound practical business judgment, he can now be termed a postgraduate in mating and rearing Rose Comb Reds. We can most truthfully and conscientiously state that no breeder, large or small, can beat him in improvement of his strain from year to year. Mr. De Loof's first Youngstown cock is simply a wonder

for evenness of type, rich red and has the reddest undercolor we ever saw. The picture of this great bird appears in this issue. Mr. De Loof has a lot of show birds in show condition. Write for prices. —H. H. Coburn.

If any one in this broad land knows how to grow large, rangy Single Comb Reds it is E. F. Birkholz, Willoughby, Ohio. He seems to hold some secret charm that makes them get to weight in double quick time. When I visited him in September he had them hen hatched and up to weight. He hatches with hens exclusively and raises the chicks on range so they are very rugged and great hustlers. His Reds have great type and are a beautiful, even red throughout. The demand for his Reds has steadily increased during the past two years and he has shipped birds to every State in the Union. He has scores of letters from satisfied customers whose birds will win in their respective sections. Last year Mr. Birkholz showed at Ashtabula, Ohio, and won in a class of 75, 1-2 cockerel, 2 cock, 1 pullet, no hens or pen entered. If you want good winners at reasonable prices write E. F. Birkholz, Willoughby, Ohio. —H. H. Coburn.

Above is a correct likeness of Luther J. Hall, owner and manager of Hill View Farm, Kenney, Ill., the originator and breeder of the "Largest in the World" strain of Barred Plymouth Rocks. Mr. Hall has been breeding this, his favorite variety, for fifteen years, and in that time has spared neither time nor expense in building up a strain that is second to none. Hill View Farm comprises 140 acres, situated four miles north of Kenney; here the Rocks have free range over the meadows and through the woodland, where they develop splendid size and beautiful plumage. On a recent visit to this farm we found a strictly "up to date" plant, well equipped for the rearing of poultry, while a general air of prosperity surrounds the place. While there we handled quite a number of the breeders and young stock that showed plainly the result of careful mating and rearing, many of them showing that clean, snappy, "down to date" barring so hard to obtain and so rarely seen. In addition to the many prizes won by Hill View Farm at the leading shows of the middle west, they have furnished the winners for such shows as Atlanta, Ga., Goshen, Ind., Elkhart, Ind., Minneapolis, Minn., Regina, Canada, and many others. They can furnish you show birds and breeders in any quantity desired. Their ad appears on another page of this issue. —J. C. Johnston.

Park Poultry Yards, Nashville, Tenn., have been making some wonderful winnings on their S. C. White Orpingtons this season. At the Tennessee State Fair, Nashville, Tenn., they won 1 hen, 1-3 pen, 1-3 cock, 1-3 pullet and several specials. At the Arkansas State Fair, Little Rock, they won 1-2-3 pullet, 1 hen, 1 cock, 2-3 pen, 3 cockerel, and carried home several beautiful silver cups. Mrs. Stonestreet, proprietress of these yards, reports good business in stock and orders for eggs for hatching. Anyone interested in good White Orpingtons or Partridge Plymouth Rocks should write for catalogue and address Park Poultry Yards, Glendale, Nashville, Tenn.

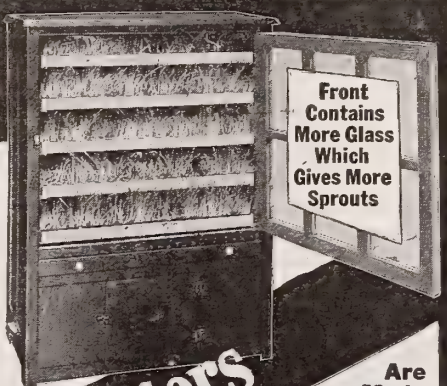

## Grain Sprouters at a Bargain

**5,000** more of the famous Reliance Grain Sprouters are now ready for delivery at factory prices. This gives you another opportunity of saving \$5.00 for yourself, which you can put into an incubator or brooder. If you order quickly, you will get a still better bargain for our special

**November Price Is Good Up to December 15th**

There's many reasons why we can undersell all competition on Grain Sprouters. In the first place, by buying large quantities of raw material—best steel, lumber, etc., for cash, we secure large discounts. Again, we manufacture by thousands, while others hundreds, which saves factory costs. Again, we sell direct to our customers, employ no agents, therefore have no agents' commissions to pay or agents' high prices to protect. We add only one small profit to actual cost for ourselves.

Our low prices are not quoted on one size only, but on all sizes. Shipped complete same day order is received. Safe delivery guaranteed.

**Front Contains More Glass Which Gives More Sprouts**

**Are Made to Make Money for You**

Winter is right here NOW. You need a Grain Sprouter—every poultryman does. So don't delay, but write today for low prices on different sizes.

Choose the size you want, then when the Reliance comes, start giving your hens sprouted grain. Reliance Sprouted Grains will be the means of

Increasing Egg Yield Over 50 p.c., Keep Hens Laying All Winter, Aid Growth; Promote Health of Fowl and Cut Your Feed Bill in Half.

The Reliance will produce 3 to 4 bu. of sprouts from 1 bu. of grain and do it quicker with less care and attention. In fact, there is

**None Better Made—No Matter What the Price**

The Reliance has double walls, double insulation, extra galvanized iron linings, galvanized trays, (not wooden), strong screening. The lumber is of the highest grade, the heating system is better, the ventilating system is faultless; besides, the front contains more glass which induces larger quantity of sprouts. Don't put it off any longer, but write, right now, and learn what a really low price we place upon our machines. Facts and literature will be sent by return mail. Address

3 bus. sprout from 1 bu. grain.

## This Incubator Hatches! Boosts Profits—Slashes Expense!

Reader, now that you've decided to buy an incubator, are you going to choose one on promise or performance?

Results are what count. The number of chicks hatched, the amount of oil used, the freedom from care and attention, and the assurance that the incubator will perform season after season, the same as the first time it was used.

Standing beside several types of machines, the "Rayo" has shown its superiority time and again. In one instance averaging 16 chicks more to a hatch with one-fifth the quantity of oil. This superiority of the

100-egg size. One price—our factory price—to all.

## RAYO Incubator

isn't just a matter of luck. The superiority is built into the machine and there isn't an old-style, lamp-on-the-side machine that will ever equal it. Besides saving dollar after dollar on oil and 15 to 20 chicks each hatch, the Rayo puts an end to all the drudgery of old-style machines.

The "Rayo" requires only one filling to a hatch. Eggs and thermometer can be seen through double glass top, which raises for airing, cleaning and turning eggs. Lamp under egg chamber gives perfect radiation. Double wiper thermostat acts on flame—produces exact heat needed—none thrown away. Automatic ventilator. Turn eggs semi-automatically without touching trays. Clean lamp without removing chimney or tank. Oil tank holds five quarts, a month's supply. Strong redwood case, covered with steel, enameled like mahogany, making it fireproof and handsome.

The Rayo's claims are based on actual facts. Hundreds of experienced poultrymen will have no other machine. Beginners sure of success. Low, direct, freight prepaid prices bring it within reach of all.

**Money-Making Book, "Turning Eggs Into Chicks Into Dollars"—FREE**

To everyone sending their name and address. This book contains special articles by expert poultrymen which, if followed, will bring the reader greater profits. The reason why we send this book FREE is because it also tells all about Rayo Incubators and Brooders. Write for Book No. 16 today and we'll send you Rayo special low price and combination offers. Address

**RAYO INCUBATOR COMPANY**  
1012 S. 13th St., Omaha, Nebr.

**First and Only Patent Hatching Chart in the World—FREE**

To every person who asks for our free Money-Making Book, we will send, absolutely free, a sample of the Rayo Patent Hatching Chart. It tells what to do day by day during the hatch. We also present to you with each Rayo Incubator you purchase a \$1.50 Hygrometer. The hygrometer and hatching chart would cost you \$2.50 if you had to buy them. Remember, we include these with each incubator without extra charge. No other firm does this.

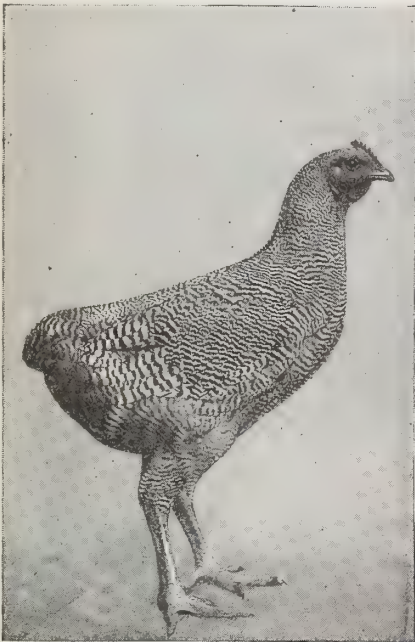

### Rose Comb Black Minorcas.

On the edge of Seymour, Indiana, we find a fine poultry farm of G. A. Clark, the oldest professional breeder of the great Perfection strain of Rose Comb Black Minorcas, which has won consecutively at Madison Square Garden and other great shows for years, winning in all over 500 ribbons and specials, a record unapproached and unsurpassed by any other breeder in the world.

At Madison Square Garden last year he won first cock, second pen, fifth hen and pullet. His first cock bird, Perfection III, whose photo appears in this issue of A. P. J., is the greatest Rose Comb Minorca cock living. His first prize pullet at Cincinnati, 1913, is a bird of great individual merit. Her head points are fine and length of back great. Her dam has a phenomenal egg record and this pullet will go her one better. At the Cincinnati show the first prize cockerel, Ajax, weighed 10 pounds at the age of 9 months—he actually weighed 10½ pounds when he started for the show, and as a cock bird he weighs 12½ pounds.

At the Indianapolis show the first hen Mino, weighed 9 pounds. At St. Louis his first prize exhibition yard, consisting of four large hens and cock, the five birds weighed 43 pounds. His catalogue shows picture of pullet that laid first egg at the age of 4½ months. Mr. Clark's fancy poul-

A pullet bred cockerel, son of "Lady Beautiful," first prize hen at M. S. Garden, N. Y., 1913. This cockerel shows wonderful equality in color, barring and form. We can see in him breeding quality of worth and in his veins flows the blood of a great winning line of Barred Rock females. The owner and breeder is Mr. C. N. Myers, Hanover, Pa. It is a line full of character.—H. P. Schwab.

try business is run on business principles and prices calculated accordingly, and are most reasonable, considering the quality. Write for catalogue and mention American Poultry Journal.—H. H. Coburn.

Dirk's Red Miller Killer has become known as a standard remedy and is now used by all up-to-date breeders to rid their fowls of mites. Mr. Dirk has hundreds of testimonials from prominent poultrymen in all sections of the country, who are loud in their praise of his remedy. Mites are one of the worst enemies that poultrymen have to contend with; but where Dirk's Red Mite Killer is used this trouble is entirely eliminated. For full particulars write M. E. Dirk, Box 102, North Baltimore, Ohio.

The Joe-Pye Orpington Farm, South Norwalk, Conn., report a very successful season, with a large flock of youngsters of extra quality. By their winnings at New York, Boston, etc., this line has made a reputation and they have without question the greatest winning male ever produced. Note mention elsewhere in this issue.—H. P. Schwab.

The Blue Orpingtons on the Pine Lodge Farm, South Lincoln, Mass., show wonderful improvement this season. Last season

birds from this farm won at Chicago, New York and Boston, and they have prepared a wonderful string that will be an eye-opener for all lovers of the Blue variety and are making preparations for a clean-up at the large shows in the near future. They are prepared to furnish winners in this variety for any show in the country. Write them for full particulars.

J. J. Klein, Macon, Ill., Barred Rock specialist, starts his advertising in this issue. Mr. Klein is a genial good fellow and a judge of no mean ability, while his Rocks class with the best, as his winnings in the leading shows of the middle west attest. Mr. Klein has about 400 young birds to furnish American Poultry Journal readers. Write him your wants; you will be treated right.

Muntz's S. C. White Leghorns are making good in the large shows, such as Chicago, New York, Elgin, etc. His latest winning is at the Illinois State Fair, Springfield, where he entered 9 birds, 6 of which won prizes as follows: 1 cock, 2-3-5 cockerel, 2-4 hen. While Mr. Muntz does not breed

as many Leghorns as some breeders, you cannot find stock bred closer to the standard than he has in his yards. Anyone wanting the best show stock will make no mistake in writing their wants to him.

"Get right on poultry supplies." Before spending another cent for equipment, write Otis & Moe Manufacturing Co., Otis building, Chicago, for latest catalogue. They manufacture Moe's line of useful devices, invented by a successful breeder for his own needs and they are what you want.

East Pembroke, N. Y., Dec. 18, 1912. M. E. Dirk:—I think I gave your Mite Killer the severest test it ever had. I used it in an old house that had innumerable hiding places for Mites. Since using it, not a Mite can be found in the house.

M. W. PARKER.

The Carver Green-Food feeder is filling a long felt want; there is positively no waste in its use. Write Mr. A. Q. Carver, Freeport, Me., for circular and other information.

## BROODER STOVE

## How Many of Your Chicks Live?

With a Simplex Brooder Stove you can actually raise 20 per cent to 50 per cent more chicks than by any other method.

### HERE'S THE PROOF

The "Simplex Eliminates  
White Diarrhoea

Read this letter, it proves that we know what we are talking about when we say the "Simplex" will prevent White Diarrhoea.

Chicago, Ill., April 9, 1913  
Simplex Brooder Stove Co.,  
Grand Rapids, Mich.  
Gentlemen:—

Enclosed please find my check for \$29.50 in payment for Brooder Stove shipped me on 7th. This is the second Stove I have purchased from you this season, and of course the last one is purchased because the first one is doing the work. The Stove works entirely satisfactory, and does all that you claimed it would do. I believe you have solved the bothersome problems in brooding. The Stove has entirely eliminated White Diarrhoea from which I suffer heavy losses, losing 50 per cent of my hatch.

The losses with the Stove have been very small.

Very truly yours,

Judge J. C. Everett.  
Farm at Holland, Michigan.

The Simplex Brooder Stove not only raises more chicks for you—it also saves 75 per cent of your operating expense and 90 per cent of your time and labor. Just think what this means to you in **profits**. The Simplex can be operated in almost any room. It is built and sold by experienced, practical poultry men. Now is the time to investigate—get **your** Simplex Brooder Stove before winter arrives.

Upon request a catalog will be sent containing information to poultry men, also letters from men who tried the Simplex methods.

### Simplex Brooder Stove Co.

220 Fourth St., N. W., Grand Rapids, Mich.

Sign name and address below and Cat. and Letters will be sent

### Whatglen Farm.

Judge Frank McGrann, Lancaster, Pa., of Black Minorca fame, has decided to do but little if any judging this season, so he can again get into the show ring as an exhibitor and we are glad to know this. We have been to his home and seen his birds several times and have urged him to refuse shows and to exhibit as a duty to himself and to the breeders of Black Minorcas, for he has the line and quality that should be shown and seen at our best shows, and it is a positive shame not to have them where the general public can see them and know what our best breeders are making of the grand old Black Minorcas.

The What-Glen farms are of general interest and beauty; their locations are superb and with Mr. McGann and Mr. Hiram Dinny as poultrymen they are breeding a line of birds of exceptional merit and quality. For size and carriage with positively sound color they are real wonders. Head points are a feature, nice combs, well set, of medium size and well serrated, lobes and wattles uniform, making them a leading and

purchasers will get bargains that will go down in history. They are fitting a large strain for the Palace Show, New York, Cleveland and Pittsburgh. This strain has a fancy show record and it is in them to stay on top. Write for prices and particulars.—H. H. Coburn.

### Schenley Heights Farm.

The best record ever made in Reds at the great Allentown Fair was made by the Schenley Heights line of S. C. Reds this fall when they won all five first prizes offered in the class and in the best of competition.

Last season this line was the prominent winners at Philadelphia, Cleveland and Pittsburg and the previous year at Cleveland. At all three of these shows his first prize cockerel won the sweepstake special for best cockerel in the entire shows.

Mr. C. F. Rankin, the owner, has proven himself a breeder of worth and this season has shown young of a superior quality. With a very large flock of over 1,000 young he is offering a share for sale and can

They were also heavy winners at this show in 1911 and 1912. If you want a winner write him and mention American Poultry Journal.

### How to Make Poultry Pay.

The above is the title of a booklet published by E. C. Stearns & Co., Syracuse, N. Y. It contains a lot of valuable information on poultry, as well as an interesting letter on how Sam Watkins made poultry pay with a Stearns Green Bone Cutter. Send for a copy and mention American Poultry Journal.

Leominster, Mass., Nov. 6, 1913.

American Poultry Journal,  
Chicago, Ill.

Gentlemen:—I thought I would let you know that I have sold out my entire flock of Blue Wyandottes to Mr. Murray D. Kennedy, Elk Lake, Ont., Canada, which includes the first Crystal Palace cockerel, the first Dairy Show cockerel and many other winners. In all my dealings with Mr. Kennedy I have found him very honorable and

Frank Schellang's poultry plant, Erie, Pa., where several thousand prize-winning S. C. Brown Leghorns are raised annually.

most desirable line with rarest and best quality in every section.

By judging Mr. McGann has also handicapped his selling, but now he can sell at will and we would advise our readers interested in this variety to correspond with him. His birds are better than ever this year and he can satisfactorily fill all demands made upon him. In writing mention A. P. J.—H. P. Schwab.

### W. O. Lyle & Son.

The Erin strain of Partridge Plymouth Rocks as bred by W. O. Lyle & Son, Gnadchubben, Ohio, need no introduction for they asserted themselves repeatedly at our best and most classy shows. This firm breeds them for business and pleasure so accentuate both sides of the business. The senior member of this firm has accepted a new position which necessitates his moving, and to do this quickly must make some tremendous sacrifices in disposing of his birds. He even offers to sell the whole flock, with ribbons, specials, show records and good will. If he does not get his price he will continue the sales as usual, but the

supply choice breeders and the best of exhibition quality. Write him your wants and mention A. P. J. Address Schenley Heights Farm, Pittsburg, Pa.—H. P. Schwab.

With this issue of A. P. J. we start Mr. A. D. Taylor's advertisement of his celebrated strain of Single Comb White Leghorns. Mr. Taylor is breeding a strain of Leghorns that never fail to win wherever shown, and while breeding for exhibition purposes he has kept constantly in mind the utility values, all his breeders are trap-nested and nothing but the very best win a place in the breeding pens. If you are looking for cockerels that will win for you, or females that will fill your egg basket, we recommend to you A. D. Taylor, Springfield, Ill., and his Single Comb White Leghorns.—J. C. Johnston.

L. H. Brown, Lunenburg, Mass., the well-known breeder of Golden Wyandottes, is offering some real bargains in high-class breeding and exhibition birds. At the last Boston show his birds won 1, 2, 4, cock; 1, 4, 5, 6, hen; 1, 4, 5, 6, cockerel; 1, 5, pullet; 1, display; 2, pen.

straightforward. To those who wish to buy Blue Wyandottes or eggs I can recommend them to Mr. Kennedy.—Haldie Nicholson.

### Need Good Poultry Fencing

If so, look up the advertisement of Kitzelman Brothers, of Muncie, Ind., on another page of this issue.

They can supply your wants and supply them right. They are advertising a poultry fence with mesh wires close enough for small chickens, yet strong enough to turn stock.

Their latest catalogue, handsomely illustrated, on farm, poultry and lawn fencing is now ready. Write them for it. It's free. Address Kitzelman Brothers, Box 295, Muncie, Ind.

J. G. Budde & Co., Oak Park, Ill., the well known S. C. Rhode Island breeders, have sold their entire flock of Reds, including their prize winners, to the Hawthorn Farm, Libertyville, Ill., who will continue the breeding of this celebrated strain.

## MONSTER SALE OF PEERLESS STRAIN EXHIBITION WHITE LEGHORN COCKERELS

The tornado of last Spring destroyed three of my largest houses and as I shall not rebuild until Spring, I am compelled to close out immediately more than 200 big, strong, healthy and as pretty a lot of cockerels as one could find on any farm in America. This statement is made conservatively and to appreciate the values offered in this sale one must see the birds themselves. They must be sold before severe weather sets in, and I have culled so closely that even a small sum will bring you a very high-class bird. **SEND ME \$2.50, \$3.00, \$10, \$15 or \$25 for a cockerel to be delivered before January 1st and I will ship you a bird worth two to five times the amount paid.** Then, if you are not highly pleased, return him and I will refund your money—each of us to pay the express one way. Imagine getting a \$5 or \$10 cockerel for only \$2.50, or a bird that would ordinarily bring me \$25 for only \$10. The \$15 and \$25 birds are simply immense. This is your opportunity to get a winner for your show and make a big paying investment.

### A MOST IMPORTANT FEATURE OF THIS SALE

All the cockerels have been reared on open range, fed largely on Spratt's Patent Foods, and there is not a sick bird nor a bird that ever has been sick on the place. No strain is superior to Peerless Strain for production of large white eggs and lots of them. Don't wait until the last minute, but order now so that I will not have to put up temporary quarters for these birds. It will be well worth while. I know that I can please you and will ship C. O. D. if you prefer.

Remember, I have furnished the big winners for years. See other adv.

**LEON C. HUNTINGTON, Box 12-B, OMAHA, NEBRASKA**

## BUFF ROCKS

Many of our best breeders after June first will be for sale cheap to make room for young stock. Mention A. P. J.

Box 49, Dept. B, Sharonville, O.

## I Must Sell 500 Peerless Strain White Leghorn Hens and Pullets Before Jan. 1, 1914.

Last month I told you why I must close out 75 per cent of my birds before the New Year. Elsewhere in this issue I offer you cockerels at unmatchable bargain prices for the quality. Here I claim to offer in this sale 500 as healthy and productive and pretty White Leghorn females as one could find anywhere. My custom of culling slow-growing pullets as freely as undesirable cockerels and introducing new blood from the finest available strains each season has given excellent results, and I really am losing a lot of money on account of being forced to let these hens and pullets go at this time for what they will bring.

**SPECIAL OFFER**—12 clean cut, pure white, splendid pullets, late hatched, but will be laying in January or February, only \$18.00.

**SPECIAL OFFER**—12 fine, big hens of 1911 and 1912 hatch, birds that were in my last season's matings, every one a good layer and of good type—for the twelve, only \$18.00.

**SPECIAL OFFER**—15 yearling hens or early laying pullets, or part of each, the same class of birds you would ordinarily expect for \$3.00 to \$5.00 each—my price for the fifteen birds, \$32.00.

**NOTE**—With each order for combinations above, I will include a splendid cockerel without charge. The cockerel alone would be \$5 to \$10 ordinarily. **ALL SHIPMENTS ON APPROVAL**—If you are not more than pleased with the birds I send you, return them promptly and your money will be refunded, less the express charge only one way. In making a comparison of prices, please bear in mind that all of the birds offered you in this sale are not only extra healthy and vigorous, but have an ancestry of Blue Ribbon Winners at New York, Chicago, Kansas City and other large shows. Write for corresponding low prices on the highest type exhibition females, exhibition pens, etc.

LEON C. HUNTINGTON

Box 12-B

OMAHA, NEBRASKA

## Notice

Single Comb White Leghorns and White Runners, exhibition and utility stock at bargain prices. Mention Am. Poultry Journal.

JAS. R. SNYDER, BOX 0, FRAZER, MISSOURI

## Get Acquainted

Modern advertisers rightfully expect the publications in which they buy space to guarantee and prove the circulation of each and every issue. Certain such papers are known as the **Progressive Poultry Papers**.

Each publisher of such paper is progressively striving to furnish their readers with live, scientific, up-to-date reading matter and agrees to prove his circulation, promote and protect the advertisers interests by refusing objectionable advertising. It will pay advertisers to get acquainted with these papers. For list of papers, rates and circulation information address

E. J. W. DIETZ

919 Advertising Bldg., Chicago

## Of Real Interest to You.

There may have been a time in the past when more interest in the poultry show has been manifested, but when?

There may have been a time when the breeder of poultry was as wise in his calling as now, but when?

There is one thing that is coming to pass faster than some of us realize and that is that the day of "putting over" anything on the "chicken man" has gone, and the fellow who tries it is beaten before he starts.

The one particular thing we want to set forth is this: Have the poultry shows done as much real good to those for whom they should bend their greatest efforts, as they should? If not, why not? Have not too many shows lead for the reason of their existence the pleasing of some local idea or some man's fancy that he could run a show just a little better than the other fellow? In other words how many poultry shows of any size and importance are held solely in the interests of the exhibitors, and by "his interests"? I mean a show that has as its first and last thought, what can be done in so arranging the classes, the premiums and the selecting of judges that the result cannot fail to be of direct benefit to the exhibitor who has had enough experience in the show room to know fairness and squareness when he sees it.

The day is right here, my friends, when the only method in the poultry show business that will hold water, is the method that does not value a bigger claim in any particular than it can fulfill—that keeps its eye on the interests of the exhibitor and does not take it off. If a poultry show does its best service it certainly should make every effort to better the interests of the very man who makes a poultry show possible. It is with these thoughts in mind and some others in addition that has been the backbone of the poultry exhibition of Pittsburgh, and if there has ever been held any more generally satisfactory exhibition of poultry anywhere than has been held by them, we do not know it. There can be no more favorable conditions under which an exhibitor can show his birds than at that big exposition show in Pittsburgh, January 19 to 24. Entries close January 5, 1914. W. P. Craig is the secretary, and his address is Empire Bldg., Pittsburgh, Pa.

## Illinois State Show.

The Illinois State Poultry Show has established a new department for the benefit of its exhibitors. It has created a sales department, with Theo. Bates, of Pittsfield, as the superintendent in charge.

It will be the duty of Mr. Bates to attend to sales of stock for exhibitors who cannot come to Springfield or those who may not be in attendance at the show at all times. He will have an office in the Information Bureau Booth inside the show room and he or his assistant can be found there at all times. Mr. Bates is an experienced fancier and one well qualified to look after the interest of exhibitors.

Another feature that will be of interest to visiting poultrymen will be the Information Bureau Booth, in which the superintendent, the sales manager and a representative of the secretary's office will be found. The booth will be large enough to supply a resting place for exhibitors.

Entries will close December 26, 1913. Catalogs can be had on application to Theo. S. McCoy, Golconda, Ill., after November 15. Don't forget the Illinois State Show, Springfield, Ill., January 5-10, 1914, in making up your lists of shows at which you will exhibit.

## National Fanciers' Club Show.

At no previous time, this far in advance of the great National Fanciers' Club Show, to be held at Indianapolis, Ind., January 10 to 16, 1914, have there been so many requests for premium lists and entry blanks received. This indicates a wide-spread interest in the big poultry exhibition, and from every indication the entry will reach at least 3,000 birds. The National Fanciers' Club Show is the recognized big central show of the country, and ranks along with the Chicago, New York, Boston and other big eastern shows. Thirty states were represented at this show last year and it is expected that the total number of states represented this year will exceed that number. Mr. H. C. Dippel, secretary of the National Fanciers' Club Show, and who has just returned from an extensive judging trip at the fall fairs in the south, reports a large entry coming to Indianapolis in January from that section of the country. Send today for premium list and entry blanks of the National Fanciers' Club Show. Address H. C. Dippel, secretary, 114 N. Delaware St., Indianapolis, Ind.

## Official Marked Catalogue of the Coliseum Show.

Readers of the American Poultry Journal who may not attend the Coliseum show December 12 to 17, 1913, may secure a marked copy of the catalogue by sending 35 cents in stamps or coin to Theo. Hewes, secretary, Indianapolis, Ind.

This catalog gives name and address of all exhibitors, number of birds in each class, and the correct list of winnings. The marked catalogue will be mailed from Chicago Monday, December 16, before the show closes.

The Freeport Poultry & Pet Stock Association, Freeport, Illinois, have completed all arrangements for holding their show, Dec. 15-20, 1913. Coops will be furnished free to the exhibitors. Geo. A. Hehl, judge; judging will be done by comparison. For premium list address the secretary, Paul Wurtzel, Freeport, Ill.

The Jackson Poultry Association, Jackson, Mich., will hold its annual exhibition Dec. 27, 1913-Jan. 1, 1914, at Jackson Mich. W. S. Russell, judge. W. O. Wellman, secretary, Jackson, Mich.

## GRAND CHAMPION Columbian Wyandottes

GEORGE A. KERSTEN, Washburn Park, Minneapolis, Minn.

## Don't Feed Green Food!

## Succulenta Tablets

They are better and cheaper and more relished by all fowl. Simply dissolve one tablet in one quart drinking water for fowl. Sample can (100 large tablets) by mail 50c. Can of 250 large tablets by mail \$1.00. YOUR MONEY BACK IF NOT SATISFIED. Drop postal for particulars to The Succulenta Co., P. O. Box 405-1, Newark, N. J.

### Buffalo's Great International Show, January 12 to 17.

If you have not received a premium list of this show by December 10, send in your request at once, if you wish to be numbered among the exhibitors at this show.

By special arrangements every exhibitor can be assured a cash special, whether he makes a winning or not.

Entries will close December 29.

This show is backed by 600 poultry fanciers in Buffalo. It has adopted as its slogan, "7th Show—Greater Than Ever." Stanley A. Merkley, 35 Coal & Iron Exchange, Buffalo, N. Y.

The Virginia branch of the American Black Orpington Club will hold its annual meeting and show in connection with the Virginia Poultry Association Ninth Annual Show, to be held in Richmond, Va., December 9-12, 1913. To boost the club is to boost your own business. You can become a member of the club any time before the opening of the show and be ready to compete for the specials by paying the annual dues of \$1.00. Applications may be sent to Ora Overholser, secretary-treasurer, Eaton, Ohio.

The Quality Show of Cleveland will be held in Gray's Armory January 5 to 10, 1914. The success of this show is assured when the list of specialty clubs will hold their state meets, and the following list will show: The Ancona Club of America, the Black Orpington Club (American), the American White Plymouth Rock Club, the American Black Minorca Club, National White Wyandotte Club, American Buff Plymouth Rock Club. Meeting will also be called by the Campine Breeders of Ohio, to organize for this state, and the Red Club is also a possibility, but was not definitely settled when this article went to print.

The Cleveland Poultry Breeders offer a handsome cash bonus for 100 to 150 birds to the above specialty clubs, and will give each club a handsome silver loving cup and all

breeders of the above varieties will be requested by the various secretaries of the clubs to write A. E. Rebburg, secretary, West 25th Street, for premium list, and make as large an entry as possible. The motto of this quality show has met with universal favor, "The best bird will win." Judges Frank L. Platt, George Webb, J. E. Gault, L. A. Stream, A. H. Emch, Len Lanius.

The fourth annual exhibition of the Waterford Poultry Association will be held at Waterford, Wis., February 2 to 7, 1914. The officers elected recently are Alb. Topp, president; H. W. Halbach, secretary. Mr. F. J. Albrecht is superintendent of the show. Plans have been laid to make this the best show and especially of the highest quality that has ever been put on. Those who know the quality it takes to win at Waterford realize that a winning made there is a very valuable asset in advertising. Judge James A. Tucker of Concord, Mich., has been selected to place the awards by comparison. This will give you an opportunity to have your birds handled by a leader among judges. For premium list address H. W. Halbach, Waterford, Wis.

The Missouri State Poultry Show and the Kansas City Poultry Show have combined and will hold one of the largest and best shows in the history of Missouri at Kansas

in connection with the Fifth Annual Exhibition of the Great Mid-West Poultry and Pet Stock Association. For further information address H. L. Peck, secretary, Box 86, Champaign, Ill.

## Darling's Meat Scraps

are best. Our book will tell you why. Write for it. Mention American Poultry Journal.

P. J. Olle, R. 4, Box 111A, Racine, Wis.

We are manufacturers and headquarters for

## Meat Scraps and Poultry Bone

**Hines Bros. Company**  
Dept. 1 Union Stock Yards Chicago

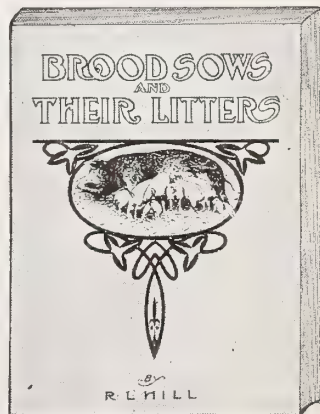

A three months old daughter of "Lady Beautiful," first prize hen at the M. S. Garden, New York, Show, 1913. Lady Beautiful also won the shape special, and besides winning first prize also at Philadelphia, Dec., 1912, won special for best hen in the entire show. This pullet is but one of the many daughters of quality she has produced. In color and style of barring they are ideals. Mr. C. N. Myers, Hanover, Pa., the owner and breeder, has made a pronounced success in breeding and has a pullet line of exceptional value.—H. P. Schwab.

City, Missouri, Dec. 11-16, 1913. They are offering 100 cups and \$500 in cash specials in addition to their regular cash premiums, which are very liberal. The Kansas City Poultry Show owns 4,000 coops and has over \$4,000 invested in coops and other show property. They have secured the services of a large number of the best judges in the country to place the awards and they have limited the entries to 5,000. Everyone interested in poultry in the western territory should make a point to visit this show.

Owing to long and serious illness in his family, and press of business, James V. Johnson has resigned from the office of secretary-treasurer of the White Plymouth Rock Club, and Mr. M. T. Schulte of Bartlett, Tenn., has been appointed to succeed him, and he has taken charge of the club's affairs.

There will be a meeting of Blue Andalusian breeders at the Coliseum building, Chicago, Ill., Tuesday morning, December 16th at 11 o'clock. This will be held

## Great Swine Book FREE

Prices from \$22.00 up  
Send for Large Illustrated Catalogue

**Dyer Poultry Supply Co.**

3929 Elston Ave. Dept. A Chicago, Ill.

## Think of This!

**Finest Egg-Making Feed—Fresh Green Feed—For Less than 10 Cents a Bushel!**

### Here's How To Get It!

Sprout grain! Do it with the aid of the "Successful" Grain Sprouter—the original grain sprouter—the first one ever made and the first one marketed—the leader of them all! It is made in sections—capacity from 50 to 500 hens. Makes money for both little and big poultry raisers. Gives each just the size each needs. Grows as your needs grow. Made of all steel throughout. Double steel walls. The newest, best idea in sprouter construction—being positively fire-proof and absolutely safe.

### "Successful" Grain Sprouter

can't warp, shrink or swell, like other sprouters. Prevents moulding of food. Made with large glass doors—metal trays. No wood to rot. Lasts practically forever. With it you can make 1 bushel oats go as far as 3 bushels ordinarily. You turn your idle hens into industrious egg-layers just at the time egg prices are highest! Makes early winter hatches possible. And it sprouts grain in 24 hours! Gives an inch of crisp green sprouts every day after that! Sprouts wheat or rye. Makes winter chicks thrive wondrously—protects their health—saves usual loss of chicks in winter—assures quicker maturity—enables you to sell chickens earlier when prices are highest. Write for the facts—find out for yourself. Get our Free Book.

Des Moines Incubator Co., 561 Third St., Des Moines, Iowa

## MADISON SQUARE GARDEN, N. Y., CHAMPION WHITE PLYMOUTH ROCKS

**They Have Won and Improved  
Year by Year**

### NOW THEY ARE BETTER THAN EVER

We can please you with exhibition stock so if you wish to win write us and let us make you a proposition which means money to you. Grandcocks and hens and a great lot of choice young that will meet any demand made upon them. A few more selected breeders to sell. Write your wants and let us tell you what we can do for you. Mated trios and pens a specialty. We will please you if you are interested.

### Remember This "Champion" Line

Made its records and reputation at America's greatest show, Madison Square Garden, New York. For several years at Cleveland, Ohio, Philadelphia, Williamsport, Chicago, etc., color and shape specials have been won at all exhibits and we have won five championship specials for best bird in entire shows. Consider this and write us your wants. Absolute satisfaction assured.

**Webster Farm, Box A, Girard, Pennsylvania**

## Lichtenwalter's Quality Buff Ply. Rocks

They have won at more prominent shows the country over than any other line. Last season they were prominent winners at Madison Square Garden, New York, Springfield, Illinois, (Club Show), Philadelphia, Cleveland, Williamsport, etc. I have birds of quality in old and young and can sell you exhibition birds and selected breeders, assuring satisfaction.

**E. A. Lichtenwalter : Box A : Girard, Pennsylvania**

### 25 Years With Silver Wyandottes.

A. and E. Tarbox, Box A, Yorkville, Ill., have bred Silver Wyandottes continually for the past 25 years. The other day we visited this farm and found over 900 Silvers, the best we ever saw. Every bird was in show condition. Standard breeding is not all these birds possess. During the first six months of the Missouri Egg-Laying Contest the Tarbox pen held second place. One of their hens laid 187 eggs in nine and one-half months of the contest. Tarbox Bros. do not sell eggs for hatching, but can furnish birds for any competition.

### R. C. Brown Leghorns.

The R. C. Brown Leghorns are one of our oldest varieties and have always been general favorites with a large number of breeders. Of these W. W. Kulp, Pottstown, Pa., is one of the best known and has been breeding them with success as long as we can remember.

We just have word from him that he has just made his second shipment of birds to New Zealand where they will arrive in time to lay eggs for the new owner's Xmas dinner.

Mr. Kulp has always been a practical as well as a fancy breeder and has particularly bred his line up to a heavy-laying strain for which they are today noted.—H. P. Schwab.

### Huntington's Big Sale.

It is rare that our readers have such an opportunity to buy S. C. White Leghorns at such exceptional bargains as are now offered for the month of December by Leon C. Huntington, Box 12 B, Omaha, Neb., one of the largest exclusive breeders of S. C. White Leghorns in America. For years this fancier has been building up a strain that for egg production has never been excelled—coupled with standard type and rare exhibition quality, as is proven by his show record at many of the greatest shows. No matter what quality you may desire, write Huntington for prices and remember that he ships on approval. We just have word that Mr. Huntington's name is on the ballot for president of the National Single Comb White Leghorn Club.

The executive board of the American Campine Club being desirous to increase the membership of the club, has decided that no initiation fee be charged to those who apply before January 1, 1914. \$1.00 paid before that time entitles applicant to one copy of Campine Standard and covers dues to December 31, 1914. The club has a membership of over 400. This membership will without doubt be increased to 1,000 members within the next few months. M. R. Jacobus, secretary-treasurer, Ridgefield, N. J.

"Get right on poultry supplies." Before spending another cent for equipment, write Otis & Moe Manufacturing Co., Otis building, Chicago, for latest catalogue. They manufacture Moe's line of useful devices, invented by a successful breeder for his own needs and they are what you want.

The Silver Wyandotte Club will have their annual meet in connection with the Baltimore show January 6 to 10, 1914. For membership or information regarding club matters, address H. J. Coette, secretary-treasurer, St. Paul, Minn.

The Barborton Poultry Association will hold its annual show at Barborton, Ohio, Jan. 20-24, 1914. This is a new association and is composed of 50 enthusiastic poultry fanciers of Barborton and vicinity. H. C. Miller will place the awards. For catalog address E. W. Arnold, secretary, Barborton, Ohio.

The Central Louisiana Poultry & Pet Stock Association will hold its annual exhibition at Alexandria, Louisiana, Dec. 17-20, 1913. For catalog and premium list write the secretary, W. H. McCrackin.

The Gallion Poultry Fanciers' Association will hold its fourth annual show at Gallion, Ohio, Dec. 15-19, 1913. D. D. Whitaker and Carl C. Beatty, judges. W. M. Huffman, secretary, Gallion, Ohio.

The Batavia Poultry Association will hold its third annual show at Batavia, Ill., Dec. 18-20, 1913. C. L. Barrick, judge. J. A. Pierce, secretary, Batavia, Ill.

Lyle Poultry Association will hold its third annual show at Lyle, Minnesota, Dec. 8-12, 1913. Prof. A. C. Smith, judge. Wm. Nordland, secretary, Lyle, Minn.

The Western Poultry Fanciers' Association will have the honor of entertaining the annual meeting of the National White Wyandotte Club, and will offer in cash \$250 in prize money and two valuable trophy cups. This announcement will interest every breeder of White Wyandottes and all should join in making this one of the greatest classes of White Wyandottes ever shown in America. The dates are: January 12-17, 1914. For premium list address E. D. Monilaw, Secretary, Cedar Rapids, Iowa.

The 1914 catalogue of the American Buff Wyandotte Club will go to press in January. For several years past, this club has been issuing the handsomest specialty club catalogue and expect to keep up the record. Those who join now can have their names listed in the new catalogue. Give us a chance to show you how it will pay you to become a member of the American Buff Wyandotte Club. Write at once for full information and application blanks. J. E. Willmarth, Secretary, Amityville, N. Y.

The twentieth annual meeting of the American Black Minorca Club will be held in connection with the third annual show of the Poultry Exhibition of Pittsburgh at Pittsburgh, Pa., between the 19th and 24th of January, 1914. The business meeting of the club will be called at 2 p. m. January 20th and a large attendance of members is desired on account of the unusually large amount of important business which will be taken up at this time. Marcus Allen Northup, Secy., American Black Minorca Club, Orangeburg, N. Y.

The Lima Poultry Fanciers' Association will hold its annual exhibition at Lima, Ohio, Jan. 5-10, 1914. This association will combine with the Corn Growers' Association and the Farmers' Progressive League, to be held in the Memorial Hall on the dates mentioned. For further particulars address C. E. Morrow, secretary, Lima, Ohio.

The Illinois branch of the National S. C. Buff Orpington Club will hold its annual show in connection with the regular state show at Springfield, January 5-11. Judge Johnson will place the awards on this variety. If not already a member of the state branch send in your application to A. B. Porter, secretary-treasurer, La Salle, Ill.

The second annual meeting of The Rhode Island White Club of America will be held at Pittsburgh, Pa., on Wednesday, January 21, 1914, at 1 o'clock p. m. Send \$1.00 to Mrs. C. M. Vertrees, Secy.-Treas., Cecilia, Ky., and she will issue you a membership card good to November 1, 1914.

The New England meet of the International Ancona Club will this year be held at New Haven, Conn. Send \$1.00 for club dues to Robt. A. Tierney, Secretary, 1555 East 82nd street, Cleveland, O., and write for premium list to Charles S. Scoville, 155 Church street, New Haven, Conn.

The National Black Langshan Club will hold its annual meeting and club show at Rochester, N. Y., December 15-20. If you breed Langshans and are not a club member, join at once. Membership free \$1.00, which pays you to October 1, 1914. Address John A. Rhodes, secretary, Cedar Rapids, Iowa.

The big show of Illinois will be held Dec. 22-27, 1913, at Lanark, Ill. Breeders, don't fail to make an exhibit and secure a score card by the veteran judge, Chas. McClave. Ample room for 2,000 birds. Send for premium list at once to J. A. Shaner, secretary, Lanark, Ill.

"Get right on poultry supplies." Before spending another cent for equipment, write Otis & Moe Manufacturing Co., Otis building, Chicago, for latest catalogue. They manufacture Moe's line of useful devices, invented by a successful breeder for his own needs and they are what you want.

The Savanna Poultry Association will hold its annual show Jan. 8-12, 1914. Charles McClave, judge. W. H. Griffith, secretary, Savanna, Ill.

Show birds that will win anywhere; cockerels that will improve any flock, and breeding stock of the rarest quality at introductory prices. As a table fowl their meat is juicy and well flavored. The eastern market is now paying 15 cents a dozen more for our "large white eggs" than they are offering for any other kind or color. Free catalogue.

CHARLES G. PAPE, FORT WAYNE, INDIANA

## AMERICA'S BEST COCHIN BANTAMS

BLACK, BUFF, PARTRIDGE, WHITE

Have never known defeat in the Show Room and during the past few weeks they met and defeated many Noted Breeders from the north, east and west in three of the greatest Fall Fairs.

Cleveland, Ohio, August 25-29, 1913 (Forest City Fair), they won 10 firsts, 10 seconds and 3 thirds, winning twice as many points as their nearest competitors. One week later at the Great Indiana State Fair, September 8-12, 1913, in competition with one hundred and thirty-three (133) specimens, America's Best won 19 firsts, 11 seconds and 10 thirds, winning three times as many points as all their competitors combined.

After accomplishing these two (2) marvelous victories they were not satisfied. Hence, a month later they took a trip to the greatest of all Fall Fairs, Illinois State Fair, October 6-11, 1913, and on all eight (8) entries won 8 firsts in the largest and best class of Cochins Bantams ever exhibited in Illinois.

At three of the greatest Fall Fairs America's Best Cochins Bantams won nine (9) times as many firsts and twice as many points as all their competitors combined.

From these noted winners we have Five Hundred (500) of the most wonderful specimens ever reared to offer our customers this fall and winter. We can furnish birds that will win in any show room in America. And at the opening of the breeding season you will have birds that will produce specimens of renowned quality. Write for our Fall Booklet, which contains very interesting and valuable information.

WAHEBE BANTAM YARDS, Box 13B, EVANSTON STATION, CINCINNATI, OHIO

## S. C. WHITE ORPINGTONS

If you need a Cockerel, a Pullet or a Hen for some particular show, be sure and write us before placing your order elsewhere. We can save you on the cost, and we can give you the birds that will win for you. We have 40 Cockerels, 20 Pullets and 12 Hens, every one strictly an exhibition specimen. They are large in size, many above standard weight, with deep full breasts, low on legs and good color.

### Examine Birds Before You Pay For Them

So sure are we of pleasing you with the high quality of our stock we are perfectly willing to send any shipment to you C. O. D., subject to your inspection before you pay for them. Write for our liberal plan. We guarantee every sale to give absolute satisfaction. You take no risk whatever. State fully just what you want and the show at which you wish to exhibit, and we will furnish you the birds.

### GOSHEN POULTRY FARMS

::

Goshen, Indiana

## CURRENT NEWS OF THE POULTRY WORLD.

Plans being made for the annual Christmas week show of the Inland Empire Poultry and Pet Stock association indicate an exhibition triple the size of any previously held. James M. Hone, claim agent of the Spokane and Inland Empire railroad, has been elected president of the association, with W. J. Moore as vice president and George Whitney as secretary. The following are directors: J. M. Hone, W. J. Moore, Frank Bolton, John Pfeffer, Harry J. Fuller, H. J. Sheppard, O. E. Bosworth, W. A. Dettner and M. E. Taylor of Winona, Wash. H. J. Sheppard will manage the show, which recently was appropriated \$250 by the Spokane county commissioners.

The United States Supreme Court has ruled that express companies are liable for birds lost or injured in shipment and hereafter the shipper of valuable birds will be able to adjust his differences with the express companies with less trouble than was formerly the case.

At a meeting of the Poultry Producers of Texas, held in Galveston recently, it was decided to ask the State Legislature to pass a law making it a serious offense, punishable by a heavy fine, for a poultryman to guarantee eggs for hatching, and in case of a poor hatch refuse to make it good.

Wilcox S. Barr, aged 70, a well-known poultry breeder, was killed by lightning while standing under a tree during a storm on July 11. He was attending

the Medina county fair and he and two companions took shelter under a tree as the storm approached. All three men were killed.

## Our Cover Design.

We call our readers' attention to the fine design adorning the front page of our magazine. It is the work of Leonard Karl Stahmer, aged 16 years, son of Louis A. Stahmer, our artist. Talent evidently seems to run in the family as

there are now five members engaged in the art and engraving line. For a boy of his age it is a very creditable piece of work and we predict a great future for him.

A. Boyle, of Denver, Colo., has purchased forty acres of land near Tucson, Ariz., and will engage in the poultry raising and egg producing industry on a large scale.

Weasels, minks, skunks, rats or some other four-footed animals are playing havoc with the poultry in the vicinity of DeKalb, Ill. One night recently 110 young birds on the Munger poultry farm were killed, and R. C. Davey has lost 500 head. Several thousand head have been lost during the past few weeks.

A damp chicken coop is a disease breeder, and dampness and filth are a bad combination.

Never place ducks in close, stuffy quarters. They need plenty of air and dry floors.

Tea made by boiling garden peppers in water and adding to boiled potatoes or corn meal is a sure preventative of cholera.

## Death of Henry Hales.

We take the following from the November 15th issue of American Fancier and Stockkeeper:

"It is with a feeling of sadness we chronicle the death of that dear old fancier, Henry Hales, of Ridgewood, N. J. We remember him back in our schoolboy days, when he exhibited his Dorkings and talked with enthusiasm of their good qualities, and this enthusiasm for the breed lasted to the end of his days.

"The dear old soul was always a welcome guest at dinners tendered the veteran fanciers at the Boston show, where he exhibited his birds for years, and his little after-dinner speeches were filled with emotion as he related his life as a fancier and brought up the many pleasant recollections of past years.

"We were in hopes that he would be spared to meet with the veterans again at the coming Boston show, but God has willed different, and his genial smile will be sadly missed; but he will always be held in kindly memory by the old fanciers who have gathered there annually, and by hundreds of others who knew him as a true fancier, a kind and upright man. Mr. F. H. Valentine, his fellow townsman, in sending us the sad news, writes:

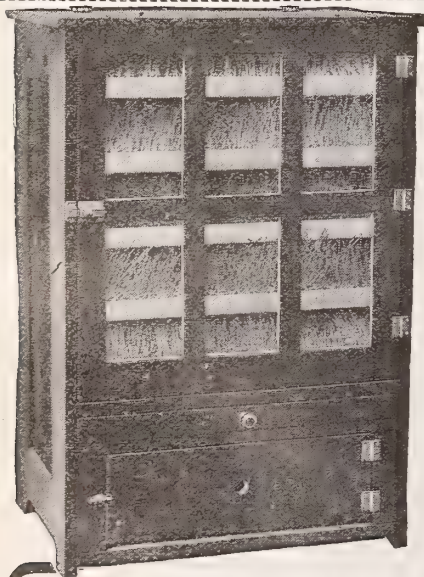

"Our good friend Henry Hales passed to his reward just at the close of day last Thursday, the 6th, respected and mourned by all who knew him. He would have been 84 next February. He was laid to rest in the beautiful Valleeau cemetery on Sunday."

"Henry Hales represented a type of fanciers of which we are sorry to say there are altogether too few.

"W. B. Atherton."

The fourth annual exhibition of the Lynchburg, Va., poultry show will be held Jan. 13-16, 1914. Newton Cosh and Charles Nixon, judges. For premium list address R. H. Anderson, secretary.

"Get right on poultry supplies." Before spending another cent for equipment, write Otis & Moe Manufacturing Co., Otis building, Chicago, for latest catalogue. They manufacture Moe's line of useful devices, invented by a successful breeder for his own needs and they are what you want.

## Increase Egg Yield This Winter, Save Money on Feed, Make Chicks Grow Rapidly, Strong

by installing an Ideal Grain Sprouter  
and feed your hens the green food  
that is absolutely necessary to  
insure prolific egg production.

Eggs are going higher in price every year, the demand is far exceeding the supply, and it looks like *good times* and *plenty of money* for the man who has one of our sprouters.

## The IDEAL Grain Sprouter

- is the *best machine* for sprouting grain ever made;
- will produce sprouts over two inches long in 24 hours;
- sprouts any kind of grain *better, in less time* and without fuss or muss;
- produces *three to four bushels* of feed from one bushel of grain;
- pays for itself in a single month by saving in feed bills, increasing egg yield, supplying food that makes chicks grow strong and vigorous.

The "Ideal" is made in several sizes—for a few hens up to hundreds. Can be used in summer (without lamp) as it has proper arrangements for moisture and ventilation to produce quick results and crisp feed.

## CONSTRUCTION

Made of best lumber—double walls, insulated with heavy deadening felt—inside lined with galvanized iron—frame of trays heavy galvanized iron—bottom of tray heavy wire netting—front of machine glass, which induces green sprouts. These sprouts require very small amount of artificial heat which is produced by the Ideal Safety Lamp, the fumes of which pass through ventilators.

## Get Special Low Price Offer Today

Don't delay but write at once for special low price freight prepaid introductory offer, full particulars and description of this perfect grain sprouter. No poultry man should be without it. It is the *Biggest Money Maker for the Poultryman since the Incubator was invented.*

Made by J. W. Miller Co., Manufacturers of Incubators, Brooders and Poultry Supplies, which is sufficient guarantee of its excellence.

J. W. MILLER COMPANY, Box 600 ROCKFORD, ILLINOIS

### Old Forge Poultry Farm.

In the southern part of Pennsylvania and close to the Maryland line in a valley of historic and natural beauty is the quaint little city of Spring Grove. It is a section that you regret leaving after having once entered and we doubly enjoyed our trip, for we had motored over from Hanover with Mr. C. N. Myers and had every opportunity to fully enjoy a delightful October day, when woodland, fields and hills are decked in their richest colorings.

Just beyond Spring Grove high up on the

This plant is a new and not an old one. The best foundation stock that money could buy was purchased and the birds seen here are an evidence of value received. Here were the birds bred last year, and the young, a smart lot of even, high grade quality, strong in type and vigor and of a beautiful rich color that is bound to hold.

This season this farm has made four of the leading shows held to date, winning at Allentown cock 2, hen 3, pullet 2; at Hanover cockerel 2-3, pullet 2-3-4, on five entries. At York cock 1, hen 1, cockerel 1-2-3, pullet 1-3-4-5, pen 1-2, specials for

imagine just what you will see if you go to the Old Forge Poultry Farm, and we would advise all to go that can.—H. P. Schwab.

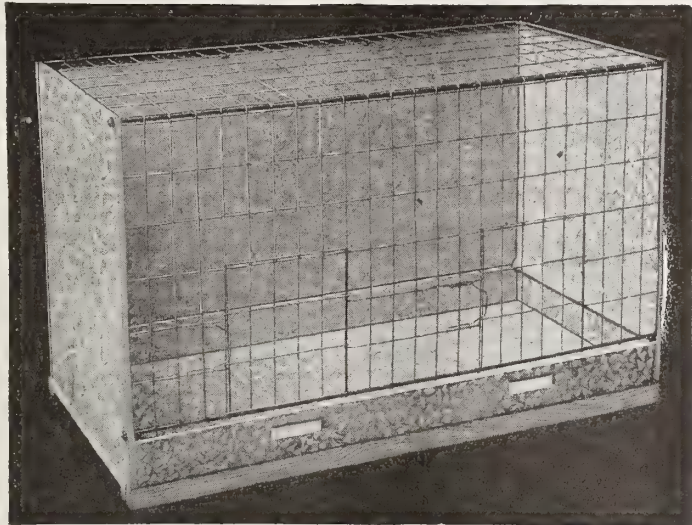

### "Wingold" Buff Farm.

When we got around to Fred H. Poertner's Buff Farm, Berea, Ohio, we found a flock of something over 400 youngsters with quality much improved; in fact, the best we ever found there. Mr. Poertner is one of those live wire fanciers who could not come to a standstill in that direction. He has done a great deal of experimenting in mating Buffs in past seasons for his own personal education, and has realized that to produce Buffs one must put Buff and Buff together. His entire flock of Buff Orpingtons, Buff Wyandottes and Buff Rocks are so fine in soft golden buff that we pronounce him an artist at the color scheme, but color does not make the breed with Mr. Poertner. Type really comes first and his birds show for it, too.

The stock is all farm grown and this, together with Mr. Poertner's method of feeding and sanitary quarters make them very healthy and vigorous. The Wingolds have made some famous victories in the show room, winning at St. Louis, Indianapolis, Cleveland, Youngstown, and other good shows of quality, winning at these shows 29 blue ribbons, 10 seconds, 12 thirds, 5 fourths and 9 fifths. Mr. Poertner will be at Cleveland in December with a large string of Wingolds. Meet him there, you may pick up something better than you ever dreamed of. This farm is located 13 miles southwest of Cleveland. Visitors welcome and pleasantly entertained. Write for prices. Address F. A. Poertner, Berea, Ohio.—H. H. Coburn.

In this issue will be found the ad of Richard M. Seward, R. D. 3, Cuba, Ill., breeder of Single Comb Buff Orpingtons. Mr. Seward's Orpingtons are noted for their great laying qualities. At the National Egg-Laying Contest his hen, Lady Seward, won first prize with a record of 223 eggs in one year. Mr. Seward pleases and satisfies his customers and showed us many testimonials from them, all loud in their praise of his treatment. Write him for what you want and mention American Poultry Journal.

We would call particular attention of our readers to the advertisement of the Hancock Inoculation Company, Salem, Virginia, who are advertising Oculum in this issue. In their advertisement they are stating plain facts, and they inform us that if anyone questions their statements they are at liberty to write to any banker in Salem, the Judge or Clerk of the Court, the Mayor of the Town, or any official of the town for confirmation, at their expense. Look up their ad in this issue and write for particulars.

The above illustration is a collapsible exhibition coop manufactured by Nieman Bros., Manufacturing Co., Box 677, Mount Olive, Ill. This is one of the many articles manufactured by this firm. We have been at many state fairs and poultry shows this season, but have never found

anything that would compare with this coop. All of the galvanized iron used is of 26 gauge. The above firm issues a large catalogue which should be in the hands of all progressive poultrymen. It is free if you mention American Poultry Journal.

hills Mr. P. H. Glatfelder has built his home and near by has erected his poultry plant, known as the "Old Forge Poultry Farm," where he breeds S. C. Buff Orpingtons exclusively. In a later edition we will hope to show pictures of this plant, for it is "different" from the rest and has its original features, many of them valuable and of interest.

As stated, this entire plant is devoted to S. C. Buff Orpingtons. Eggs for hatching, day old chicks, custom hatching, and the sale of choice stock will be featured here.

best buff bird in the show, best buff cockerel in the show, best display, etc., on 12 entries. At Hagerstown cock 2, hen 3, pullet 4, pen 2.

These winnings tell the story of worth. They were made at famous exhibits and in exceptional classes of quality with the best breeders of America and Canada competing.

We were greatly pleased with both old and young birds seen here, for they have the true Orpington character; it is evident the owner knows shape and combines with this even and sound color. You can then

### Elliott's S. C. White Leghorns.

Some nine or ten years ago R. J. Elliott, Mansfield, Ohio, left the city for the country to engage in the poultry business, starting with S. C. White Leghorns, White Wyandottes and Barred Rocks, relying principally on heavy egg production. Comparing Leghorns with the others, he decided to keep them exclusively. His foundation stock was purchased from three of America's leading fanciers and by intelligent mating and careful selection has established the Up-To-Date Elliott Strain, noted for size, vigor and snow white plumage.

Mr. Elliott's farm consists of 54 acres, 15 of which is a bearing orchard; the land lies high and is within one-half mile of the highest point in the state. It is situated 1½ miles northeast of Ontario, 6 miles west of Mansfield and one-half mile south of stop 10 on Cleveland & Southern Traction line. Mr. Elliott says the past season has been his best and that the American Poultry Journal has been the best advertising medium he ever tried. He will reserve 350 pullets and 200 one and two-year-old hens for his breeding pens and 150 vigorous cockerels for his own use and for cock birds. He has a lot of good ones to let go for show and choice breeders. Mr. Elliott does a fine baby chick business and knows how to hatch strong and husky chicks. If you want some up-to-date stock write for catalogue and prices, and address R. J. Elliott, Route 7, Mansfield, Ohio.—H. H. Coburn.

### H. D. Riley, Strafford, Pa.

After the Atlantic City convention we paid a hurried visit to Mr. H. D. Riley, secretary of the American Barred Plymouth Rock Club, and breeder of note of Barred Plymouth Rocks. Here we were pleased to note the progress the club is making for Mr. Riley is a hard working official, prompt and deserves every credit for the general success attained.

Mr. Riley is one of those fanciers full of enthusiasm whose whole heart is in his work and in this we can find cause for the great success he has made in breeding Barred Rocks. He has made two or three fine records at the M. S. Garden, New York, show, winning first hen twice and was also well placed in every class. His winnings

for two years at Cleveland are history, as are also his records made at Baltimore, Philadelphia, Camden, Hagerstown, etc., at all these shows his line has been a prominent winner as shown by himself. At the late Hagerstown his winnings were 2nd hen, 1st, 2nd and 5th cockerel, 3rd pullet, 1st young pen, special for shape, male; special for best Plymouth Rock in the show, etc.

Birds hatched from eggs Mr. Riley sold have also won at our largest shows, including New York, Chicago, Philadelphia, Guelph, Ont., etc. Last winter two cockerels hatched from his eggs won 1st and 3rd at Guelph, Ont. (the Canadian Winter Fair) in a class of 60 cockerels.

Mr. Riley has had a busy season with the demand for his stock ever on the increase and he yearly has enlarged his plant to supply the demands made upon him for stock and eggs.

His young birds give every promise of worth and his very large flock looks most promising; the reputation of this line is in good hands.—H. P. Schwab.

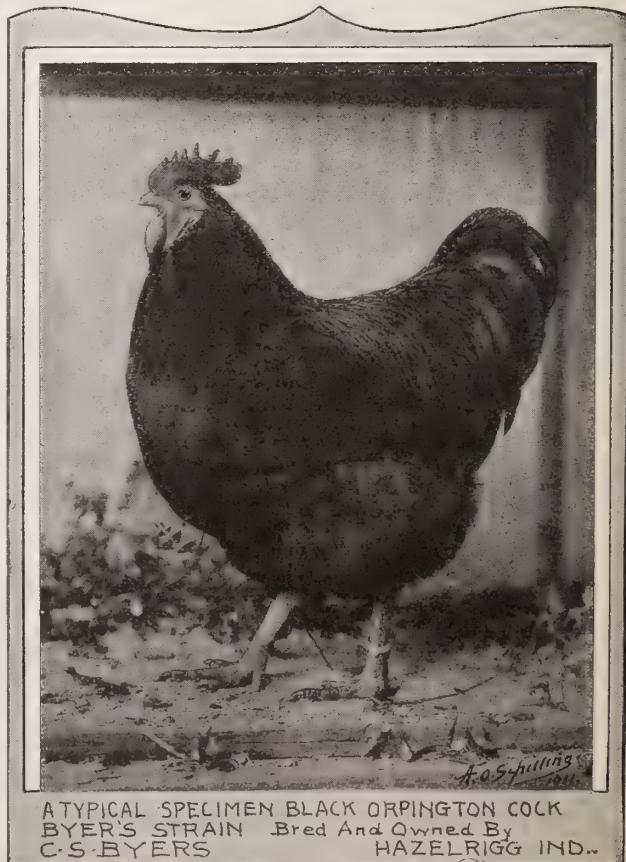

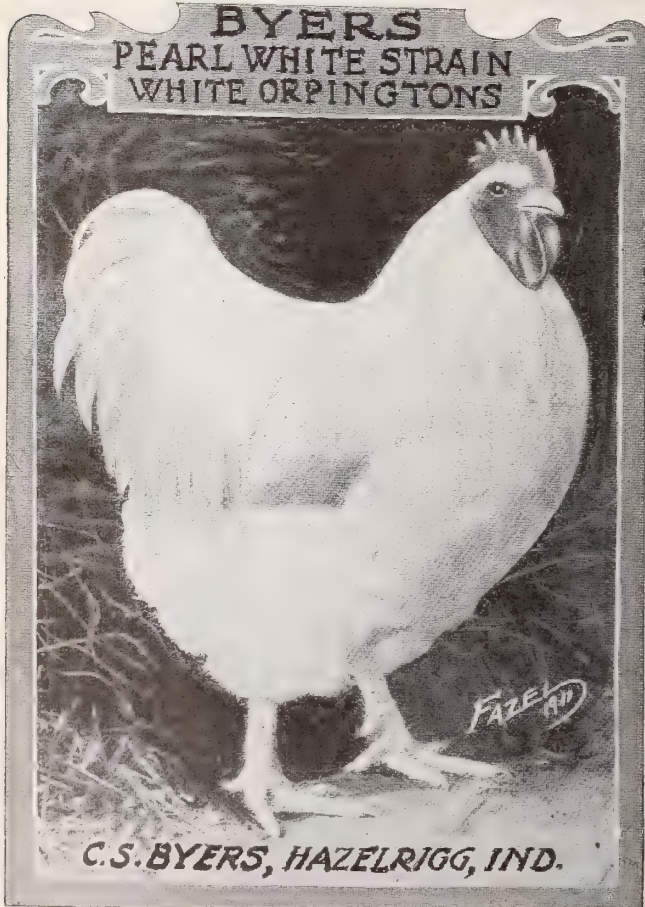

### An Ideal Farm.

If it were given us to select an ideal poultry farm our first and last selection would be Iowana Farm, Davenport, Iowa, situated as it is on the summit of the bluffs overlooking the Mississippi river to the south, with a grand view for miles and miles up and down this majestic stream, with the beautiful cities of East Moline, Moline and Rock Island sitting in splendid relief against the cliffs on the opposite shore. The farm is flanked on the north, east and west by beautiful rolling pastures and groves of splendid oak. Surely this is nature's chosen spot for an ideal poultry plant. Not only has nature been lavish in her natural equipment of this farm, but she has endowed it with men of culture and refinement, whose sole ambition is to make of it a poultry farm that shall be the pride of the American continent, and by honest and fair dealing, to establish relations that shall bring forth, not in dollars and cents, but in the higher and loftier thoughts of men, a feeling of good fellowship and security in a business that must command the respect of all. Dr. Bryant Smith, who has the management of the poultry department of their immense estab-

lishment, is a man of high standing and of character beyond reproach. He is ably assisted by H. W. Atkins, a man thoroughly qualified for the work, a good judge of poultry, and a man of integrity. They have by careful selection and breeding built up a strain of White Orpingtons that is thoroughly in keeping with this splendid farm and magnificent surroundings. They are offering White Orpingtons, grand in type and color and great in size, at one-half their value. Their list of awards at the leading shows will give you some idea of the quality of their flock, all their winners being bred on the farm. We feel that we can not too highly recommend Iowana Farms and the management to the readers of A. P. J.—J. C. Johnston.

### A Visit to Pope and Pope

There is no breed more popular than the Barred Plymouth Rock, especially when they are bred right and have stamina and vigor that is visible to the eye. We find only too often that what is called and sold as a Barred Rock, are underfed and undersized specimens that should have no claim to the name. The Barred Plymouth Rock is "made in America," and for that reason should be the best in the poultry line. There is no better place to raise them right than on the farm, and birds of this breed when reared under natural conditions, are far superior to those raised by the backyard fancier. We have seen Pope and Pope's birds at numerous shows and have always admired their vigorous condition and the brilliant, snappy barring, due no doubt, to that excellent and famed "blue grass" range of Kentucky. We were agreeably surprised upon visiting their 65-acre farm at Locust Grove, to see the great number of these fine birds for which ideal location and proper management is responsible. Their fine type and beautiful barring, due to skillful mating of the pens, shows that Pope and Pope's know standard requirement from A to Z, and back again. They sell their birds at very reasonable prices and the numerous testimonial letters which they have received from many satisfied customers in this country, shows that they give satisfaction to the trade. Their catalog is free for the asking and contains many fine pictures of their farm and birds. Address Pope and Pope, Louisville, Ky., Box A.

### REPRESENTATIVE SPECIMENS BYERS STRAIN ORPINGTONS.

C. S. Byers, Hazelrigg, Indiana, informs us that the above birds are samples in outlines of many finished birds that he will offer during the early winter for early breeding and winning.

POPE AND POPE  
 BARRED PLY. ROCK SPECIALISTS  
 LOUISVILLE, KY

POPE AND POPE  
 BARRED PLY. ROCK SPECIALISTS  
 LOUISVILLE, KY

Great, big, husky, farm raised Barred Plymouth Rocks of Standard type and coloring is what Pope & Pope, of Louisville, Ky., are noted for. The above birds are winners of first pullet at Indiana State Fair, 1912, and first cockerel, Memphis, Sept., 1912.

## POULTRY FLATS

Are sure to revolutionize poultry raising for profit. Build one and you will always be glad. Not half the work and that done out of wind and weather. Need not move three feet from one spot to water, feed and clean. No brooders to buy. Each flat will brood 600 chicks. Build as many as you like. Raise all you want. One occupies 24x36 feet of ground and includes six runways. They have been erected in every state in the Union. No business today is so safe and sane as the poultry business when properly conducted and you do not need much money to start. One man made \$800 the first year from one flat.

He tells you all about it in the book, Poultry Flats, also twenty-four others from nearly as many different states tell you what they have done with this new and easy way of raising poultry. This book tells you about the Ott-Omatic Fountain, whereby you can water 10,000 birds as easily as one.—No work. You do not need a section of land to make money from poultry. The book tells you why, also about the ten point perfect laying house, line-breeding guide and many other things that we all ought to have known long ago.

Poultry Flats is one of the greatest side lines yet. It works while you work as well as while you sleep.

Send us ten cents in coin or stamps and we will mail you this 124-page book, or better yet, send 25 cents and we will send you a six months' trial subscription to our paper, recognized as one of the best published and also send you FREE this book, Poultry Flats.

Under no circumstances build or buy until you have read this book. Address

### A Visit to Holter's Roost.

W. D. Holterman is the man behind the gun at Holter's Roost, Fort Wayne, Ind., where is produced the Aristocrat strain of Narrow Barred Plymouth Rocks. This farm is located about four miles out of Fort Wayne, Ind. In our rounds of visiting all the principal poultry farms, in five states, covering three, Michigan, Indiana and Ohio thoroughly, the writer can truthfully state, and that, too, without being at all egotistical, that he ought to be some authority on poultry farms in general, and furthermore can say that this farm is among the very finest. The scenery is strikingly picturesque, a beautiful grove forming the background to this beautiful suburban home. Mr. Holterman is justly proud of his fine terraced lawn, which is in part the work of his own hands and his son's. The residence is one of the finest which has been our privilege to enter and is built of red brick and faced stone and is located about in the center of the aforesaid terraced lawn. Mr. Holterman's office is a large room in the front of this beautiful home and is furnished and equipped in keeping with Mr. Holterman's original and practical ideas—originality and practicability being carried to extreme in everything and everywhere. Mr. Holterman is a man of ideas and of a nationality, as his name indicates, that makes a success and makes ideals realistic. He is also a man possessed of pleasing and strong personality. To meet him is but to admire and esteem him. It is our good fortune to be pleasantly and hospitably entertained among our fellow fanciers (which is duly appreciated, we assure you, and it means much to us, for banging around on the road is not all sunshine) and Mr. and Mrs. Holterman are among the most hospitable, so we naturally look forward with no small degree of pleasure to a visit at the home of the Aristocrats.

Some 15 years ago when Mr. Holterman espoused the fancy poultry business and determined to adopt the grand old Barred Plymouth Rocks as his choice there was as much difference in the quality compared with what the Aristocrats are today, as there is in the automobile of today compared with the original attempts. After studying carefully the Barred Plymouth Rocks he first considered the type and size desirable for a table fowl, also the appearance of the head, crowned with its neat comb, red lobes, bay eyes, together with yellow shanks, a combination that was quite pleasing, but the plumage with its indistinct and smutty barring grated on his artistic taste. Here he conceived the idea of the work that lay before him and with steady patience and persistent determination he set out to show the world what the ingenuity of man could do to the color and barring. He made a survey of the situation and got in touch with the best breeders of the land and finally succeeded

in securing the best he could get in color and barring and this at no small expense. He confined his effort to very small matings for pullets and cockerels, advancing steadily from year to year to the extent of having more of the desired quality to suit his exacting taste. Following this method up until the present time we find the best narrow barring ever produced and a large per cent of the birds showing most wonderful color. Doubtless no other breeder of Barred Rocks has given more or perhaps quite as much study to the quality of fibre and texture of feather as he has. He is now a professional in the color scheme of mating Barred Rocks for narrow barring in both sexes.

The beautiful colored plate which he ran in the November, 1912, issue of American Poultry Journal is true to life and represents his birds as seen on the home place. This pen was used to produce exhibition cockerels that made good in leading shows in many climes. This pen also produced some great cockerel breeding pullets, a goodly number of which Mr. Holterman reserved for his own matings for last season, and from these he has to offer some ex-

clusively fine stock for the coming shows. In talking it over with Mr. Holterman as we roamed round the farm and grove he gave us his experience, stating that these birds are a result of painstaking, systematic line breeding from generation to generation. Prince Ringy IV coming in direct line from Old Ringy, who sired the sensational Prince Ringy III by which this Prince Ringy IV was sired, and he has outdone his predecessors in siring Prince Ringy V. What his get will be remains to be seen next year. The prospects are indeed most promising and flattering to Mr. Holterman and purchasers of eggs from his pens. Mr. Holterman has another entirely distinct family for the breeding of cockerels known as Prince Manybar family. The two families are kept separate and when he feels the introduction of a little new blood is in keeping he carefully blends the two families. This eliminates the necessity of purchasing other strains. It is our candid opinion that Mr. Holterman is one of the most conscientious line-breeders in the United States. Considering the fact that the Aristocrats are so originally bred for so many generations, the power

## One Gallon Oil—One Filling X-Ray Does The Rest

Put one gallon of oil in your X-Ray Incubator Tank. Light the lamp underneath. In 15 minutes your X-Ray is at perfect hatching temperature (Others require 4 to 8 hours.) Then your X-Ray takes the oil and lamp work away from you.

You don't have to put oil in the tank again until the next hatch. One gallon does the work. (Others require five gallons.) You don't have to regulate the flame. The X-Ray Automatic Trip does that. (Think of the time others waste on the temperature of old fashioned incubators.)

**X-Ray Saves 75c  
to \$1.25 on the Hatch**

because the Central Heating Plant is underneath—in the middle—where it should be. All the heat is used—just enough and evenly supplied to every corner of the egg chamber.

No other incubator in the world heats in this way. The X-Ray is patented. It is the simplest—the safest—produces the largest hatches.

**Send for Free  
Book No. 10**

X-Ray Brooder also has the Central Heating Plant. The floor always warm and dry. Air always fresh without chill. The book shows you WHY X-Ray poultry-raisers get more chicks—healthier chicks—greater poultry profits.

**Only Incubator in  
the world with Central Heating Plant underneath—in the middle. Saves oil! Saves work! Saves money! Most profit!**

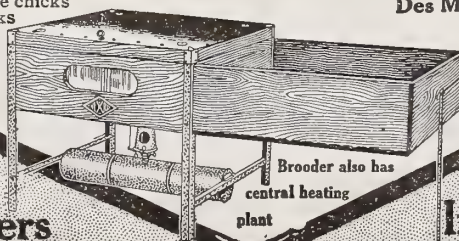

**Largest Incubator  
Factory Means  
Lowest Prices**

The new X-Ray Factory at Des Moines, Iowa, is the largest exclusive incubator factory in existence. Completely equipped with the most modern machinery. It enables us to produce the best incubator—best in materials—best in workmanship as well as best in principle—at the lowest prices. No finer incubator construction can be found anywhere than this factory can put out.

You get the X-Ray direct from the factory—FREIGHT PREPAID—at the lowest factory price. No agents—no middlemen—to add on profits. Buy the X-Ray yourself where the X-Ray is made. Write today.

### Sworn Statement Made Under New Postal Law

Statement of the ownership, management, etc., of AMERICAN POULTRY JOURNAL, published monthly at Chicago, Illinois, required by the Act of Aug. 24, 1912.

Note—This statement is to be made in duplicate, both copies to be delivered by the publisher to the postmaster, who will send one copy to the Third Assistant Postmaster General (Division of Classification), Washington, D. C., and retain the other in the files of the post office.

Editor—James W. Bell, Chicago, Ill.

Managing Editor—Dr. Prince T. Woods, Silver Lake, Mass.

Business Manager—James W. Bell, Chicago, Ill.

Publisher—American Poultry Journal Pub. Co., Chicago, Ill.

Owners (if a corporation, give names and addresses of stockholders holding 1 per cent or more of total amount of stock):

James W. Bell, Chicago, Ill.

Henry G. Eisert, Chicago, Ill.

C. W. Zimmer, Ft. Wayne, Ind.

J. G. Zimmer, Ft. Wayne, Ind.

Mrs. J. G. Budde, Oak Park, Ill.

Known bondholders, mortgages, and other security holders, holding one per cent or more of total amount of bonds, mortgages and other securities:

There are no bonds, mortgages or other securities outstanding against American Poultry Journal Pub. Co., Chicago, Ill.

James W. Bell, Business Manager.

Sworn to and subscribed before me this ..... day of September, 1913.

[Seal.] Hy. G. Eisert, Notary Public.

to reproduce themselves is undisputed and not only that but will reproduce themselves progressively. Valuable and instructive information may be obtained on the subject by a study of the Aristocrat catalogue which is gratis to all breeders and should grace every fancier's library and office.

Mr. Holtermann has a large number of birds ready for the show room and ships on approval so that the purchaser takes no risks in being dissatisfied. When we visited "Holters Roost" the week of the Indiana fair he had over two thousand birds and we could but note the great improvement in type and head points. The ideal conditions under which they are grown make them very healthy and of large bone. Mr. Holtermann's son Louis is of invaluable assistance to his father, both in rearing the youngsters and in the office. Under his father's tutoring he will be a narrow barring specialist, dyed in the wool from his childhood. Mrs. Holtermann, like many other fanciers' wives, is a power behind the throne and is a woman for caring for baby chicks whose care usually surpasses that of the stronger sex. She is also a woman of sound judgment and is Mr. Holtermann's co-worker and counsel.

One more subject not to be forgotten and to be briefly touched upon is the buildings. Of all artistic and ornamental poultry houses we ever saw is the main building, which is twelve sided and divided into twelve pens, a circular space is left in the center, making it only a step to care for each pen. This building is a two story structure, the upper floor of which is utilized for a conditioning, shipping and feed room. The past season Mr. Holtermann has introduced the Diaphragm style buildings designed and copyrighted by our artist, Mr. Louis A. Stahmer. These buildings are in the grove and are giving perfect satisfaction.

To return to the Aristocrats, every bird Mr. Holtermann has sent out has given satisfaction and those purchased for certain shows have never failed to make good. He is literally flooded with strong and flattering testimonials from satisfied customers. His last season's business was unusually good and as he runs his fancy business in a strict business way, being liberal with printer's ink, which is absolutely indispensable, considering the above facts about the quality of his birds and the satisfied customers, we congratulate him. He is very optimistic for the future outlook for the same reasons and hopes to double his business the coming year. Here's hoping for a bright future for the Aristocrats themselves and customers who wisely purchase them.—H. H. Coburn.

### Poultry Remedies.

On another page of this issue will be found the advertisement of George Sixeas, New Castle, Va. He is offering readers of American Poultry Journal remedies for the cure of various poultry diseases.

Mr. Sixeas has handled and cured more sick chickens and turkeys than any living individual. His preparations are based on scientific knowledge and practical experience. His wonderful cures are attested by leading poultry raisers. His Cholera Cure is unexcelled for cholera or white diarrhoea, roup remedy quickly cures canker, colds and roup, the Poultry Powder will prevent disease and keeps poultry in laying and growing condition. Look up his ad if in need of poultry remedies. His prices are very reasonable.

W. J. Brinkley, Iuka, Mississippi, the well-known breeder of White Plymouth Rocks, reports the following winning at Jackson, Miss.: 1-2-3 cock, 1-2-4 hen, 1-2 cockerel, 1-2 pullet, 2 pen. Whitest bird in the show and best cockerel and pullet. These winnings, together with his great winnings at Memphis and Little Rock, is certainly a record to be proud of, and prove that he is producing White Plymouth Rocks of the highest quality. If you are looking for something that will win for you and produce winners, write him and mention American Poultry Journal.

For a year or more past we have liberally recommended the use of "French's Poultry Mustard" for growing chicks, moulting fowls, conditioning for the shows and for layers, and we now have dozens of letters from users in all sections of the country who have been benefited by its use. One of the large egg farms has used several tons.—H. P. Schwab.

R. A. Hewes, Crete, Ill., breeder of Black Langshaus exclusively, made the following winning at the late Illinois State Fair: 2nd cock, 1st and 2nd cockerel, 1st and 3rd pullet, 1st pen.

Dont forget to read back inside cover

# CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

OUR BREEDERS FOR SALE

## WHAT EXPERTS THINK OF IT

"Most Complete and Comprehensive"

Gentlemen: Your 1913 Year Book received and carefully inspected. We find it to be a most complete and comprehensive work. Very truly yours, Leo T. Robinson, Editor Nat. Barred Rock Journal, Union City, Mich.

Dear Sir: I am satisfied you have succeeded in giving to the public a book of permanent value, one that the editors and artists should be proud of. The Year Book is a welcome addition to our poultry literature. Yours truly, J. H. Drenstedt, Editor American Poultry World, Buffalo, N. Y.

Gentlemen: You certainly deserve great credit for publishing such an excellent Year Book. Judging by its merits, it should meet with great success. Sincerely yours, A. G. Studier, Editor R. I. Red Journal, Waverly, Ia.

## 11 Four Color Pictures

The American Poultry Journal Year Book for 1913 contains eleven four-color pictures of fowls made by the famous poultry artist, Louis A. Stahmer. Three of these pictures are double-page in size (6½ by 9½ inches, each showing one male and four females) and they were all made from life by the new four-color photo engraving process. Eight of these colored pictures are mounted on heavy tan paper and are suitable for framing. These beautiful pictures have created a sensation wherever seen as they represent the highest type of thoroughbred fowls and they are beyond question the most beautiful and artistic set of exquisite pictures of pure-bred poultry ever published. To appreciate these pictures they must be seen, as it is almost impossible to find words strong enough to describe their natural beauty and artistic background taken from nature's scenery, with its charming hues and tints of the glorious rainbow.

## "MENDELISM AND THE LAWS OF HEREDITY,"

By Rev. F. W. Sturgus, M. A., of England, occupies 36 pages of the Year Book and is undoubtedly the best exposition of Mendelism and the laws of heredity in relation to poultry breeding that has yet been published and is worthy of deep study by our American breeders. This one article by this noted authority, is worth many times the price of the book to every breeder of fancy poultry.

## "The Poultryman's Encyclopedia"

is one of the big features of the book, giving a complete description of 29 common diseases of fowls, their causes and cures, explanation of all technical terms used in the poultry industry, and also treating briefly but fully such subjects as How to preserve eggs, Making feeding sprouted oats, Soft-shelled eggs, Right size of poultry house, Eroilers, Broken legs, Curing broody hens, Care of setting hen, Capons, How to stop cock crowing at night, Cockerel and pullet breeding, Double and single mating, Color feeding, Colony houses, Contents of egg, Copulation, Crate fattening, Dust bath, Egg bound, Egg and feather eating, Feed for fattening, Grit, Flavor of eggs, Incubators and cellars, Influence of the sexes, Insect pests, Killing and dressing poultry, Mash feeding, Molt, Nests, Perches, Scratching sheds, Sifters and non-sifters, Telling the sex, Removing spurs, Watering devices, Ventilating houses, How to give medicine, Scaly legs, etc. All the above and many more items are arranged alphabetically for instant reference, making it truly a Poultryman's Encyclopedia.

## Printing and Binding

The Year Book is printed on high grade enameled book paper and the binding is linen thread sewed to make it flat opening. There is nothing cheap or trashy about the book as no expense was spared to make it a representative of the best present day standard of artistic printing and worthy to be handed down to posterity as an example of what the best printer could produce in the year of 1913.

No book of this kind has ever been presented to the American public before. Think of it 379 pages, 11 colored illustrations, the best articles that money could buy, on the most helpful subjects, and complete show reports for 1912-13.

Prices—\$1.00 for the de luxe cloth bound edition and 50c for the paper bound edition, express prepaid.

## EVERYBODY PRAISES BOOK

"An Excellent Book for Poultrymen"

American Poultry Journal, Gentlemen: We have looked over the Year Book with a great deal of interest and find it filled with valuable poultry information. It is certainly an excellent book for poultrymen. Yours truly, C. H. Chaplin, Sec'y Sheffield Farm, Part. Wyandottes, Glendale, O.

"More Than Pleased"

Dear Sirs: Received the Year Book for 1913, and must say that I'm more than pleased with same. I think this a great book for amateurs. Yours truly, R. P. Schneider, West Newton, Pa.

"Is Worth Waiting For"

Gentlemen: The Year Book has reached me and more than fulfills my expectations. It is worth waiting for. Yours, Edwin R. Frazer, Oakland, Cal.

## Poultry Show Reports

One of the most valuable features of the Year Book to the exhibitor and breeder is the complete reports of the leading poultry shows held during 1912-13. 1st, 2d and 3d prize winners, with judges making the awards and number of entries in each class, are reported of nine of the largest shows, and 1st prize winners of the next 32 largest shows, and shows having less than 1000 entries are compiled into a directory, giving number of entries, entry fees, date of show, name of secretary, who furnishes the coops, etc.

The Year Book also contains a Specialty Club Directory, Experiment Station Directory, Poultry Judge's Directory, Biographies of 30 successful prominent breeders; The American Poultry Association, its officers, branches, Organizers, and what it is. Complete reports of the National Egg-Laying Contest; North American Egg-Laying Competition, and the Inter Ocean-Midlothian Farms Egg-Laying Contest.

## NOT A ONE MAN BOOK

The table of contents shows that it took 29 of the best poultry experts to edit and write the great American Poultry Journal Year Book for 1913.

The editors of the Year Book are: Jas. W. Bell, Editor in Chief; Clarence Ward, Managing Editor; Louis A. Stahmer, Artist and Contributing Editor; Dr. Prince T. Woods, H. H. Stoddard, C. W. Zimmer, Helen T. Woods, Miss Carey of England, are the contributing editors, besides 21 special articles by leading specialists on poultry culture.

## The Year Book Contains

379 PAGES, all chuck full of valuable, up-to-date information for the poultry raiser, such as "The Poultryman's Calendar," telling what to do each month in the poultry yard; many articles by prominent breeders on such subjects as Line breeding with chart, Dr. Wood's Improved Open-Front Poultry Houses, with illustrations showing how to build one; Capons and Caponizing, with illustrations; Feeding the Layers, with feeding formulas and table of food values; Opportunities in Poultry for the Farmer; Advertising Pure-Bred Poultry; A Simple Indoor Fireless Brooder, with illustrations; Stoneburn Trap Nest, with illustrations showing how to build one; The Diaphragm Open-Air Poultry House, with illustrations; Gillette Open-Air House; Old and New Breeds; and many other special articles by leading specialists of this country and England.

The Book is a comprehensive review of the poultry industry for 1912-13, all thoroughly and carefully indexed for instant reference. It is worth \$5.00 of any poultryman's money.

# E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

Win the most remarkable record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—winter of 1913, winning as follows:

First, second, sixth and eighth on cockerels.  
First and sixth on pullets.  
First, second and fifth on exhibition pens.  
First on cockerel mated pen.  
Second, third, fourth and fifth on cocks.  
The Imperial Prize of the show, Sweepstakes special for champion male.  
Sweepstakes special for champion female.  
Diploma presented by the Amer. Poultry Asso. for best cockerel.  
Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety.

Challenge silver cup for best exhibition pen.

Special best shaped male.  
Special best colored male.  
Special best colored female.

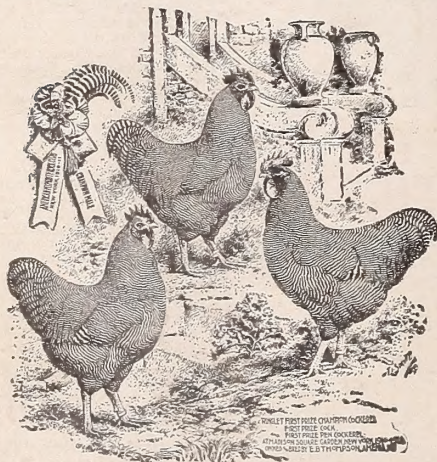

Best cock, cockerel, hen and pullet, four best cockerels, four best pullets, \$25 special prize, presented by the New York Show for finest display.

All silver cups and cash specials—four times as many first prizes as any competitor.

More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibition of any breed.

## My Exhibit of 56 Birds Was the Best the World Has Ever Seen

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York, Winter 1910-1911.

**The Three Greatest Living Barred Rock Males**

No other Barred Rock breeder has ever produced or is producing such matchless quality. Every feather in my exhibit was bred on my farm. My First Prize Champion Cockerel and First Prize Champion Pullet are years ahead of their time. They are the product of the highest skill.

No other Barred Rock breeder has ever accomplished the unprecedented achievement of winning the two greatest prizes in the world, Sweepstakes Champion Male and Sweepstakes Champion Female, at one show in Madison Square Garden. For 25 years at New York my "Ringlet" victories have been complete; my clean sweep of 1ST, 2ND, 3RD, 4TH AND 5TH PRIZES on pullets has never been approached at Madison Square Garden

and stands alone and unequalled. The Imperial "Ringlets" are the standard by which all other Barred Rocks are judged. To meet success in winning prizes you must have my birds and eggs. I will sell you grand exhibition birds for any show, and breeders of this Richest First Prize, New York, blood mated to produce prize winners. Richly illustrated 70-page catalogue upon request. It is full of original pictures of New York winners from life.
